Nations cannot prosper except in conjunction. Being dependent, to a certain extent, on the food grown in other countries, the price we are obliged to pay for that determines the price we must pay for what is grown at home. We are constrained to import it, and the price at which we can purchase it, including any duty imposed on it, regulates the price of all the corn sold in the market. At present, though wheat is now 78s. per quarter, for it rose on Monday 2s., the Government, in spite of free-trade professions, levies a duty of 1s. per quarter on foreign grain, meal, and flour imported. On the 5,786,816 quarters imported between the end of August, 1854, and the end of August, 1855, or on one-sixth of all the bread consumed, it collected £286,395. The duty of 1s. per quarter raised the price to the consumer of all the corn imported, and at the same time it raised equally the price of all the other five-sixths consumed, or it actually levied between August and August £1,729,350 on the people's bread, of which £1,442,955 went into the pockets of the landowners and farmers. In fact, this is not all, for the tax raises *pro tanto* the price of all agricultural produce, and, while it puts annually about £300,000 into the Exchequer, it takes more than £3,000,000 from the public at large. This is a piece of bad policy and injustice, against which the people would do well to remonstrate. It raises the price of bread now when wheat is nearly 80s. the quarter, and when under the old Corn-law all duty ceased. The rise in the price of corn from a comparative deficiency, of which the people complain, invariably has the effect of increasing production and ultimately lowering the price, but the rise in the price caused by this taxation has no such effect. It merely increases the rent of the landlord, and ought, as a remnant of an old injustice, now to be abolished.

If the bakers, the millers, and the farmers, who all exert themselves to supply the rest of the community as cheaply as possible, do not cause the high price, what does cause it? In spite of one excellent harvest in England and another certainly not a deficient harvest, the price of corn has been high ever since the autumn of 1853. In that year the harvest was a failure generally in Europe. In 1854 it failed partially in Europe, though abundant in England, and in the United States it was the worst harvest known for many years. In 1853 and 1854 the gold discoveries and other circumstances led to a great extension of trade and of consumption. The demand for food everywhere got ahead of the supply, and countries, France for example, which sent us considerable quantities of corn in 1852 and 1853, imported corn from us in 1854 and 1855. The rise in price, not confined to England, in common to the whole civilised world, and no municipal regulations of any one State, can long withstanding anywhere, can lower it; but, by impeding the free distribution of corn, may raise it still higher. That nothing could be done anywhere to increase production in future is not asserted; but this is much too great a theme for us now to touch. England, by Free-trade, which she has found to be pre-eminently beneficial, has united her fate and fortunes with those of other nations, and rejoices in their abundance or suffers from their scarcity. She continually needs large supplies of food from abroad. France and Belgium are now under the same necessity; large supplies are now here to be got, and hence the general dearness. That the classes who live on comparatively small wages, and suffer from this condition, should seek a remedy is very natural; we regret the ignorance which prompts them to seek it in a riotous assemblage.

BANISHMENT OF THE KING OF DENMARK'S FAMILY.—A letter from Copenhagen, dated the 4th inst., says:—"The King, on the refusal of the Hereditary Prince to sign the new constitution, gave him a certain period to think the matter over; and it was not till after the Prince, on the expiration of that period, had repeated his refusal, that the Majesty removed him from the command of Zealand and the other Danish isles, as well as of one army." The *Independance Belge* says:—"The news of the 6th, received from Copenhagen at Hamburg, says the Royal Ordinance removing Prince Ferdinand from the command of the Danish army was likely to assume a still more serious aspect. Nothing less was spoken of than the banishment of the Prince from the capital so long as he should persist in the intent to sign the constitution. It was said that the fortified town of Frederickshavn would be assigned as his place of banishment. A similar punishment was inflicted in 1846 upon the present King by his late father-in-law, Christian VIII., because of the difference which existed between the latter and his son. The latter married on the 10th of June, 1841. It was to the fortress of Frederickshavn the late King banished his son. The determination of the Government has rallied around it the Democratic party, which was evidently beginning to abandon it in both the Danish Chambers. The Government will in all probability enlist on its side next month the majority which carried the measure submitted to it. The address of the Rochilde deputy, M. Blough, carried by a majority of 54 against 8, at the last sitting of the extraordinary session, was presented to the King on the 5th by the President of the Second Chamber. His Majesty assured him that he would use all his power to extend the liberties which the constitution has proclaimed throughout the kingdom, secured to the people under his

THE NEWSPAPER PRESS:

ITS INFLUENCE AND CHARACTER.

THE "TIMES" AND THE "ILLUSTRATED LONDON NEWS."

[From the new Number of the *Edinburgh Review*.]

But if the daily and weekly Press deserves its power on the score of talent, it merits it on the ground of character no less. On this head our conviction, which we do not hesitate to express strongly, runs directly counter to the common and thoughtless language of the day. In no respect does the Journalism of the Present stand out more distinguished from the Journalism of the Past—and the Newspaper Press of England from that of every other land—than in its freedom from all impure and corrupt influences. All charges to the contrary we hold to be utterly without foundation. The position and character of the men connected with all its respectable organs would of themselves be sufficient to set such sinister accusations at defiance. That it is never open to unworthy influences *of any kind* would be too much to assert; but personal predilection or personal animosity may not often warp the judgment and blind the vision of those who wield its weapons; that individual wrongs may not occasionally lend venom to the pen of the journalist, and private hatred disguise its rancour under the fair seeming of public justice; and that party fury may not too frequently lead to a suggestion or an assertion of the false, and a suppression or distortion of the true—it would be absurd to deny. There may be passion, there may be faction, there may be intrigue, there may be unseemly vehemence, there may be recklessness of mischief, there may be malice and uncharitableness—alas! of what combatants in what arena may not these sins be safely predicated!—but from any suspicion of dishonour, corruption, or venality, the Newspaper Press of England stands wholly free. It would be as impossible to buy a journalist as to buy a member of Parliament. You might almost as well offer a bribe to a Minister of State as to the editor of a leading paper.

Hitherto we have spoken of the Newspaper Press as consisting of many organs, representing every variety and *nuance* of sentiment which prevails in the community, and expressing through numerous and divergent channels that aggregate of thought, feeling, prejudice, and passion, which we term Public Opinion—as a corporate existence, in short, comprising a thousand members, whose differences and agreements, whose consenting and antagonising action, combine to constitute that power which we have described as so beneficent and vast, and that character which we have placed so high. As long as this is a true conception of the actual journalism of the country, there is little to be feared from its influence, however great that may become; the doctrines of one journal are criticised and refuted by another; the statements made in the papers of to-day are corrected or contradicted in the issue of to-morrow; and the accusations brought by the organ of one party are disproved or explained away by those of the opposing faction. The case is fully heard; the arguments on one and on both before the court; the plaintiff and defendant are represented by pleaders whose voice reaches alike to every corner of the land. The poison and the antidote are both before us; and the antidote is disseminated as widely as the poison. In such a condition of things no injustice can easily be committed: every maligned individual is sure to find some journal who, for party or philanthropic considerations, will espouse his cause; every fallacy is certain of detection or exposure. But the case becomes widely different when from any cause one single journal has so far distanced its competitors as virtually to have extinguished them, when it has so completely monopolised the public ear, and filled the public eye, that other organs can scarcely be seen or heard. The "republic of letters" then becomes a despotism, and resembles us with the evils which attach to autocracy in all its forms. Any decided superiority of one journal over others, once established, has an almost irresistable tendency to augment in a sort of geometrical ratio till it becomes absolute supremacy; and this supremacy, once made good, is in its essence indestructible. The leading paper is, of course, specially patronised by advertisers, and of course specially sought for by all those to whom advertisements are addressed; its circulation brings its advertisements, its advertisements again multiply its circulation. Again, the superior wealth which it thus acquires enables it to outbid all rivals in the command of talent, and the high reputation thus obtained makes it the favourite channel of the ablest writers. The public favour fills its coffers; and full coffers enable it to serve the public in superior style. Then, in proportion to the circulation which it possesses is the desire of the world to send it: everybody must see what everybody else is certain to have seen. It may offend or flatter your prejudices, it may assail or support your friends, it may combat by your side or turn the weapons against you; but still you must see it, or you must have it; you must purchase it; and consequently you assist in maintaining the very supremacy which you deprecate. In short, its utility and superiority become such that those objects are universally sought for by the public even against their own discretion, and sometimes against their own moral sense. Such a power then becomes something equally difficult of control or counteraction. A daily organ which has reached this paramount position is read every morning by hundreds of thousands who read nothing else, who imbibe its doctrines, who accept its statements, and who report both to every one they meet, till the whole intellectual and moral atmosphere of the nation becomes insensibly coloured and imbued. It of itself forms, and is, the public opinion of the country. The Government knows this notice and feels it, and recognises this anomalous and irresponsible power. Ministers—conscious that omnipotent and omnipresent organ is guiding and influencing the entire active and vigorous portion of the community; that it is read by every one whose energy and enterprise affect public affairs, and that insensibly or even consciously we all read it in a purely passive and believing spirit—dread it and consider it more perhaps than is wise or noble, but certainly not more than is natural: it becomes itself a puissance in the realm: a sole organ becomes, it is scarcely too much to say, that "Fourth Estate" which should be the aggregate result of a multitude of conflicting and mutually modifying organs. It is as if one senator held the proxies of four hundred absentee members of the Lower House; and decided on his own responsible hurry the vote of an Assembly.

The *Times*, it is notorious, has reached this extraordinary and dangerous eminence. It was not the earliest in the field; it was long before it fairly and unquestionably got the lead: but, once obtained, it has never lost it. It has indeed only merited its supremacy by its vast exertions and its many excellences: it has not forfeited it by any of its lapses and offences. Sometimes it has rendered the most signal services, by resolutely stemming the tide of popular frenzy or delusion: sometimes, we think, it has done vast mischief by encouraging and encouraging the most ignorant prejudices of the people. But on all essential points—of home policy at least—it has usually been on the side of justice, freedom, and popular improvement; and, right or wrong, its ability has been always wonderful, and its unflinching courage above all praise.

To a power so vast and a supremacy so unquestioned as this, we possess only three effective counteractives. Most of the other organs of the London daily Press are, as we have seen, so far behind, that it becomes doubtful how much longer they can continue to maintain their faint and struggling existence. The last alteration of the Stamp-duty appears as if it would give them their *coup de grâce*; and, as has often been the case before, a step, urged on the part of Liberty and progress, has turned to the profit of autocratic power. The provincial papers have hitherto done much to influence public opinion in their several localities, and among the non-elective classes they are more generally read than the *Times*. Whether the recent alteration in the law will have augmented their power as well as extended their circulation, it is too early as yet to pronounce. As the London rivals of the *Times*, however, become one by one inoperative or extinct, the *Times* will inevitably more and more gravitate towards and supply its materials to the organs of the local press, as these are more and more reduced to live upon its undirected and unrevised contributions. But the weekly journals—if the cheaper daily ones do not gradually drive them out of circulation—will be, as they have hitherto been, valuable competitors and correctives. They have time for graver questions more deliberately and to sift facts more carefully than those which appear from day to day; they are, some of them, conducted with considerable ability and great consistence; and one or two—the ILLUSTRATED LONDON NEWS for example—whose leading articles are always sensible and generally very sound—have a circulation far beyond that even of the *Times*. That of the ILLUSTRATED LONDON NEWS now sometimes reaches, we are told, 170,000 copies. The chief and surest corrective of all, however, is, and must always be, supplied by the *Times* itself, in the publication of the Parliamentary debates. As long as these are fully and honestly reported, no *exparte* statements of the Newspaper Press can long mislead or deceive.

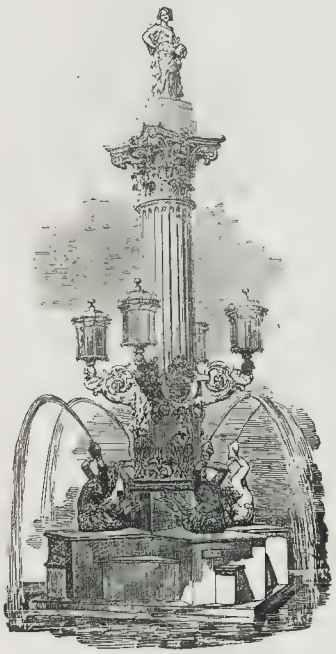
Every fact that concerns the public,—every thing that affects individuals,—every fallacy that has been put forth as an argument,—is pretty certain there to be sifted and exposed. And if we could conceive it possible that any leading journal could ever make such a blunder, or commit such an iniquity, as to resist full, fair, and unfairly, the Houses of Parliament would have an easy and efficient remedy in their own hands, by appointing their own reporters, and publishing their own debates. After all, however, the chief and only perfectly effective corrective against the abuse of such a vast power as that wielded by a supreme journal must be sought in the high character of those who conduct it, and in the increasing and competent judgment and instinctive sound feeling of the country, which would receive any marked dereliction from honesty or duty with disgust and indignation.

THE REVENUE OF [illegible].—The Minister of Finance publishes in the *Moniteur* of the [illegible] the returns of the revenues for the first nine months of 1855. In comparison with the corresponding [illegible] 1854 [illegible] The total receipts of the nine months in round [illegible] 999,000,000 francs, which [illegible] 1854 [illegible] 81,000,000 francs over the receipts of all the [illegible] Bons du Trésor [illegible] 31,000,000 over the receipts of all the

FOUNTAIN FOR THE CITY OF CONCEPCION.

The rarity of fountains in our metropolis has often been remarked; more especially as these sanitary embellishments can be now produced in iron at considerably less cost than was the sculpture stone of the seventeenth or eighteenth centuries—the age of the few works of this class which remain. The Chilian Government have lately taken advantage of this elegant economy by commissioning the Coalbrookdale Company, in Shropshire, to cast a monumental Fountain, to be placed in the great square of the city of Concepcion, in that Republic. It may reasonably be supposed that the order is one of the countless beneficial results of the Great Exhibition of 1851, wherein it will be remembered, the Coalbrookdale Company exhibited several remarkably fine specimens of their castings, now allowed to rival those of any European foundry.

The splendid piece of iron-work just completed for Concepcion is intended to serve the purposes of a fountain and a public light. It consists of an elegant Corinthian column, surmounted by a richly-finished capital. The Abacus forms a plinth, on which stands, with one foot resting on a tortoise, an exquisitely-finished full length figure of Ceres The base, which is cruciform, has in each of its quadrangular projections the figure of a mermaid. The head and body lean inwards towards the pillar, the hands uplifting a large shell, through which the jets of water forming the fountain will rush. The lower part of the body terminates, so as to realise the Essayist's "fine woman ending in a fish's tail," curving inwards. Immediately above, the column is surrounded by beautiful scroll-work projecting over the intervals between the mermaids, and, terminating in winged snakes, form the brackets which support the lamps. These are octagonal and richly finished. In the intervals between the lamps appears on a shield the "Lone Star" of the Republic, with proper supporters—a wild horse and condor, crowned.



FOUNTAIN FOR THE CITY OF CONCEPCION, SOUTH AMERICA.

The monument, which is coated with bronze, weighs 14 tons 5 cwt., is 19 feet square at the base, and is 34 feet high to the top of the figure Ceres. Concepcion is the capital of the southern division of the Chilian Republic, and the centre of its most prosperous agricultural district; the exports of wheat and flour are very large to Australia and other countries. Hence, the column is therefore aptly surmounted by Ceres, emblematical of the richness of the country in cereal produce. The satisfactory completion of this fine piece of iron-work reflects great credit on the Coalbrookdale Company.

THE HUSKISSON MEMORIAL WINDOW.

This beautiful tribute to the memory of our distinguished statesman, the Right Hon. W. Huskisson, has lately been placed in the north aisle of Chichester Cathedral, in the same chapel with the statue of Mr. Huskisson, erected in his honour by the inhabitants of Chichester and the county of Sussex.

It appears that in 1851 Mrs. Huskisson applied to Mr. Digby Wyatt, for the design of a memorial window to her late husband; but, from various causes, mainly from Mr. Wyatt's occupation in other matters, the completion and erection of the memorial has been delayed until the present year.

This window is of larger dimensions than that of the Nield monument, and in it the artist grapples with a subject (the "Last Supper") involving much greater difficulties of treatment. To so arrange this subject as to prevent its being uncomfortably cut up by the mullions of the window was a problem, that, so far as we are aware of, has not hitherto been solved in an equally satisfactory manner as that in which Mr. Wyatt has now got over it. By adopting the Triclinium form for the table, much greater variety of action, and susceptibility of division, have been attained than could have been the case had the ordinary longitudinal table type been adhered to. The little angels, which on their several instruments celebrate the institution of the Sacrament, are very happily introduced, and have been carried out with much grace and feeling by the artist, Mr. Clayton, by whom the full-size cartoons were made, under Mr. Wyatt's direction. The glass was very carefully painted by Messrs. Gibbs, whose works are to be found in most of the principal cathedrals in the country. The window bears the simplest and shortest possible inscription, and for a man so known, so honoured, so loved, and so lamented, no more, at least in this generation, was needed. Chichester Cathedral is now richly endowed with precious gifts of stained glass similar to that which we illustrate on the present occasion, and which forms one of those many offerings with which the widow of the great statesman has essayed to render his memory tangibly and permanently venerable in the eyes of posterity.

THE HUSKISSON MEMORIAL WINDOW, IN CHICHESTER CATHEDRAL.

MONUMENT TO SIR JOSIAH JOHN GUEST, AT DOWLAIS.

This is an elegant testimony to the memory of the late Sir Josiah John Guest, and is erected by his widow and family. It was, we believe, designed by Sir Charles Barry. The centre slab is composed of red Cornish porphyry; the columns are the same; the rest of the work is in Derbyshire alabaster. The inscription, which is incised, is neat and appropriate, and is as follows:—

Beneath rests the mortal part of Sir Josiah John Guest, Baronet, of this place, Member of Parliament for the Borough of Merthyr-Tydvil, High-Sheriff for this County in the year 1819, and, at his death, sole proprietor of the Dowlais Iron Works, who through honest paths placed himself at the head of the Iron Manufacture of Great Britain, raised into importance this populous and flourishing district, and was himself an example of what, in this free country, may be attained by the exercise of Skill, Energy, and Perseverance. He was born 2nd February, 1785, and died on the 26th November, 1852; leaving by his wife, the Lady Charlotte Elizabeth Bertie, only daughter of Albemarle, ninth Earl of Lindsey, five Sons and five Daughters. Happy in his domestic life, prosperous in business, full of years and honours, having had time and inclination to prepare for his latter end, he died where he was born, at Dowlais, in the midst of his family and dependents, Beloved, Respected, universally Lamented.

"Seest thou a Man diligent in his business he shall stand before Kings"

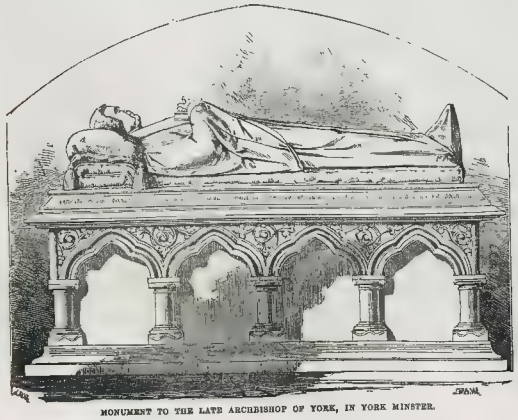
This Monument is erected to his Memory by his Widow.

MONUMENT TO THE LATE SIR JOSIAH JOHN GUEST, BART., AT DOWLAIS.

MONUMENT TO THE LATE ARCHBISHOP OF YORK.

BY M. NOBLE.

This monument is about to be erected in the nave of York Minster by the family of the late venerable Archbishop, Edward Vernon Harcourt. The figure, which is recumbent, is in full canonicals, and the hands are slightly pressing the Sacred Volume to the breast. It is sculptured out of



MONUMENT TO THE LATE ARCHBISHOP OF YORK, IN YORK MINSTER.

TESTIMONIAL PRESENTED TO MR. JOSHUA COOPER, F.R.S.

a very pure piece of white Carrara marble, and in the face there is a fine expression of calmness and trust, as if the spirit were about to leave its earthly abode in peace. In the whole figure, indeed as in other works by Mr Noble of some of which we have given engravings—there is an ample evidence of a high and earnest feeling, and of true artistic power. The pedestal is very suitable for the occasion, and is made of white marble and Caen stone, much in the style of similar memorials of the thirteenth century. On the border of the pedestal surrounding the figure there is, in raised letters, the following inscription:—

EDVARDVS : VERNON : HARCOVRT : VIXIT : ANNOS : XC.
IN : ECCLESIA : DEI : MINISTER : ANNOS : LXVII.
EPISCOPVS : CARLIOL : ANNOS : XVI
ARCHIEPISCOPVS : EBORACENSIS : ANNOS : XI.
OBDORMIVIT : IN : XTO : ANNO : DOMINI : MDCCCXXI.
PATRI : AMABILISSIMO : LIBERI : PP.

TESTIMONIALS IN SILVER.

We engrave upon the present page Six Testimonials, or pieces of Presentation Plate, which, whether viewed as specimens of artistic design, or working in metal, are highly creditable to their class of art-manufacture; and are otherwise interesting from the circumstances marking their presentation.

I. THE COOPER TESTIMONIAL.

This handsome work has been presented to Edward Joshua Cooper, Esq., F.R.S., of Markree Castle, Collooney, co. Sligo. It consists of a candelabrum, value 500 guineas, carrying nine lights, with basket for flowers. The ornaments are enriched with the wild hop and fruits, and upon the stem with ears of wheat and haybands. The grouping around the stem represents, on one side, Science and the Fine Arts fostering Industry; and, on the reverse, the Family of an Agriculturist rejoicing in consequent prosperity. Above these groups are figures illustrative of the Seasons. Figures of animals, shepherd, flock, &c., ornament the angles of the base: upon one of the shields of which is introduced a river god, rejoicing over the new acquisition of the salmon to his waters; on another is the coat of arms, &c. In front is the inscription.—Makers, Messrs. Hunt and Roskell.

TESTIMONIAL PRESENTED TO MR. JAMES HENDERSON, R.N.

II. THE DEGRUT RIFLE CHALLENGE CUP.

The subject of this group is the "Deer-stalker Returning." On the black-wood plinth are four silver panels, engraved with a boar-hunt, the inscription, and trophies. Makers, Messrs. Hunt and Roskell.

III. THE GUNN TESTIMONIAL.

This elegant tribute was subscribed for by the friends of Mr. Gunn, Rhives, factor for the Duke of Sutherland; and was presented to that gentleman at a public dinner at Golspie. The testimonial consists of a handsome épergne, richly chased, with pastoral figures, and other graceful ornaments, and bearing the following inscription:—

Presented to GEORGE GUNN, Esq., along with a Dinner-service of Plate, by his friends in and connected with the county of Sutherland, as a token of respect. 1853.

The dinner-service is rich and handsome, and engraved upon it are the crest and initials of Mr. Gunn. It was commissioned from Mr. George Jamieson, Aberdeen, and cost about 150 guineas. The épergne is of equal value, and was obtained from the establishment of Howden and Son, Edinburgh.

IV. THE HENDERSON TESTIMONIAL.

This graceful piece of table-plate, designed and manufactured by Messrs. Widdowson and Veale, Strand, was last month presented to James Henderson, Esq., R.N., late surgeon of H.M. Dockyard, Portsmouth, by the resident families and other friends, as a small token of their respect and esteem, and in acknowledgment of his kind professional attention experienced during a period of seventeen years.

V.—VI. NEW SOUTH WALES PLATE.

These two works are from the establishment of Messrs. Hunt and Roskell, and are of very tasteful design. First is the New South Wales Regatta Club Sailing Match Prize; a silver centre ornament, representing, on an oblong base, the figures of Neptune and Æolus, with fluted shaft, terminating with a lotus-leaf basket, surrounded by sails, flags, anchors, &c. Next is the New South Wales Rowing Match Prize, a richly-chased silver vase, one side of the body representing a rowing match, the other containing the inscription—the handles elegantly ornamented with scroll and leaf mountings, &c.

THE DEGRUT RIFLE CHALLENGE CUP.

In our description of the Liddell Testimonial, in the ILLUSTRATED LONDON NEWS of last week, it was omitted to be stated that the Etruscan Vase bears richly chased medallions, representing on one side, Hercules and Diomedes; on the reverse, Hercules and Hippolitus; and that the Vase is surmounted with a figure of Mercy holding an olive wreath.

THE PARIS UNIVERSAL EXHIBITION OF FINE ARTS

THE SPANISH CONTRIBUTORS.

SPAIN has contrived to send eighty-three pictures to the Universal Exhibition. These contributions are exactly those we expected from a demoralised nation. It is evident to every visitor that the country of Murillo and Velasquez no longer encourages the Fine Arts; that, if painting has not altogether vanished from the land, the fact is not attributable to the Spanish Government. The kind of patronage bestowed upon the artists who are subjects of Isabella may be seen in the collection of pictures before us. The portrait-painter has an assured set of patrons in every country; for in every country there are people who love to treasure up memories of their kindred, and people, also, who love to see themselves reflected in their holiday dress. It is evident at a glance that these two categories of patrons are the mainstay of the living Spanish painters. Noblemen with mortgaged estates may deny themselves the pleasure or the parade of collecting a gallery of pictures, but they cannot forego the distinction of being immortalised upon canvas by the most fashionable living painter of their time—their Counts are *still* be painted, regardless of the husband's balance at his banker's. Thus, the first artists of Spain are portrait-painters. This fact is beyond doubt—that is, if we are to accept the pictures before us as a fair representation of modern Spanish art. It includes no less than twenty-five portraits: all, with about two exceptions, of royal or titled personages. Of these M. Federico

TESTIMONIAL PRESENTED TO MR. G. GUNN, FACTOR FOR THE DUKE OF SUTHERLAND

Madrazo's little gallery of beautiful women are at once the most conspicuous and the best. This artist, who appears to have studied much in Paris, and to have carried off a first-class medal there in 1845, is the most vigorous, the most pleasing painter represented here. His flesh tones are often hard and dry, and his backgrounds are invariably harsh and opaque, but he occasionally catches the expression of his sitters very happily, and he disposes drapery about them with effective care. His works are, in short, good specimens of an educated hand and a limited natural gift. Beautiful, however, are some of the Spanish ladies who have sat to him. There is the splendid head of the Duchess of Medina-Coeli, with its stately, serious expression, in contrast with the very arch physiognomy of the Countess de Vilches. Then the stately presence of the Spanish woman who nursed the Princess of the Asturias must be an effective study for any painter of moderate ability. Truly, Madrazo has been fortunate in his subjects Rarely have so many pretty faces been exhibited upon the canvas of a single artist. But we must not pass by the portrait of Mdlle Sofia Vela, who appears to be looking out from her frame, amiably anxious that no visitor should pass without having noticed her. There is a keen sense of nature in this portrait. But Madrazo does not confine his attention even to beautiful studies like the above. He aspires to produce a Scriptural subject, and if this aspiration be not realised as his most sanguine friends could wish, if the general treatment of his sacred women at the tomb be conventional—and all the women-angels included bear a strong family likeness—there is yet an atmosphere in the scene and a majesty about the supernatural presences that give the whole performance a claim to rank far beyond the bald and poor imitations around it. Where the Spanish

NEW SOUTH WALES ROWING MATCH PRIZE. NEW SOUTH WALES REGATTA CUP.

sacred subjects are not imitated from the old masters they are horrible monstrosities—not to be surpassed for their barbarism by the sacred pictures to be found in Dalecarlian cottages. We refer the reader to the picture by Louis Ferrant (marked 389); it is entitled "A Child Borne to Heaven by Angels." The central figure is a child, with a fine head of black hair, apparently in a night-dress, with an expression of surprise upon his face. He evidently wonders at the strange company about him. The little obese angel under him appears to be tumbling to the earth, but he is just far enough away to disclose a doleful scene under his feet. In very opaque gloom, the father, mother, and brother of the child are before his tomb. The whole effect is wondrously ridiculous and grotesque. If the visitor be not convinced by this picture that our remarks are just on this section of the Spanish show, we refer them to picture No. 536 "The Apotheosis of a Son of Queen Isabella II." Here a cherub is stationed to the right and left of the picture, holding back green curtains to show the subject; all we need say on this performance is, that the said cherubs would do well to let go the ropes. From these and other evidences of ambition that has overleaped itself, we will turn to one or two subjects—less pretentious and more praiseworthy. We cannot consent to place such pictures as are to be faintly seen along the upper lines of the Spanish wall in any rank of art. They are efforts of the feeblest—the most laborious —mediocrity. Some are conspicuously ridiculous—as witness "The Emperor Napoleon the First Taking Leave of Queen Hortense," in which the Emperor appears to be six feet in height. This work had in every part—may be remarked in strong contrast with the excellent effects of colour and good disposition of drapery to be found in the "Portrait of his Majesty Don Francisco d'Assis in the Costume of the Golden Fleece." The less pretentious subjects—few in number (for a weak school is generally so) and trifling themes, being led by its vanity instead of its capacity—are not, however, of sufficient worth to call the world hop for many more works from Spain. Joachim Espalter, a native of Barcelona, and a pupil of Gros, has certainly the best bit of nature in the Spanish collection. His "Three Pifferari" (marked No. 539) is a little study of character excellent in its way. In part of the English force, they will of course have a right to a share of the spoil assigned to England. The town itself has been portioned out as follows:—That part comprised between the Quarantine, Fort Nicholas, the Naval Yard, the Mast Basin, &c., to belong to the Allies without the English having any claim on it. On the other hand, the English are to have the Karabelnaia quarter, but the French may establish hospitals there, and will do the duty of the Careenage, the Docks, &c.—*Letter from Marseilles.*

RUSSIAN OFFICERS.—The Russian army has among its officers the very best and the very worst men, only that the former are present in an infinitesimally small proportion. What the Russian Government thinks of officers it has plainly proved in its recent code of military laws and regulations These regulations do not merely prescribe a general mode of placing a brigade, division, or army corps in action, a so-called "normal disposition," which the commander is expected to vary according to the ground and other circumstances, but they prescribe different normal dispositions of all the different cases possible, leaving it a general no choice whatever, and tying him down in a manner, which, as far as possible, takes all responsibility from his shoulders. Any army-corps, for instance, can be arranged in battle in five different ways, according to the regulations; and at the Alma the Russians were actually arrayed according to one of these three normal dispositions, of course, they were beaten. The mania of prescribing abstract rules for all possible cases leaves so little liberty of action to the commander, and even forbids him to use advantages of ground to such an extent, that a Prussian General in ordinating it says:—"Such a system of regulations can be tolerated in an army only the majority of whose generals are so imbecile that the Government cannot safely entrust them with an unconditional command, or leave them to their own judgment."—*Putnam's Monthly*

THE DESTINATION OF THE ALLIED FLEET.—Intelligence has been received here that the secret expedition of the Allied fleets is destined for the Liman of the Dnieper, a bay or estuary on the north-west shore of the Black Sea. The entrance is guarded by the towns of Otschakoff on the northern side and Kinburn on the south, and is not much more than a mile wide. The former is known in history for its wars with the Turks, and the latter for its defence of the shallowness of the water precludes the entrance of the line-of-battle ships, it must, on the other hand, prevent the coming out of the Russian larger vessels, whilst there is nothing to hinder the gun-vessels and other small craft of the Allies from entering, and making a sweep of the coast, as they did in the Sea of Azoff. At the extreme eastern end of the gulf, and on the northern bank of the Dnieper, is situated Cherson, the principal town and seat of government of the province, celebrated for the famous vaunt of the Empress Catherine, who wrote on the gate of the city "Road to Constantinople" This province, which was torn from Turkey and incorporated with Russia 7 years later than the Crimea (1792), is a much more extensive territory than Tauria.—*Letter from Vienna, Oct. 9.*

The receipts of the theatres, balls, and concerts of Paris in September last amounted to 1,400,000*f.*, which were 95,000 fr. more than those of August, and double those of September, 1854.

NAVAL AND MILITARY INTELLIGENCE.

THE chiefs of our great victualling establishments, who are in the habit of supplying the English military and navy with salt and fresh meat, have been informed that the Admiralty will receive tenders for forefold the quantity of meat they furnish in time of peace. They must under-ake to deliver between the 1st of November and the 1st of January, 1856, 15,000,000 lb. of beef and pork, exclusive of parcels of 500 lb. each. This enormous quantity of meat is deemed necessary for the consumption of the English fleet in the East, and it is inferred from this circumstance that the maritime war in that quarter is and in the Baltic will be continued in 1856, as it had been in 1854 and 1855.

A CONSIDERABLE quantity of timber has been sent to Heligoland for the purpose of building a number of spacious huts which may serve as barracks for the Germans enlisted in the British Legion, and subsequently for the English troops who are hereafter to form the garrison of the island. The construction of all those huts is now terminated. They can easily lodge 6000 men, and are provided with the necessary beds, kitchen utensils, &c. As no water fit for use is to be found in the island, the English Government has caused an engine and filters to be erected on an elevated part of the coast, by which the sea-water is purified, distilled, and converted into clear and sweet water

THE contract entered into for the construction of huts at Woolwich for the Crimea is completed, the last portion having been shipped on Saturday.

NEARLY forty men of the Galway Militia have volunteered to join the gallant 88th, and more than thirty others have given in their names to Captain Vokes to be enrolled in the Land Transport Corps.

SOME men of the Irish constabulary have at length suffered themselves to be tempted into the Guards, a corporal of the Guards, named M'Caligh, who left the regiment stationed at the constabulary barracks, having induced a few others of his old comrades in the northern counties to follow his example.

Nearly 100 lb. of good tobacco, which had been seized by the custom-house authorities of North Shields, on board vessels from foreign ports, has been sent off to the Crimea for the use of the English soldiers This is the second parcel that has been sent from Shields

ON Saturday morning the the ceremony of drumming [illegible] out of the regiment, mentioned at the [illegible] presence of a vast concourse [illegible] graceful conduct. The [illegible] between [illegible] Tower gates, and the [illegible] chanting of their red coats and caps, the drums and fifes struck up the "Rogue's March," and they were ordered off the ground, and took their departure amidst the loud execrations of the onlookers and the populace.

THE Lords of the Admiralty have notified that all colliers going from England with supplies of coals to the Baltic fleet must be at Kiel by the 1st of November, or forfeit their contracts.

THE new range of wooden barracks at Pembroke has been completed. The site on which they have been erected is a portion of ground [illegible] thousand men.

AMONGST the vessels now building at Pembroke are two dispatch gun-boats, on the construction of which a large number of hand [illegible] ployed. Owing to the rapidity with which their building [illegible] with, they will soon be ready for launching. [illegible] the diagonal system of planking, on which [illegible] Queen's yacht, [illegible] are built. The various other work [illegible] with energy, and a large increase has been made to the strength of the establishment. The ship-wrights are earning 6s. and 7s. per day.

THE [illegible] sailed on Saturday morning from [illegible] *Andely*, with 1000 quarter-barrels and 431 casks of [illegible] a mixed cargo, also sailed that day. The *Euphemia* is ready [illegible] These departures will leave the Arsenal waters nearly bare, the [illegible] transports being the only ships now moored there. The shipping-offices are to be removed. Captain Macdonald, the naval superintendent of transports, whose offices have been hitherto in the dockyard, will remove to the Royal Arsenal.

Two cavalry officers, consisting of one Captain and one Lieutenant, from each cavalry regiment serving at home, are under orders to proceed to Scutari, to take charge of the Cavalry Depôt there—the services of the present officers in the charge being required at the field.

It appears from the official reports of the number of casualties in the British army, from the date of the first landing in the Crimea till the capture of Sebastopol on the 8th September, that we have had 198 officers, 152 sergeants, 20 drummers, and 2106 rank and file, killed; 475 officers, 645 sergeants, 71 drummers, and 10,984 rank and file, wounded; and 13 officers, 23 sergeants, 2 drummers, and 469 rank and file, missing. The casualties in the Fleet, Naval Brigade, and Royal Marines have not been [illegible]

ROMAN BANDITS.—M. Dierckx, the chief curate in the parish of St. James, at Antwerp, was travelling a few days since from Rome to Ovita Vecchia, when three masked bandits, in broad daylight, stopped the diligence in which the curate and eight other passengers were sitting. The bandits compelled the coachman and guard to lie with their faces to the ground, while they came up to the top of the vehicle and extracted the sum of 7000 francs from a parcel. Not one of the passengers was molested; a lady, however, at the instant the door was opened by a robber, being very much frightened, offered him a sum of 300 francs or thereabouts, which was accepted, as also was a smaller sum tendered by another of the passengers. All the other travellers escaped with merely a fright.

A SECRET EXPEDITION.— H.M.S. [illegible] off Kazatch Bay, Sept. 26, 1855.—I write to the Admiralty would decide what is to be done with the fleet. We are of very little use here now; but still I am not sanguine about returning to England just yet; not, indeed, till the Russians are driven from the north side of Sebastopol. We have announced something like this to them, and they reply to our fire very feebly. They appear to be moving their army by degrees into the interior.—I suppose to secure winter quarters. It is not known what the plans of the Allies are; these natives are very sparingly kept under strict than they used to be; but it is the general opinion that something important is contemplated, for the fleet has been employed in carrying out a regular course. On Friday last the [illegible] and the French and we lay [illegible] having performed [illegible] me trick. Having landed our [illegible] army, the fleets [illegible] to our old [illegible] Sebastopol on Sunday evening. [illegible] know or we make our [illegible] [illegible] [illegible] being made [illegible]

I start from it [illegible]

AN ENGLISH PRISONER IN RUSSIA.—Captain James Duff, of the 90th Regiment, who was taken prisoner on the 26th of November, 1854, [illegible] of Inkerman, arrived at Sebastopol lately, having been exchanged [illegible] His own version of his adventures and treatment in Russia [illegible] from the account which appeared in some of the journals. He was a prisoner while on picket in the White House ravine, leading to Careening Bay He attributes the fault of his capture to a party of men of the [illegible] division on his right, who fell back, leaving him and the men with him to be picked were fighting in front, and had nearly expended their ammunition, when, to their surprise, they suddenly found some of the enemy on their flank. The [illegible] proved that they were being surrounded, and attempted to fall back, but did so, one man who kept close to Duff was shocked over by his side. He then tried to make for a path leading up the hill, and had proceeded a few yards when he and some Russians in front, directly opposed his further progress. Eight or nine men then closed upon Duff, and, as he still struggled to escape, one gave him a tap on the head with the butt of his musket, which stunned him. The Russians then carried him off in triumph. [illegible] would not let him walk. He soon recovered from the blow on the head, and while going along was fully aroused by a volley of Minie balls which came whistling among his escort. [illegible] of them allowed him to wa[illegible] [illegible] [illegible] [

COUNTRY NEWS.

THE REPRESENTATION OF TOTNES.—The vacant seat for the Borough of Totnes, for which the Duke of Somerset recently sat, is to be contested by Mr. J. T. Mackenzie, who has issued an address dated from the Oriental Club, Hanover square. He declares himself in favour of an energetic honest prosecution of the war, that it may be speedily and honourably terminated. He is opposed to the Negro-Sioux grant; is an advocate of improvements in every branch of the public service, and feels a personal and direct interest in the prosperity and development of our Indian empire and our colonial dependencies. On the subject of education and "needful changes in our legal and military systems" he entertains sentiments which he has "reason to believe are in unison with the opinions of the great majority of Englishmen." Earl Stafford, the other candidate, has already canvassed the electors, and has the interest of the Duke of Somerset.

MEETING OF MR. HASTIE, M.P., WITH HIS CONSTITUENTS.—Mr. Hastie, M.P. for Paisley, met his constituents last week in the Exchange Rooms, Paisley, and briefly stated his reasons for the votes he had given on the principal divisions. He thought the resignation of Sir J. Graham, Mr. Gladstone, and Sir Wm. Molesworth, one of the best things which could have happened for this country. He gave these gentlemen too much credit for ability to believe that they could be satisfied with Mr. Cane's opinion of public virtue; in taking that view, he felt the speeches of these men to be so unpatriotic and unworthy of statesmen that he hoped never again to see one of them a member of her Majesty's Government. He gave Lord Palmerston credit for the energy, perseverance, and ability he had shown in performing the duties of his high office since the secession of the three colleagues referred to. Of course he could not say how or when the war was to end; but looking at the vast resources of this country and of France, and comparing them with the resources of Russia, he could not but hope that the war would soon come to a termination if it were for no other reason than that the latter Power must soon be exhausted in a contest with France and England. With regard to our own capacity for carrying on, if need be, a prolonged contest, he would say that, in the year 1801, when the population of Great Britain, exclusive of Ireland, was only half what it was now, the nation raised £41,000,000 for the war, while last year, with a population double that of 1801, we were only called upon for a contribution of £16,000,000 to the war. It must be remembered, also, that our material resources had immensely increased since that time; and that the war, so long at least as it was confined to Russia, interfered very little with our commerce. Our exports to Russia before the war began only amounted to two per cent of our whole exports. Only 14 per cent of the grain and flour imported into Great Britain came from Russia, and 8 per cent of that proportion came from the Black Sea, of which our navy had now the command. And with respect to the supplies of hemp, flax, tallow, and of other merchandise exported from Russia, the occurrence of this war would only stimulate other parties, our own colonists among the rest, to send us these articles in time to come. Mr. Hastie concluded amidst applause with the sentiment that energetic prosecution of the war was the best way to make a safe and honourable peace.

MARRIAGE EXTRAORDINARY.—One day last week a young man of very gentlemanly appearance, attired in the first style of fashion, wearing a diamond ring on his finger, with a gold watch and appendages, presented himself at a respectable hotel in Carlisle, and, after making a [illegible] requesting accommodation, ordered a [illegible] and [illegible] which was [illegible] [illegible] [illegible]

SUBMARINE ELECTRIC TELEGRAPH BETWEEN NEWFOUNDLAND AND CAPE BRETON.

TERMINUS AT CAPE RAY, NEWFOUNDLAND.

around which it was passed three times. From this it passed to a second iron drum of equal size, around which it passed the same number of times. From this point it passed over a huge iron cylinder on the stem of the vessel into the sea. These revolving drums were readily stopped by means of powerful brakes whenever it was necessary. The number of revolutions was indicated by a register attached, thus marking the amount of cable paid out per hour. Thirty-two men were constantly employed in the hold of the vessel in throwing over the coils of cable, to avoid, as far as possible, any kinks which might occur from its rigidity, and also to stand by the brakes whenever kinks should occur. Notwithstanding all the care exercised, it was impossible to prevent these interruptions, and on one or

THE LAYING OF THE ELECTRIC CABLE.

two occasions to prevent even a break in the cable itself. By means of signals shown from the barque the steamer was promptly stopped at each occurrence of these unfortunate kinks.

The present failure of this important enterprise is partly owing to the gale, and partly to the difficulty of paying out a cable from a vessel in low. The Mediterranean and the Black Sea cables were both laid directly from steamers, and the former during a gale as heavy as had been experienced. Besides, the *James Adger* is neither adapted for towing, nor is she at present in proper trim for such a service. Although it is sad to reflect that so much energy, industry, and perseverance have now been expended in vain, the connection will doubtless be successfully made before another year.

SKETCHES IN THE BALTIC FLEET, BY J. W. CARMICHAEL.

SEAMEN GOING ON BOARD H.M.S. "DUKE OF WELLINGTON," OFF CRONSTADT.

THE "HASTINGS," "CORNWALLIS," AND "AMPHION," ENCOUNTERING THE BATTERIES OF SANDHAM.—(SEE NEXT PAGE.)

SKETCHES IN THE BALTIC FLEET.

THE pair of scenes engraved upon the preceding page were sketched by Mr. Carmichael, during his recent visit to the Baltic. The first represents a striking incident in the operations of the Fleet upon the territories of our Russian enemy—the *Hastings*, *Cornwallis*, and *Amphion* encountering the Batteries along the eastern shore of the Island of Sandham, in August last. The vessels pre-ent Mr. Carmichael's usual fidelity of portraiture: in front of the picture are the remains of a Russian boat.

The accompanying Illustration portrays the magnificent fing-ship, the *Duke of Wellington*, with the lively incident of Midshipmen going on board the vessel to copy the orders of Admiral Dundas.

THE RUSSIAN FOUGASSE.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

Dublin, 46, Talbot-square, Oct. 15.

PERMIT me to offer the following observations upon the Russian Fougasse, to which is now attached a painful and melancholy interest. Some time since a description of the several machines of the Baltic was given in your valuable journal, on which occasion I was committed in stating that our ships struck a bigger, which before a small glass vessel containing sulphuric acid, which produced the explosion by flying on chlorate of potash, lying in contact with the gunpowder. Instead of chlorate of potash, it should have been, in that account, equal parts of chlorate of potash and pulverised white sugar; for sulphuric acid acting on that important salt alone produces decomposition, but no combustion, even if it touch gunpowder or be mixed with it. My attention was again called to the Fougasse this week by reading the article, "The War in the Crimea," page 434, from the pen of your able Artist, in which he says, "the Russians had placed a Fougasse over it, and an accidental tread upon a wooden peg, driven into the earth, broke a *glass tube of inflammable matter*, which communicated with the powder below." It should have been a glass tube of sulphuric acid, which fell on chlorate of potash and white sugar, as above. It is evident, from the error having been in the composition from the Baltic and the Black Sea, that some misunderstanding exists respecting the Fougasse, which General Simpson calls "an invention peculiarly Russian." The adaptation of this old experiment in chemistry to warfare proves that our barbarous enemy is a skilful and scientific engineer

I am, &c.,

WILLIAM LOGER, M.D

THE MUSCOVITE JERUSALEM.

According to the Lutheran creeds as not far from Moscow a place re joicing in the euphonous title of "Voskresenskoi." The interpretation of this outlandish term is "The New Jerusalem;" in other words, it is a counterpart of the Holy City. One of the principal features of attraction is a mock tomb, called the Saviour's sepulchre, to which crowds of "the pious" continually flock for the purpose of offering prayers for the deliverance of the real tomb. They are taught also to supplicate Heaven for the extermination of those who guard the "holy places," and to invoke a like curse upon such as have betrayed the Christian cause by becoming their allies.

It appears that this imaginary Jerusalem consists of a vast temple, the site of which corresponds with that of Palestine, save in the absence of a brook and a glowing sun. The resemblance in the latter particulars is rendered perfect by immense artificial works, so as to confirm the illusion almost beyond the power of discovery. On one side of nature is a brook, upon the banks of which are inscriptions denoting that the pilgrim has reached Kedron, while on the other side is an eminence, called the Mount of Olives, on which is a spacious architectural enclosure, the behalf of stee before him a grand edifice, in imitation of the one erected over the Holy Sepulchre, consisting of numerous chapels, and all the accessories be longing to this famous prototype. It is said that the impression increases after having penetrated into the interior, which, like that of the true temple are mine. It copied, and are of the same dimensions as the tombs in all their dimensions and with lighting and ornaments are all of the same description as those of Jerusalem. In the sanctuary, too, there are the same (continual) burning, and so complete is the deception, that the equal degree of emotion excited among the ignorant peasantry, as the sacred grotto itself. Such is the Muscovite Jerusalem. He is a most extraordinary sham is attributed to the Russian character of Peter the

At now as to the motive for so strange a creation. Among the tenets upon the wounded Russians at Inkerman was a belief that by becoming stone-scented, and purporting to be a guide to the mentioned fabric. This work discloses a secret which the ingen western speculators has failed to worm out. It shows that the has had a clear pole of attraction besides Constantinople, in fixed their eyes upon the Holy City of the Hebrew. In order gain its possession the German capital they have appealed to the spirit of their people, by giving to the enterprise the sanctity of religion, and have succeeded in the "land of milk and honey," which they destined to be their inheritance. But they, day-dreamers as they are, have not reckoned upon the Lion of Judah, who will, in the fulness of time, come upon the Holy Zion, to see their vultures bespattered with cherished wings over the desecrated fane of Salem. To which the pharaoh, not only have they offered upon the baser pave ments of idolatry; but only have they fed their lust for conquest and plunder, but have failed to excite their fanaticism, to awaken their religious zeal. In short, the Muscovite has failed to work out the empire's destiny. Kosciusko's "Yorkscenskoe," or "the New Jerusalem," is also no pilgrims visit its shrine every year, and they are encouraged to perform the "holy act" as a means of impressing strongly on the minds of the Russian people a sacred feeling of the future possession of the Orient. We may, therefore, expect that the severance of the Russian Empire will be effected through the instrumentality of the Greek Church, and that Constantinople will be the last province that will be severed from the Muscovite Empire. There is no other way in which the Russian Empire can be dismembered, and that a company is in course of formation to carry out the project, execution of which will necessitate, at the least, an outlay of one hundred millions of pounds sterling.

A TRIP [illegible] We can confirm the report that the object of the bomb does is to be submitted before long to a committee of the States interested in the question; and that Dr. Marsh, in a despatch sent to these States, expresses a hope to see colleagues assembled in the second fortnight of November.—*London Gazette.*

A RAILWAY TO FRANCE. The project of a submarine railway between England and France, which was much talked of a few years ago, and then dropped, is now once more in the [illegible] Channel, established a "navvy" to make a [illegible] between [illegible] and [illegible] [illegible] [illegible]

possible Shakespeare could have written of these localities as he has done without his having seen them personally.—JOHN MARSHALL.

RARE OR UNPUBLISHED LETTERS.

AN INEDITED LETTER OF CHARLES LAMB.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

The lovers of literature are much indebted to the ILLUSTRATED LONDON NEWS for the thrice-welcome present of its "Memorabilia." Amidst the caprices of fashion, the jarring of politics, the vivid heart-stirring descriptions of battles abroad, and the revolting, heart-sickening details of crime and misery at home, it is pleasant to turn to one instructive and peaceful page devoted to old books, old ballads, and such like interesting and recondite lore. Such a page comes before the public with prudent and appropriate grace; and such a letter" as the following, written by the compassionate "Elia" in his happy rest mood, cannot but prove acceptable to kindred spirits who have taste to admire and hearts to feel its delicate and affectionate humour; who, in this harsh, busy world, find "leisure to be good;" and, with dear old Izaak Walton, "study to be quiet." It was my delightful privilege to enjoy the friendship of Charles Lamb for many well-remembered years: to listen to his wildest sallies of innocent mirth; to his grave, sarcastic wisdom; and to his exquisitely poetical melancholy. Through these various moods the characteristic originality of his versatile genius, the beauty and flow of his thoughts and language, and the truth and tenderness of his heart were finely exhibited. The quaint wit, the subtle and generous critic, the social philosopher, the playful satirist, the sage gifted with "a most humorous sadness," and the sincere friend, were harmoniously combined in this rare child of humanity. I envy not the microscopic eye that could discover his failings. I would dash from me with scorn the dastardly pen that could dare to record them. On a future occasion I may have something to communicate in the way of personal recollection and anecdote. For the present let the highly-valued and original letter (*in his own autograph*), that I now send, suffice. It will ramble and adorn this *recherché* "Column," and I'm about to meet the eye of one of his ancient chums and associates—a few of whom, and but very few, are still living—it will make the lip quiver and the heart tremble. Happy spirit!—grateful for the past, contented with the present, and not painfully solicitous for the future—I mourn thee. But my hope and thine, while it permits and pardons the "human tear," ensures at no distant period a joyful reunion. The dark cloud that overhangs the Valley of the Shadow of Death is but the twilight of an eternal morning.

GEORGE DANCER.

Canonbury, October, 1855

Twelfth-day, '23.

The pig was above my feeble praise. It was a dear pig. There was some contention as to who should have the ears, but, in spite of his obstinacy (deaf as these little creatures are to advice), I contrived to get at one of them.

It came in boots, too, which I took as a favour Generally these petty toes, pretty toes are missing. But I suppose he wore them, to look taller.

He must have been the least of his race. His little feets would have gone into the silver slipper. I take him to have been a Chinese, and a female.

If Evelyn could have seen him, he would never have farrowed two such prodigious volumes, seeing how much good can be contained in—how small a compass.

He crackled delicately.

I left a blank at top of my letter not being determined whether to address it to, so farmer and farmer's wife will please to divide our thanks. May your granaries be full, and your nuts empty, and your chickens plump, and your envious neighbours lean, and your labourers busy, and you as idle and as happy as the day is long

VIVE L'AGRICULTURE.

How do you make your pigs so nice?
They are vastly engaging at that age.
I was so myself.
Now I am a disagreeable old hog—
A middle-aged-gentleman-and-a-half,
My faculties, thank God! are not much impaired.

I have my sight, hearing, taste, pretty perfect: and can read the Lord's Prayer in the common type, by the help of a candle, without making many mistakes.

Believe me, while my faculties last, a proper appreciator of your many kindnesses in the way: and that the last lingering relish of past flavours upon my dying memory will be the smack of that little ear. It was the left ear, which is lucky. Many happy returns (not of the pig) but of the New Year to both

Mary, for her share of the pig and the memoirs, desires to send the same.

Yours, truly,

C. LAMB.

*It will be curious to compare this letter (addressed to two liberal friends) with his celebrated "Dissertation on Roast Pig." Roast pig was the pet both of his palate and his pen.

MONUMENT TO SCHELLING.—The King Maximilian of Bavaria is having a monument raised to the memory of his tutor, the philosopher Schelling, who died at Ragatz, a canton of Saint Gall, where he was buried with due Catholic solemnity. The march, M. *Berlioz*, adds, of the deceased before his death abjured the perverse and heretical ideas he entertained, and whether he returned within the pale of the apostolical church. "In Switzerland," says the *Indépendance*, "people ask by what right the papal Nuncy incessantly meddles in this way. If it is in virtue of his post as Chargé d'Affaires, the question he has just mooted is no concern of his. If he acts as Archbishop (*in partibus*) the Swiss Confederation are not likely to tolerate such an interference."

SPANISH REFUGEES.—The Spaniards who have been expelled from France and are at present in London have petitioned Lord Palmerston to intercede with the French Government for the purpose of obtaining for them permission to return to France on account of the difficulty they find of living on their limited means in England. The Premier is said to have consented to intercede, but previously he demanded from the refugees a declaration that on their return to France they would do nothing against the new act of Queen Isabella. The refugees refused, and this, of course, put an end to the affair.

A WARNING TO AMATEUR PHOTOGRAPHERS.—A day or two ago some curious French visitors inspecting one of the underground "tanks" with which the Redan abounds found a box containing some implements which they recognised as belonging to a photographic apparatus. They also found some chemicals connected with the science of photography. The name of a celebrated firm of opticians in Regent-street, London, was marked on some portions of the apparatus. It soon became spread abroad that the Russians, among other devices, had been employing photography against us; and the circumstance of the Russian servant having sent to London for his implements, if it were found to fall again into English hands, was quoted as a curious coincidence. The most valuable part of the machine, the lens, had not been left behind, and the parts which remained, therefore, were broken up and carried off by degrees as curiosities from motives of curiosity. Some of the chemicals were of actual value, and were also taken away. The next day an officer in naval uniform was observed searching all jointly at the bank in an unlucky box was a photographic apparatus had been destroyed. Presently his eye fell upon a broken portion of the band for the camera, and then the distressing truth flashed across his mind. The riddle was solved. He had come up from his ship a couple of days before on his present visit to the Redan, and had taken some photographs, but left with the intention of returning to take others. Not wishing to encumber himself with the conveyance back of all his apparatus, he had concealed the lens of it in one of the under-ground bank alluded to, and, estimating too lightly the inquisitive and acquisitive character of his neighbours, had hoped to find his property waiting in the same place for him on his next visit. So was concluded the "adventure" respecting the Russian photographs of the Redan, though, as some who made the first discovery may not have heard of the second, the story of this, among the other scientific pursuits of the defenders of the Redan, may yet be chronicled as an established fact.—*Letter from the Camp.*

BOMBA AND HIS SUBJECTS.—A short time ago some hundred and twenty or fifty of the mule-drivers in Sicily were employed by the British Government to accompany the mules which were purchased on the Government for our service in the Crimea. Knowing well the tender mercies of their own Government, they asked for passports, but were informed that passports were not at all necessary. A British steamer, not many days since, landed those men at Messina. Six of them, it appears, belonged to Reggio, where, upon their arrival, they were arrested and cruelly beaten. This act has taken place since the fall of Malta; it shows, therefore, that no mantle can cover upon his successor. The case, too, of a young student in the Priests' Seminary at Sorrento has created a great sensation in that quiet village. The lad is a native of Massa, of poor but respectable parents. When the news of the fall of Sebastopol became known there the enthusiasm of the poor fellow was greatly excited, and he wrote a few lines in honour of the Allies; and in the course of his little poem branched off into some aspirations for liberty in Italy. He confided his piece to four individuals, three of whom were unknown to him personally. The acquaintance of the fourth, a young man of great learning, he had made a few weeks ago in the boat which plies between Sorrento and Naples. He was charmed with his handwriting, the lad sent his poem to a sergeant of the invalids at Massa, his penmanship being clearer. As the termination of some of the verses rather bothered the sergeant, he showed them to a lieutenant, who immediately smelt treason. The rhymes were forthwith carried to the Commandant, who considered them of sufficient importance to be carried by him specially to Naples Orders soon arrived for the arrest and incarceration of the hapless boy. For eight days he remained in prison in Sorrento, and at the expiration of that time an order was sent for his transfer to the prisons of Naples. On the evening of his removal the ill-starred companion of his boat voyage, whose only sin it was to be thought worthy of a declination, was arrested at the Casa Lovi, and I report says that two or three others have shared the same fate.

CHESS.

TO CORRESPONDENTS.

T. J., of Ilkeworth.—We cannot say. Not agreeing with the author's solution, it was no doubt destroyed by the Examiner, with hundreds of others.

J. P., Southfleet.—Your solution of the Indian Problem is the true one.

FRENCH, DEA, and W. W. O.—See the notice to "W. C., of Sudbury."

ARTHUR, W. C., BERWICK, J. T. C., and others.—In Kuligma No. 947, add a Black Rook at Black's King's Rook's 6th sq, without which the mate is not practicable.

W. C., Sudbury.—Dean has reported on us turn, but there is such a vast accumulation of similar matter that we cannot find room. Less Lore is required to do them all justice.

J. T. C., Blackheath.—They are now under examination.

D. M., Tamworth.—No difference, except in name, between a Chess Problem and a Chess Enigma

J. P. D., Hove.—Type at a Chess Club recently established at Romford, under the presidency of the Rev. W. J. Skilton, M.A., which meets for play every Tuesday and Friday evenings.

R. B. J., G. W. All of them ineligible.

J. T. C., Blackheath.—No. 3 is impracticable, and No. 4 too simple. The last batch sent are under examination; but we should recommend you in future to concentrate your attention upon one good problem, rather than dissipate it among a dozen that are indifferent only.

R. A., Portsea.—Much below our standard

CHESTER RUSH.—Very inferior to many of your previous ones

LUCK, Quincy, Illinois, U.S.—They are now under consideration, and shall be reported on forthwith

J. H.—It will be published in France, and, if the wrong moves can be carried out, will be translated and published in England also, we believe. But we are not yet fully apprised of the date of

ZETA.—1. You are quite mistaken in supposing the rule which permits a plurality of Queens is a modern one. It was known to some of the game from the earliest introduction of chess into Europe. For an allusion to the game founded on two queens see Greene's Groatsworth of Wit, 1621.

2. In No. 3 Black can move B at his K's Rook's 8th. as we cannot offer more than one solution in a Problem.

CLIFTON, DUBLIN.—Lord KNARESBOROUGH is in the country. The numbers of provincial Chess clubs supplied are extensive, and we expect soon to receive from the Isle of Wight, Bristol, Liverpool, Manchester, Leeds, and other towns, the names of the Chess clubs that are established in their respective neighbourhoods. Portsmouth and Southampton have each a Chess club, and Brighton has two. Portsea, Gosport, Ryde, Newport, Cowes, Ventnor, Shanklin, and Godshill have each a Chess club, although the current defence afterwards as one which demands the utmost possible care and attention. Let us suppose—

18.	P takes at	21 Q to K 5th (ch)	K to B sq
19. Q to Q 5th, or 6	R takes Kt	22. Q to K R 5th	R to K B 2nd
20. Q takes K Kt P	K to Kt sq		

This is the only really secure move; all else, we believe, enables Black to save the game.

* 19. Kt to K 3rd (ch) B to Q B 4th (best) 19. Kt takes P (ch) K to Kt 4
Q takes R R takes Kt

And again, we are inclined, Black would escape, gaining a piece for the exchange.

CHESS ENIGMAS

No. 948.—By M. E. C.

(The elegant little Knight-guard is the composition of a lady).

White Kt to his 8th, Q at her Kt 8th, R at Q Kt 2nd.
Black K at Q B 5th, R at Q 8th, Kt at Q B 8th, Ps at K 5th and Q 7th.
White playing first gives mate in three moves.

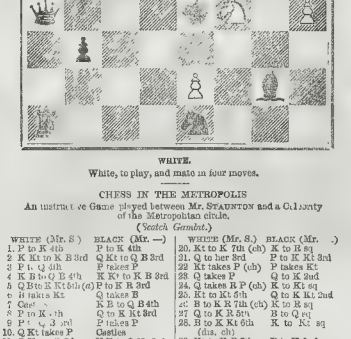
No 949.—By an AMATEUR.

White: K at Q B 3rd, Q at K 6th. R at Q Kt 3rd, B at Q B sq. Kt at Q 4th.
Black: K at Q R 7th, Q at K Kt 6th, R at Q R 4th, P at Q B 4th.
White playing first mates in four moves.

No. 950.—By an AMATEUR.

White K at Q Kt 6th, Kt at K t 8th and K B 3rd; Ps at K B 2nd and 4th, Q 3rd, and Q B 2nd.
Black: K at Q 4th, Q at K R 8th, B at K Kt sq; Ps at K R 2nd, K 3rd, Q 3rd, Q B 6th, and Q Kt 6th
White to play and mate in five moves.

The *Moniteur de l'Armée* announces that 217 pupils of the Ecole Spéciale Militaire, and six pupils of the Polytechnic School, Paris, have just been nominated sub-lieutenants of infantry regiments.



WHITE.

White, to play, and mate in four moves.

CHESS IN THE METROPOLIS

An instructive Game played between MR. STAUNTON and a CELEBRITY of the Metropolitan circle.

(*Scotch Gambit.*)

WHITE (Mr. S.)	BLACK (Mr. —)	WHITE (Mr. S.)	BLACK (Mr. —)
1. P to K 4th	P to K 4th	20. Kt to K 7th (ch)	K to R sq
2. K Kt to K B 3rd	Q Kt to Q B 3rd	21. Q to her 3rd	R to K Kt 3rd
3. P to Q 4th	P takes P	22. R takes R (ch)	P takes Kt
4. K B to Q B 4th	K Kt to K B 3rd	23. Q takes P	Q to K 2nd
5. Q B to K R 6th (a)	P to K R 3rd	24. Q takes R P (ch)	K to Kt sq

7. Castles	K B to Q B 4th	26. B to K R 7th (ch)	K to R sq
8. P to K 5th	Q to K Kt 3rd	27. Q to K R 3rd	B to Q sq
9. P to Q 3rd	P takes P	28. B to K Kt 6th	K to Kt sq
10. Q Kt takes P	Castles	(dis. ch)	
11. R to Q Q 5th	K R to Q Kt 3rd	29. Kt to K R 7th	B to K 2nd
12. P to Q Kt 4th (b)	K to R sq	30. Kt takes R	B takes Kt
13. P to Q Kt 5th	Kt to Q R 4th	31. Q R to Q sq	Kt to Q B 6th
14. B to Q 3rd	Q to K Kt 3rd	32. K R to K sq	P to Q 4th
15. B to Q B 2nd (c)	P to Q B 3rd	33. P to K 6th	K B to Q 3rd
16. Q Kt to K 4th	Q to Q B 6th	34. Q R to Q 4th	Kt to K 4th
17. P to K 3rd	Q takes Q B P	35. B takes R	B takes R
18. Q Kt to K 6th (ch)	K to Kt sq (d)	36. B to K B 7th (ch)	K to B sq
19. Q to Q 6th	Q to Q B 4th	37. R to K Kt 4th	Q to B 3rd
		38. R to K Kt 6th	

And White wins.

(a) This is an unusual mode of playing the open rg, and the authorities do not appear to have examined it sufficiently yet to pronounce a decided opinion on its merits

(b) Threatening to win the Kt, because if it be now moved, White can check both King and Queen.

(c) Prepara ory to a very complicated and perhaps too hazardous attack upon the adverse King

(d) We have here a situation of singular interest and difficulty, and the question whether Black could not make the Kt move to the Kt 8th square—his own square—is doubtful, although the current defence afterwards as one which demands the utmost possible care and attention. Let us suppose—

* 19. Kt to K 8th (ch) B to Q B 4th (best) 19. Kt takes P (ch) K to Kt 4
Q takes R R takes Kt

And again, we are inclined, Black would escape, gaining a piece for the exchange.

White to play and mate in five moves.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Duke of Newcastle is expected to arrive in England from the Crimea in about a fortnight. His Grace's health has been greatly improved by his journey to the East.

The French Emperor and Empress, and the Duke and Duchess de Brabant, left on Saturday afternoon to the Jardin des Plantes, and returned to St. Cloud at six o'clock, following at a foot pace the line of the Boulevards. Along the whole way their Majesties and their Royal Highnesses were received with loud acclamations. In the evening there was a grand dinner at St. Cloud.

On the 12th inst. the King of Prussia received Baron Brunnow, ex-Ambassador of Russia at the Court of London. Baron Brunnow has been staying about a fortnight in Berlin, at the Royal Hotel.

Sir Archibald Alison has two sons in the Highland Brigade in the Crimea, one of whom was in the Redan at the time an explosion took place, and the other was in the division which was to have been called upon to renew the attack next morning.

The King of the Belgians has presented a gold medal to M. J. De Geyters, of Antwerp, author of the Flemish poem read at the late celebration of the twenty-fifth anniversary of Belgian independence.

Ex Queen Amelia, the Duke and Duchess of Montpensier, with their family, left Brussels on the 8th for Paris. The Duke and Duchess of Aosta, the Count of Paris, the Duke of Chartres, the Duke and Duchess of Nemours, the Duke Alexander Philip of Wurtemburg, accompanied the august travellers as far as Hal-le-berg.

The *Nord*, in a letter from Copenhagen of Thursday, contains the following account of Sebastopol:—"The English generals, Admiral Lyons and the Countess de Persigny have been on a visit to Lord Raglan at his head-quarters, the country residence of Lord Clarendon."

The Emperor of the French, accompanied by the Duke and Duchess of Brabant, recently visited the Hôtel de Ville, the Louvre, and the Ecole Speciale. The royal party were received by M. Le Prefet, the eminent financier, whom they greatly complimented on the admirable manner, ease, and luxury of the Hôtel de Ville. Indeed.

Lord Brayebrooke has erected a musical monument in the chancel of Saffron Walden church to the memory of his two gallant sons who fell, one at Inkermann and the other in the cavalry charge at Balaclava. A touching inscription records that they were of the ages of twenty-four and thirty, the third and fifth sons of their parents.

It is said that Chevalier Bunsen has declared that he cannot accept a seat in the Prussian Chamber, as it is his firm intention to have nothing further to do with politics, but to confine himself to literary labours.

The Queen has appointed Henry Francis Howard, Esq., now Minister Plenipotentiary to the Emperor of Brazil, to be her Majesty's Minister Plenipotentiary to the King of Portugal.

The two representatives of Austria, Count Colloredo-Walsée and Count Valentine Esterhazy, both in Austria at present on leave of absence, will return to their respective posts at London and St. Petersburg on the return of the Emperor from Ischl.

T. B. Lawrence, Esq., Attaché to the Legation of the United States at London, and lady, went out as passengers from Liverpool in the Royal mail steamer *Africa* on Saturday last

Prince Pierre Bonaparte has left Marseilles for Corsica.

Thomas Chisholm Anstey, Esq., has been appointed to be her Majesty's Attorney-General for the colony of Hong-Kong.

M. de Bach, Austrian Minister of the Interior, has been affianced to the eldest daughter of Count de Bissi, Minister of Foreign Affairs.

The writ for the electing of a member for the borough of Totnes, in the room of Lord Seymour, now Duke of Somerset, will be issued next week.

The Duke of Modena has granted a pension of 20 francs a month to the widows of the men who may die in attending cholera patients, if ever they are in distress. The pensions are to be increased if they have children.

Mr. Urquhart has addressed letters to Lord Goderich, Professor Maurice, and the Rev. C. Kingsley, requesting them to undertake the task of adjudication with reference to the charges against Mazzini.

The exiled Archbishop of Turin, Monseigneur Franzoni, is at present staying in Paris.

The family and entire household of Count Augustus Brunetta d'Usseaux, Colonel of the Savoy regiment of cavalry, have been poisoned by mushrooms. The Countess, her eldest son, and one servant are already dead, and the other eight inmates of the house are in a dangerous state.

In consequence of bad health the Duke of Anhalt has nominated his consort, the Duchess Frederica, regent of that Duchy.

Mr. Pressly has been appointed Deputy-Chairman of the Board of Inland Revenue, in the room of Mr Thornton, resigned. Mr. Henry Roberts, formerly Under-secretary for Wales, has been appointed a Commissioner of Inland Revenue, in succession to Mr. Pressly.

General de Wedell, Governor of Luxembourg, has been sent for by the King of Prussia, and it is thought that he is to be charged with a diplomatic mission. Colonel de Manteuffel, Aide-de-camp to his Majesty, who has been already charged with different missions, has also been summoned from Dusseldorf.

Abdel-Kader has left Marseilles in the *Semoos* for the East. He intends first returning to Brussa for his wives and children, and will then proceed with them and his followers to Damascus, where he is for the future to reside.

The *Tablet* states that Mr. Lucas, M.P., had exhibited symptoms of improvement at the beginning of last week, but has since become worse.

General Bedeau has been visiting the scenes of the greatest battles fought on the soil of Belgium. On the 10th inst. the celebrated general went to Fontenoy, where the local authorities gave him a respectful but hearty reception.

The celebrated orchestral Strauss has received an invitation to visit St. Petersburg on the occasion of the approaching carnival, with a promise of 2000 roubles more for the engagement than he has ever hitherto received.

Baron Marochetti has presented to the Sardinian Government the model, on a small scale, of the monument to be erected to the memory of the late King Charles Albert. The monarch is on horseback, sword in hand, in the attitude of a man who appears to it as the only means of emancipating Italy from bondage.

At Copenhagen theatre, a few nights since, the public remarked the presence of the Countess Danner with the King—this being the first time, since her morganatic marriage, that she has taken her seat beside his Majesty in the Royal box.

The farewell banquet some time in preparation to Mr. Charles Gavan Duffy, M.P., has been abandoned at the earnest request of the honourable gentleman himself, on account of the illness of Mr. Lucas.

The St. Petersburg journals applaud the performances of Mdlle. Fanny Cerito in that city.

A subscription is about to be set on foot at Barnsley to aid the fund for erecting a monument to the late Mr. Feargus O'Connor.

Out of 352 Representatives, the future Prussian Chamber will contain nearly 200 public officials, placed more or less directly under the control of the Government.

At a late dinner of the English residing in the village of St. Pierre, near Calais, in honour of the Crimean victories, an ox was roasted whole, and afforded a banquet to about 600 guests.

The *Salut Public* of Lyons says that a large order has just been executed in that city for lapel badges, to be worn in Sebastopol.

The great estate of Nesmyl, with its immense dependencies, in Hungary, has been recently purchased by the Archduke Maximilian of the Cloister of Neuburg, for the sum of 600,000 florins, which, at twelve florins the pound sterling, is equal to nearly £47,000.

The money remitted to the Chancellor of the Exchequer, by sundry persons unknown, for conscience sake, for the year ended 31st March last, was £1890.

Postage-stamps have been introduced into Chili. They are of a square form, of a red colour, and about the size of the English postage-stamp. On them are printed the words, "Correos Forro Franco Colon Chile 5 centavos."

A Temperance conference was held at Edinburgh last week, when resolutions were passed highly commendatory of the working of the Public-house Act in Scotland.

The Technicoscope Government has granted 3000 lire annually for the three best Italian plays successfully represented on the boards of the Theatre Royal at Turin. The first prize is to be 1400, the second 1000, and the third 600 lire.

In France all the Imperial colleges and schools have had a week's extension of holidays for the taking of oysters.

A project of law for extending the barriers of Paris to the line of the fortifications is before the Council of State

The return of corn sold in Mark-lane market on Friday week is the largest hitherto made, at least as far as can be traced, the total amount being £15,214 1s.

PANORAMA OF A FASHIONABLE WEDDING.

The Lovely Bride, (Smothered in hysterics an Honiton lace).

The Rt. Rev. Father, &c., the Bishop.

Three Rt. Revs. who assisted the Rt. Rev. Father, &c.

Three Parsons' Clerks who assisted the &c.

The Duke who gave away the Bri. e.

The Small German (with a Principality as big as Mecklenburg-square), who has honoured the ceremony with his presence.

The Mother of the "Lovely Bride," &c. *(In tears of course).*

The Father, in emotion and dress tights.

The Twelve Bridesmaids, who waited on the Lovely Bride.

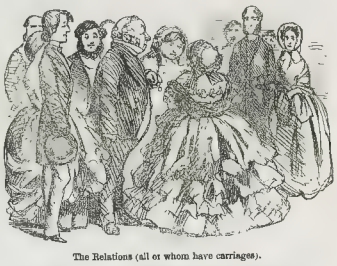
The Lady's Maid, with Scent-bottles, Preston Salts, Eau de Cologne, and other Restoratives.

The Young Member of Parliament, who is reported to have been rejected, and who attends to prove that he was not.

The Old Nurse (who recollects the Lovely Bride when she was only so high—bless her!

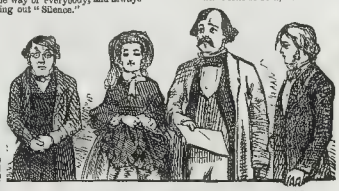
The Rosy Beadle, who is always getting in the way of everybody, and always crying out "Silence."

The Two Smiling Pew Openers, who make so bold, &c

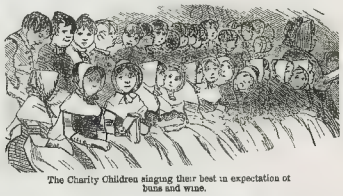


The Relations (all of whom have carriages).

The Bosom Friends
And Loving Acquaintances, looking down (and criticising) from the Gallery.



The Organist, and the Signor, and the Madame, and the Singing Master, who have kindly given their services on this occasion.



The Charity Children singing their best in expectation of buns and wine.

The Faithful Servants and Interested Tradesmen, some whom strew flowers before the Lovely Bride.

The Powdered Footmen with their Bamboos, Nosegays, Favours, and pink calves

The Post-boys who have been drinking the Young Master's Health all the morning

The Poor Bridegroom *(faint)* looking extremely sleepy, as if he had never been up so early before

The Mob—who have been attracted by the show of highly-emblazoned coachmen and carriages outside.

SCENE FROM THE NEW EGYPTIAN DRAMA OF "NITOCRIS," AT DRURY-LANE THEATRE.—THE CORONATION PROCESSION.

DRURY LANE THEATRE.

NOTWITHSTANDING the absence of unanimity among the critics as to the merits of Mr. Fitzball's new Egyptian drama, produced last week at this theatre, the piece, in theatrical phrase, "goes well, and evidently brings money." In the present rage for spectacle, elaborate getting-up, with what has been happily termed "the pomp and circumstance of modern art," this success might reasonably be calculated on. We have engraved one of the most imposing pageants, which occupies the whole of the last act. The spacious stage of the theatre is thrown open to the utmost extremity. The floor is covered with a carpet in imitation of an ancient inlaid pavement, and the procession commences from the back. The several deities of Egypt are introduced: there is Isis crowned, like Diana, with the moon; Osiris, decked with the feathers of the hawk and the ostrich; Apis, the sacred bull, with the white mark of deity on his forehead; Typhon, the evil principle, with his crocodile head; Horus, the son of Osiris, with the head of the sacred hawk; and there are the ibis, the crocodile, and the ichneumon, the horned snake, the asp, and the beetle, besides numerous other objects of adoration and worship among the Egyptians. Lastly, the King and Queen appear in the centre of the stage, surrounded by all those extraordinary forms, and the curtain falls.

Altogether, the appointments of this new drama, illustrating the life of what may be termed the most popular nation of the ancient world, are its great attraction. Thus, the tutelary deities of the land, the sacred vessels of the temple, and all the symbols of the national idolatry, combined with bodies of soldiery, vestals, priests, and sovereign equipages, figure in great profusion. Again, the scenic effects are very striking: the colossal architecture, the grandeur and sublimity of the sculpture, and the mystic character of the hieroglyphics and decorations, materially assist in producing the very effective *ensemble*.

GRAY'S NEW PORTABLE TENTING, OR SHEDDING.

THE new portable shedding, erected by the Bath and West of England Agricultural Society, at their annual meeting held in June last, at Tiverton, is the invention of Mr. Jonathan Gray, a member of Council of the Society. The tent has attracted great attention from the novelty, lightness, and elegance of its construction—it being the first time provision has been successfully made for the contraction and expansion of canvas in varying states of the weather. It was first inspected by the Medical Ordnance Department; and since its erection by the War Department—an officer of Engineers having been sent to Tiverton by the authorities officially to examine the shedding, and report on the principle. Government has since adopted a portion of Mr. Gray's principle in the Army Works Corps tents.

The novelty of the invention does not consist wholly in the appliance of indiarubber to canvas; it dispenses with the heavy and cumbrous ridge-poles hitherto in use, and substitutes galvanised iron wire, which passes through an eye-staple driven into the tops of larch poles, which poles are let into the ground by means of an auger, and were placed in one shed 10 feet, and in another 30 feet apart. The wire rope is fastened to double-acting screws, and then firmly moored by the Mitchell screw into the ground: 1100 feet run of the sheds or tents were erected at Tiverton in various lengths, as follows—One shed 240 feet by 20 feet; four of 200 feet by 20 feet; and one 60 feet by 20 feet 6 inches.

The centre or ridge wire passes over poles 14 feet 6 inches from the ground, the side or eaves ropes pass over poles 7 feet 6 inches from the ground; and, when strained to the requisite degree of tension, hooks are screwed into the top, on each side of the centre or ridge pole, as well as to the inward side of the eaves-poles; one of Hodge's indiarubber springs is then hooked on, having a ring at one end, through which a cord is passed diagonally from centre to eaves-pole throughout the entire

GRAY'S NEW PORTABLE TENTING.

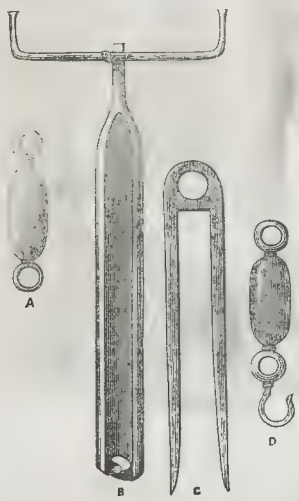
length of the tent. The springs are so far elongated by the lacing of the cord as to keep it at full strain when fastened. Mr. Gray thus obtains a very effective roof of iron wire and cord, combining, like the spider's web, strength and lightness. The canvas, of best double-warped duck, is tied securely to the ridge-wire by linen strings 4 inches apart, and attached to the eaves-wires by hooks, which pass through an eye in the indiarubber springs previously sewed on to the canvas within 10 inches of its edge, so as to allow the tent to be perfectly covered when the indiarubber is at full stretch.

We quote that portion of the speech of Earl Fortescue, as President at the Agricultural Society's dinner, which alludes to this invention. In proposing "The Army and Navy," his Lordship observed:—Measures, and he hoped, had been taken to secure more adequate attention to the sick and wounded, and this would be aided much by the valuable invention to which he was proud to call their attention. It was that of a worthy member of that society, Mr. Gray; and he (the noble Chairman) hoped, by the adoption of such shedding as that gentleman had invented, its benefits might be brought into general use for our army in the coming campaign.

Captain Hamly, of the Royal Engineers, in returning thanks, said: There was one subject alluded to by the noble Chairman, on which he might be expected to remark; he referred to the invention by a member of the Council of this Society, which he had that day had the pleasure of inspecting, and which had given him (Captain Hamly) the greatest pleasure as an engineer. Its parts and construction and the lightness and elegance of the invention had attracted his admiration in a very high degree.

As Mr. Gray has neither patented nor registered his valuable invention, but presents it freely to the Government, societies, and the public, it is but fair that where his principle is adopted, he should receive the credit due to him as the inventor.

We have engraved the tent, and the details of the invention:—



A—An indiarubber spring, drawn of the actual size, with two rings, through which the wire rope is passed.
B—An auger with which the holes in the ground are made to receive the tent-pole.
C—Iron staple driven into the heads of the poles. The wire rope passes through the holes, and forms the ridge and eaves of the tent.
D—An indiarubber spring used to keep the canvas down at the lower or eaves end.

SAXE-COBURG-GOTHA. It has already been stated that the Duke of Saxe-Coburg-Gotha recently declared in the Germanic Diet that he would oppose the demand of the nobles of his Duchy for restoration of their ancient privileges, abolished in 1848. In consequence, twenty-one villages of the duchy have just voted an address to his Royal Highness expressing their gratitude for this liberal policy, and it was presented a few days ago, after his return from Paris, by a special deputation.

SALARIES OF THE JUDGES.—A return from the Court of Chancery has been issued of the names of the Judges of the Courts and of the year 1853: the amount of their salaries; the fund out of which each return was paid, the gross total amount of fees collected from suitors, whether by stamps or otherwise; the purposes to which the fees were appropriated, the amount of the surplus of such fees, if any, paid and in aid of any deficiency in the amount of such fees, if any, which all fees received were applied to the holding of the Courts, and as providing courthouses and offices, and repairing, furnishing, &c. of the same.

SCARCITY OF SALTPE[TRE]. The Genoa [Powder] Mills, situated five miles [from] Genoa, making 400 c. [wt.] of powder, blew up on Se[ptember] explosion. No lives were lost. These mills have exploded four times in the last eighteen months and the new mills are [to] be made. The proprietors had procured the most approved machinery for safety, and employed none but the most experienced [men], all of whom had worked at powder-mills, either [in] Italy or [else]where for many years. [The] latter explosion, nearly [all] the machinery was still rising. The [works] have been [entirely] destroyed, not [leaving] any nothing of stock and machinery. The [works] will be rebuilt, and the mills in a few days, they being unable to procure saltpetre, not [a] single article can be procured in the Escurial cities. The demand for Russian [saltpetre] it advance in price 150 per cent in the last seven days, and Russian agents in New York and Boston bought by sample all that will arrive this year from Calcutta. It is said [that] the United States [Government] have [ordered] large quantities of saltpetre from Calcutta, and [that] Russian agents [are] now [in] Calcutta, all [to] be [sent] to the United States.—*Rochester United States Union.*

IN FRENCH SOCIALISTS IN [JERSEY]. The [Government] has lately prevailed throughout Jersey owi[ng] to the [publication] on her Majesty in a paper published [in] Le [Socialiste], entitled and unanimous meeting was held at the Queen's Assembly Rooms —Mr. N. Le Quesne, Constable of St. Helier, in the chair—when the following resolutions were unanimously [carried]. That [it] is the opinion of this meeting, it is right that this country should at all times afford a safe asylum to political and religious exiles, whatever may be their country or their creed. But that in return for the home and protection now [enjoyed] in the British Empire, it is the duty of refugees to submit to the laws, and that to do otherwise is an abuse of useful [hospitality] and a gross violation of [morality] and [decency]. Learning with regret that during the [past] year [certain] have seditiously published in the Island a [paper] entitled [*Le Socialiste*], which has for its object the suppression of Christianity, the [overthrow] of the [Government], and the destruction of all [property], including that of [individuals]; and [considering] that it is our privilege [to] [enjoy] the most complete liberty, in the most emphatic [manner] by the Socialist [journal] before named, which [openly] [advocates] infidelity, calls for the overthrow of all constituted authorities, [insults] the great and cordial ally whose efforts in cementing the [union] of England and France entitled him to the respect and attachment of the people of this country, but extols political murders, [and] denies regicide, and [has] wantonly insulted the Queen of this realm. That in doing [this] considers the publication of such [a] [publication] as highly [immoral] [and] [disgraceful] to [the] Island, and that [it] will be adopted [by] [the] [Government] [in] [Council] [to] be communicated to the Right Honourable the Lieutenant-Governor" [in] [which] [the] [resolutions] [are] [stated] [to] [be] [adopted]

NEW BOOKS, &c.

Recently published, in one volume, post 8vo, with 210 Engravings, cloth, 7s. 6d.,
THE Library Edition of the WAVERLEY NOVELS, produced at a cost of £13,000, and forming one of the handsomest works published in this country. It is illustrated by upwards of TWO HUNDRED ENGRAVINGS on Steel, after Drawings by Turner, Leslie, Stanfield, Wilkie, Roberts, Frith, Ward, Phillips, Tenniel, Cope, Solomon, Faed, Horsley, and the principal Portrait-painters of the day, and is the only Edition in which the Novels are illustrated throughout. These plates are engraved in the very highest style of the art, and by first-class artists, and are printed on fine toned paper, in such a manner as to preserve the beauty of the original impression. Each Volume contains a Vignette Frontispiece, from which the Author's name is omitted, in order that the Illustration may be placed on the first page of the Novel. Also, a Portrait of the Author, engraved on Steel, after Watson Gordon's Picture in the Scottish National Portrait Gallery.
The Introductions and Notes to the Novels, and the Author's Prefaces, which have been carefully revised, and in many instances rewritten, by the Author, will be found in this Edition. Also a Glossary of Scottish Words and Phrases, which will be found a most useful Companion to the Novels, and a Copious Index to the whole of the Characters mentioned in the Novels.
All former Editions are superseded by the Publication of this Edition, which contains the Author's last Corrections and Additions.
Complete in 25 vols., demy 8vo, with 210 Engravings, cloth, 7s. 6d.; or in 25 vols., fcap. 8vo, with 210 Engravings, cloth, 3s. 6d.
A detailed Prospectus, containing Specimen Illustrations and Specimen Pages of Letterpress, may be had of all Booksellers.
EDINBURGH: ADAM and CHARLES BLACK. And sharply, Hamilton and Stoneman, London. Sold by all Booksellers, and at the Railway Stations.

Bed-hangings, Cornices, Poles, Rings, and Tassels, ... Japanned Iron

SKETCHES IN THE CRIMEA.

PASS OF FOROS, BAIDAR, SKETCHED BY J. A. CROWE.

THE VALLEY OF BAIDAR.

This romantic locality, upon the beauties of which so many travellers have dwelt with rapture, has lately acquired a new interest from the military movements taking place in its vicinity. On the 22nd ult. we hear of French troops moving on the Russian left by Baidar Valley, apparently engaged in discovering the extent of the Russian position. The following facts and speculations relating to the strategic movements of the Allies in the Crimea, from the mountains of Baidar and the town of Eupatoria, are by Colonel St. Ange, the military writer in the *Journal des Débats*:—

The corps d'armée of Eupatoria constitutes, although at a distance, the extreme length of the general system of operation of the Allies. This corps menaces both the right of the Russians and the centre of their communications with Southern Russia, from which they obtain their supplies in the Crimea. Their army before Sebastopol maintains for the present its right at the northern forts, its centre in the fortifications of the Mackenzie Heights, opposite the lower course of the Tchernaya and its left on the heights above Tchorgoun, which are occupied by the Piedmontese. But this left appears at present greatly menaced by the movements of the right wing of the Allies in the mountains of Baidar. The only elements of appreciation which we yet possess are the despatches of General Gortschakoff, the last of which is dated the 6th. He first of all spoke of engagements of the vanguard towards Urkousas, or Ruikacata according to the maps, a village situated above Baidar, and said that our advanced posts had been repulsed by the Cossacks; then he announced that that place remained in our power: then that the Allies had on the 22nd ult. an engagement with his infantry, and that they retired towards the same Urkousas; and afterwards that the Allies, having come down from the mountains, had "forced themselves a passage"—an ingenious expression to disannulate some combat in which the Russians were driven from their position. Finally, under date the 4th, the Russian General announces that the Allies were extending their operations from the mountains of Baidar to the valley of the Upper Belbec; and, according to another despatch of the same General, of the 6th, our troops had left the Upper Belbec. Thus, then, they had only gone so far to make a reconnaissance. But this sole indication denotes a marked progress of the Allies on the left wing of the Russians to surround them. The Belbec, in fact, flows at three or four leagues to the rear of Mackenzie. We do not know to what part of the valley of the Upper Belbec they went, but it may be supposed that it was to Kariou, opposite Foti Sala, because there exists there a road which crosses the mountains of Baidar to that village. It is even to be noted that from Foti Sala the road runs on the right bank of the Belbec, to join the high road from Sebastopol to Simpheropol, at a place named Khutor-Traktir (the Inn Farm). It is the road in which the Tartars of the southern region were accustomed to take to reach Bagtcheserai.

As the Russians no doubt still occupy the village of Ai-Todor, at the rise of the Chouliou, which falls into the Tchernaya at Tchorgoun, and the village of Chamli-Ozembak, the Allies will probably not attempt to establish themselves on the Upper Belbec before having driven the enemy from Ai-Todor and the other position—if that is to form part of the plan of Marshal Pelissier to prolong his right wing to the Belbec. General Gortschakoff lastly announces that the Allies have removed their troops from their right, between Balaclava and the Tchernaya. This is very well explained by the movements which we have just described. The Russians will not attempt to advance in that direction (where, by the way, there are reserves), because then they would expose themselves to be taken in the rear by our right wing. However this may be, all the right wing of the army has taken possession of the mountains situated between Baidar, the Chouliou, and the Belbec, on the extreme left of the Russian army. It is even fortifying itself in the most important passages, in arming redoubts on commanding positions, and is forming roads to facilitate the arrival of provisions and ammunition. These measures seem to indicate that the army thinks of establishing itself during the bad season on the line from Sebastopol to the Upper Belbec.

The first of these Illustrations, from a sketch by our Special Artist and Correspondent, commands a view of the sea, and is reached immediately after passing through a place called "the Pass of Foros," in the Valley of the Baidar, of which lovely region the second Engraving presents a general view from an original Sketch by a Correspondent.

THE VALLEY OF THE BAIDAR, FROM AN ORIGINAL SKETCH.

London: Printed and Published at the Office, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, October 20 1855.

THE ILLUSTRATED LONDON NEWS

No. 767.—VOL. XXVII.] SATURDAY, OCTOBER 27, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

IMPENDING EVACUATION OF THE CRIMEA.

One of the peculiarities of the present war is the intense feeling of indignation against the Power which provoked it. Men have been interrupted in their peaceful business—the progress of the world has been impeded—and all for the gratification of a greedy despot, who, miscalculating his time and the temper of the nations, chose to throw Europe into confusion. Though the war is known to be just, it is felt at the same time to be highly inconvenient. Hence there is a very general desire on the part of the British and French people that Russia should not only be speedily and thoroughly punished for her past and actual transgressions, but effectively restrained for the future—or at least for as long a time as in this world of change it is possible to restrain or limit anything. All circumstances combine to show that the desire is about to be gratified; and that the war approaches a climax when the Allies may force the Russians to evacuate or surrender the Crimea. Such a triumph will be a great one, and will be hailed with delight by every people in Europe. None will lament it but the Princelings and Dukelings of Germany, and the petty tyrants of Italy. We cannot imagine that even the King of Prussia will be sorry for it; or that the Emperor of Austria will be other than pleased at a preponderance on the part of the Allies which will give him a pretext (such as cowards and trimmers are fond of) for taking, once for all, the side that has unmistakably proved itself to be the strongest.

It is evident—if we may use an expressive Americanism—that the Russians are "in a fix." They know to their sorrow that they cannot winter in the Crimea for want of supplies. They also begin to perceive that they cannot fight their way out of it without the fearful risk—almost approaching to a certainty—of a signal defeat at every step of their progress, or of total annihilation before their broken and dispirited legions reach Perekop.

So forlorn does their condition appear to be, even to their friends in the Austrian capital, that the surrender of Prince Gortschakoff is openly canvassed, as the best means left to the Czar of avoiding still greater humiliation and calamity to his empire. For the sake of humanity, and all its mighty interests, it were to be wished that this may prove to be the true state of affairs. The Allies would, in these circumstances, be able to dictate a peace. The rights of Europe would be vindicated, offended justice would be appeased, and the Czars would experience an amount of chastisement sufficient to keep them quiet, and to deter them for a generation or two, if not for a longer time, from imitating the bad example of Czar Nicholas.

The most inveterate of grumblers will scarcely allege that any time has been lost by the Allies since the capture of Sebastopol. The naval services of England and France, burning for the opportunity of taking a part in the pacification of Europe, have been gratified by the expedition to Kinburn and Otchakoff. The skill of their leaders and the courage and discipline of the combined forces have already led to the capture of the one, and to the destruction of the other by the enemy himself. The liman or estuary of the Dnieper is open to our military as well as to our naval power; and the country may from day to day, if not from hour to hour, expect to hear that both Nicolaieff and Kherson have yielded to the Allied arms, or to the no less destructive agencies of Russian despair. The capture of those places, or even a lodgment by the victorious English and French in the immediate vicinity, will seal the fate of Prince Gortschakoff's army. Already that gallant soldier (and let us do the foe the justice of admitting that neither in ancient or in modern times has there been a leader of armies who has done a more wonderful thing than the retreat of the Russians, under his orders, from the burning city of Sebastopol) is preparing for an inevitable catastrophe. The latest accounts represent the evacuation of the northern forts as about to commence. There is but one road by which the Prince can withdraw. Upon that road the Allies are ready to meet him. If the Russians offer or accept battle, we know too well of what stuff the British and French armies are composed to doubt for a moment of the result. How a great battle can be avoided, we, as civilians, who look upon the seat of war through the medium of maps and of authentic testimony, and simply with the eyes of ordinary judges, confess ourselves unable to understand. Military men, it would seem, have come to the same conclusion as the result of their more intimate acquaintance with the laws of war, and with the exigencies of Prince Gortschakoff's very critical position. The Prince knows how to retreat—as the ever-memorable passage of his army over the harbour of Sebastopol will testify to the latest time. We may, therefore, expect from the greatness of the issues and the daring of his character that his retreat will be both skilful and desperate. If the Allies, as we hope and trust, shall prove themselves to be more skilful than he is, and hem him round so effectually as to make his resistance criminal, by rendering it insane and useless, the evacuation of the Crimea may be cheaply purchased. It wants but a week to the anniversary of the great battle of Inkerman. Before that day—if the indications of approaching events which we gather from every side do not prove illusory—the world may expect to hear of another victory, more creditable to our Generals, though not more glorious to our soldiers. The next victory will be more fruitful in results, and will be pregnant, not with future battles, as that was, but with the great object of all just and generous warfare—PEACE.

Already the abettors of the war, who had peace in their mouths, but war in their hearts, have given indications of a change of policy. The German Governments who, not being with us, were against us, are beginning to turn. They find that the Czar Nicholas was a bad man, and that the Czar Alexander is worse, for being unsuccessful. The rats are leaving the sinking ship; and the asses of Germany are lifting their legs to kick the unhappy lion who is caught in the toils. France and England would at one time have been glad of German aid; for, if loyally offered, it would have prevented the war. Thenceforward the Allies can and will do without the Sovereigns of Austria and Prussia, and wish them no worse fate than a satisfactory reckoning with their own subjects.

We trust their approaching fate and the friendless condition in which they find themselves will be a warning to such public men amongst ourselves as have pursued in their own little way the same little and mean policy. The Peace party in England have been among the principal abettors of the war. They gave the late Czar the luckless notion that, such as they were, all Englishmen were; that we were a self-sustained nation, who neither understood nor cared for Continental politics; that we, like Mr. Cobden and Mr. Bright, had no creed of the duties which nations owe to one another, or that, if we had, the Englishman's idea of a Frenchman in the nineteenth century was the same as it was in the eighteenth; and that we taught our children, as our great-grandfathers did before us, to "hate the French," because, as Oliver Goldsmith said, "they were a nation of slaves, and wore wooden shoes." The world will perhaps never know the full extent of the mischief done

THE LATE SIR WILLIAM MOLESWORTH, BART., M.P.—FROM A PHOTOGRAPH BY BRYAN E. DUFFER, ESQ.—(SEE NEXT PAGE.)

by well-meaning religionists like Mr. Bright on the one hand, or by presumptuous and conceited philosophe rlings like scores we could name upon the other, in degrading the name of England by the deliberate and pertinacious advocacy of a policy of acquiescence in any amount of wrong which a powerful Sovereign might choose to inflict upon his weak and unprotected neighbours. Happily for the national character, these men have only proved that we were a free, and never that we were an effete, people. Like the Sovereigns of Prussia and Austria, they fomented war in the name of peace; and like them—though in an infinitely smaller degree—they will have to pay a penalty, sooner or later, to the public opinion which they have outraged. The world will enjoy Peace—but it will not have to thank its misjudging friends in England or in Germany for the inestimable blessing.

THE LATE SIR WILLIAM MOLESWORTH, BART.

The death of Sir William Molesworth creates not merely a vacancy in the Ministry, but is a serious loss to the political world. It is very seldom that a people accustomed to the free exercise of constitutional rights will voluntarily place so much confidence in any public man as practically to invest him with a kind of dictatorial, almost of irresponsible, authority. Sir William Molesworth was in this enviable position. The management of our vast Colonial Empire has often—too often been intrusted to statesmen who have virtually enjoyed absolute power. But this has been the act of the aristocracy. It was the peculiar pride of Sir William Molesworth that he had been almost universally designated by the people as the only man for the Colonial office long before Lord Palmerston placed him there. It is equally true that his premature death is regarded as a positive loss, which it will be difficult, to say the least, to repair

To understand why Sir William Molesworth was thus trusted in reference to colonial affairs we must go back some distance in his public career. Within about five years of his first election to the House of Commons, and three after he had delivered his maiden speech, he first commenced publicly to agitate questions connected with our Colonial administration. His "agitation," however, was of a very different kind from that of the mere ordinary trafficker in grievances and popularity. He had devoted years of patient study and application to acquire a thorough knowledge of the actual condition of our various Colonies, as well as of the general principles on which they ought to be governed; and, when at last he did begin to moot that class of questions in Parliament, it was felt that he spoke from a full mind, and a resolute and legitimate purpose. His first speech of any importance on a Colonial question was made in the year 1837, when he first made his profession of principles in reference to the manner in which the Colonies ought to be governed; and from that time forth he continued the steady, persevering, and respected advocate of the cause of the colonists, which at last entered on the way to success, when he was appointed to the management of the Colonial Department of the Government

Returning, however, to the general Parliamentary and political career of the late Sir William Molesworth, it should be observed that he was returned in 1832, he being then twenty two years of age, as representative of East Cornwall in the House of Commons. Other members of his family had sat for the county or boroughs thereof for several generations. He entered Parliament with opinions already formed. He was emphatically a Liberal, from a thorough conviction of the uselessness of much of our restrictive legislation. His very first vote was for the unconditional emancipation of the Jews—a sufficient indication, at that period, of his entire emancipation from political prejudices. His maiden speech, however, was on a much smaller matter—the efforts made to prevent, by force of law, Mr. Gurney from running steam carriages on common roads. His taking a prominent part on such a question may have arisen from the circumstance that Mr. Gurney and he were from the same county. This was in 1834, and in June of the same year he gave still further pledges to the Liberal cause by his speech on Mr. Roebuck's motion in favour of a system of national education of the most comprehensive kind. In the following year he seconded Mr. Grote's motion in favour of the ballot—a sufficient proof that he had already taken a high position among the party—rank in numbers, but strong in talent and [illegible] of their individual integrity—known as that of the "Philosophical Radicals"

There is one peculiar feature in the political career of Sir William Molesworth which does not seem to have attracted its full meed of attention He was one of the first among those statesmen of our time who have understood the importance of the press as an element in political affairs. Throughout his career he has more or less been connected with periodical publications—in this respect showing his good sense and penetration, that the general opinions of his party, in their more philosophical acceptation, could only in the nature of things at first be fully comprehended by comparatively a few, and that their propagation could not, therefore, safely be left to the action of the ordinary law of literary supply and demand. It was in pursuance of this view of the mission of the press that Sir William Molesworth, whose wealth permitted him such hazardous indulgences, established the *London Review*, a publication which, while it lived, was distinguished for talent of a very high order, and which certainly did its appointed work. Sir William Molesworth, of course, himself contributed to its pages, assisted by James Mill, Charles Buller, John Mill, George Grote, and other less-known celebrities of the literary world.

His line of conduct in Parliament did not belie his reputation for fearlessness as a Reformer. On every question affecting the rights and liberties of the people, or which involved the propagation or the arrestation of Liberal opinions, he was ever found stanch to his colours and uncompromising in their defence. At last, by the commencement of 1837, he had openly and deliberately committed himself to an advocacy of Free-trade, triennial Parliaments, the ballot, a very considerable extension of the suffrage, a wholesale system of retrenchment, and the abolition of the property qualification required from members of Parliament. Such fearlessness met with its natural reward. Notwithstanding his strong claims on Cornwall, the holders of the electoral right there were not able to accept his "extreme" opinions; and at the next general election, that of 1837, he lost his seat, chiefly because he had spoken so strongly in favour of abolition of the Corn-laws. This defeat, however, was the kind of fall from which a man of courage and energy derives new strength. As a Cornish Baronet, sitting in right of family influence, Sir William Molesworth, in spite of his acknowledged talent, was not of so much specific political weight as when, a short time afterwards, he was elected for Leeds. He now became—like Brougham just before the Reform Bill, and Cobden at the epoch of the abolition of the Corn-laws—the representative of a principle on which a large portion of the nation had set its heart.

At the commencement of the Session of 1837, as we have already said, he began his career as the advocate of the rights and interests of the colonists, the Government of the day having, through Lord John Russell, applied coercive measures to the legislation of Lower Canada. Events proved that, as regarded the principle involved, Sir William was right, and the Ministry wrong. Towards the close of the same year it was, however—in the month of November—that Sir William Molesworth first stamped himself as a practical reformer. His celebrated speech in denunciation of the evils of the then existing system of transportation led to the appointment of a committee, whose labours ultimately resulted in the entire abolition of the system of transportation to New South Wales, and its alteration in other penal Colonies. About ten years later, we may observe, Sir William Molesworth resumed the question, in a speech still more ripe with information and political philosophy, which has laid the foundation for a gradual but total change in our whole system of punishment for crime. In this respect Sir William appears more as the philanthropist than even as the politician; and, long after the party questions of the hour shall have lost their exciting interest, his name will be associated with a noble feeling throughout the kingdom. At the next general election—when, in 1841, Sir Robert Peel came in at the head of the Conservative reaction—Sir W. Molesworth was not returned, and during four years he remained out of Parliament. During the interval of his public political labours he collected, edited, and published the works of Hobbes, at an expense, it is said, of £6000. It has been stated, also, that he has left behind him a MS. life of the "philosopher of Malmesbury" very nearly completed. Nor should we forget to record his well-known, but not publicly-avowed, connection with the *Westminster Review*, and some other periodical publications. From the very commencement of his career, as has already been observed, he appreciated the value of the press as a source of political power, and availed himself of the assistance it afforded him in the propagation of the opinions to which he was so sincerely devoted.

The year 1845 saw Sir W. Molesworth once more in Parliament; and the progress his principles had made, and the influence of his political uprightness, were attested by his election for the metropolitan borough of Southwark, in spite of a fierce opposition, not only from Mr. Jeremiah Fitcher, on the Conservative interest, but also on behalf of an important section of the Liberal party, from Mr. Miall, the editor of the *Nonconformist*, who attempted to array against him religious and sectarian prejudices, on the score of his support to Maynooth and the leanings he was accused of towards certain heterodox religious and metaphysical opinions. Sir William was now a personage of mark and influence the acknowledged leader of the "Philosophical Radicals," and something more He supported the Free-trade policy of Sir R. Peel, and, after his downfal, though generally voting with the Liberal party, always doing so in advance of the Whigs. We need not follow him through all his votes and speeches further than to say that he never lost sight of Colonial reform and its correlative topics. During the years 1845 and 1842 he omitted no occasion to press his views on the attention of the House of Commons, and always in a way to command respectful attention, and force the Government of the day to approach nearer and nearer a practical solution of the question. His opinions on foreign policy had for their basis the desirableness, even the necessity, for the maintenance of peace; but, unlike some other advocates of the same general principle, he never proposed to attain peace at the expense of the national honour. One of the very last, if not the last, of his public speeches was conceived in this spirit.

At length this life of labour in the propagation of sound philosophical and Liberal opinions led to its most appropriate and grateful reward—the opportunity to serve the public. To a man of Sir William Molesworth's wealth, the mere possession of office could offer none of the temptations which are often said to influence place men. His whole career goes to show that even ordinary political ambition was in his case subservient to a sincere desire to be useful to his country The opportunity was afforded when the Earl of Aberdeen, desiring to construct a strong administration on the broadest basis, offered Sir William Molesworth a seat in the Cabinet. True, it was absurd that he should have been put to the Woods and Forests; but, at any rate, this nomination was a concession to public opinion and the recognition of a principle. As Minister of Public Works he gave satisfaction; but it was not till Lord Palmerston made him Colonial Secretary that it was felt he was in his right place. His very appointment was hailed as of happy augury here and in the Colonies; and it is deeply to be lamented that the care imposed by his too conscientious discharge of his duties should so have preyed upon his health as to have thus caused his premature and untimely death.

The family of the deceased Baronet is one of the oldest and most honourable in the kingdom He was descended from Sir Walter de Molesworth, the companion of Prince Edward (afterwards Edward I.) in the Holy Land. The Baronetcy was conferred upon the then head of the family in the year 1689, and was the first one conferred by King William III. The family is also closely related with that of Viscount Molesworth. Sir William was the eighth Baronet, and was the son of Sir Arscott Oury Molesworth, the seventh Baronet, by Mary, the eldest daughter of Patrick Brown, Esq., of Edinburgh. He was born on the 23rd of May, 1810, and succeeded to the Baronetcy in 1823. In July, 1844, he married Andaluzia Grant, only daughter of Bruce Carstairs, Esq., and widow of Temple West, Esq., of Mathon Lodge, Worcestershire. He died on the 22nd Oct., at his residence, 87, Eaton-place, aged forty-four; and, as he leaves no issue, the Baronetcy is inherited by his uncle, the Rev. Hugh Henry Molesworth, Rector of St. Petroe Minor, Cornwall.

Of the early career of public men little often is known, and, if known, generally displays so many changes of opinion that it becomes a record of so many years of vacillation. Not so with Sir W. Molesworth. His early education was conducted under the guidance of a very sensible mother at Edinburgh: when there he, whilst pursuing the ordinary routine of study, became imbued with those principles of Liberalism and political economy which have rendered his latter years so distinguished. At the University of Cambridge, although he did not graduate, he was noted as a studious and profound mathematician for his age, and a politician of the then ultra-Radical school. From Cambridge he took a tour on the Continent, where his time was passed in profitable study, until the passing of the Reform Bill, when he entered Parliament.

Among the few men who have pursued a line of conduct consistent throughout Sir W. Molesworth stands pre-eminent. That which he was at the commencement he was at the close of his career—a model of unflinching rectitude, of firmness, and honesty of purpose. He lived long enough to find those principles for which he so unceasingly contended the principles of a majority of his fellow-countrymen. To his high character for integrity he owed his position nearly as much as to the influence commanded by his logical mind. Admirable in his public conduct, in the relations of private life he was as amiable, and in both respects his loss is regarded with an equally deep and sincere regret.

NATIONAL MEMORIAL OF THE WORKING CLASSES TO THE LATE JOSEPH HUME.

An Association has been formed, the object of which is to raise a fund to provide a suitable memorial to perpetuate the memory of the late Joseph Hume, M.P., as well as to express the deep and general gratitude entertained by the working classes, who have so materially benefited by his continuous and prolonged exertions during upwards of half a century in the promotion of economy and liberal progress. The following letters were read at a meeting of the provisional committee on Wednesday evening

Great Stanhope-street, Oct. 22, 1855

Gentlemen,—I indose a copy of a letter which I received from Lord Fortescue, in relation to the subject upon which you formed a deputation to me. I beg you will lay that communication before your committee, and I shall be happy to hear from you or to see you again in reference to the proposed memorial to the late Mr. Hume

I have the honour to be, Gentlemen,
Your most obedient servant.
B. HALL.

Mr. Davenport.
Mr. Cross.
Mr. Wall.

Grosvenor-square, Oct. 20, 1855

Dear Sir Benjamin,—When you kindly informed me of the result of your interview with the Deputation from the Marylebone Working-Man's Association regarding the erection of a monument to Mr. Hume, you omitted to mention to me the motive for my inquiry that I had been lately in communication with some of my friends on the same subject. I have now the pleasure to tell you that the indosed has been signed by above twenty Peers, who, like myself, sat and voted with Mr. Hume in the House of Commons, and it is, I think, likely to receive some more signatures before the assembling of Parliament.

It may be well that you should make this known to the association, not with the view of interfering in any way with their proceedings, but in the hope that they may be disposed to give their aid to the general subscription which will, of course, be proposed at the meeting

I am, dear Sir Benjamin, yours very faithfully,
Right Hon. Sir B. Hall, Bart. FORTESCUE.

We the undersigned, having sat in the House of Commons with the late Mr. Hume, and feeling, in common as we believe with many of our countrymen, that the gratitude of the public for his long services in that House ought to be manifested by the erection of a monument to his memory, beg to invite those who agree with us in that feeling to attend a meeting at

on the first Saturday after the assembling of Parliament, to consider the best means of carrying the above object into effect.

A meeting of the committee was held at the Mechanics' Coffee-room, Clerkenwell-green, on Wednesday evening; Mr. Brooke in the chair Letters were read, approving of the proposed subscription, from Apsley Pellatt, Esq., M.P., Herbert Ingram, Esq., F. T. Streeten, Esq., and Colonel Sykes, joint trustee with Mr. Williams, M.P. for Lambeth. After some discussion, it was resolved that all subscriptions should be limited to contribute to the fund, and that each person subscribing one penny or upwards shall be entitled to a vote as to the mode in which the fund shall be applied to commemorate the public services of Mr. Hume.

Lynch Law in California.—The tragedy in the Central Mines of which I spoke in my last letter has at length been concluded. The catastrophe has been the complete and absolute breaking up of the Lynching, the robbery and spoliation of much money and other property belonging to the victims, and the forcible and unlawful expulsion of about 1000 Mexicans and Chilians from Amador and two adjacent counties. In the whole affair neither the substance nor shadow of law was observed, and many innocent persons were sacrificed to the fury of the mob It is evident that we do not progress in morality, for, by the *Homicide Calendar* for July, it appears that 103 persons were "killed" in that month, and three "Lynched." I., the first seven months of the present year the total killed by violence was 922; "hung by the mob, 25;" and "hung by the sheriff" (under legal sentence), 2" only. What a commentary on the administration of justice.—*Letter from San Francisco.*

PROROGATION OF PARLIAMENT.

Parliament was on Tuesday last prorogued by Royal Commission until Tuesday, the 11th day of December next. The Lord Chancellor and the other Commissioners having taken their seats at the foot of the throne, the Usher of the Black Rod was directed to summon the Commons to hear the Commission read. Shortly afterwards, one of the Clerks, attended by the doorkeeper and some other officials of the House, appeared at the bar, when the Commission was read by the clerk at the table. The Lord Chancellor then, by virtue of the Commission, declared it to be her Majesty's Royal will and pleasure that Parliament should be further prorogued until the day therein named; and it stood adjourned accordingly until the 11th of December. The usual words conveying the significant intimation that it would then meet for the dispatch of business were not contained in the Commission. The ceremony, which was simply one of form, did not last many minutes; and beyond the few personages immediately engaged in it there were only a few persons present.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

Paris, Thursday.

The departure of the Duke and Duchess of Brabant has caused the Court to resume its retirement. We are happy to state that a marked improvement has taken place in the state of the Empress's health; indeed, she is said at this moment to be stronger and better than she has felt for a very considerable time, and the measures taken to preserve her from fatigue are much more precautionary than really requisite. During their stay the Duke and Duchess of Brabant visited nearly every sight and every object of interest in Paris. The Exposition was gone over in its minutest details, and certain purchases were made by their Royal Highnesses. At the Beaux Arts the Duke took note of several English pictures, with the intention of buying them. One of the excursions that afforded the greatest amusement to the Royal guests was the promenade *incognito* on the Boulevards, which they descended on foot, and then proceeded to the Tuileries

A petition addressed to the Prince Napoleon is at present being signed, relative to the prorogation of the Exhibition until May, 1856. The petitioners state that, from the alarms and excitement consequent on the war, many persons who, under other circumstances, would have sent the productions of their industry, have been prevented doing so; that, in addition to this, the Exhibition was not really complete until the month of July, and that, therefore, it has not been seen in perfection more than three months. In consequence of this state of things, the petitioners request that it may be reopened on the 1st of May, leaving it optional with the exhibitors to remove their goods during the winter; to leave them, or to replace them by fresher productions in the spring. By this time, say the petitioners, it may be hoped that the return of peace will induce many who have hitherto refrained from adding their works to do so, and will enable others who have perfected and improved on those already exhibited to display these improvements. Many thousand signatures are already appended to this petition, which has been transmitted, after the Prince's inspection, to the Minister of Commerce, and the Government is already deliberating on the reply to be given to it.

The butchers continue to exercise various petty vexations in consequence of the new regulations respecting the sale of meat, and nothing but the constant surveillance of the agents of Government enables these regulations to be carried out. Matters, however, are not, it appears, to stop here; for further improvements in the system are in contemplation with respect to the arrangements of the principal cattle markets. There is a talk, also, of Government interfering in the matter of the rents of the dwellings of the poorer classes;—but this is so much more a subject of individual and private interest and property than the question of subsistence, that it seems difficult to interfere in it without attacking the privileges of the subject, and that credit is accorded to the rumour.

Considerable discussion have taken place relative to the number and value of the médailles d'honneur for the Beaux Arts. At first it was intended that only five should be accorded, but, that number being considered wholly insufficient, it is decided, on the representation of the Comte de Morny, that this shall be augmented to seven. One medal will be given to the sculpture, one to architecture, and five to painting: of these five three will fall to the share of France, one to Belgium, and one to England. Two names are on the Belgian list; the votes will decide between them. On the English figure those of Landseer and Mulready—their respective claims to be, of course, decided in the same manner. One of the first propositions on the subject of these medals was to give but one, and to present that to Ingres; but, happily, so ridiculous a proposal was not adopted. Really, in the face of Europe, to set up the author of such productions as some of these figuring in the salon exclusively devoted to his paintings—witness the Napoleon, the Francesca de Rimini, the portrait of Cherubini, and several others—as the first of living painters, would have been an insult to the art and the artists of the nineteenth century

Mademoiselle Rachel—will she or will she not sing the "Marseillaise"?—such is the question debated in all the *foyers* of all the theatres, in all the reviews of name. One thing seems to be pretty clear and pretty generally accepted and acknowledged, that on this point depends her success or failure in America. Brother Jonathan don't care about tragedies he does not, and he says so, and he tells you why. (Excuse a parenthesis—*Pourquoi est-ce-que Mdlle. Rachel ne fait si mauvais? Parce-qu'elle ne se nourrit que de Racine*). True, it is Mdlle Rachel's *métier* to play tragedy: but then, if she *can* do something that will amuse him more for his money, why, in the name of goodness, let her do it. The "Marseillaise," she can sing that; she sang it in '48 with a *verve*, and an expression, and a concentrated energy that made Paris shiver. Like the negro who, seeing his companion swallowing down the contents of a rum-bottle with shudderings, contortions, and cries of "Ochy! ochy!" snatched it from his grasp, exclaiming "Me cry 'Ochy! ochy!' too!" Brother Jonathan wants to be made to shiver as well: having got the fancy into his head, *ça lui est égal*, that the changes of the political winds have rendered Mdlle. Rachel hoarse, he thinks that, with what he is willing to give her, if she pleases him, she may well afford to purchase any amount of pectoral lozenges. The "Marseillaise," therefore, he will have, or will know why; and it seems pretty certain that unless "La Grande" makes up her mind to sing it, she will have to return to France considerably poorer than she left it—the expenses to which the charge of a whole family and of an undertaking such as she has laid on her own shoulders entails requiring nothing short of an enormous success to meet them. And this after the *coup* dealt by the Histori!

Rossini, Meyerbeer, and Verdi, are all at this moment assembled in Paris; it is said that the conjunction of the three *maestri* is not (forgive the *mot*, it is so *fraîche*!) calculated to produce harmony.

The disappearance, as yet unexplained, of Villars, one of the favourite actors of the Gymnase, excites much painful interest and curiosity. The existence of an unfortunate attachment, which preyed deeply on his spirits, and other circumstances known to his comrades, all tend to induce a belief almost amounting to conviction that suicide has terminated his career.

Alexis, the celebrated somnambule, is about to publish a *brochure*, entitled "Explication du Sommeil Magnétique Lucide, par un Somnambule endormi." Mdme. Stoltz is re-engaged at the Opéra; *gare a* Mdlle. Cruvelli. Alexandre Dumas *fils* is to write a piece for the Théâtre Francais, to appear after that of Mdme. George Sand: it is whispered that the Légion d'Honneur will be the probable result.

An opéra comique of M. A. Adam, "Le Hussard de Berchini," has a marked success at this moment. Nearly all the theatres are preparing actively for the winter campaign.

THE WAR.

THE OPERATIONS IN THE BLACK SEA.

The capture of Kinburn by the Allies, and the blowing up of the fortifications of Otchakoff, are among the most signal successes gained during the present campaign. A few weeks ago the fortresses by which Russia had guarded that entrance to her dominions were represented as being almost as strong as those of Sebastopol. A trial of their strength has proved what reliance may be placed on those reports. The fort of Kinburn was bombarded for two days—a specimen of the Sebastopol *feu d'enfer* on a little. The troops stationed on the road to Alesbki, the only line of retreat of the garrison, cut off that retreat, and the garrison, seeing the hopelessness of their position, capitulated—leaving the fort, nearly 1500 prisoners, and 174 guns, in the hands of the Allies.

Marshal Pelissier has forwarded to the Minister of War the following communication relating to the operation of the Allied forces at Kinburn :—

Sebastopol, Oct. 21, 5 o'clock p.m.

I have just received from General Bazaine his report of the capture of Kinburn. The Anglo-French division of the army has actively contributed to the success of the Allied squadron. Having been landed on the peninsula about five kilometres from the fortress, it took up its position, and on the night of the 16th opened the trenches at 800 mètres from the works. When the fleet commenced its heavy fire on the 17th, two companies of Chasseurs, under cover, at a distance of 400 mètres from the batteries, were able to keep up a fusilade on the Russian artillerymen at their guns. The field artillery also played an effective part in the operation. We have taken 1426 prisoners, including General Kosnovitch and 40 officers, with 174 pieces of cannon and a quantity of ammunition and stores. We are now in full occupation of an important position. Such are the results to the Allies of this successful expedition. The Russians have rendered this success complete by themselves blowing up the fortifications of Otchakoff on the 18th. I send you the standard, with the arms of Russia, which floated over the walls of Kinburn

The telegraphic reports from Kinburn come down to the 22nd. "Nothing important" had been done, according to the Russian bulletin. Some ships of the Allies had tried to get up the Dnieper and the Bug; but had failed, owing to the stones and the fragments of rock which the Russians had sunk in the channel. In spite of these obstacles, however, great alarm prevails last Nicolaieff should be attacked. A letter from there, of the 10th, addressed to the *Militar Zeitung*, says :

The Grand Duke Constantine, the Grand Admiral of the Fleet, has ordered the greater part of the intrenchments to be demanded, it having been discovered that the directors of the works had grossly abused the confidence placed in them by their Imperial master. The Grand Duke has formed a Building Commission, at which he presides. An possible energy is displayed, and thousands of hands are at work. The Grand Admiral himself inspects all the new works, which are making rapid progress. The former doctors are under examination; and, in order to prevent such abuses in future, they will be most severely punished. Adjutant-General Todtleben, so celebrated for his defence of Sebastopol, has been summoned to Nicolaieff.

The *Moniteur de la Flotte* contains an article on the operations which the Allied fleets are likely to undertake in the Black Sea. After a few remarks on the rapidity and daring displayed by Admirals Lyons and Bruat, the writer says :—

Our soldiers now occupy Kinburn, and a part of our squadron, anchored in the limans of the Dnieper, cuts off all communication by sea between Odessa, Nicolaieff, and Cherson. The Russians are thus reduced to a grave extremity, for the ships now lying in the docks of Nicolaieff, and intended to replace the fleet of Nachimoff, ingloriously sunk in the harbour of Sebastopol, can be of no possible advantage to them. We are now in a position to menace Cherson and Nicolaieff; the latter being the great naval and military arsenal of Russia, from which might at any moment be launched a new fleet, fully equipped for another Sinope; and Cherson having, since the beginning of the war in the Crimea, been the central depôt of provisions for the Russian army. Although it has lost much of its importance since the foundation of Odessa, it has, nevertheless, from its strategic position, and from its being the principal magazine of the army, been of the greatest utility during the present war. Its docks are sufficiently spacious to admit of seven ships of the line being built at the same time. The town is of great extent, being divided into four quarters—the fortress, the naval department, the Greek suburb, and that of the suburb. At Cherson the Dnieper is a league and a half in width, and fifty feet in depth. According to a recent telegraphic despatch, the Allied fleets are lying at the extremity of the liman, exactly opposite the mouth of the Dnieper. Soundings, no doubt, have been taken at the Bug and the Dnieper, and we shall soon be in a position to form an opinion as to the alleged impossibility of navigating those rivers, which may have been intentionally circulated by the Russians themselves for a very obvious reason. We are already aware that, as far as regards Nicolaieff, the river is navigable for men-of war, except at a point about ten miles from the mouth of the Bug. As to Otchakoff, the attack, according to the official documents, presents no serious obstacle. Once masters of it, the Allies may proceed overland to Nicolaieff. The events now impending, precluding all useless conjectures, we, therefore, confine ourselves to a simple statement of the numerous advantages which accrue to us from the seizure of the forts of Kinburn and of the Liman of the Dnieper. Let us hope that before long the Russian army in the Crimea, completely isolated in the peninsula, cut off from its supplies, disheartened by the successive disasters that have defeated their plans and frustrated their exertions and their courage, shall be reduced to make a last heroic and desperate effort, the consequences of which will be by means doubtful to us, or lay down their arms without trying the chances of a battle

PRINCE GORTSCHAKOFF'S ARMY.

It was reported that Prince Gortschakoff had represented to the Emperor Alexander that there were great difficulties in his present position, and asking for instructions as to whether he should risk a decisive battle or evacuate the Crimea. The Emperor, not wishing to take upon himself the responsibility of so serious a movement, is said to have sent Generals Benkendorff and Hackelburg to the Crimea, to make a personal inspection, and upon their report future movements will depend.

Whether the Russian Commander will deem it prudent to wait for their report seems questionable. The latest intelligence from the seat of war states that on the 14th the second French corps, commanded by General Bosquet, occupied the passage of Duna, near Also, and the excellent positions of Ichoulkou and Chamli, on the route leading to Aitodor and the passage of Manbug Kaleh, the heights of which, as well as those of Kerman, were said to be occupied by the Russians to the number of 24,000. The reconnaissances made by the 2nd corps near that passage were terminated, and the French were engaged in fortifying the roads which lead from the valley of the Tchoulou to Chamli. They had, at the same time, completed important operations between Skolia, at the extremity of the valley of Baidar Kalé, and the Belbec, and had explored the country to a distance of fourteen leagues, without meeting with the slightest resistance from the enemy; indeed, it was only when the French began to return to the heights of Baidar, on the 12th, that a Russian army appeared disposed to attack them. Marshal Pelissier still had his head-quarters at Skolia on the 13th. The reconnaissances on both sides give rise to almost daily skirmishes on the route from the Skolia to Kalé. The only place where there had been no fighting was the passage leading directly from Tchoulou towards the north, and terminating in the country of the Tcherkess Kerman, in the interior of the principal position of the Russians. It was believed that the autumn campaign would be closed by the capture of Bagtcheserai, from which the Allies are now not far distant. As long as we had not advanced to the Upper Belbec there was a kind of neutral ground between us and the Russians, but now we close upon them. Fort-Sala, which is in the possession of the French, is only about nine miles from Bagtcheserai. A very short time must decide whether the Russians will fight or run away.

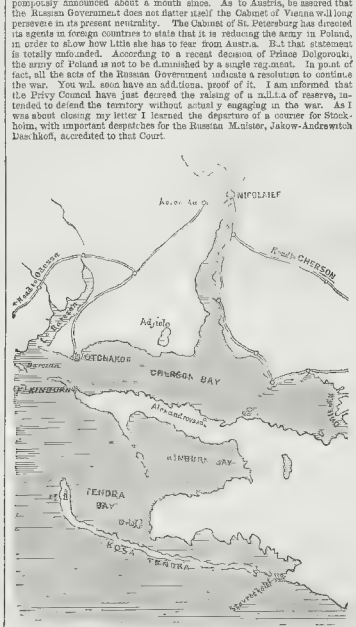
SERIOUS STATE OF AFFAIRS IN RUSSIA.

Private letters from St. Petersburg affirm that the Emperor's mind is becoming affected; and, in proof of this, they say that his train includes more priests than generals; that he prays the whole day; and that great alarm prevails among the nobility in consequence of the general distrust of the Czar's ability to cope with the overwhelming difficulties in which his father's ambition has loaded him. As regards the supply of soldiers, which was said to be inexhaustible, the most authentic accounts show that the waste of "the raw material" is beginning to be felt, and in Russia much more than it is in France or England. The kingdom of Poland has been already drained of its last men, and is now perfectly exhausted. None but women and children of tender age are now left to do the heavy agricultural work. The Grand Duchy of Finland, also, is considerably drained of its population, as great numbers of young men have been draughted into the different regiments on active service in the south, and the local battalions of sharpshooters for the defence of the province have been again reinforced by fresh levies.

The following letter from St. Petersburg, which appears in the *Constitutionnel* of Wednesday last, shows what the feeling of the people is in that quarter :—

St Petersburg, Oct. 15.

Unfavourable accounts succeed each other with such rapidity here that the greatest despondency has seized on all classes. We had scarcely learned the defeat of General Soimonoff, near Eupatoria, when we were informed by telegraph of the arrival of the Allied fleets before Odessa. On the other hand, the anxiety observed among the upper classes, and even the members of the Imperial family, has contributed in no small degree to increase the public alarm. A regret prevailed during the course of the day that the Empress had commanded General Gezevitch to proceed express to Nicolaieff with a letter for the Emperor, in which she entreats him to return to St. Petersburg. The approach of the enemy has aroused the fears of both Empresses. The Czar is no longer safe at the extremity of the liman on which Nicolaieff is built, and the Metropolitan has ordered general prayers to be offered in the churches for the Emperor's security. I have this very day assisted at one of these ceremonies in the church of Kasan, and the serious countenances of the masses that thronged round the images of the saints convinced me that they are beginning to feel the gravity of the crisis. Besides, the Government openly admits that fresh sacrifices must be submitted to. In the western part of the empire preparations are already making for the fourteenth levy, which is to take place before next March. The decree relative to this levy is expected to appear in a few days. The diplomatic accounts are not reassuring, and the military reports. The representatives of Russia at foreign Courts are by no means satisfied with the attitude assumed by the different Cabinets. Taking, for instance, the neighbouring States, it has been observed that in Sweden the King is more and more disposed every day to adhere to the policy of the Western Powers; and Count Nesselrode has determined to send to Stockholm an Envoy Extraordinary, with a view to counterbalance the constantly growing influence of the Ministers of France and England. At the other extremity of the empire the conduct of Persia does not inspire more confidence. Notwithstanding the honours paid to General Bircaloff, the Russian Envoy at Teheran, it is not considered probable at the Home-office that, with the victories of the Allies before him, the Shah will persevere in a strict neutrality. On the other hand, the very marked reception given by Persia to the representative of France must be regarded as a most significant fact, and nobody any longer talks here of the Persian Embassy, whose arrival was so pompously announced about a month ago. As to Austria, be assured that the Russian Government does not flatter itself the Cabinet of Vienna will long preserve in its present neutrality. The Cabinet of St. Petersburg has directed its agents in foreign countries to state that it is reducing the army in Poland, in order to show how little she has to fear from Austria. But that statement is totally unfounded. According to a recent despatch of Prince Dolgorouki, the army of Poland is not to be diminished by a single regiment. In point of fact, all the acts of the Russian Government indicate a resolution to continue the war. You will soon have an additional proof of it. I am informed that the Privy Council have just decreed the raising of a militia of reserves, intended to defend the territory without actually engaging in the war. As I was about closing my letter I learned the departure of a courier for Stockholm, with important despatches for the Russian Minister, Jakow-Andrewitch Daschkoff, accredited to that Court.



PLAN OF NICOLAIEFF, AND FORTS OF KINBURN AND OTCHAKOFF.

OFFICIAL DESPATCHES.

CAPTURE OF KINBURN

Paris, Sunday.

The *Moniteur* of this day contains the following despatches from Admiral Bruat to the Minister of War :—

Kinburn, Oct. 17, 1855.

The fort of Kinburn and the new works erected on that peninsula are in our power. Our losses are of little importance.

Kinburn, Oct. 17, 1855.

On the 14th October, in the morning, the squadron quitted the roads of Odessa, as soon as the violent west winds, which had impeded our operations ever since the 8th October, permitted of our moving. The same night we anchored off Kinburn.

In the night four French gun-boats, viz., the *Tirailleur*, *Strudente*, *Meurtrière*, and *Mutine*, sent by Rear-Admiral Pellion, under the orders of Lieutenant Lieussou, and the *Cocapue*, effected a passage through the pass of Otchakoff, and entered the Dnieper.

The following day, Oct. 16, at break of day, the troops disembarked about 4500 mètres to the south of the fortress. In the afternoon the mortar-vessels opened fire; but they were obliged to cease firing in the afternoon on account of the swell of the river, which caused their aim to be uncertain.

The 16th was almost a lost day to us, the wind having changed to the south-west. The troops employed themselves in making entrenchments and making reconnaissances towards the south. The gun-boats in the river were only able to keep the place in a state of alarm.

The wind having changed to the north in the night, Admiral Lyons and myself were occupied this morning in carrying out the plan which had been interrupted during the whole of the previous day. Captain Spratt, of the *Spitfire*, and Lieut. Cloué, of the *Brandon*, having taken soundings of the river, assisted by MM. Fleix and Manen. At twenty-minutes past nine the three floating batteries, *Devastation*, *Lave*, and *Tonnante*, opened their fire.

The success which they obtained this day responded to the hopes of the Emperor. The rampart which the enemy had raised specially presented practicable breaches on several points

The French and English mortar-vessels had opened their fire at 45 minutes past 9, their aim, corrected by the signals from the advice-boats, was admirably directed. I attribute the speedy surrender of the fortress in great part to this circumstance.

The French gun-boats, the *Grenade*, *Fleche*, *Mitraille*, *Flamme*, and *Alarme*, supported by six English gun-boats, commenced their fire about the same time as the mortar-vessels. Their aim caused their shot to reconnoitre advantageously against the batteries *à barbette*, which directed their fire against the floating batteries

Precisely at noon the ships, followed by the frigates, the corvettes, and avisos, got under steam. The ships were formed in line in front, and they cast anchor about 1600 mètres from the forts, in 3½ feet (French) of water At the same moment six English frigates, under Rear-Admiral Stewart, and three French frigates, under the orders of Rear-Admiral Pellion, the *Armide*, the *Cocapue*, and *Séné*, entered the Pass of Otchakoff to take the forts of Kinburn in the flank. The *Hannibal* advanced to the middle of that pass. Generals Bazain and Spencer led their tirailleurs and their field-pieces within 400 mètres of the forts

These bold manœuvres, and the imposing front presented by the nine French and English vessels, moored stem and stern, and pouring forth all their broadsides, had a decisive effect. At thirty-five minutes past one, remarking that the fort of Kinburn had ceased firing, while the works on the north continued to discharge their mortars against us, Admiral Lyons and I thought that we ought to respect the courage of the brave men who fought against us; we therefore made the signal to cease firing, and hoisted a flag of truce, sending on shore a French and an English vessel.

The fort accepted the capitulation offered The garrison marched out with the honours of war, and surrendered themselves prisoners. Our troops occupied the Russian works.

The capitulation stated that the fortress should be given up to us in the state in which it then was. We took possession of the provisions and munitions of war of the enemy. Admiral Lyons and I sent surgeons from the two squadrons to take charge of the wounded Russians, to the number of about eighty

The number of prisoners is from 1200 to 1500 We shall continue to occupy this fortress, and make here a solid establishment.

NOTE UPON KINBURN

The waters of the Bug and the Dnieper fall into the sea by a single branch After having formed a lake in which their waters are mingled, the two rivers flow on together between Otchakoff to the north and Kinburn to the south, by a narrow channel of variable depth (fifteen feet maximum), approaching much nearer to Kinburn than to Otchakoff.

Otchakoff, on the right bank, is built on the summit of a rocky elevation of medium height, advancing a sharp point to the south, and also projecting a low point, upon which is erected an old Genoese tower, now in ruins. A battery, of nine pieces of large calibre, enfilades the channel at a short distance, completing the defence of the fort, without presenting any serious obstacles

It is on the left bank, on a tongue of sand formed by the alluvial deposits of the two rivers, that the citadel of Kinburn is built, commanding the passage in front, and constituting, as a ward, the only defence of the entrance of the Dnieper.

The citadel of Kinburn is a hexagon, faced with masonry and surrounded with parapets, and having a ditch all round where it is not washed with the sea. It has barracks and other edifices which rise above the ramparts It is armed on all its faces, offering points of defence, with covered casemates, surmounted by a battery *à barbette*, the whole being able to present about sixty cannon, of which the heaviest fire on an enemy towards the sea, to the south-west and north-north-west.

Kinburn keeps a war-flag continually displayed, and is never left unarmed, and contains a garrison of 2000 men, without counting the military colonists established without its walls in a village regularly built, to the south, and within cannon-shot of the fortress. Two new batteries have been lately erected to the north-west of the fortress

AUSTRIA AND SARDINIA

No sooner had the Neapolitan storm blown over for a time than a new quarrel begins in another corner of Italy. Those familiar with Court gossip are aware that diplomatic relations between the Sardinian and Tuscan Governments have been for some time suspended. The cause is of a private nature, but the dispute has already become serious, and may have important results. The history of the affair may be told in a few words. A certain Count Casati emigrated from Lombardy in 1848, and became a Sardinian subject. His son entered the diplomatic service, and was for a year Attaché to the Legation at Constantinople. He was thence transferred to Florence, but not before the Marquis Sauli, Sardinian Minister at the Tuscan Court, had announced the intention of his Government to the Grand Duke's Minister for Foreign Affairs. In answer to the inquiries of the Tuscan Cabinet, it was stated that the young Count Casati was a naturalised Sardinian subject, and in 1848 he was only eighteen years of age. This was quite satisfactory. The Sardinian Minister announced the appointment officially, M. Baldasseroni, the Tuscan Prime Minister, replied politely. The new Attaché left Turin with M. Baldasseroni and the Austrian Minister at Florence, who left there in return. Up to that period it was clear that the Tuscan Government had no objection to the appointment.

But a sudden change was at hand. In a few days the Tuscan Premier called on the Marquis Sauli, stated that the Grand Duke's Government had been too precipitate in receiving the son of a refugee, and hagged that the Attaché might be sent away on leave, and then receive another destination. This request was forwarded to Turin, but the heads of M. Baldasseroni could not await an answer. He addressed an official note to the Marquis Sauli, intimating that Count Casati must at once be sent on leave, and never return, as he would not be received by the Grand Duke. This note was evidently contrary to all diplomatic precedent. The Court of Florence having once received a member of a Legation could not be allowed to order him from the capital without a cause. The communication could not, in the opinion of the Marquis Sauli, be received without compromising the dignity of the Sardinian Government. It was accordingly returned; but the Sardinian Minister used all means to bring the matter to a friendly conclusion. M. Baldasseroni would now hear nothing, but at once wrote to Turin a despatch that Sardinian Minister himself should be at once recalled. The only course now open to the Court of Turin was, therefore, to break off all diplomatic relations with the Tuscan Government. The Sardinian Legation left Florence, and the Tuscan Minister at Turin received his passports.

And now comes the question, what instigated the Tuscan Court to a breach of diplomatic rules and an open rupture with a friendly Power? In the answer to this question lies the whole importance of the matter. The Tuscan Government, with a due sense of decency, asked the opinion of Count Buol, the Austrian Minister of Foreign Affairs. The Viennese statesman, in reply, asks whether the Grand Duke of Tuscany can really think proper, "in his position as an Austrian Archduke," to receive in his palace a person who could not be received by his Imperial Majesty or by any Austrian Minister? This was enough. The Tuscan palace was in commotion. Reparation must be made at any cost. Of course Count Buol carries matters with a high hand. In an interview with the Sardinian Minister at Vienna he boldly declares that "as the rupture between the Courts of Florence and Turin had taken place in consequence of instructions sent by the Imperial Government, his Majesty the Emperor would not remain out of the question, but was determined to consider it a personal one to himself." "We shall be a time," continues Count Buol, "in which the difference ought to be made up; it does not matter to us whether there be a Sardinian Minister at Florence or not; but if you do not settle the dispute his Imperial Majesty will consider it a personal affair, and take measures accordingly." The question now is whether Austria shall be allowed to "take measures" in the manner which Count Buol indicates. Is Piedmont to suffer for her alliance with us? The Court of Vienna has formed a high resolve; it is for Europe to say whether it shall be carried out. The Tuscan Government, doubtless through Austrian instigation, will listen to nothing. The British Minister at Turin tendered his mediation; it was accepted by the Sardinian Cabinet, and a proposition was made involving great concessions to Tuscany. For the sake of peace. This proposition the Tuscan Government has peremptorily refused to receive.

Much blame has been attached to the Marquis of Normanby for the part he has taken in the affair. According to one account he has openly censured the conduct of the Sardinian Government in consenting to office the son of a refugee, and, in consequence, a diplomatic agent instructed by the British Government has been sent to Florence to bring his Lordship to views more worthy of his position as the representative of this nation.

AMERICA.

The steam-ship *America*, which left Boston on the 10th inst., arrived at Liverpool on Monday. The political intelligence is not of much interest.

A desperate attack with fire-arms was made upon a mass procession at Baltimore on the night of the 4th. The Democrats of the 18th Ward were returning from a mass meeting when several pistol-shots were fired at them by certain parties said to belong to the Know-Nothing organisation. A young man in the procession named Burke was shot in the head and died shortly afterwards. The supposed murderer was arrested.

The War Department at Washington had received a package of the papers taken from the Sioux Indians at the recent battle of the Bluewater. Among them is a postmaster's blank evidently taken from one of the mail agents whom they robbed and murdered—and is covered with Indian hieroglyphics, apparently intended to detail some of the bloody deeds of the tribe. The massacre of Lieutenant Grattan and his party is evidently one of the subjects of this symbolic history. It is also believed to describe the murder of an emigrant party, composed in part of women. Among the articles captured were two scalps of white women; a small memorandum-book, in which some neat penman had noted the incidents of an overland journey; a letter from B. W. Leonard, dated Hermon, July 6, 1855, doubtless taken from a captured mail, several rather good sketches of Indians fighting, and a portion of the clothing which had belonged to the soldiers of Grattan's party.

Intelligence from Northern Mexico states that General Castro was still in command of Matamoras. The city was embroiled in trouble, while the revolutionary force was without. The besiegers number 600 to 1200, and demand the unconditional surrender of the place General Vidaurri was also marching on them. San Luis de Potosi had been captured by the insurgents, and General Giulan killed. Tampico had pronounced for the plan of Vidaurri, and driven out Casanova.

CONFLICT BETWEEN THE 10TH HUSSARS AND COSSACKS, AT KERTCH.

THE following is the version of this gallant affair which we are enabled to illustrate from the sketch of a Crimean Correspondent:—I have not seen any version of the little affair at Kertch," says the *Times'* Correspondent, "in which the 10th Hussars were engaged, but I have heard many various reports and statements on the subject, and it is said the despatch containing the particulars was lost between Balaclava and head-quarters. It is reported that a small force of the 10th went out to patrol the country towards Arabat, and that when marching in loose order they were suddenly attacked by a strong party of Cossack cavalry, who succeeded in killing two, wounding three or four, and taking fifteen men prisoners. The rest of the Hussars cut their way through the enemy, and are said to have left forty dead on the field. There are very few means of communicating with Kertch or Yenikale, and the many delays and mistakes made on board the fleet with respect to the Sea of Azoff mail-bags render those means still less satisfactory. What the garrison will do in the winter is only for generals and admirals to determine. In addition to this rumour from Kertch, there is a vague story going about that the French cavalry at Eupatoria, being out on duty, lost their way in a fog and wandered about till they came abruptly upon the Russian troops established in their neighbourhood as a corps of observation, and gave them such a fright that they bolted off at once, leaving their stores and quantities of provisions behind them, which were destroyed by the French, who thereupon returned on their way rejoicing."

THE ARMY WORKS CORPS.

ON Saturday last a great concourse of people assembled at London-bridge to witness the departure of another detachment of the Army Works Corps. About 450 men, consisting of mechanics and labourers embarked on board two Watermen's steamers, which conveyed them to the fine steam-ship *Hanse*, off Greenhithe. After the usual leave-takings the men went off apparently in excellent spirits, frequently cheering, and being as loudly cheered, as they passed down the river. No accident of any kind occurred.

Many of the men's wives went by rail to Greenhithe, to have one more last word with their husbands, and many a rough cheek was moist for a moment as the boats conveyed these women ashore. It is satisfactory to know that all the married men in the corps are obliged to allot a portion of their pay for the maintenance of their families during their absence.

Nearly 3000 men of all classes belonging to the Army Works Corps have now left for the Crimea.

DEPARTURE OF THE ARMY WORKS CORPS FROM LONDON-BRIDGE, FOR THE CRIMEA.

BRISTOL, FROM ST. PETER AND ST. PAUL—SKETCHED BY J. A. CROWE.—(SEE PAGE 498.)

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 28.—21st Sunday after Trinity.
MONDAY, 29.—Mermaid died, 1804.
TUESDAY, 30.—Great Armoury in the Tower of London burnt, 1841.
WEDNESDAY, 31.—John Evelyn born, 1620
THURSDAY, Nov. 1.—Battle of Oltenitza, 1853. Sir Matthew Hale born, 1609.
FRIDAY, 2.—All Souls'
SATURDAY, 3.—Sir Samuel Romilly died, 1818.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING NOVEMBER 3, 1855.

Sunday.		Monday.		Tuesday.		Wednesday.		Thursday.		Friday.		Saturday.

SEBASTOPOL, Oct. 6, One p.m.

(From our Special Correspondent in the Crimea.)

(*To the Editor of the* ILLUSTRATED LONDON NEWS)

Sir,—I have got a passage in the *Charity*, and go by her with the expedition to Kinburn.—Most truly yours, in haste, J. A. CROWE.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 27, 1855.

It is stated on authority that the Government has accepted the resignation of General Simpson, and that his successor has been already appointed. The name of the new Commander has not transpired, and will not be announced in this country until the telegraph from the Crimea shall notify to the Government that the command has been accepted by him to whom it has been confided. Public opinion has already designated the man; but, as public opinion may have made a mistake, we shall abstain from mentioning names until the official announcement of the fact. Thus much is already known—that the new General-in-Chief is already in the Crimea, and has shared the perils and the glory of the army. In justice to General Simpson—now that he is no longer in the high position for which his own avowal declared, and subsequent events proved, his unfitness—we trust that he will not be allowed to retire without honour. Though not possessed of the genius, or the youth, for supreme command, he has proved himself a gallant soldier, and worked his way upwards to his late position without the adventitious aids of aristocratic connection, ministerial favour, or Court favour. He rose by slow degrees, and in a perfectly legitimate manner. His career is sufficient to prove that merit may work its way in England without having recourse to undue influence to back it; and that the sober, steady, hard-working man—loving his profession, and sticking to it through evil as well as good report—may come to the top, if he be fortunate enough to live sufficiently long. We should rejoice at any mark of honour which the Government might feel disposed to bestow upon the man who held, even temporarily, such a command; and whether the recognition were in personal or in professional promotion in his elevation to a peerage, or to the Field Marshal's baton, along with Lords Combermere, Strafford, and Hardinge, the country would not begrudge the honour or think it ill-bestowed. The new General, whoever he may be, will have a task of no ordinary difficulty to accomplish; for he will have to heal the wound inflicted upon the sensitive feelings of the army by the greater glory which the French acquired in the capture of Sebastopol. Not that our gallant soldiers envy those of France any glory which they may gain; but that they hope, when glory is to be got, their leaders will give them a chance of competing for a share of it. Our men had not such a chance in the capture of Sebastopol; and it will, therefore, become the duty of the new Commander to see that the British army shall have the opportunity of sharing to the fullest extent the hard work, the danger, and consequently the glory, of the generous allies with whom it is their privilege and pleasure to be united.

THE confidence expressed on Wednesday last, by her Majesty, in reply to the City Corporation address on the taking of Sebastopol, that the great body of her people concurred in determination to support her in the vigorous prosecution of the war, is more than justified wherever the people themselves have a chance of being heard. Factionists or crotchetty politicians may affect to deprecate the noblest strife ever undertaken by a Christian nation; but let a section of our population, large or small, be but assembled, and the dissenting orator is disposed of with "Three cheers for the Queen and three for the Crimean army!"

Not only in this country is the war enthusiasm thus prevalent, but from the Colonies is sent back a shout of gratulation that the old country wins the day. The news of the fall of Sebastopol had scarcely reached Canada when its excitable inhabitants broke out into the loudest utterances of triumph. A Judge on the bench proclaimed the event, and the whole assembly joined in the heartiest cheering. Cannon were discharged, bells were set ringing, the chief cities—Quebec, Montreal, and Hamilton—were brilliantly and generally illuminated; fireworks ascended, and every manifestation of joy and thankfulness (including devotional services by the clergy of all denominations) was made throughout the colony. Nor was this a mere English demonstration. Early in the war Canada sent a splendid contribution to the two armies, and the united victory brought out the enthusiasm of French, English, and, adds the reports, of Irish. And, as the colonial mails continue to come in, we doubt not that more distant dependencies will be found to have confirmed our Queen's testimony to the spirit of the great body of her people, whether residing under her eye or extending and strengthening her sway at the antipodes.

If ever there were a period in the history of a young and powerful nation when it could show itself worthy of the great duties to which, when its own principles are settled and its own stability assured, Republican America will probably be called, this is the time. It might be expected—at least by the sanguine and single-minded persons who take the men of the States, if a little below their own self-valuation, still as the most intellectual, the most enlightened, the most free, and the most generous beings in the world—that at a crisis like this, when a people of kindred descent with their own, speaking the same language and holding the same faith, had engaged in a terrible conflict with the enemy of all freedom and civilisation, the Americans would have forgotten trumpery jealousies and prejudices, and given us the aid of their sympathy, if not of their arms. But no; they are not intellectual and enlightened, and so forth, to such an extent as this. Whether the Anglo-Saxon character deteriorates in certain latitudes, or whether the conquest of America, by means of the Irish, who have in great measure subdued the Yankee race, and are gradually making it conform to the principles and practices of its Celtic masters, is being avenged upon us, it is hard to say. But America can see nothing noble and chivalrous—but those are old-country ideas—can see nothing grand and enterprising in our championship of Turkey, and our fight for the freedom of the tideless sea. Our successes are scoffed at, our reverses magnified, and a barbarous tyrant is fulsomely flattered by those who claim a patent in free institutions. An American can stand up here and say that he is proud to claim ancestry from the country of Shakspeare, and Milton, and Newton; but at his own board he drinks success to Gortschakoff, and Osten Sacken, and Moursvieff. These Canada rejoicings have already given mighty offence to the Yankees, who find subjects for sarcasm in the filial enthusiasm of an Englishman and of Englishmen's children who, in a distant land, hear that the old flag has again triumphed, and shout at the news.

But we have no right to complain that Irish America is displeased at our victories, and that the eagle of the Union screeches compassionately to its double-headed relative, now hit somewhat hard. Indeed, we refuse to believe that a great deal of the pro-Russianism manifested in the States is not simulated. It will not do for the American to admire anything English; and so, with his usual enterprise, he pushes ahead and affects a creed which he does not really adopt. It is not—it cannot be—that he respects the deceitful semi-savage Russian, or that he approves of institutions based upon an irresponsible despotism. But in his thin-skinned jealousy he cannot bear an addition to the glory and prosperity of the nation whose rottenness he has preached until he almost believes in it. We will not do him the injustice he does himself. It is not ignorant folly, but only vanity, that is making him ridiculous. With so much that he might be justly vain and proud of, it is matter for regret that he cannot take his legitimate position, and find the world wide enough for us all. But that is his affair: we fear that, even to soften and satisfy him, we cannot afford to be beaten by Prince Gortschakoff.

If the American pleases, however, he must confine himself to legitimate methods of demonstrating his hostility to our cause, and his desire for the success of Russia. Tempting as the opportunity may be, while we are putting out our full force in one direction, for him to seek to embarrass us in another, we must remind him that while the two nations are at peace he must forego that happiness. It is now signified that, whether hired by Russian gold, or only prompted by a general taste for buccaneering, divers "true Americans" are inclined to give us trouble, and that it is necessary, in consequence, to increase our force in the Western Ocean. This would not be necessary were American institutions strong enough to give the Executive a proper power of restraint over unruly citizens. But it seems that the Government of America has not this power; and, feeling this, but wishing to disguise the fact, and to have some plausible pretext for refusing to act, it has instructed some of its organs to get up petulant and unfounded complaints against Lord Palmerston and our representatives in the States. All this will most probably end in nothing beyond some voluminous despatches and some irritating newspaper articles, for it is impossible to believe that the leading men in America will pay more than an affected homage to the bad temper of certain of their constituents. But the model institutions do not work so well that we can calculate upon results; and it is desirable that the press of England should make it as clear as possible to the people of America that we quite understand the state of the question, and that we know the Americans do not sympathise with Russia, but that they have not yet been able to get over their prejudices against us. A nation that vaunts itself as a people of thinkers will surely, under such circumstances, exert common sense enough to preserve its temper.

THE stringent measures adopted by the Bank of England to check the exportation of gold, however natural and proper for that body to adopt, will of necessity produce other results which the Bank did not intend, and which are not for the interests of the country or of commerce. The state of trade is at present essentially sound. There is no undue speculation. It cannot be pretended—nor is it, as far as we are aware, alleged by the most zealous upholders of the Bank Restriction Act of 1844—that the operations of the mercantile community, either internal or external, are other than legitimate; but the scarcity of the circulating medium, which has been produced by causes totally independent of the ordinary and remunerative operations of trade and manufactures, has left the Bank no alternative but to restrict the circulating medium still further. The unlucky Act of 1844 compels it to cripple trade at the very moment when trade ought to be aided and encouraged. No doubt trade suffers to some extent from the ordinary operation of natural laws, in consequence of a deficient European harvest, when the price of the primary articles of subsistence is rising in all the markets of the world; but at such a time, if the Bank of England represented the national interests, and were free to act as sound policy would dictate, it would take measures to alleviate, rather than to aggravate, the monetary pressure. At the first commercial crisis which ensued after the enactment of Sir Robert Peel's measure of 1844 it was found necessary to override and suspend the law, which had the unhappy peculiarity of becoming mischievous the moment it ceased to be inoperative. This was its result in the days of peace, when commerce was not in all respects sound or legitimate. We now see its trial in the days of war, when the state of commerce is perfectly wholesome; and we see the same results—inutility for good, potency for evil, and an utter inadaptability to the wants and the business of a great commercial nation. The French, whose commerce is not based on the sound principles of Free-trade—who are, with almost the solitary exception of the wine-growers, a nation of ultra-Protectionists—suffer a monetary disturbance, produced in part by the expenses of the war, but in a greater degree by their own unwise restrictions upon commerce, and the consequent undevelopment of their immense natural resources. Intimately connected with this country, they come to us for gold. They receive it as a commodity, to the profit of people who deal in it, just as they would deal in tea, or cotton, or iron bars, or any other article from the sale of which they might derive advantage. But in taking away from England this particular commodity they take away more than a commodity; they take away our bank notes, which we want as the representatives and counters of our own commercial transactions. In the same way the Emperor of Russia, sorely pressed for gold "to pay his legions," comes into the gold-markets of Germany and Holland, and offers a premium as large as his necessities. He gets a portion of what he wants some millions from time to time—the greater part of which comes from this country. So that our enemy, by borrowing gold in the open markets of Europe, does our commerce a greater injury than he has ever been able to inflict upon it by his arms or his diplomacy. He forces the Bank of England to restrict the issues of its bank-notes, makes money dear, raises our commercial discounts to six and seven per cent, and presents to thousands of commercial houses in London, Liverpool, Manchester, and Glasgow, the gaunt and unpleasant spectacle of bankruptcy. And all this evil we owe to Peel's Act of 1844; an Act as ill adapted for war as for peace, and with the existence of which we honestly believe the vigorous prosecution of the war will be found impossible. Sir Robert Peel rated the credit of the Government at an extremely low point when he fixed at £14,000,000 the amount of notes which the Bank of England might issue without having bullion to back it. For every £5 note issued beyond that sum it must have gold in its coffers; but why fourteen millions only, and not forty millions? If all the gold in the world were in Threadneedle-street the commerce of this nation could not exist without credit; and if credit be absolutely necessary, and if it be extended to the Government to the amount of fourteen millions, why not to a larger sum? The fourteen millions may be satisfactory as a transaction between the Bank and the Government, for it is the debt which the State owes to the Bank; but as between these two parties and the Nation it is unsatisfactory in the extreme. This question was practically answered in 1847 by the suspension of Peel's Act. It will have to be answered in the same way in 1855 or 1856, or perhaps by a still better mode than a mere suspension of the mischief; by the total repeal of the measure which periodically produces it, and which will neither act beneficially in peace or in war, and which fetters trade, when the whole tendency and spirit of our legislation is to set it free.

THE COURT.

The Queen held a Court and Privy Council at Windsor Castle yesterday se'nnight. At the Council Parliament was ordered to be prorogued until Tuesday, the 11th of December. The Turkish Minister and the Portuguese Minister had audiences of her Majesty; and the Sheriff of London was admitted to an interview with the Sovereign to learn her Majesty's pleasure as to the presentation of an address voted by the Court of Aldermen on the fall of Sebastopol. Viscount Palmerston and Lord Panmure remained at the Castle on a visit to the Queen. The other members of the Ministry present at the Court returned to London

On Saturday the Queen and the Prince, with the Princess Royal, rode on horseback in the Home-park. Viscount Hardinge arrived at the Castle on a visit in the afternoon. The dinner party in the evening included the Duchess of Kent and the distinguished visitors staying at the Castle

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal and Prince Alfred, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle. Viscount Palmerston and Lord Panmure were also at the service. The Hon. and Very Rev. the Dean of Windsor officiated.

On Monday the Queen, accompanied by the Princess Royal, walked in the grounds adjoining the Castle. His Royal Highness Prince Albert, attended by Colonel Seymour, left Windsor at ten o'clock for Aldershott, for the purpose of inspecting a draught of the Grenadier Guards ordered for immediate embarkation to the Crimea. Viscount Palmerston, Viscount Hardinge, and Lord Panmure, took their departure by an early train for London. The Earl of Clarendon and the Right Hon. Sir Richard Pakenham, late her Majesty's Minister at the Court of Portugal, arrived at the Castle on a visit.

On Tuesday her Majesty, with the Prince of Wales and Prince Arthur, attended by the Duchess of Wellington, drove out in an open carriage. Mr. Andrews, her Majesty's Minister to the Court of Denmark, had an audience of the Queen, and was presented by the Earl of Clarendon. The dinner party in the evening included her Royal Highness the Duchess of Kent, her Royal Highness the Princess Royal, the Earl of Clarendon, the Right Hon. Sir Richard Pakenham, Colonel Williams (Commanding Officer 2nd Life Guards), Lieut.-Colonel Halday (Commanding Officer 36th Regiment), and Major Owen (Royal Engineers).

On Wednesday the Queen received an Address from the Corporation of the City of London, congratulating her Majesty on the fall of Sebastopol.

The Duchess of Atholl has succeeded the Duchess of Wellington as Lady in Waiting to her Majesty. The Earl of Listowel and General Sir Edward Bowater have succeeded Lord Byron and Colonel the Hon. N. Hood as the Lord and Groom in Waiting.

The Duchess of Sutherland, accompanied by the Earl and Lady Constance Grosvenor and Lord and Lady Blantyre, arrived at Stafford-house early in the past week, from Dunrobin Castle, N.B. The Duchess has since left town for Paris, with the intention of making a brief stay in the French capital.

The Earl and Countess of Derby have been surrounded by a brilliant circle of friends, invited to meet their Royal Highnesses the Duchess of Cambridge and the Princess Mary, at Knowsley Park, during the past week.

The Earl and Countess of Yarborough have arrived at Manby-hall, Lincolnshire, from St. Lawrence, Isle of Wight. The noble Earl is improved in health.

Lord and Lady Brougham have arrived in Grafton-street, from Brougham-hall. His Lordship goes shortly to his villa in the south of France.

A matrimonial alliance is stated to be arranged to take place between the Marquis of Winchester and the Hon. Miss Montagu, daughter of General Lord Rokeby.

LATEST INTELLIGENCE.

THE WAR IN THE CRIMEA.

The only news from the seat of war is contained in a Russian telegraph vil Berlin, which states that on the 22nd inst. the Allies marched from Eupatoria towards Toulek,* 40,000 strong. On the 23rd inst., having arrived at the height of Actass Djanin, they perceived the Russian Lancers on their left flank, and returned behind Aktatschi.

Nothing fresh has occurred between Kinburn and Nicolaieff. The Emperor of Russia is on his return from Nicolaieff. He will visit Kieff, where large reserves are forming; but it is not certain whether he will go to Warsaw

General Mouravieff's defeat at Kars has put an end to the idea of his supplanting Prince Gortschakoff. It is now said that General Parowsky, who commanded the expedition to Khiva, is to supersede the Prince.

The *Danube* contains a letter from Warsaw, of the 18th, which says:—

The Russian Grenadiers, according to the last news from the South, are at Perekop, and their advance guard has already entered the Crimea. As only two divisions of that corps, forming nine regiments of 3000 men, have been dispatched to the seat of war, it may be stated that the corps at Perekop, which consists, besides the Grenadiers, of artillery, troops of reserve, Cossacks, &c., amounts to about 30,000 strong.

THE WAR IN ASIA.

The official reports of the victory of the Turks at Kars, on the 29th September, have arrived. A despatch from Trebizond of the 8th inst., says, the Russians are supposed to be preparing to attack Kars again

* A place of this name occurs on the map half-way on the high road between Eupatoria and Simpherepol.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, OCT. 2.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.
Oct. 19	29.805	60·5	44·8	51·6	+ 2·4	81	W. & N.W.	0.00
„ 20	30.156	61·2	46·8	52·6	+ 3·6	89	N.W.	0.00
„ 21	30.091	61·7	51·3	56·3	+ 6·8	78	N.W.	0.04
„ 22	30.169	63·8	50·8	55·3	+ 6·3	94	CALM.	0.00
„ 23	29.954	60·3	51·7	55·6	+ 7·2	91	W.N.W.	0.09
„ 24	29.826	54·1	49·3	47·9	— 0·6	67	N.W.	0.00
„ 25	29.956	54·8	39·0	47·0	— 0·9	86	S.W. & W.	0.06

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air at 100 is complete.

The reading of the barometer increased from 29·805 inches at the beginning of the week to 30·169 inches by the 22nd, decreased to 29·826 inches by the 24th, increased to 29·956 inches by the 25th, and decreased to 29·75 inches by the end of the week. The mean for the week, at the height of eighty feet above the level of the sea, was 30·02 inches.

The mean temperature of the week was 52·8°—being 3·7° above the average of the corresponding week during thirty eight years.

The mean temperature during the week was 54·8°—being the difference between the highest reading, on the 22nd; and the lowest, on the 25th.

The mean daily range of temperature during the week was 12·8°. The greatest was 15°, on the 25th, and the least 8°, on the 23rd.

Rain fell during the week to the depth of 1·10th of an inch

The weather throughout the week was fine, and the sky, for the most part, clear, till the morning of Thursday, when it became overcast, and the eclipse of the moon was not visible. The wind blew strongly on the 20th and 25th.

Lewisham, 26th October, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week which ended Saturday, October 20, the births of 1725 children were registered: 915 were boys, and 810 girls. In the corresponding weeks of the ten preceding years the average number of boys was 707, and of girls 654, showing an excess above the average of 324 children within the metropolitan districts. Within the same period, and within the same districts, 1,000 deaths were registered, showing an increase of 57 deaths over the number registered in the previous week, but less than 157 over the estimated number for the week, as calculated from the returns for the same week in the ten preceding years. The mortality of London at present is below its average rate, but it is calculated that it is 91 in excess of the deaths that would have happened under a satisfactory system of registration. Through the effect of vaccination, small pox was fatal to 12 children and to 4 adults. Scarlatina is very prevalent, and in the week destroyed no less than 29 children and 15 adults. Of the 977 deaths, 480 were males and 447 females; of the two sexes 1 died more than half the total number, were under 20 years of age; 154 were between 20 and 40; 159 of the age of 40 and 60; 120 of the age of 60 to 80; and 20 of the age of 80 and under 100 years. No less than 11 violent deaths were registered within the week.

REPRESENTATION OF SOUTHWARK. The electors of this metropolitan borough, are actively engaged in the choice of a candidate to fill the vacancy caused by the decease of Sir William Molesworth. Mr. George Scovell, wharfinger, resident in Southwark, and Admiral Sir Charles Napier are already fairly in the field, and have expressed their determination to go to the poll. Other names are mentioned as likely to be brought forward, among which are Mr. Conyngham, of Brighton, and Mr. E. James, Q.C. Several meetings have been held; others are organising; and a brisk and zealous canvass has commenced. The political principles of Mr. Scovell and Sir Charles Napier are the same; but a portion of the electors will give their suffrages to Sir Charles because they think he was shabbily treated by Sir J. Graham and his colleagues while entrusted with the command of the Baltic fleet. On Thursday night Sir Charles Napier addressed a meeting at London Bridge-house Hotel. In the course of his speech, he said he would act honestly to the best of his ability. He would be subservient to no Minister upon earth: but he was Liberal in principle to the backbone, and he approved Lord Palmerston as Premier because he believed him to be a strong man, a bold man, and a man who would not make an inglorious peace with Russia. We had now achieved such success as would enable us, together with such a position, that Russia must "sue" for peace; but she must be for it on her knees; and, she so doing, we must have a Government which would assert our rights to a safe peace, and which would let Russia down in such a manner that the tranquillity of Europe would not be disturbed again for many years to come.

THE PARISIAN SYSTEM OF OMNIBUS TRAVELLING IN LONDON.—It has been stated that the Société du Crédit Mobilier has made overtures to the omnibus proprietors of London for the purchase of their establishment, &c. This, however, appears not to be the case, the Société not having taken any steps in the matter beyond the receipt of a letter to that end concluded with the proprietors by M. J. Oral, of the house of Oral and Armani, and M. Leopold Foucaud, of Paris (the founders of the Compagnie Générale des Omnibus), by which they have agreed to take 500 London omnibuses, to the number of 728. Six hundred are to be delivered in December next, and the remaining 128 in two months, if required. It is, however, intended with most success remains to be seen to adopt the Parisian mode of "correspondance," by which a person in one omnibus would soon 600 omnibuses would be enabled to go to any part of the metropolis direct. The wheel of the omnibuses, it appears, will be taken at a valuation of £400 as the maximum price for one vehicle, with horses complete, &c. The revolution in this mode of travelling will be most extraordinary, and the Parisian system, if strictly adopted, will be most beneficial to the public, the sum fixed for the fare being 6d. for a single journey without change of vehicle, and an extra 1d. for the "correspondance." For instance, a person wishing to travel from St. John's-wood to Highbury, under the present system, would be obliged to ride first to the New-road, paying 4d.; thence by another omnibus to Islington, 4d.; and from Islington to Highbury, 4d.; amounting in all to 1s. By this singular and contemplated change a traveller will be conveyed to the nearest point for 4d., and, paying the extra penny, will be carried by a second omnibus to his destination, which being so ordered as never under any circumstances to require more than a single change of vehicle. Each of the omnibuses will have a machine which has been adopted in Paris, indicating the number of passenger who enter and leave the vehicle, thus checking all attempts at dishonesty, and guaranteeing to the owners the value of each journey.

REDUCTION IN THE PRICE OF BREAD.—In consequence of considerable dissatisfaction that has been evinced by the inhabitants of St. Luke's and Shoreditch relative to the recent rise in the price of bread, several bakers in those districts have reduced the price of the 4lb. loaf of bread of the second quality to 8d., and household or country bread (unweighed) to 8d. per loaf.

THE BUILDERS' BENEVOLENT INSTITUTION.—The eighth anniversary festival of this valuable institution is fixed to take place on Tuesday next, at the London Tavern, on which occasion Mr. Charles Lucas, of Lambeth, will preside. It is to be hoped that the funds of the society will be benefited by this festival, there being at the forthcoming election, on the 29th November, a large number of very deserving candidates.

THE TRIAL OF STRAHAN, PAUL, AND BATES.—Yesterday (Friday) morning the Hon. D. Paul, Mr. Strahan, and Mr. Bates, were placed in the dock of the Central Criminal Court, charged with a series of indictments for misdemeanour. The Attorney-General opened the case against them, entering fully into the particulars of the transaction between Mr. Griffith and the prisoners, as given in evidence in the examinations of the prisoners before the magistrates previous to committal. These facts were proved in evidence. Now, Sir F. Thesiger addressed the jury in favour of Mr. Strahan, stating that the only charge that could be brought against him arose out of a conversation between him and Dr. Griffith; admitting, however, that he did "unhappily, in a moment of pressure, agree to apply certain securities of his customers to relieve the necessities of the bank." But, with respect to the alleged misappropriation of the Bonds in 1854, he maintained that there was not a tittle of evidence against Mr. Strahan. Unless it was shown that Mr. Strahan was privy to the sale of the Bonds in March, 1854, the jury would be bound to acquit him. Now, Sir J. D. Paul was the only person who negotiated the sale of the Bonds with Foster and Brathwaite, through Mr. Beattie. Another point in favour, not only of Mr. Strahan, but of the other prisoners also, was their having made a full disclosure before the Commissioners of Bankruptcy—a recent Act of Parliament having specially protected persons making such disclosures. Serjeant Byles addressed the jury on behalf of Sir J. D. Paul, dwelling almost exclusively on the legal point—that, having made full disclosures before the Bankruptcy Commissioners, he was not liable to a criminal conviction. Mr. H. James, Q.C., defended Mr. Bates, maintaining that there was no tittle of evidence of proof that he was in any way connected with the transaction for which the parties were indicted. The inquiry was adjourned until to-day (Saturday).

DEAR-BREAD AGITATION.—On Sunday last there was another meeting in Hyde park, called ostensibly for the purpose of considering the present high price of bread. Between eight and ten thousand people assembled. Most of them were attracted to the spot by idle curiosity, and the meeting was neither serious in its tone, nor decided as to the objects it had in view. The persons present collected in groups and joined in conversation on all sorts of subjects, but no formal speeches were made except in one case, where five or six hundred persons stood round Mr. Beacon, a well-known agitator, who was at once nominated "chairman." In this group a working man spoke at some length upon the origin of the war, of which generally he approved, and denounced the present high price of bread, for which he admitted he could not account, nor was he able to suggest a remedy. He concluded by moving a resolution, providing for the establishment of a "provision league," and appointing a committee of twenty to watch the headquarters during the forthcoming winter. This resolution was agreed to *nem. dis.*, and the meeting adjourned until two o'clock next Sunday. Much excitement prevailed in the vicinity of the Marylebone Police-office on Monday, in consequence of numerous parties having been taken into custody for offences arising out of the "dear-bread" agitation, in Hyde-park. Martin Hussey, Bartholomew Daly, and Anthony Shields, charged with throwing stones in Wigmore-street, Cavendish-square, and assaulting police-officers, were each sent to the House of Correction for a month. John Smith, Bartholomew Daly, and Henry Williamson, charged with being concerned in wilfully breaking numerous panes of glass in the house of Mr. Attride, were fined 30s. each, or a month's hard labour in the House of Correction.

NAVAL AND MILITARY INTELLIGENCE.

THE COMMAND-IN-CHIEF IN THE EAST.—The public will learn with little surprise that General Simpson is about to return to England. His appointment to the chief command was, as we announced at the time, only provisional, and her Majesty's Government have taken the steps to gratify General Simpson's desires, and to relieve him from the arduous position which he has hitherto filled. The names of General Codrington and of others have been mentioned as successors to the command of the army in the East, but, as the despatches conveying the appointment have only just left town, it would be manifestly unadvisable to publish matters of so high and delicate a nature here before they are known to those they chiefly concern. The appointment will be announced as soon as the telegraph shall notify its receipt by the new Commander-in-chief in the Crimea.—*Hornet Post.*

THE ADMIRALTY are making great exertions to build and equip a numerous and powerful flotilla of gun and mortar-boats for next year's campaign. A number of private firms will be intrusted with the task under the direction of the officers of her Majesty's dockyards. Four have been commenced at Sunderland, by Messrs. Briggs. These vessels will be constructed of great length, to carry a heavy armament at an exceedingly high rate of speed, and to navigate in the comparatively shallow parts of the Baltic. These boats will have screw-propellers in addition to efficient masts and sails. Messrs. John Scott and Sons, of Greenock, have also contracted with the Admiralty to build six mortar-boats, to be ready in the spring of 1856. They will be upwards of seventy feet in length, and are to be constructed in a very strong and substantial manner, and to have a light draught of water. Their armament will consist of a 13-inch mortar, fitted on a platform of great strength placed amidships, and they will be cutter-rigged. They will carry little canvas, as when brought into use they will be attended by steamers, which will tow them into position. Messrs. Scott, Sinclair, and Co., of Greenock, have also an offer from the Ordnance Department to cast the mortars, and manufacture shot and shells

NUMBER OF ALLIED TROOPS IN THE CRIMEA.—There are in the Crimea 54 battalions of British infantry. These may be counted at an average of 700 men to each battalion—which would give 38,200—but, taking the moderate average of 600 men to a battalion, it will give a total of 33,000 of infantry alone. The artillery is acknowledged to be 6000, and to be the most efficient force of any nation in the Crimea. The cavalry now musters 6000 in its fifteen regiments. There are still 18,000 men without counting sappers, Engineers, Marines, Work and Transport Corps. It is a moderate estimate to call them 30,000 men. The French force is about 80,000—that makes 130,000 French and English. Add 30,000 Turks (there are nearly that number at Eupatoria alone), and [illegible] Sardinians, and we have an army of 180,000 men. General Vivian's Continental contingent of [illegible] at least [illegible], which will amount to 200,000 men. How the Russians are to escape from such a force out of the peninsula, with the sea on all sides in our hands, is a puzzle, which we may leave for Count Resebeval and his abetters and apologists in London, in Manchester, in Berlin, in Brussels, and elsewhere. Gortschakoff is clever at getting over a bridge. If he expects to get away this time he must be quick about it.

ARRANGEMENTS are making for the payment to the seamen and marines comprising the Naval Brigade employed at the siege of Sebastopol, of sixpence a day in addition to their sea pay. This very proper acknowledgment of the truly gallant services of the seamen and blue-jackets who did their duty in the trenches is creditable to the Board of Admiralty. Owing to the difficulty of ascertaining with certainty the names and ships of the men engaged, and the exact periods of their servitude, it is probable some months will elapse ere the bounty is payable.

A RETURN was issued from the War-office on Tuesday giving the number of deserters up to the 22nd instant. From that document it appeared that the total number of deserters from her Majesty's regular service amounted to 350. The following order has also been issued:—"That for the present the usual reward which is given by the War-office for the apprehension of a deserter will be £1 instead of 10s."

A FIRM body of men, who arrived the previous evening by railway, and were billetted for the night, proceeded by train, on the South-Eastern Railway, for Folkestone, en route for Dover and Shorncliffe, on Tuesday morning. This detachment, numbering sixty-four men, received their preliminary instructions at Hollingsland, and their drill will be completed at Shorncliffe. More than one half were the regimentals of the 1st and 2nd Jager corp.

AT forty minutes past six o'clock on Tuesday morning a special train was dispatched from the Waterloo-road terminus of the London and South-Western Railway to Plymouth. Upon which there are 310 rank and file, with five officers, belonging to the Grenadier Guards, entered the carriages, and the train proceeded direct to Southampton, where the men embarked for the Crimea. At half-past ten another special train left Basingstoke for the same port, in order to convey the men to the Crimea, containing 204 rank and file, six officers, five horses, and a considerable number of the Land Transport Corps with stores for the East. A special train also left the Willesden Junction, with twelve horses, five officers, and 226 rank and file. Owing to the admirable arrangements made at the railway everything passed off without the least confusion.

ORDERS have been forwarded to the cavalry depôts at Maidstone and Canterbury to hold in readiness for embarkation as many disciplined mounted men who may be available of the 1st Royal Dragoons, 2nd Dragoons, 6th Inniskillings, 10th Hussars, 11th Hussars, and 13th Lancers. The detachments of the three first-named regiments being heavy will proceed from the cavalry reserve at Canterbury, and the others, belonging to light cavalry regiments will proceed direct to the seat of war. Similar instructions have been transmitted to the cavalry depôts at York, Manchester, Brighton, Dorchester, Dublin, Newbridge, and Cahir. The number of mounted men to embark to join their respective regiments is 600, taking with them about 500 extra troop-horses for remounts. Orders for embarkation have been issued for detachments from the depôts of the 54th Foot, 68th ditto, 92nd Highlanders, and 94th Foot, to join their respective regiments at Gibraltar, they being about to proceed to the seat of war. Detachments for the 57th King's Light Infantry, and 72nd ditto, will proceed by the same conveyance to Malta, the regiments being under orders for the Crimea.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

OUR artists as they return from Paris delight to dwell on the vast benefit that each fancies he has derived from a careful examination of the five thousand examples of art which the Emperor Napoleon has been the means of gathering together as a sort of supplement to the general Exhibition. The nephew of the great Napoleon has done more for art, so artists assure us, by this collection of the works of living artists, than his uncle accomplished by robbing Italy of her treasures, and making Paris the great gallery and cabinet of the world. Our artists who rushed to Paris in shoals in 1814 brought back with them much that was useful and much that was turned to good account. Wilkie and Haydon saw in 1814 what had been done by the mighty dead; their followers in 1855 see what is doing and can be done by all the best painters in all the existing schools of art. What Wilkie and Haydon saw excited emulation, and almost precluded rivalry—what is now seen provokes comparison, and points out excellences and weaknesses with even-handed justice. "We stand as well as a school," observed one of the ablest of our Royal Academicians, immediately after his return from Paris, "and we can point to works which will mark us out for many excellences of design and treatment. We have our Mulready and Millais—our Stanfield and our Roberts—our Landseer and our Webster; but each of these artists, who has had the advantage of seeing the Beaux Arts at Paris, must carry away something that will be of use to him in his future studies. Thus Landseer may learn much from Rosa Bonheur; Webster cannot fail to profit from seeing the pictures of the Prussian Meyerheim; Stanfield must have found some sea-pieces that smacked of salt-water in a way which he, with the frank spirit of his nature, would at once admit. Roberts, equally generous in rendering justice to others, has been loud in the praises of some interiors of churches, which he understands so perfectly and renders so well. Mulready and Millais must assuredly have found that the same elaborate attention to drawing and detail for which they are so deservedly famous is to be seen in the works of some of the ablest of the French and Belgian schools. Lee and Lunnell will at once admit that there are artists out of England—I would name Koekhock for instance—who can render trees quite as ably as themselves. In sea-shore pieces, such as Collins loved to paint, we find that M. Henri Place is no unworthy representative in the French school of a thoroughly English painter. Henry Cooper may learn much from the Belgian Louis Robbe and the French Brascassat and Louis Cogniard. Grant and Gordon will discover qualities worth remembering for future portraits in the works of Winterhalter and other artists of celebrity in France. Frith and Goodall will assuredly profit by the time they are said to have bestowed on a picture by Jean Baptiste Madou; while those exquisite little works of Meissonier might at once be placed in the best cabinets of the Dutch school, so masterly are they in point of colour and detail." Such is the strain of commendation generally indulged in by English artists who have returned from studying the choice and extensive collection of pictures which is the taste and influence of the Emperor of the French collected and exhibited so nobly to the world.

There are people who find fault with the warmth of commendation which the critic in the new number of the *Quarterly Review* has thought proper to give to "The Newcomes" of Mr. Thackeray. The arrow of approbation is drawn, so it said, to the very head. "The critic talks of 'Tom Jones' and 'Humphrey Clinker' in the same breath with 'The Newcomes.' Nay, he heads his panegyric (there is the part that is most condemned) by transferring to Mr. Thackeray the very words of praise which that writer has with great skill applied to Fielding." Others, and those of reputation in letters, are as loud in favour of the article, and commend the critic for awarding these praises to the living while too frequently is only bestowed upon the dead. Fielding and Smollett had, when alive, very little reputation as novelists. Their fame is almost entirely posthumous. Dickens and Thackeray (we are now more discerning and generous) partake of that fame in their lives which our children will assuredly continue to them when they live only in their works.

This mention of Mr. Thackeray reminds us of a query thrown out the other day on the occasion of the farewell dinner at which Mr. Dickens presided: "I wonder," said the querist, "if a farewell dinner was given to Fielding when Fielding left for Lisbon, with Smollett in the chair?" To which a second query was made before an answer was given to the first: "I wonder if a farewell dinner was given to Smollett when Smollett left for Leghorn? and, if so, was Goldsmith in the chair?" We fear that no such pleasant meetings took place. Fielding and Smollett do not appear to have known one another personally. Goldsmith, it is true, lived on a friendly footing with Smollett; but there is nothing to strengthen the pleasant supposition of either querist. Wits live now on more friendly terms with one another than formerly: they are better off, and can, therefore, better afford to praise one another.

The lovers of choice editions of choice authors will learn with pleasure that M. Didot, of Paris, is about to give us an edition of Horace that will rival in beauty the far-famed editions by Pine and Milman. The illustrations, excellent in themselves, are printed in sepia, and the whole appearance, from what we have seen, is one replete with promise.

The greatest number taken by any one firm of the forthcoming volumes of "Macaulay's History" has been taken by a circulating-library keeper—Mr. Mudie. Till of late years Simpkin and Marshall were the leviathans of every subscription list for a new book of any mark or likelihood. The matter is not wonderful: readers are divided into purchasers and borrowers—the purchasers are the smaller class—Mr. Mudie buys to lend.

DESTRUCTION OF ENGRAVING PLATES.—The friends of Mr. Boys who is about to retire from business after a career of nearly forty-five years, and the admirers of art generally, were invited on Wednesday last to that gentleman's premises, 497, Oxford-street, to witness the breaking up of twelve of his most celebrated plates of impressions on the last record of that once-famous banquet by the long-looked-for ninety-seven-portrait engraving of "The Congress of All Nations" which met in May, 1851, to inaugurate the "Temple of Industrious Peace." The plates had been previously grooved in three-inch spaces, in order to facilitate the operation of breaking; and Mr. Lewis looked calmly on, in company with Messrs. Boys, Gambart, Southgate, Dixon, and seven or eight others, while the ruthless Vandal in the shape of a mechanic mounted the table, and, placing each plate on an anvil, knocked it neatly to pieces with a sledge-hammer. The process of grooving caused several of them to curl up very much, thereby rendering the work of demolition easier; but the "Hawking" and the "Jerusalem" plates stoutly refused to yield until they were fairly shivered to atoms. After an hour's enjoyment of this unique sight the company took their leave, with the parting toast that the plates might prove "as lucky in death as in life"—a wish which was, we trust, fully realised by Mr. Boys at the dinner trade sale on the following day

CONGREGATIONAL UNION OF ENGLAND AND WALES. On Monday evening the 17th annual autumnal session of this conference, which is composed of lay and clerical delegates from the various Nonconformist churches in England and Wales, belonging to the Independent denomination, commenced by an inaugural service at the Poultry Chapel. After the preliminary devotions, the Rev. J. C. Harrison, of Camden-town, delivered an address, based upon Acts iv., 23. On Tuesday a meeting was held in the same chapel in the morning, under the presidency of the Rev. Dr. Halley, of Manchester, and in the evening a meeting was held in Exeter-hall, "for the enforcement of Congregational principles;" Samuel Morley, Esq., in the chair.

SEBASTOPOL, FROM THE ARSENAL CREEK.—SKETCHED BY J. A. CROWE.—(SEE PAGE 498.)

ENTRANCE TO SEBASTOPOL, FROM THE WORONZOFF ROAD.—SKETCHED BY E. A. GOODALL.

SKETCHES OF THE INTERIOR OF SEBASTOPOL.

We continue our Artists' Views of what has been termed in a letter from the Camp "the large skeleton of the city, its roofless tottering walls, and vast heaps of rubbish and cinders." The first scene, at page 493, has been sketched by Mr. Crowe, from the ruins of St. Peter and St. Paul; the second View, at page 496 also by Mr. Crowe, is from the Arsenal Creek; and the third scene, by Mr. Goodall, shows a shattered house in picturesque ruin at the entrance to Sebastopol from the Woronzoff road. These several points have already been described by our Correspondent in his letters from the Camp. The following vivid picture of the scene which Sebastopol presents, from which must it may be viewed, is given in "A Soldier's Letter" in the *Times* of Thursday. The writer, on visiting the town immediately after the siege, says:—

What a sight! Every step you take the mind became overwhelmed at what you saw, until one's ideas were staggered. Here you saw what had been a street of gorgeous palaces; there you saw a mighty but solemn temple; yonder a prodigious line of classic buildings and terraces—all in a pile of blackened, smouldering ruins. Some houses that I entered presented an appearance which would almost cause one to look at, for pity's sake, from their intrinsic ruin and desolation. The dwellings of the upper classes appear to have been built and fitted up to the utmost degree of comfort, convenience, and elegance. But the chaos in which everything was found I cannot describe. In what had been the drawing-room would lie the broken shaft of a column of polished marble, the Corinthian capital of which shone with burnished gold, while the upper part of its fellow still adhered to the ceiling which it was intended to support, and the weight of which now brought the ceiling nearly down on the flooring. Close beside would be a large block of stone that had crushed to pieces a piano of extraordinary beauty and dimensions, a shot or shell having shattered it from the wall of masonry. Fragments of marble chimney-pieces, gilded picture-frames, music, pieces of polished mahogany of elegant forms, belonging to ladies, eiderdown beds, &c., were everywhere strewn about. The beautiful places of worship were all ruinous empty shells, riddled. Like all the houses and buildings, with shot and shell. One thing, however, went to show that the inhabitants had long left their dwellings, probably as long ago as the first bombardment, for every house appeared to have been in occupation of the military from the *débris* of clothing and appointments everywhere seen. Those inhabitants, it is probable too, who had left with the fugitive host of ever returning, doubtless, with a true Russian spirit and feeling, cursed about them what ruin and damage they could before leaving; and what they failed to do the soldiers did for them before they left.

But without this our projectiles would have destroyed nearly every stone and stick. Those noble buildings which are seen from our heights with smooth white exterior walls and green roofs, which smile and look pleasant as a sunbank in the distance, on approaching them are found to be cold, forbidding ruins—pierced from top to bottom in every direction. The effect of our 13-inch shell can everywhere be seen, weighing as they do 200 lb.; and, falling from an altitude of a mile and a half, or about 3000 yards, their concussion is equal to seventy tons. Large gaps or empty spaces in rows or clusters of buildings tell that a shell has penetrated the roof or wall and descended to a depth below the foundation, and in an instant not a vestige remained—nearly every atom scattered to the winds in all directions. * * *

But Sebastopol has been known and feared more as an arsenal, and an arsenal we found it. No one is prepared to hear of the extent of the warlike resources, naval and military. As you leave the Camp and thread your way down the ravines, you enter a *faubourg*, or suburban village, most beautifully situated on the slopes of the opposite hills of the Great Redan and Flagstaff Bastions, but now scarcely one stone remains on another. Leaving this, you wind at once upon the creek adjoining the Great Harbour; here frowns a formidable battery of ships' guns. The left of this creek is the main city sloping up to a height of about 500 feet above the level of the sea. This is called the "French side," as it was commanded by the Flagstaff Battery, which the French captured. The Redan, the most formidable of all, covered the public works and the barracks—immense buildings, plain but beautiful structures of brown stone of marble whiteness. The vast store houses, with the same appearance, form a grand quay not equalled any where. The quay is terminated by Fort Paul, now destroyed, having been blown up by the Russians on the night of the 8th before leaving.

THE FAVOURITE SONG AT THE CAMP.

The singing of old songs, catches, glees, and choruses forms a principal feature in the amusements of the Camp. During the long evenings of the past summer our men used to sit in some old redoubt or abandoned trench, and there the song and toast went round, and once or twice I heard some original and humorous verses composed to the time and place, on our Government at home, to our Generals at head-quarters, to the Czar in his palace, and to Johnny Russ in front, which were not only witty and satirical, but highly indicative of poetic genius. I took a note, one evening, of an encore given to the "British Grenadiers," which was received with wonderful enthusiasm by a large company of red-coats who were watching the infernal fire of the Redan upon our advanced trenches. It was getting dark, but the Redan dropped shells every few seconds into our works, producing the effect of the most brilliant fireworks. Unfortunately, when morning dawned, a terrible list of killed and wounded proved the accuracy of Russian artillery practice. The verse was as follows:—

And soon a song of Victory shall cheer the hearts of all,
And triumph fleet on every breeze borne from Sebastopol,
Where Frenchmen brave, and black Zouaves, the men who know no fears,
Have made by side the British brothers fought with British Grenadiers:
The Great Redan shall thunder find, and we will find the cheers—
With a row-dow-dow, and a row-dow-dow, for the British Grenadiers!

But of all songs the favourite song at the Camp is "Annie Laurie." Words and music combine to render it popular; for every soldier has a sweetheart, and almost every soldier possesses some organ of tune. Every new draught from England marches into regimental quarters at the Camp, the band playing this old and recently modernised Scotch melody. I heard the song sung on the evening of the 7th of September, under circumstances so peculiar that I never can forget them. Codrington had visited us on parade in the afternoon, and addressed the men. We were told that on the next day the assault was to be made on the Great Redan; "And," said the General, "the Commander-in-Chief feels assured that Light Division—never known to fail—will again nobly do its duty." This was a good speech, according to the poetry and the romance of war; a Manchester orator would have said—"The Commander-in-Chief sends his congratulations, and says that at this hour to-morrow about 1500 of you will be killed or wounded." Every man understood it, according to the Manchester version; but, though a few cheeks turned pale, not an eye quailed, not a muscle trembled. About eight o'clock in the evening I walked towards the Victoria Redoubt to gaze for the last time on the terrible batteries of Sebastopol. Hundreds of soldiers were sitting on the other side the hill looking down on the doomed city. A song was proposed, silence obtained, and a corporal in the 2nd Battalion Rifle Brigade struck up "Annie Laurie." He had a brave voice, tolerably good, and sang with expression, but the chorus was taken up by the audience in a much lower key, and hundreds of voices in the most exact time and harmony sang together—

And for bonnie Annie Laurie
I'd lay me down and die.

The effect was extraordinary; at least I felt it so. I never heard any chorus in an oratorio rendered with greater solemnity. The heart of each singer was evidently far away over the sea. It was more like a psalm than a ballad; for at such a time, on the eve of a great battle, a soldier thinks only of his love and his God. The song was scarcely finished when the bugle sounded to quarters, and the company dispersed never to meet again. Ere the next sunset the singer of the song, and scores of those who joined in the chorus, were lying still and stark in the ditch of the Redan, having "laid down and died" at the command of their mistress than any of womankind. And there they still lie; and the ditch that used to be so deep is now level with the embrasures. Alas! how many hearts are breaking for them at home! How many eyes "dark blue" as Annie Laurie's have scanned the horrid list recording the names of the dead, fading when they most dreaded to see! How many loving women whose happiness is for ever buried in the grave which holds the mangled remains of the idol they treasured have fallen on their knees and asked God to take pity on them and let them die too?—W. C., *Letter from the Camp.*

The Representation of Hereford.—We were much grieved to observe, in the list of bankrupts in the *Gazette* of Friday last, the name of Sir Robert Price, one of the representatives of this city, who has been a great sufferer from extensive engagements in mining and other speculations. Several of the London papers have announced that the bankruptcy would occasion an immediate vacancy in the representation of this city; but we are informed that the seat will not become void until twelve months have elapsed, and that if the bankruptcy is superseded within that period there will be no vacancy at all.—*Hereford Journal.*

NOTES OF THE WEEK.

Among the more notable rumours of the day, we hear that Mr. John Bright, M.P., is to succeed General Simpson as Commander-in-Chief of the Crimean army. Mr. Gladstone is about to take orders in connection with the Church of Rome, having an eye to the next vacant cardinalship, and ultimately to the Papal chair, when Pio Nono dies, in the hope that he would then be able to settle the melancholy differences which separate the Eastern and Western Churches, by transferring the seat of the Popedom to Moscow or St. Petersburg. Count Nesselrode is said to be on his way to London, with a pacific message from the Emperor Alexander, or, should that fail, with a challenge to Lord Palmerston to decide the quarrel, on neutral territory, by a regular duel, as his grandfather Paul proposed to Mr. Pitt, half a century ago. From the same veritable source we learn that the Illustrated London News has changed hands, an announcement which is just as much entitled to credit as the other items of wonderful news to which we have adverted.

This is an eventful time, whether we regard national or military movements, or mere incidents of the scenes around us. The dullest observer of Continental affairs cannot be blind to the approaching crisis, in which Austria and the Italian States will be more immediately involved, but which must have its influence upon the relations of all Europe. The war is just now at a point when the excitement is almost painful—the Russian army apparently preparing to rush in despair from the Crimea, and the Allies sternly seeking to bar every outlet, and to annihilate the forces opposed to them. At this moment an incapable Commander-in-Chief is deposed, and any hopefulness felt in reference to his successor is founded less upon the knowledge of the abilities of the latter than upon the feeling that almost any change must be an improvement. The Anglo-French navy in the Euxine is striking hard and well, and we may expect greater news than that the two fortresses of a liman have fallen. In short, turn the eye where we will, it is at once arrested by movements of significance or of importance.

Mr. Gladstone could say nothing in eulogy of our loyal colonists when delivering his Hawarden address, and perhaps may think it a proof of the Canadians being but half-civilised that, when the war began, they hastened French and English alike—with noble contributions for aid of the Allied armies; and that, when they heard of the fall of Sebastopol, Quebec, Hamilton, and Montreal burst out with a shout of enthusiasm that the prowess of the "old countries" had been rewarded; that judges cheered from the bench, and clergy of all denominations exulted in the pulpits; and that cannon-roar, fireworks, and illuminations testified to the delight of the loyal colony. Mr. Gladstone's cosmopolitanism may lead him to sneer at such manifestations, but they have been received with great pleasure by the people of England, not only because they evince the warmest sympathy in the common cause, but because they are confirmatory of the wisdom of the policy (to which our Governments were mainly brought by the lamented statesman whose loss we now deplore), that acted upon the belief that the freer the colony the stronger and the more rational its affection for the parent country.

Parliament has been again prorogued until the 11th of December, so that there is yet a chance for Mr. Disraeli that the humiliating and disastrous peace which, just before the Houses rose, he was so certain Ministers would make, in the impunity of the vacation, may yet be patched up by Lord Palmerston, though we must confess that events do not seem exactly pointing in the direction of that sort of pacification. There is an *on dit*, which may have no further foundation than the extreme probability of its being true—namely, that the Earl of Derby is so little delighted with the alleged manœuvres of his accomplished ex-Chancellor of Exchequer, that it will need some preternatural tact (of the kind with which Vivian Grey won over the Marquis of Carabas) to reunite certain political ligaments which have been lately ruptured. Lord Galway has, however, certified that Mr. Disraeli has none of the peace-notions which have been recently attributed to him. The Conservative party retain the Huntingdonshire seat vacated by the succession of Lord Mandeville to the peerage—the new member, Mr. James Rust, a retired barrister and distinguished University scholar, pledging himself to support the Government in carrying on the war with the utmost vigour. While speaking of Parliament, it should be added that the seat of the late Sir William Molesworth is asked for Mr. Scovell, a wharfinger, who polled a large number of votes on a former occasion; and for Sir Charles Napier, who says that if the electors approve of his sentiments, to be expressed at public meeting, they may elect him, if not, they may select a better man. Mr. Conyngham and Mr. Edwin James are also "spoken of."

A member for Southwark may easily be found, but it will be difficult indeed to find a worthy successor to Sir William Molesworth in the important office to which he had raised himself by his persevering, enlightened, and undaunted advocacy of colonial rights. Several names are of course, mentioned, among them, those of Lord Elgin, who has had experience in the government of a colony, and of the Duke of Somerset, who as Lord Seymour, has had official training. To the last vacated office of State, that of the Postmaster-General, his Grace might, it was understood, have been appointed, but the place was not exalted enough for a Duke of Somerset. Our colonial empire and the situation of a Secretary of State may not be below his ambition. There is Lord John Russell, the last Colonial Secretary, too. Lord Palmerston has a "high opinion" of him, and is very forgiving; but perhaps it is a little too soon to forget Vienna. Mr. Gladstone is a peacemonger, and self-excluded, luckily; for his colonial rule some ten years since was anything but felicitous. The great importance of the office of Secretary for the Colonies makes it essential that a large-minded man should be selected for it, and the circle within which the Premier will look is, unfortunately, sadly contracted, and not very brilliant.

The indignation of the loyal Jersey men was not to be trifled with, and the three persons who have been implicated in the late outrageous insults to our own Sovereign, and the attempt to procure the assassination of her ally, have been unceremoniously turned out of the island whose hospitality they have repaid with disgusting ingratitude. They find a few advocates here, but these are of a class whose advocacy is a fouler stigma to a cause than any legal branding can be. The usual fictions with which personages of the class of M. Piandini garnish their "martyrdom" have been urged, one being that a magistrate of Jersey proposed that the refugees with their wives and children should be sent out to sea in a vessel, which should be scuttled—Nantes fashion. That the indignation felt by some honest man at proposals for the cold-blooded murder of a Sovereign might have induced him to say that something of this kind would serve the scoundrels right is probable enough; but the precautions taken by the authorities that not a hair of the head of one of the refugees should be injured by the excited mob shows how resolved they were that the contemptuous expulsion to which the *proscrits* were subjected, should not be dignified into persecution, and Europe perfectly comprehends that the process administered was simply that of kicking a ruffian down-stairs.

The records of wife-beating brutalities which are daily registered, and which will, no doubt, furnish a complete case for a police enactment of great severity next Session, have been varied this week by a yet more harrowing narrative, into which one enters with reluctance. It may be enough to say that this was the case of a poor girl who, in the very hour of woman's life when all but unredeemed and unredeemable brutes must soften into sympathy for her, was expelled from a lodging by a callous and hardened individual of her own sex, and was subsequently refused shelter by workhouse officials, for whom the strongest word of condemnation in the English language would not be too strong. The whole case is too disgusting for more comment, but we must add that the magistrate who heard it took a strangely-indulgent view of the conduct of the coarse brutal woman who thrust the girl from her house, and that we trust the officials who are mixed up in the affair will be indignantly dismissed from their position by common outcry of the ratepayers who hire them. The only person who behaved humanely in the affair was a policeman.

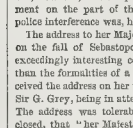
The bread meeting to which we adverted last week was renewed on Sunday in the Park, but the people, who, it might be supposed, were more immediately affected by the price of bread, seemed to pay little heed to the summons to attend. A great many were present out of curiosity, but they manifested no earnestness of interest in arguments which were of the weakest, and they were easily distracted by any interruption. The question itself has been too fully discussed in these columns to render necessary more than a mere reference to one of the facts of the week; we shall add, however, that the police precautions, taken in anticipation of excitement on the part of the people, were very discreet and humane. No police interference was, however, needed.

The address to her Majesty from the Corporation of the City of London on the fall of Sebastopol, was presented on Wednesday, and was an exceedingly interesting ceremony, and one of a character more elevated than the formalities of a Lord Mayor's career often attain. The Queen received the address on her throne in St. George's Hall, the Home Secretary, Sir G. Grey, being in attendance, as chief representative of the Ministry. The address was tolerably well written, and the prayer with which it closed, that "her Majesty's life" might long be spared, to guide us in war, to govern us in peace, and to reign over a people distinguished for its love of freedom, its enterprising commerce, its ardent pursuit of science, and its possession of a pure Christianity, might not be the choicest composition in the world; but what it meant was what we all mean and feel whenever the subject is approached. The Queen's reply spoke of her admiration for the enduring patience and heroic courage of her brave soldiers and sailors; and also contained the assurance, ever welcome to British ears, that the war is to be prosecuted with vigour until, by the blessing of God on our own efforts and those of our Allies, it can be concluded by a lasting and honourable peace. This address and reply will have a place in our history, and the civil magistrate is fortunate in closing his consulship with the discharge of so notable a duty.

OBITUARY OF EMINENT PERSONS.

JOHN, VISCOUNT DE VESCI

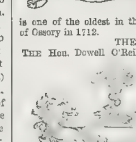
This venerable and much-esteemed nobleman died on the 16th instant, at Portarlery, co. Down, Ireland, aged 84. His Lordship was a Representative Peer, an Irish Baronet, and Lord Lieutenant of Queen's County. He succeeded to the title the 13th Oct., 1804. In 1800 he married Frances Letitia, fifth daughter of the late Right Hon. William Brownlow, and leaves a daughter, Catherine, wife of Patrick John Nugent, Esq., of Portarlery, and two sons, of whom the elder, Thomas, present and third Viscount de Vesci, was born the 20th Sept., 1803, and is married to Lady Emma Herbert, daughter of the eleventh Earl of Pembroke.



The late nobleman, whose death we record was son and heir of Thomas, first Viscount, by Elizabeth Sebina, his wife, daughter and coheir of the Right Hon. Sir Arthur Brooke, Bart. The family from which he descended is one of the eldest in the kingdom. The father of the first Peer was Bishop of Cassory in 1712.

THE HON. DOWELL O'REILLY.

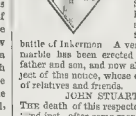
The Hon. Dowell O'Reilly, Attorney-General for nearly a quarter of a century of Jamaica, and President of the Legislative Council there, was the sixth son of the late Matthew O'Reilly, Esq., and the uncle of Lee prince Miles William O'Reilly, Esq., of Knock Abbey Castle, in the county of Louth, a Roman Catholic family of some respectability in Ireland. Mr. Dowell O'Reilly was born in 1795, and was a member of the Irish bar. He was, some four-and-twenty years ago, appointed Attorney-General of Jamaica, by the present Earl of Derby, when Secretary of State for the Colonies, under the first administration of Earl Grey.



On the death of the Hon. James Gayleard, in June last, Mr. O'Reilly was named by Sir Henry Berkly to the chief office of President of the Legislative Council, an honour which he did not survive sufficiently long to admit of his inauguration. The hon. and respected gentleman died on the 12th ult., at his residence, St. Andrew's, Kingston, Jamaica. His remains were the following day attended by a large number of the most influential and respectable inhabitants of Kingston to the Catholic cemetery of that town, where Mr. Dowell O'Reilly was buried, pursuant to his dying request. Mass was previously performed in honour of the deceased at Trinity Chapel, Kingston. Mr. Dowell O'Reilly's elder brother, Colonel Walter O'Reilly, C.B., married in November, 1827, Harriett Dowager Duchess of Roxburgh, and died in 1844. Mr. Dowell O'Reilly was himself never married.

MRS. CARPENTER.

This lady, who died, aged 95, on the 20th ult., at her residence, 7, Great Cumberland-place, Hyde-park, London, was Hester, relict of General George Carpenter, whose demise occurred very recently. The venerable lady retained her faculties clear and unimpaired to the last. She was the daughter of Robert Moore, Esq., of Moore Vale, county Armagh, the granddaughter of Wallace of Crobane, county Down, and great-granddaughter of Colonel Robert Rose, of Rosstrevor, M.P. She was particularly proud of her descent from Sir William Wallace, the defender of Scotland, and a very fine portrait of that great chieftain graced her apartment, having been in her family through many generations. Shortly previous to the death of her husband she lost her only surviving son, Colonel Carpenter, who fell at the head of his regiment, the 41st, while sustaining the brunt of the first attack of the Russians at the battle of Inkermann. A very handsome and tasteful monument of white Italian marble has been erected in Kensal-green Cemetery to the memory of both father and son, and now also forms the last resting-place of the venerable subject of this notice, whose death has caused much sorrow to an extensive circle of relatives and friends.



JOHN STUART WORTLEY, BARON WHARNCLIFFE.

The death of this respected peer occurred at Wortley Hall, Yorkshire, on the 22nd inst., after some months' suffering from severe illness. His Lordship was born 22nd April, 1801, the eldest son of James, first Lord Wharncliffe, by Elizabeth Caroline Mary, his wife, daughter of John Earl of Erne, and the grandson of the Hon. James Archibald Stuart (second son of John, third Earl of Bute, K.G.), who assumed, in 1795, the additional surname and arms of Wortley, on succeeding to the great Yorkshire and Cornwall estates of his mother, Mary, only daughter of Edward Wortley Montagu. Lord Wharncliffe, married 12th December, 1825, Georgiana Elizabeth, third daughter of Dudley, first Earl of Harrowby, and leaves three sons and two daughters; of the latter, the elder, Miss Caroline, is wife of the present Marquis of Drogheda; and of the former, the eldest, Edward Montagu Granville, succeeds as third Baron. The late Lord Wharncliffe was a Liberal Conservative, but did not take, of late, any active part in politics. He mainly employed himself in forwarding the interests of his tenants, and devoted much of his time to the promotion of agriculture. He sat in the House of Commons as member for the West Riding from the general election of 1841 to the period of his accession to the peerage in 1845.

Death of Mr. Frederick Lucas, M.P.—This event, which had been anticipated for the last week or two, took place at Staines, on Tuesday afternoon. The malady under which he sank at last was a complication of diseases, but the origin of his illness was the disappointment caused by the failure of his appeal to the Pope in favour of the right of priests to interfere in politics. In notifying the death of Mr. Lucas, most of the daily newspapers state that he was the brother-in-law of Mr. Bright, M.P. This is not correct. Mr. Samuel Lucas, grain-merchant, a younger brother of the late member for Meath, married a sister of Mr. Bright, and hence the mistake.

EXHIBITION OF PHOTOGRAPHIC PICTURES OF THE SEAT OF WAR IN THE CRIMEA.

The most interesting exhibition in London at the present time is, beyond doubt, the Exhibition of the Photographic Pictures of the Seat of War in the Crimea. Every one will acknowledge at a glance the inherent truthfulness of such a display of the form and features of the men who lead our armies to the strife, and of the groups of gallant men, from the noblest of private soldiers—and we all know there are noble fellows in the ranks—to the subaltern and superior officers who march or ride to victory at their head; but few, perhaps, will be able to appreciate the difficulties under which Mr. Fenton, with rare skill and courage, succeeded in producing these admirable pictures. Mr. Fenton, as we are informed, having been engaged by Messrs. Agnew and Sons, of Manchester, to proceed to the Crimea for the purpose of taking these views and portraits, sailed in the early part of January from London-bridge in one of the Government vessels, direct for Balaclava. A travelling van, or dark room, being absolutely necessary for his operations, having been built and securely shipped on board the steamer, the vessel in due course made Gibraltar, where Mr. Fenton purchased three stout Andalusian horses, and in three weeks from the time of his embarkation he landed at Balaclava with all his material. At this point there appeared every probability that the van would be perfectly useless, as the Gibraltar horses were found utterly incapable of dragging it through the muddy and wretched roads from Balaclava to the Camp. Unharnessing one of the horses, and without saddle, Mr. Fenton endeavoured to make his way to the front, to present his introductions to Lord Raglan and to General Canrobert. He had not, however, passed a mile on his route when the poor beast, which had never been broken in, became unable to proceed, and with a violent effort threw his rider senseless on the road, with a fracture of the ribs, which necessitated hospital treatment for many days. At length, however, and after many hardships, Mr. Fenton presented his credentials to the authorities, and was received with extreme kindness by Lord Raglan, who ordered six artillery horses to be sent down to Balaclava for the photographic van, and *matériel*. Mr. Fenton had Lord Raglan's permission to go to Kertch with the expedition, of which he availed himself; but the order for the embarkation of the troops was so sudden, that he had not time to prepare his apparatus for the purpose of taking pictures. Whilst in the Crimea Mr. Fenton was frequently under fire—especially when taking the photograph "Valley of the Shadow of Death," one of the most interesting in the collection, and the "Panorama of Inkerman," which occupied him three days. The continuous panorama of the "Plateau of Sebastopol" was a work of much difficulty, owing to the nature of the ground and the constant variation of the atmosphere, which affected the horizon line. It shows the entire ground occupied by the Allied forces. The "Council of War" was of course done with Lord Raglan's permission, on the morning of the 7th of June; on which day, at head-quarters, Mr Fenton took the three separate portraits of Pelissier. At General Bosquet's table Mr. Fenton was a frequent guest, and but for the General's kindness he would not have been permitted to make so many pictures of the French camp.

We have not space to enter into any detailed criticism of the various works of art—for such they are—which were thus created by the enterprising photographer. Mr. Fenton is an artist in the highest sense of the word, as we may see from the *pose* and grouping of his pictures. We have, by the kind permission of Messrs. Agnew, transferred to our own columns from time to time some of the masterpieces of the collection: but, among others equally if not more beautiful as specimens of photography, and of the highest interest as illustrative of the war, we cannot omit to mention the characteristic portraits of General Sir De Lacy Evans, Sir George Brown, Marshal Pelissier, General Bosquet, General Estecourt, Lieutenant-General Pennefather, Lord Burghersh, Sir Harry Jones and Staff, Mr. Russell, the *Times'* Correspondent, and Colonel Gordon, and the Head Quarters Staff a group of eleven individuals. "The Council of War held at Lord Raglan's Quarters on the morning of the successful attack on the Mamelon" is another picture, as finely executed as it is historically interesting. Upon a future occasion we hope to be enabled to devote a larger space to a review of Mr. Fenton's labours; but in the mean time recommend all who have not visited the collection to lose no time in doing so, if they would make themselves thoroughly acquainted with the excellence of photography as an art, with its uses as a recorder and illustrator of events, with the visible resemblance of the leading men of the Allied armies, and with a truthful representation of the historic and for ever memorable scenes in which they have figured for the last twelve months.

MUSIC.

What may be called the winter musical season has been commenced, somewhat earlier than usual, by Mr. Hullah, who gave a performance of Mendelssohn's "St. Paul," at St. Martin's Hall, on Wednesday evening. The hall was as full as it could have been at the height of the season. The performance was excellent; and Madame Clara Novello, in particular, displayed all the powers of her magnificent voice, and that grandeur of style which places her above all other singers of sacred music. The only novelty was the début of Mr. Winn, who sustained the baritone part. He is from Bradford, in Yorkshire, and has gained considerable reputation (not undeserved) in that highly musical part of the country.

The provincial engagements being now over, most of the eminent performers have returned to town, and the various winter concerts will be speedily set agoing, among the first of them, of course, will be those of the Sacred Harmonic Society at Exeter Hall. That society is to bring out Costa's oratorio of "Eli" early in the season. The copyright of the work has been purchased by Messrs. Addison and Co., who are now preparing it for publication.

The project of the National Opera Company appears to be making progress. The *Musical World* says that the necessary amount of capital has been subscribed, and that the Lyceum Theatre will be opened by the company before the end of the year.

The Musical Festival at Kidderminster.—We feel it our duty to recur to the opening of the new Music Hall at Kidderminster as an event of no small importance to that town and neighbourhood, and worthy of imitation in other parts of the kingdom. At the instance, and with the liberal aid, of the nobility and gentry of the surrounding district, the inhabitants of that borough have subscribed for the erection of an extensive public building, which comprises a corn-exchange, a newsroom, a free library, class and lecture rooms, and a capacious music-hall: to all of which purposes its arrangements and accommodations are admirably adapted. In the principal room, which, we understand, is to be devoted chiefly to the providing of superior yet inexpensive musical entertainments for the public, an excellent organ has been placed, the public inauguration of which was confided to Mr. Stimpson, of Birmingham. The hall appears to be perfectly adapted to the end for which it was erected; for not only are its fine proportions and appropriate ornaments calculated to please the cultivated eye, but the size and form of its area are such as to allow the most delicate and finished enunciation of the singer to be equally appreciated in every part, so that all the audience have the same advantage of hearing distinctly every sound uttered by the instruments or by the voice. All the performers, and especially the solo-singers, appeared to be justly impressed with the requirements and facilities of the room, and to give free scope to their feelings in adapting the proper variations of expression and ornament to every phase and alternation of sentiment and composition, from the most simple and delicate to the most complicated and sublime. We cannot conclude our notice of this festival without stating that the Tuesday evening concert was signalised by the debut of Miss Mahlah Homer, a young lady from the neighbourhood of Kidderminster, who, we understand, has for some time past been a pupil of Signor Crivelli of London. She sang two songs—Haydn's "Mermaid," and Spohr's "Rose, softly blooming." She was most favourably received, after first song was unanimously encored, and the second narrowly escaped the same honour, by the lateness of the hour to which the concert had now extended. Miss Homer possesses a rich and powerful mezzo-soprano voice of large compass and great variety of expression, to which she seems qualified to do full justice by the attention which she has evidently bestowed on the cultivation of a distinct and graceful elocution. We congratulate her on her successful début, and would urge her to pursue her studies with zeal and perseverance, that she may not only secure, but advance, the position which she has thus early attained by the suffrages of a large, refined, and critical audience.

THE THEATRES, &c.

Princess'.—We have already remarked on the intended reopening of this house with the tragedy of "Henry VIII.," and its highly satisfactory illustrations, which are conceived not only in an archæological but poetic spirit, and presents us with a true picture of past manners. A full house welcomed the return of the actors to their tasks, and there can be no doubt but that this stately drama will be again received, for some time, with especial favour by numerous audiences. It was introduced on Monday by a new one-act comedy, adapted by Mr. Mortou, from a vaudeville of M. Dutertre, entitled "Ange et Demon," which is lively enough in its treatment, and in which Mr. John Cooper performed the part of a *Major Logger* in a manner that brings back to mind the old age of the drama, when distinct speaking was a qualification considered essential to good acting. The worthy Major has twin nieces, *Diana* (Mi Leclercq) and *Angelina* (Miss Eglintoun). The former is full of mischief and spirit, evidently having a will of her own, the latter an affectionate meek and submissive, but, when her interests and affections are really touched, exhibits a change of mood which is referred to in the title of the farce, "Don't Judge by Appearances." This hopeful pair of young ladies old Major *Logger* has intended for two cousins similarly disposed; but on their coming together he is doomed to disappointment. Like takes not to like; but "Love best loves dissimilars." Ultimately, the kind though irascible parent consents to the new arrangement, and permits nature to take her own way. The smart dialogue, sparkling with conceit and pun, supported the trifling action with the desirable effect; and the little drama was decidedly successful.

Sadler's Wells.—Mr. Selous, whose play of "The Templar" was produced on the boards of the Princess' at the commencement of Mr. Kean's management, has contributed to those of this theatre a tragic drama of remarkable interest. It is named from its subject "Hamilton of Bothwellhaugh," who shot James Stuart, Earl of Murray, Regent of Scotland, from a window in Linlithgow. The motive for this act is, according to the dramatist, the too powerful temptation of his wife's brother, *Orrel Baliol*, a priest (Mr. H. Marston), who, to gain a cardinal's hat, has himself up in the struggles about Queen Mary Stuart, and insinuated himself into the service of the Regent under a false name, as his secretary, *Hamilton*, an adherent of Queen Mary's party, to serve his brother-in-law. The

"CONFLICT" (SCREW) "DESPERATE" (SCREW) "ARCHER" (SCREW) "GORGON" (PADDLE).

ATTACK AND DESTRUCTION OF RUSSIAN WORKS, AT THE ENTRANCE OF BALDER RIVER, RIGA, BY THE COURLAND SQUADRON.

they had evidently prepared her or a bait, and were hauling her close in. However, they defeated their object by opening fire on us from a masked battery of about seven guns, at the same time men appeared on board the vessel, apparently soldiers; so we had to beat a retreat, the ship keeping up a smart fire to cover the boat on our way back, evidently with some effect. If they had not fired so soon it might have gone very hard with the boat, as I have previously stated. Our large boats were all away. However, we got back all right, and the ship blazed at them till near dark, when we steered for the mouth of the river, as we observed a steamer coming down, and expected an engagement with her; but, on our arrival off the entrance, discovered she was employed towing down gun-boats—fourteen of which they anchored across, to command the passage. Our great draught of water preventing a nearer approach, and as they would not come out within range, we left about an hour after dusk, for the north side of the gulf, to pick up our boats, to be in a more efficient state for another dash at them. A few days afterwards we fell in with the *Archer*, *Desperate*, and *Conflict*, when it was determined by the respective Captains that we should attack and attempt the destruction of the battery; also one in the course of construction. We appeared off Riga at daylight on the 27th of September, when the *Archer* (senior officer) made the signal to prepare for action, and for the *Gorgon* to lead in to the attack, in doing which we had to pass Fort Droimeude, which gave it to us pretty smartly on passing, but fortunately without any casualty on our side. Their shot and shell were beautifully directed, but fell a little short; our long guns answered better and sent most of their shot into this battery. But, as it was not our intention to engage this heavy battery, we steamed slowly on to the next, our old friend, and commenced firing at about seven a.m., which lasted two hours, when the senior officer, finding that only the large guns did execution, made signal to discontinue the engagement.

I send you for the ILLUSTRATED LONDON NEWS a Sketch of the affair taken by our Master.

The accompanying Illustration shows the attack and partial destruction of the works in course of construction, with a seven-gun battery to cover the former near Dvisminde Point, at the entrance of Balder River Riga, by the Courland squadron.

CEFNTILLA HOUSE, NEAR RAGLAN CASTLE.

THE RAGLAN MEMORIAL.

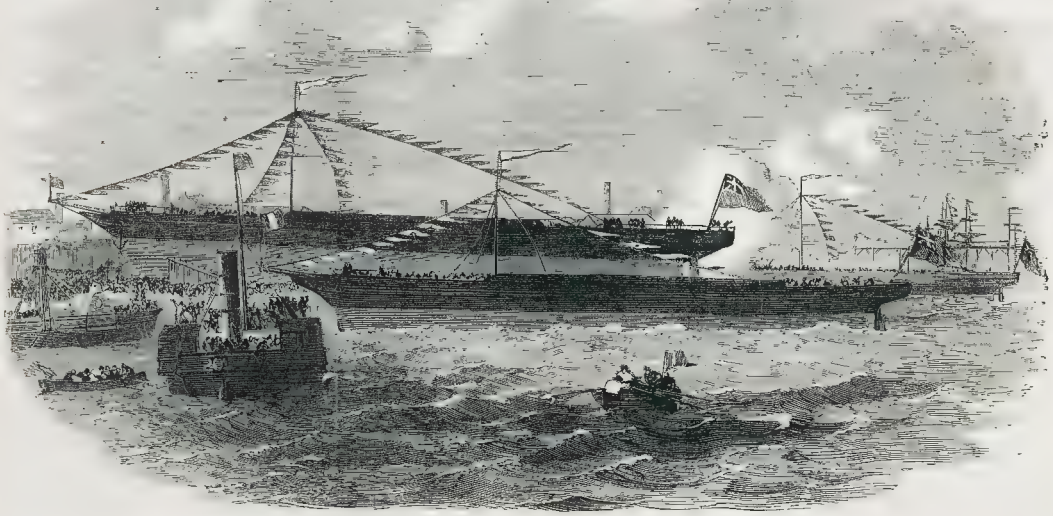
CEFNTILLA HOUSE, NEAR RAGLAN CASTLE.

THIS historic home possesses a melancholy interest in association with the war; since the house is about to be purchased, with the land attached to it, for the descendants of the late Lord Raglan.

This was the head-quarters of General Sir Thomas Fairfax during the siege of Raglan Castle, then occupied by the Marquis of Worcester, who, in the eighty-fourth year of his age, continued the last and most devoted adherent of Charles I. Fairfax succeeded in destroying the Castle in August, 1647, and it is now only a picturesque ruin.

Previous to the death of the late much-to-be-lamented Field Marshal Lord Raglan, some of his numerous friends had opened a subscription for the purpose of purchasing Cefntilla, with the land attached to it, to be presented to him in testimony of their admiration of his long public services, and his amiable and excellent qualities.

They now propose to extend the subscription, and to complete the purchase, in order to present it in an improved condition (as far as the subscriptions will admit) to the son and successor of their departed friend.



LAUNCH OF THREE IRON SCREW-STEAMERS, AT JARROW. (SEE PRECEDING PAGE.)

TOWN OF PETROPAULOVSKI, FROM A BATTERY ON POINT SCHAKOFF.

OPERATIONS AGAINST THE RUSSIAN SQUADRON IN THE PACIFIC.

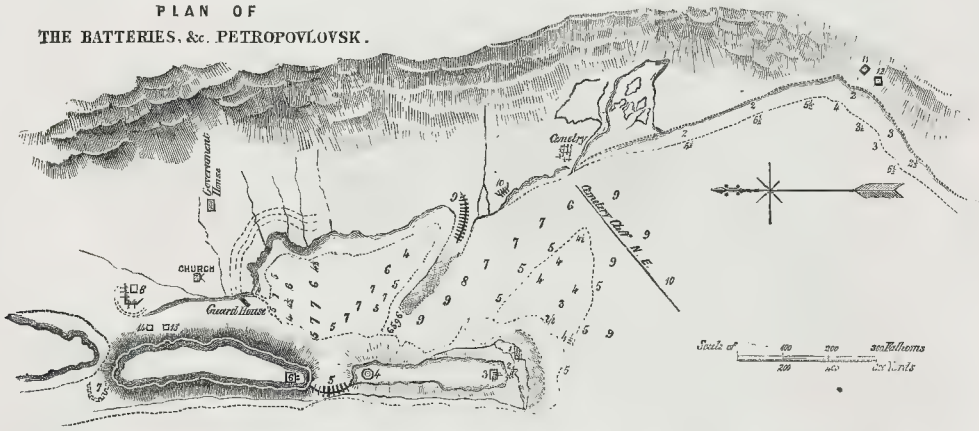
H.M.S. *Trincomalee*, Cruising off Sitka, August 8, 1855.

By the official despatches you will have learned the principal facts relating to the proceedings of the Pacific squadron under Admiral Bruce, still a few particulars, collected after the departure of the French and English squadrons from Petropaulovski, may prove interesting.

The Admiral sailed from Avacha Bay on the 19th June, leaving the *Trincomalee* to await the arrival of the *Monarch*, and also to treat for an exchange of prisoners.

Although the town of Petropaulovski had been deserted some time, two American gentlemen, merchants of the place, still remained. Through them it was ascertained that a Russian officer was in the neighbourhood with whom negotiations could be opened if a safe conduct were allowed. A flag of truce was accordingly hoisted, and the following day Captain

PLAN OF THE BATTERIES, &c. PETROPOVLOVSK.



1 Fascine Battery for four guns. Elevation, 60 feet.
2 Fascine Battery for four guns. Elevation, 75 feet.
3 Sunk Battery on the Crest of the Hill for six guns. Elevation, 175 feet.
4. Sunk Battery for a pivot gun, or three others. Elevation, 30 feet.
5. Sand-bag Battery (fascine), nine guns. Elevation, 25 to 30 feet.
6. Turf Battery, four guns. Elevation, 30 feet.
7. Fascine for six guns, not complete (evidently to be increased).
8. Turf Battery for seven guns, with Block-house in rear.
9. Reserve Battery for thirteen guns. Elevation, 6 feet.
10. Battery for five guns. Elevation 60 feet.
11. Site of old Three-gun Battery, sunk and altered for four guns.
12. Sunk Battery for seven guns.
13. Burial-place of the English, French, and Russians killed on the 4th Sept., 1854.
14. Magazine.

SITKA, THE RUSSIAN POSSESSION ON THE NORTH-WEST COAST OF AMERICA.

Martinoff, Aide de-Camp to the Governor-General of Siberia, came on board. It appeared that there were two seamen in the hands of the Russians—one French the other English: the former was severely wounded in both arms, and still suffering, at the little village of Avacha, where the garrison of Petropaulovski (470 in number) were encamped, the latter was some distance in the interior, with the trappers, and it would take a week to get him down.

Captain Martinoff had brought the despatch ordering the evacuation of Petropaulovski in case of the non-arrival of the *Diana*. His journey through Siberia occupied three months, being the quickest ever made. On the 20th December, 1854, he started from St. Petersburg, arrived at Irkutsk, the residence of the Governor-General of Siberia, on the 5th January, 1855; left that place the 13th—crossing Lake Baikal, a distance of sixty one miles, in the incredibly short time of one hour and fifty minutes, and arrived at Ochotsk Feb. 2. At the time Captain Martinoff related the circumstance it was suggested he must have travelled at twelve miles a mile), but he repeated sixty-one miles; and an American gentleman who was present stated that the distance was correct. As Captain Martinoff spoke English fluently, and mentioned other distances in miles, giving the corresponding number of versts, his statement could not be further questioned; but he informed us that the horses for drawing the light sledges across the smooth ice were of a particular breed, employed only on that work, that their speed was unequalled. Their treatment after one of these trips would rather astonish an English groom. Immediately on arriving they are tied to a short halter, and bucket after bucket of water thrown over them, which freezes, and they stand in a coating of ice. They are kept in this position for four or five hours, then taken in and fed largely until required for a similar purpose.

The journey from the Ochotsk round the head of the Ochotsk Sea to the south of Kemchatka was performed on a sledge drawn by dogs. After travelling for five weeks and four days in this manner, Captain Martinoff arrived at Petropaulovski March 15. This passage was done with such speed that even the Russians themselves marvelled.

The *Aurora*, 44, *Oneolaska*, 22, and *Dwina*, 18, at the time of Captain Martinoff's arrival, were frozen in the harbour; the *Diana*, 50, was daily expected in the Bay of Avacha, which is open during the most severe winter. New earthworks had been thrown up after the departure of the combined squadron last year, and the place rendered doubly strong. The *Oneolaska*, too, was an addition, and they only required the men, guns, and ammunition of the *Diana* to be enabled to make a vigorous resistance in case of attack. The steam-vessel expected in the *Diana* not making her appearance, preparations were made for evacuating the place; the ships were cut out of the ice—their men, guns, and ammunition put on board, and they finally sailed on the 16th April. A few weeks after their departure the Russian Admiral arrived in a small schooner, this was the first intelligence they received at Petropaulovski of the loss of the *Diana* at the island of Jedso. The *Pallas* not being seaworthy, the Admiral had hoisted his flag in the *Diana*, and sailed from Amoor to negotiate for the Japanese ports being open to Russian commerce. The following was his account of the wreck to Captain Martinoff: "The ship was lying at anchor in Jedso, when one of the most severe earthquakes the world ever experienced took place. In an hour she was swung round her anchors forty times; then, with a tremendous jerk which parted both cables was driven high and dry on the beach! Only one life was lost, and that by one of her guns breaking adrift. By great exertions she was again floated, and was being towed into a neighbouring bay to be hove down, when a strange noise was heard, the men in the boats (the Japanese towing) fearing it was the forerunner of another earthquake, cast off and pulled for the shore, the people of the ship got into their boats, and the *Diana* almost immediately filled and went down. The Admiral then built a small schooner with his own resources, and came over with part of the *Diana's* crew, to assist in defending Petropaulovski. Whilst remaining to recruit his men, our squadron was signalled off the port, and trussing to the mist which usually hangs to the land, he started with the intention of passing his schooner close along shore, hoping to escape notice, in which he was successful.

The garrison of Petropaulovski retired to Avacha, where they are at present encamped, their number is 470, of whom half are Cossacks, 100 Siberian trappers, and the rest marines. The *Monarch* arrived at Petropaulovski on the 23rd June: she is the first line-of-battle ship that ever entered Avacha Bay. The Sketch taken in the Bay shows her at anchor, with the flag of truce flying. The town of Petropaulovski is partly seen, the remainder shut in by Point Schakoff, on which you will perceive from the plan there were three batteries, one over the other. Just ahead of the *Monarch* is the three-gun battery stormed last year; the highest part of the promontory, of which Point Schakoff forms the extreme, is the spot on which so many of our countrymen and Allies fell last year. The snow-clad hill on the left is Avacha, about thirty miles distant. The volcanic mountain of Koriouska was generally active when seen by us; but the Russians state for sixteen years it "slept," and wittily added, "that, like a good Russian subject, it roused up at the approach of the enemy to show its displeasure." The sketch of the town is taken from Point Schakoff; from the pier a road leads up to the magazine, barracks, &c., close to which are the graves of the French and English that those of the Russians, placed side by side, at the foot of the hill where they fell. They occupy two mounds, decently railed in, the Russian, Greek, and Catholic cross being the only distinguishing marks. A spit runs across the harbour, leaving a small entrance by which the *Aurora* was anchored last year. As the *Trincomalee* is the only English man-of-war that ever anchored at Sitka, and is now cruising off it, a sketch of the town is inclosed. The Admiral left us here on the 17th July, after reconnoitring —the particulars of which you already know. JOHN S. H. ROYAL M.

CHURCH, UNIVERSITIES, &c.

PROROGATION OF CONVOCATION.—Shortly after nine o'clock on Wednesday morning the Vicar-General (Dr. Twiss), Mr. F. H. Dyke, the proctor for the province of Canterbury, and other officials, attended at the Jerusalem Chamber, adjoining Westminster Abbey, and in the name of the Archbishop prorogued Convocation until the 19th of December. No business will be transacted in Convocation until after the meeting of Parliament.

APPOINTMENTS.—*Rectories*:—The Rev. C. E. Oakley to Wickwar, near Wootten-under-Edge, Gloucestershire; Rev. F. A. Bickmore to Cranwick, Didlington, and Colveston, Norfolk; Rev. J. Luxton to Boxhill, Dorkinghill, Devonshire; Rev. Tighinglis, of St. Clements, Hastings. *Vicarages*: The Rev. G. M. Gorham to Walkeringham, near Gainsborough; Rev. G. J. Thomas to Northolt, Middlesex; Rev. J. Daniel Sawyer, near Cambridge; *Incumbencies*: The Rev. D. Hall to Goole, Yorkshire; Rev. C. Hayes to Brampton Bierlow, Yorkshire; Rev. H. F. Welch to Langley Chapelry, Clavering, Essex; Rev. R. P. Warren to the New Church of the Holy Trinity, Poole, near Ringwood, Hampshire; Rev. J. M'Carte to Scotby, Cumberland; Rev. T. Coulthard to Plymstock, near Plymouth; Rev. G. Johnston to St. Mary Magdalene, Barnstaple.

THE REV. W. THOMPSON, who has been appointed Provost of Queen's College, Oxford, was elected a scholar of Queen's College in 1836, being then a member of Shrewsbury School. It is worthy of remark that the two Heads of Colleges whose elections next preceded that of Mr. Thompson—Dr. Craiock, of Brasenose; and Dr. Scott, of Balliol—also went to Oxford from Shrewsbury School.

WILLS.—The will of Lieutenant-General Sir George Thomas Napier, K.C.B., has been sworn under £6000 personalty; of J. J. Bradda[illegible] ... [illegible]ior of Pedmore, £60,000; J. T. [illegible] ... [illegible], Hastings, and Newgate-[illegible] ... [illegible]ufacturer, £180,000; Isabella Norris, surgeon, Lancaster[illegible] ... [illegible]ist, Clapham-rise, £4000. Also have just been [illegible] ... [illegible]astepol; Chifley Pass, [illegible] ... [illegible] D. F. Jarman, [illegible] ... [illegible] has bequeathed to [illegible] ... [illegible] the Christian Know[illegible] ... [illegible] Lodge, Asylum, £50 each

MONUMENT TO THE LATE ARCHBISHOP OF YORK.—In the inscription (see page 477 of the ILLUSTRATED LONDON NEWS of last week, the date should be MDCCCXLVII., instead of MDCCCXL.

SERIOUS ILLNESS OF THE BISHOP OF LONDON.—We regret to hear that the Bishop of London is seriously indisposed at his residence at Fulham. His Lordship has very lately returned from a visit to the Continent.

SAILORS' INSTITUTE.—On Thursday next the Lord Mayor will lay the first stone of the new building for this excellent charity, in Mercers'-street, Shadwell.

A COMMEMORATION DAY.—Mr. Gavan Duffy sails for Australia on the 5th of November next, being the [illegible] of the Alma, and the defeat of the Russian army on the heights of Inkerman.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

NOTWITHSTANDING that money for commercial purposes has been extremely scarce and dear, we have to notice a steady improvement in the market for most National Securities. The leading cause of the improvement is easily traced to the great scarcity of stock in the hands of the jobbers. For some weeks past no more particularly within the last few days, the public have been large purchasers of Consols, and have thereby relieved the market of a pressure which might have been productive of serious inconvenience.

The position of the Bank of France is still the theme of general observation; but that the Directors have at length succeeded in checking the outflow of gold and adding to their stock of bullion must be evident from the great exertions lately made to obtain large quantities of both gold and silver. The purchases here since we last wrote have been nearly £300,000, viz., a portion of the supply received from the banks of the jubilee, and we learn that the sum of £1,800,000 in silver has been purchased of the Bank of Amsterdam. In order to increase the stock of bullion, the Bank of France has by circular summoned those who have deposited with it rentes and railway shares either to give new securities, or to reimburse a portion of their loans with cash. This is rather sharp practice; but no doubt it will induce considerable caution in future operations.

With regard to the Money Market we may observe that money on "call" is now worth five per cent. At the Bank of England the applications for discount continue to be very numerous; but we understand that very few rates of discount have been paid for four months' bills—the rates being now wholly a matter of arrangements for acceptances having more than ninety-five days to run. We have had a very good foreign inquiry for bills having been taken in Lombard-street at 4½ per cent; but, in a general way, the minimum rates out of doors are not lower than those of the Bank.

The imports of gold have been £266,584 from Australia, £90,000 from the United States, and £180,000 in silver from the Pacific. Of the above, £40,000 has been taken for France, and most of the remainder has found its way into the Bank of England.

Owing to the low market value of Exchequer Bills, it is been found necessary to increase the interest on the Unfunded Debt; viz., to 2½ per diem, or £3 15s. 0½d. per annum. The benefits of this operation on the 5th inst. will appear on the March securities, the 7½d. This advance will increase the public expenditure about £100,000 per annum.

On Monday there was a very heavy business passing in Consols. The Three per Cents, for Money, were done at from 87½ ⅜ ; and for the Account, 87½ up to 87⅝ ; the Three per Cents Reduced were done 87⅜ ⅝ ; and the New Three per Cents, 87⅜ ⅝ . Long Annuities were 7 7-16 ; Ditto, 1855, 16 3-16 Bank Stock, 209; India Stock, 226 to 229. India Bonds, par to 1s. prem.; Exchequer Bills, par to 9s. discount. Exchequer Bonds, both series, 99⅜ ; There was somewhat more animation in the market on Tuesday, and prices were a shade easier. The Three per Cents Reduced were 86⅜ to 86⅝ ; Three per Cent Consols, 87⅛ to 87⅜ ; New Three per Cents, 87⅛ ⅜ ; Long Annuities, 1860, ⅛ ; Ditto, 1859, 9-16 ; Bank Stock, 209 to 208½ ; India Stock, 226 to 227½ ; India Bonds, 1s. prem. to 2s. dis ; Exchequer Bills, 4s prem.; Exchequer Bonds, 99¾ . On the [illegible] ... [illegible] took place in the Three per Cents Reduced, the Three per Cents Reduced marked 87½ to 88⅝ ; the Three per Cent Consols, 87⅜ to 88 ; the New Three per Cents, 87⅝ to 88 ; Long Annuities, 1860, 8⅜ ; Ditto, 1885, 16⅛ ; Bank Stock, 208 ; Exchequer Bills were 2s. dis. to 2s. prem.; and Exchequer Bonds, 99¾. The market on Thursday was rather active, from numerous money purchases of stock having been made chiefly by the Rothschild party. The Three per Cents were done at 88⅛ to 88⅜, leaving off at the latter figure. The New Three per Cents were 88 to 88⅛ ; and the Reduced, 87½ to ⅝. Bank Stock, 207. Exchequer Bills, 3s. dis. to 3s. prem. India Bonds, 3s. prem. There was no further change in the Bank rate of discount

There has been no marked change in the value of Foreign Bonds; but Turkish and some other securities have been decidedly new:—Austrian Five per Cents have realised 81; Brazilian Five per Cents, 99½; Ditto, Small, 99½; Buenos Ayres Six per Cents, 85½; Cuba Seven per Cents, 99½; Mexican Three per Cents, 19½; Spanish Three per Cents, 37½; Ditto New Deferred, 19½; Russian Four-and-a-Half per Cents, 87; Turkish Six per Cents, 70½; Ditto, New Scrip, 2½ discount; Venezuela One-and-Half per Cents, 11½; Dutch Two-and-a-Half per Cents, 64½; Ditto Four per Cents, 93; Peruvian Four-and-a-Half per Cents, 52½; Sardinian Five per Cents, 84½; Chilian Six per Cents, 100; Ecuador Bonds, 4½.

Joint-Stock Bank shares have been tolerably firm as to price, but the business transacted in them has been trifling. Australasia have realised 85; City, 94½; Commercial of London, 31; London and Westminster, 46½; South Australia, 43. Union of Australia, 32½; Ditto New, 32½; Ditto New Deferred, 19½. Russian Four-and-a-Half per Cents, 87; Turkish Six per Cents, 70½; Ditto, New Scrip, 2½ discount; Venezuela One-and-Half per Cents, 11½; Dutch Two-and-a-Half per Cents, 64½; Ditto Four per Cents, 93; Peruvian Four-and-a-Half per Cents, 52½; Sardinian Five per Cents, 84½; Chilian Six per Cents, 100; Ecuador Bonds, 4½.

Joint-Stock Bank shares have been tolerably firm as to price, but the business transacted in them has been trifling. Australasia have realised 85; City, 94½; Commercial of London, 31; London and Westminster, 46½; South Australia, 43. Union of Australia, 32½; Ditto New, 32½; Ditto New Deferred, 19½. Miscellaneous Securities have ranged as follows:—Canada Company's Bonds, 142 to 143; Ditto Government Six per Cents, 106½; Crystal Palace, 2½; Ditto Preference, 8; London Dock, 69½; Kalinda's Rice, 2½; Peel River Land and Mineral, 2½; Royal Mail Steam, 68½ ex div.; Scottish Australian Investment, 1½; Ashton and Oldham Canal Shares have sold at 130; Derby, 34; Leicester, 49½; Peak Forest, 200; Rochdale, 18; Trent and Mersey, 120; Warwick and Birmingham and Berks, 4½. Berlin Waterworks Shares have realised 8 ex div.; Grand Junction, 68; Kent, 70½; Southwark and Vauxhall, 89½; West Middlesex, 91½; Ditto, New, ½ prem. Friday Evening.

We have had an inactive market for national stocks to-day, very little change has taken place in the quotations. There have been buyers of the Three per Cents at 88⅛ for the Account; and sellers at the same figure for Money. The Three per Cent Reduced are 87½ ⅜ ; and the New Three per Cents, 87⅝ to 88. Foreign Bonds and Railway Shares are flat.

THE MARKETS.

CORN-EXCHANGE (Friday).—Fresh up to-day the supply of English wheat was limited, and the show of samples was trifling. For most kinds we had only a moderate inquiry, yet Monday's prices were fully supported. In foreign wheat 2000 quarters have come to hand. The demand was wholly confined to retail quantities, at full quotations. There was a steady business doing in floating cargoes, at full prices. The barley trade ruled heavy, at Monday's currency. The malt trade was far from active, at late rates. Good second [illegible] were firm, but in other [illegible] Beans, pease, and flour were steady, and the [illegible] quotations were well supported.

Arrivals this Week.—English wheat, 4710 qrs.; malt, 1190; oats, 70; flour, 710 brls. oats, 8160. Foreign wheat, 2410 qrs.; flour, 4150 barrels.

English.—Wheat, Essex and Kent, red, 46s. to 48s.; ditto, white, 46s. to 47s. Norfolk and Suffolk red, 45s. to 48s.; rye, 48s. to 52s.; grinding barley, 24s. to 27s.; distilling ditto, 30s. to 32s.; malting ditto, 37s. to 42s.; Lincoln and Norfolk malt, 75s. to 78s.; Ware ditto, 48s. to 50s.; Kingston and Ware, 72s. to 79s.; Chevalier, 80s.; Yorkshire and Lincolnshire feed oats, 22s. to 23s.; potato ditto, 27s. to 31s.; longeal and Poland black, 23s. to 27s.; ditto, white, 25s. to 28s.; ditto brank, 23s. to 26s.; grey peas, 40s. to 41s.; maple, 42s. to 46s.; white, 50s. to 53s.; beans, 36s. to 39s. per quarter. Town-made flour, 45s. to 48s. per sack. Stockton and Yorkshire, 42s. to 45s. per 280 lbs. American, 42s. to 46s. per brl.

Scotch.—Some transactions have taken place in flour and oatmeal, at full prices. Tares are dull, and cheaper. Most other articles [illegible]

Irish.—Oats, Baltic, crushing, 24s. to 25s.; Mediterranean, 22s. to 23s.; hampseed, 48s. to 54s. per quarter. Coriander, 16s. to 20s. per cwt. White mustard seed, 12s. to 15s.; brown, 8s. to 9s. 6d. per bushel. English rapeseed, 30l. to 32l. per last. Foreign rape cakes, 6l. 10s. to 6l. 15s. per ton. Canary, 50s. to 63s. per quarter.

Bread.—The prices of wheaten bread in the metropolis are from 10½d. to 11½d. of household duties, 8½d. to 10d. per four-pound loaf.

Imperial Weekly Average.—Wheat, 70s. 10d.; barley, 36s. 10d.; oats, 27s. 9d.; rye, 40s. 6d.; beans, 42s. 1[illegible] ... peas, 42s. 7[illegible]

The Six Weeks' Average.—Wheat, 73s. 11d.; barley, 36s. 1[illegible] ... oats, 28s. 5d.; rye, 42s. 8d.; beans, 43s. 1[illegible] ... peas, 43s. 9d.

Duty Ox in both Last Week.—Wheat, 144,870; barley, 58,763, oats, 3[illegible] ... rye, 4[illegible] ... peas, 3[illegible] ... beans, 4883[illegible] ... flour, 3[illegible] ... quarters.

Tea.—The public sales held this week have gone off slowly, on former terms [illegible] ... packages, out of 13,300 offered, were disposed of. Privately a full average business in most kinds, and prices are supported. Sales to-day 1[illegible] ... lbs.

Sugar.—Our market is still active and firm, at more money has been paid for all raw qualities. Barbadoes has realised 45s. to 46s. 6d.; Grenada, 42s. to 45s. 6d.; Bengal, 41s. to 46s.; Antigua, 45s. to 45s. per cwt. Refined goods have changed hands, at 48s. 6d. to 57s. per cwt. Several cargoes of sugar afloat have sold at barely late buyers' currency.

Coffee.—We have a dull inquiry for this article, and prices are rather in favour of buyers. Good ordinary Ceylon has realised 57s. to 58s. per cwt.

Rice.—The transactions in all kinds are less extensive; yet last week's currency is well supported.

Provisions.—There is a good business doing, in Irish butter, at a further improvement in value of 1s. per cwt. Fine Limerick, Waterford, and Cork, 98s. to 100s.; good, 94s. to 96s.; and Limerick, 88s. to 92s. per cwt. Foreign qualities are in request, and dearer. Fresh-mad 108s. to 112s.; Kiel, 102s. to 110s. per cwt. The value of English is well supported. Fine Dorset, 112s. to 116s. per cwt.; fresh, 12s to 14s. per dozen lbs.

Tallow.—Our market is firm, and prices are well supported. P.Y.C., on the spot, is quoted at 62s. 6d.; October to December, 62s. 6d. to 63s. 6d.; January to March, 61s. to 61s. 6d. per cwt. About 1000 casks have arrived in a week.

Oils.—Linseed oil is in moderate request at 27s. 6d. per cwt., on the spot. Most other oils are steady, but turpentine is dull and cheaper. Spirits, 30s. to 37s. per cwt.

Spirits.—Nearly 200,000 gallons of rum have been taken by Government, the demand for that article is strong. Proof Leewards, 2s. 8d. to 2s. 9d.; East Indies, 2s. 7d. to 2s. 8d. per gallon. Brandy is in request, at the late improvement in value. Malt spirit, 1s. per gallon. Geneva, 3s. to 4s. per gallon.

Hay and Straw.—Meadow hay, £3 15s. to £5 5s.; clover, ditto, £4 0s. to £5 5s.; and straw, £1 8s. to £1 18s. per load

Potatoes.—Full average supplies continue to reach us, and the trade is steady, at from 75s. to 95s. per ton

Wool.—The value sales are going off slowly, at a decline in the quotations of from 1d to 1½d per lb compared with the previous week.

Coals (Friday).—Stewart's 21s. 6d.; Hetton, 21s. 6d.; Kepier Grasos, 20s. 9d.; Hilda, 19s. 6d.; Sunderland, 20s. 6d.; Heugh Hall, 20s 3d.; Cornwood, 18s. per ton.

Coffee, Foreign.—As most of the brokers are now at work, and the stamp of hops is extensive, our market is heavy, and prices have a downward tendency. The sales [illegible] at £20,000, of sixteen parcels, all to be 1½d. Weald of Kents £2 10s. to £4 ... Mid and East sussex, £4 to £5 15s.; Farnhams, £4 4s. to £5 12s. per cwt

Metropolitan Cattle Market (Friday).—The supply of beasts in to-day's market was but moderate, the trade, however, was excessive y heavy, at barely Monday's decline in the quotations. We were scantily supplied with sheep, which moved off slowly, at barely stationary prices. The generality quality of the stock was inferior. The number of calves was comparatively small, yet the veal trade was very dull, at a decline of 2d per 8 lbs. Pigs were a slow inquiry.—Beasts, Shorthorns, at from £4 to £49 each, inferior to middling quality 3s. to 3s. 4d. per 8 lbs to sink the offal.—Cakes and inferior beasts, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 6d. to 4s. 0d.; prime ditto and coarse ox[illegible] 4s. 2d. to 4s. 6d.; prime Scots, &c., 4s. 8d. to 4s. 10d.; coarse and inferior sheep, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 8d. to 3s. 10d.; prime coarse-woolled sheep, 4s. 4d. to 4s. 8d.; prime Southdowns, 5s. 10s. to 5s. 0d.; large coarse calves, [illegible] prime small ditto, 4s. 4d. to 4s. 10d.; large hogs, 3s. 10s. to 4s. 0d.; neat small porkers, 4s. 2d. to 4s. 6d.; sucking calves, 23s. to 30s.; and quarter o[illegible] ... lots of each. Total supply: beasts, 5887; sheep, 15,320; calves, 490; pigs, 270.

Foreign beasts, 210; sheep, 1600; calves, 50.

Corn Exchange, Leadenhall (Friday).—We had a very dull trade to-day [illegible] prices were rather cheaper.

Per sack, by the carman:—Inferior beef, 3s. 6d. to 4s. 0d.; middling ditto, 3s. 6d. to 3s. 8d.; better sort ditto, 3s. 8d. to 4s. 0d.; inferior mutton, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s. 0d.; prime ditto, 4s. 2d. to 4s. 4d.; veal, 3s. 6d. to 4s. 6d.; small pork, 4s. 6d. to 5s. 0d. ROBERT HERBERT.

Full and plain directions, county, and nearest station. Address, THOS. LETTIS, jun., Fish Curer, Great Yarmouth. "This is the third Season Mr. Lettis has supplied us with Yarmouth Bloaters, and we find the quality excellent.—J. BRANSTON, House Steward, Sheerness Prison, Oct. 29, 1854." "Mr. Lettis,—As soon as you send out your pen to enter, I shall be glad to have a supply as usual. Those I had last year gave great satisfaction.—A. F. COURROUX, Ambassador's court, St. James's Palace."

RAGLAN MEMORIAL. At a Meeting of the Subscribers to the RAGLAN MEMORIAL, held on the 21st of August, 1855, at 51, Portland-place, London, the Duke of Richmond in the Chair on the Motion of the Duke of Bedford, seconded by Sir George Brewer, it was unanimously Resolved,—

"That, in the opinion of this meeting, a small landed Estate, with a suitable House, to be settled upon his title and descendants, would be the most desirable Memorial of the long public services and private worth of the late Lord Raglan, and the better to carry that object into effect, it is resolved that public subscriptions be opened."

The Memorial Committee have now (16th October) entered into an agreement to purchase the Cefntilla or Fairfax estate near Raglan Castle, upon which a considerable sum of money is required to be expended in draining the land, and repairing and improving the house and offices.

COMMITTEE.

Lieut.-General his Royal Highness the DUKE of CAMBRIDGE.

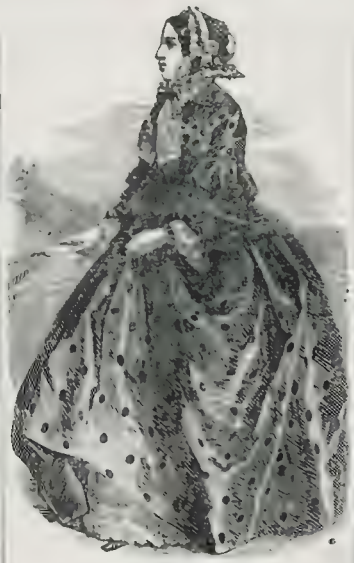
Campbell,

PARIS FASHIONS FOR NOVEMBER.

The novelties of the approaching season are now to be seen in the windows of the leading fashionable shops of Paris. Commencing with the materials that appear generally to be most sought after, in the first rank we must mention, as being always in fashion, plain velvet of every shade, and which for dark ones is covered with black lace. Lighter colours are trimmed with white lace, English or *en point d'Alençon*. Next come *les velours épingles*, especially destined for ball dresses, which were last year worn with flounces for the skirt. This kind of velvet is seldom made but of light colours for ball dresses. We have next, for soirées, the *velours impérial* and the *velours mousse*. *Les moirés antiques* of plain and sober shades are also much worn. It is a material much sought after for mourning. After this we have a new and very rich kind of robe, consisting of alternated bands of velvet and *moiré antique*, or *moiré antique* and satin. Nothing can be nobler than these materials combined in the same skirt. The *moiré antique* is also of light and lively shades, *a petite raies de satin*, which form Scotch squares upon a plain or plaid ground. The *pekins orientaux* are also very fine stuffs, which, with the damask and the *gros de Tours*, divide the taste this season.

PALETOT DE VILLE.

Taffetas is the stuff which best adapts itself to all the requirements of the existing fashion; and, next, the various patterns which can be given to the skirts, that are almost always finished off with fringe woven in the stuff. The mixture of satin heightens by its brilliancy the flowers. Taffetas is thus always fresh and in favour, because it adapts itself the



WINTER DRESS.

easier to all the changes of fancy. Popeline is also much sought after, and will be very much worn for walking dresses. The Scotch kind, and the large squares formed of two colours, are most in favour.

Of collars the variety is innumerable; and, although fashion has adopted very large ones, we do not think them in good taste, and they are not, generally speaking, much worn.

For sleeves the variety is still greater. We mention a few of the shapes most generally adopted:—Circassian sleeves, with two or three rows of lace and embroidery, and slightly pressed by an *entre deux*, midway between the elbow and wrist, so as to let the trimmings float towards the latter without hiding it. The Madonna sleeves—quite closed. They are made of muslin, remarkably simple, with nothing in the way of ornament but a triple wristband, embroidered and trimmed with lace. Plain velvet will be again used for bonnets. It has been laid aside for several years past for *le velours épingle*: but it will resume the lead this season.

Feathers also will be much used for winter ornaments; but instead of little tufts, as formerly, long feathers will be worn to border the front and fall undulating to finish off at the side.

THE ILLUSTRATIONS.

Paletot de Ville, of cloth, or Prussian velvet, closed in front by two rows of buttons. This paletot promises to obtain great success for the winter. The sleeves are rather large, but more closed than ladies' other over-coats. This new article much resembles the gentlemen's paletots.

Imperial rose velvet Hat, trimmed with black lace, placed nearly flat upon the front, and with a tuft of roses.

Taffetas robe vert d'Isly, with a sprinkling of black velvet; the skirt is quite plain. *Corsage basquine*, ornamented upon the edge, upon the breast, and the back forming a brace, with taffetas galloon, sprinkled also with velvet and with a little fringe. The sleeves, of a new form, are very elegant. After a first puff, immediately above the elbow, projects a little flounce finished, like the corsage, by galloon and fringe; then a second puff, finished by a wide wristband; between the wrist and the wristband is the flounce of a Circassian sleeve, above described. This new form is charming, and suitable for the cold winter season.

Ball cloak, jaguanita, a material called *duvet de cygne*—white, very light and soft, so as not to rumple the toilet. The cape is ornamented with a white silk fringe as well as the sleeves, which fall like those of the old talma. Around the neck is a rich galloon. The peculiarity of this article of dress consists in its not opening at the breast; but it fastens at the shoulder in crossing, and is good shelter from the cold.

BALL CLOAK.

THE UNIVERSAL EXHIBITION PRIZE, AT THE HOTEL DU LOUVRE, PARIS.—(SEE PAGE 506.)

THE HOTEL DU LOUVRE.—(SEE NEXT PAGE.)

HOTEL [illegible]

HOTEL DU LOUVRE, RUE DE RIVOLI

THE HÔTEL DU LOUVRE.

The late festivities at the Hôtel du Louvre prove that this enormous property has at least fallen into hands capable of advertising it. The opening of the Crystal Palace at Sydenham was not more written about than that of the opening of this most marvellous establishment. Meurice's is a mutual compared with it. It is a little town, with a public square in the centre. The Hôtel de Ville is the only public establishment in Paris that can give the visitor any idea of its extent, and its sumptuous fitting up. Traveller who may wander hither, on turning under its high entrance, will believe that their coachman has strayed into the residence of Baron Hausmann, or into one of the splendid palaces of official grandeur:—the Ministry of Foreign Affairs for example. To describe the endless corridors, the infinite varieties of rooms, from the great hall to the smallest bachelor's apartments, would be a fact as dull as the walls, and a very unfriendly act to the reader. The courtyard, with the immense staircases at its sides, is one of the most imposing interiors we remember. The Court of Louis XIV., at the Hôtel de Ville, is not more effective. Even arcade which encompasses this immense establishment is ornamented with golden ornaments. The pedestrian who suddenly finds himself under this arcade is astonished at the magnificent ornamentation of the place. He believes at first that all this is the result of the taste known to belong to Parisian shopkeepers; but he speedily learns that the splendid shops of the Photographic Society, the vast salons of the Imendraper's establishment at the corner, are simply places, let by the great hotel company, whose corridors, like several others above and below, are public. This, as the reader doubtless knows, is the American system of hotel management, here about to be tried for the first time. What it will succeed, even in the powerful hands of the Crédit Mobilier directors it is point beyond the conjecture of this paragraphmaker. The affair is a bold experiment, in every way worthy of the city in which it is about to be tried. It forms part of those wonderful improvements by which the second Empire will be gratefully remembered centuries hence. Nor is the speed with which this great building has been erected, the least remarkable feature of the undertaking. It was only during the milder nights of last winter that crowds used to congregate round its site, to watch the hundreds of workmen busy upon the foundations, in the cold glare of electric lights. Curious statistics of the cost at which Parisian artificial daylight was obtained circulated through the French journals, together with extraordinary calculations as to the number of beds that would be made up within this vast space. People were assured that on the 1st of May, 1855, its rooms would throw open to the visitors; but on that day were to be siege the French capital. Practical men, however, appear to have held that this was impossible. The truth is, that the Hôtel du Louvre has completely lost the great Exhibition season that the shares of the company of which it is the property have fallen enormously in value. But we hardly care to think about premiums or discount as we wander about the wonderful result of the capital MM. Pereire and Co. . tempted from the pockets of the people, that there might be an hotel in Paris worthy of the city in which the Louvre stands. The name given to this travellers' palace is also happy; for here we find the resources of modern art brought to bear, "regardless of expense," upon a sleeping and eating-house, destined to be peopled by the rich of Cambria and the proud of Belgravia, hurrying forward to Italy or to Switzerland. Of the café—the splendid, glittering café—under the broad colonnade, which is to mark the corner of the Place du Palais Royal, we can only say that it bids fair to be the Café de la Paix, enlarged to four times its original proportions.

But there is one little point which we approach with trembling. John Bull having heard all about the splendid hall, the wonderfully ornamented smoking rooms, and the great court—dipping his hands deep into his capacious pockets, and compressing his lips, will say, Ay, ay, this is all very well—but how about the charges? We are assured that they will be moderate. But then the modern notion of charges is a matter of opinion. We have been in many hotels that made moderation, and practise the coolest system of petty extortion. Very pertinent questions might be put to the directors of this scheme at the present moment on this point. Will service and wax-candles still dance like nightmares. before their astonished guests? Will the price of dinners, Will they be charged one franc each? These questions appear to be poor and mean, perhaps, as we stand before the façade of the hotel, with the residence of Prince Jerome on our right, and the new wing of the Louvre on our left—but they are momentous enough, nevertheless. The Hôtel du Louvre cannot be a slight mistake—its non-success would be almost a Parisian calamity. We have a few misgivings on the management—[illegible] than to trust to their interpretation of the proverb that says "Arrive with their luggage they will meet with more [illegible] the representatives of the English press met with on [illegible] We may add a few words on this fête.

[illegible] was [illegible] the [illegible] banded round [illegible] under the [illegible] Napoleon, in his capacity of President of the Imperial Exhibition Commission. The Prince fixed the dinner for the 15th of the present month; but intimated to the Committee that he should prefer a more modest entertainment that would allow a surplus of the subscription to be kept for the poor of Paris. It was then arranged that the dinner should be changed to a ball; and the Hôtel du Louvre was offered to the Committee as the scene of entertainment. This was a clever movement on the part of the management. They could have no better advertisement of their palace. But it was found afterwards that a ball was not within the bounds of possibility; so a soirée was finally determined on. The *Moniteur* published an ostentatious announcement that the representatives of the press had been invited. On the other hand, the managers of the entertainment declared that they had no invitation at the disposal of such representatives. The reply of the Secretary to the applications from the press was—"that he could not invite even his nephews; but that a ticket could be bought for twenty francs." For this studied discourtesy we blame neither the Imperial Commissioners nor the English authorities. By both of these bodies the utmost courtesy was shown to all inquirers; but the English press has a right to express its disapproval of the scandalous ill-behaviour, and the paltry parade of importance, with which the Committee of Management met the literary representatives of England. The attention of these gentlemen appears to have been directed chiefly to the buffets: people were informed that 1900 bottles of wine had been ordered. However, with all these drawbacks, the affair was very brilliant; and on the morning of it the Emperor, accompanied by the Duke and Duchess of Brabant, visited the hotel in which it was to take place.

But, having the gentlemen to drink the champagne, dipping lumps of pie in it from time to time; leaving them afterwards to find their noisy dance in the court of honour of this wonderful hotel; and then, returning to the scene of the drunken revel (at which even a commissioner was seen on a helpless state of inebriation), when the lobster-shells have been cleared away, and the corks have been gathered up, we may be able better to appreciate the advantages of the establishment which the abilities of M. Pereire, the King of French finance, have enabled the Parisians to add to the attractions of their capital. An hotel covering 5000 square metres of space, and containing 600 rooms—where the coffee-mills needs a separate and distinct department—where machinery lifts dishes and luggage from the ground-floor to the fourth story, and where electric wires govern a clock distributed in every part of the vast building, is a novelty even in extraordinary time. As we have said, seen from the Place du Palais Royal, the Hôtel du Louvre has an imposing aspect, with it broad colonnade and its glittering café; but the visitor must pass under the high arch which spans the entrance, into the court of honour, to have a proper idea of the scale on which the establishment is modelled. This court—covered by a glass roof that appears to float in the air, so lightly does it lie upon the walls—is highly ornamented. Elegant lamps, richly gilt, mark regular intervals in the walls. Above the broad entrance staircases—starting from the corners, and meeting at the first floor, lead to a broad arcade thirty metres in length. Above this staircase is the clock, and here are figures of the four quarters of the world by MM. Klagmann and [illegible] decked. The arcade, supported by Corinthian columns, is the splendid covered way to the great hall, or salle à manger. When the visitor has ascended the steps, and has reached the arcade, beyond which he perceives the long lines of perspective which suggest the wonderful length of the banqueting-hall, he will be delighted, we think, by the richly gilded and painted halls of Versailles. The ceiling of the arcade, divided into six compartments, has been covered by MM. Gosse and Barrys with allegories of the twelve months. Then, here also, MM. Nolace and Rubé have drawn the genii of the arts and sciences; to these paintings a brilliant colour, framework richly gilt, and enormous glasses, framed in ebony placed between the vast windows; and the reader will have an idea of a vestibule, such as few princes can command. Yet the modern railway traveller, bent upon spending the week in Paris, and paying all expenses to and from his native Hornsey for £10, may for the time call this splendour his own. Having done the honours in the vestibule, we beg leave to bow the reader into the great dining-hall where four hundred people may enjoy the daily table d'hôte. It is a splendid apartment—the walls of which are richly ornamented and draped; the ceiling of which dazzles with its wealth of colour and the glow of its gold; and the floor of which is fine mosaic of walnut, cherry-wood, and oak. When we entered it it had already begun to wear the aspect of an inhabited place. The serviettes spread like fans in long lines; the waiters lounging about, with, here and there, a smart chambermaid dashing past, brought back our thoughts to the fact that we were really and truly in a public tavern, raised by the subscriptions of hundreds of people who hoped to make a fair profit out of the allegories of the months looking down upon their customers from the ceiling of the vestibule. This dining-hall has seen fairly called the thrones-room of gastronomy. The genius of Brillat de Savarin should have been represented smiling upon the four hundred guests. Still the Seasons, represented upon the ceiling in four large octagon pictures, framed in marble, and white and gold, do their appointed work admirably. There are the triumphs of Neptune, Bacchus, Flora, and Ceres typifying the aspects of Winter, Spring, Summer, and Autumn. Bacchus, pressing the juice from his grapes, may be taken as a graceful hint to travellers to con-sult the wine-list of the hotel. Surely, with such a Bacchus looking down upon the butler, he will uncork only the choicest vintages. Below are more paintings illustrative of the Four Seasons. Here agricultural spirits are returning from the vintage straddling across the panthers of Bacchus; there spirits of a distinct propensities are fishing. These graceful little subjects—all brightly rendered—we may add that the windows appear to be in gold frames, while the spaces between them are filled with looking glasses. At the further extremity of the hall, over a wonderfully rich mantelpiece, and under a gorgeous clock, is the bust of the Emperor—a graceful acknowledgement of the debt due by the promoters of undertakings like this to the present Sovereign of France. Behind the dining-hall is the machinery by which the dishes are raised from the kitchen; and here, also, we noticed the patent knife cleaners at work.

Through the vestibule, to the right, on ascending the grand staircase from the court of honour, the visitor reaches the long gallery on the first floor, on each side of which are the grand apartments of the hotel—those which cost twenty and twenty-five francs daily per room. This long gallery, which runs round the entire hotel, is no less than 400 mètres in length. It is carpeted throughout with a velvet pile, that deadens the sounds of hurried steps, so that the luxurious traveller, in each side may lie upon the velvet couches, or repose in the state beds in perfect peace. There are four stories to the hotel; and upon each story is a grand corridor like that of the first floor, carpeted also, though less richly. Of the first floor we have already spoken as the *étage noble* of fair idea. The rich gilding that meanders about the walls; the splendid paper; the massive silk or damask hangings; the bull writing-desks and tables; the furniture covered with satin damask; the beautiful samples of Paris bronzes and clocks upon the mantelpiece, and the rich carpets—all arranged with that taste which we have not yet approached—make up rooms which appear to be destined for princes, at the very least. Then the bed-rooms are state apartments, as elegant as any in the Tuileries. We are reminded that an American family is already installed in one of these suites. We have before us a picture of a long-legged gentleman, with his feet upon these splendid dogs, calmly expectorating as he tinkles his money in his pocket, and laughs at the regal luxury that money commands now-a-days. The second, third, and fourth floors, are also handsomely furnished, and—a great advance in Parisian comfort—carpeted throughout. As we stood in the doorway of one of the third-floor rooms, and saw, stretching away to the opposite extremity of the building, a long perspective of rooms, furnished exactly like that in which we stood, a vague fear came over us for the shareholders, whose five-franc pieces had been invested in these acres of carpet, these miles of curtains, these thousands of beds! And then, as we descended to the bell room, filled with enormous wire cobwebs; to the *concierge*rie, one wall of which resembles the section of a gigantic honeycomb, with its cell for each number; and finally to the kitchen, where as on a night to receive as a side dish, while the table-d'hôte was prepared as the *plice de resistance*, we wondered where the crowds of travellers were to come from, whose purses would pay for this town laid out to pander to the whims of all nations. Already the *Charivari* has been amusing on the subject, in a letter purporting to be from a provincial, anxious to know all about the conditions of admittance to this public palace. Was it *de rigueur* that travellers should reach the *cour d'honneur* in evening dress? Would a hackney carriage be permitted to approach the stately entrance? Such comments happily enhance the interest with which crowds have wandered during the last fortnight into the patient dining-hall and along the stately corridors. Still many adventurous Englishmen and Americans have ventured to pass into the glazed court with their luggage, in the hope that the porters would instantaneously whirled up to the floor upon which they have decided to lodge, and to take a modest breakfast under the bright eye of Ceres. On the opening no less than one hundred and eighty persons sat down to the table d'hote; but one of the attractions of the hotel is that people who do not care to be at one of these daily scrambles, can dine as they please in the restaurant, and refresh themselves afterwards in the café, without once passing into the open air. This is, at all events, a splendid experiment that deserves encouragement. No traveller should quit the splendidly calm Court, made up to Saturday night, is now issued. From this document we learn that the total produce of the property sold in open court, by provincial auction, and private sale, amounts to the large sum of £31,000,000 sterling. The general head about the advantages certain to accrue to Ireland from the vast influx of English and Scotch capital, through the medium of this court; but it appears that the entire sum contributed by English, Scotch, and foreign purchasers amounts only to £2,214,846—a large sum, certainly, but inconsiderable when compared with £13,000,000 sterling paid by the Encumbered Estates Court. Another year ago this such a result as this would appear at this period? The report shows this most gratifying fact, that the Irish purchasers number no fewer than 6791 feeding proprietors, newly constituted, while there are but 1000 English and Scotch representing the £2,200,000 worth of property purchased on their behalf.

INSPECTION OF THE STIRLING AND CLACKMANNAN MILITIA.—General Viscount Melville inspected the Stirling and Clackmannan Militia on Saturday last, at King's Park, Stirling, in the presence of Colonel the Duke of Montrose and many hundred spectators. The regiment was put through a variety of evolutions by the Lieutenant-Colonel, Sir Alexander Maitland, Bart.; after which his Lordship expressed himself in terms of great satisfaction at the efficient state of discipline of the regiment, and the admirable manner in which they went through several most difficult evolutions. This regiment have offered their services to the Queen in any part of the world. They have already more than the number of men per cent of their population volunteers to the Army. These two counties may well feel proud of having given to the service of their country such a fine body of men; and the thanks of the country are due to Sir Alexander Maitland and the Duke of Montrose for the way in which they have exercised their command, and the patronage entrusted to their care in selecting good officers. Captain Denny, late adjutant, now on the staff as adjutant of the 60th Royal Rifles, and to his energy and exertions much is due.

THE ATTEMPT TO ASSASSINATE MISS HINDS.—The Government proclamation states that Patrick Bannon, a deserter from the Cavan Militia, is charged with being one of the party concerned in the horrible attempt to assassinate Miss Hinds, and with having fired the shots. A reward of £50 is offered for his apprehension. The unfortunate lady is reported to have taken a favourable turn.

THE MURDER AT SOUTHAMPTON.—Abraham Baker, who murdered his fellow-servant, Naomi Kingswell, at Southampton last Sunday week, has made a confession. It seems that after he had committed the murder he carefully dragged the body a different way, and soon after he was committed for trial he became aware of the dreadful situation in which he was placed, and sent for the Mayor of the town to make a communication to him. His justification of the murder is that he entertained a sincere attachment for his victim, and that she was perpetually tantalising him by accepting and rejecting his attentions, and that, after behaving to him in the most cruel manner for some considerable time, she finally parted him with contempt. He had a wedding ring in his possession when he was apprehended, so that it would seem that he had contemplated being married to the poor girl he murdered.

MURDER AND ROBBERY.—A woman about seventy years of age, residing alone in a cottage near Waterloo, by the side of the turnpike-road leading from Newcastle to Stamfordham, was murdered last night in a detached part of the county, and consists of only about half-a-dozen detached cottages, which are the resort of tramps, broom-makers, and vagrants of different kinds during the summer and autumn months.

NEWSPAPERS IN THE WORLD.—The following is supposed by the American *Publishers' Circular* to be the number of newspapers in the world:—10 in Austria, 14 in Africa, 24 in Spain, 26 in Portugal, 30 in Asia, 65 in Belgium, 85 in Denmark, 90 in Russia and Poland, 350 in other Germanic States, 900 in Great Britain and Ireland, and 2000 in the United States, or nearly twice as many as in all other nations.

COUNTRY NEWS.

ELECTION FOR HUNTINGDONSHIRE.—The election of a member of Parliament to supply the vacancy in the representation, caused by the elevation of Lord Mandeville, the late member, to the dukedom of Manchester, took place on Tuesday, at Huntingdon, when Mr. Rust was elected without opposition. In his speech to the electors the new member said he would rank himself among those who recognise the Earl of Derby as their leader. No allusion was made to Mr. Disraeli. "With regard to the war, glad would he be if Russia, abandoning her schemes of [illegible] would turn her attention to ameliorate the condition of [illegible] instead of amassing instruments of aggression against her neighbours. But the present ruler of Russia, unless his language has been misunderstood, has expressed sentiments little calculated to inspire hopes for the peace and tranquility of Europe; he had talked of the schemes of his predecessors, and of his own desire to carry those schemes into execution. It was those very schemes, so long entertained and so fondly cherished by his predecessors, which forced France and England to take up arms for the protection of Turkey, and thereby the prevention of all those incalculable evils which would have ensued from the occupation of Turkey by Russia. Mr. Rust proceeded to say that whenever Russia, adopting wiser councils, and showing just respect for the independence of her neighbours, should be induced to offer such terms as France and England would feel justified in accepting, without holding out the prospect of a safe and lasting peace for Europe—he, in common, he believed, with her Majesty's subjects generally, should rejoice; but until then he was an advocate for the prosecution of the war with such vigour as, combined with the aid of our respected and gallant allies, could not fail of bringing it to a desirable termination."

REPRESENTATION OF SUNDERLAND.—The Durham papers state that Mr. George Hudson intends retiring from the representation of Sunderland, and that there are three candidates at present in the field, namely Mr. W. Digby Seymour, Recorder of Newcastle; Mr. C. Alcock, and Mr. Hartley.

MR. EWART, M.P., ON THE WAR.—Mr. Ewart, M.P. for the Dumfries district of burghs, addressed his constituents at Dumfries last week. In the course of his address he observed that we were, unhappily, engaged in a state of war; and all were in anxiety, whether the [illegible] or the advocates of war. As a member of the Peace Society, at the beginning of the war he would willingly have avoided going into it; but when it was found that Russia was declaring upon nothing short of the subjugation of the Ottoman Empire, and, by her great accumulation of the munitions of war, seemed determined first to conquer and then control the East, he considered himself fully justified in supporting the war. He could not find any sincerity in the offers of Russia. He would have been glad if the negotiations had succeeded in opening up the Black Sea solely to ships of commerce. The peace of the world might thus have been secured; but after the refusal of these terms by Russia he could not withhold his assent to the prosecution of hostilities, and he thought they ought now to be carried on with vigour until they gained an honourable peace.

EXPECTED MEETING AT MANCHESTER. A rumour is current at Manchester that, before the reassembling of Parliament, Mr. Bright intends to meet his constituents at a great meeting, to be held in the Free-trade Hall. The new building will be far from complete, but it is believed that the large room in it can be temporarily covered over and converted into a place sufficiently comfortable for such an assemblage.

OUR MONETARY SYSTEM. Last week Mr. Spooner, M.P., brought before the Council of the Birmingham Chamber of Commerce a string of resolutions condemnatory of the Bank Charter Act of 1844. The Council, after a long discussion, adopted the two first paragraphs of the resolutions, as follows: "1. That had Australian and Californian gold not been discovered, the present monetary system could not have been maintained. 2. That the Legislature, when it passed the last Bank Charter Act in 1844, could not by any possibility have contemplated that discovery."

THE TWINS OF THE EARL OF DURHAM. It was stated some time ago that of the twin sons of the Earl of Durham, the elder was distinguished from the younger brother by a blue silk ribbon tied round his right wrist. A statement in contradiction of this has appeared, from which we learn that the elder twin, Viscount Lambton, wears an armlet of gold set with turquoise; and the younger, the Hon. Frederick William Lambton, an armlet of gold set with a ruby.

THE MISSING CLERGYMAN.—The fate of the Rev. Mr. Farmer, whose extraordinary disappearance was recorded in our last week's paper, remains enveloped in as much mystery as ever. After every possible search and inquiry, no trace can be found of him since he left the Hall Green Station, on Saturday afternoon. Many absurd rumours have been in circulation, but as yet no elucidation has arisen, and the friends of all the parties interested remain in a state of great anxiety.

FIRST SYMPTOMS OF WINTER.—In the Midland Counties last week the cold and stagnant water had been covered with a coating of ice, which remained on the surface for a considerable time after the sun had dispelled the hoary mantle with which the fields were clad.

SALE OF ENCUMBERED ESTATES.—The sixth annual report of the proceedings in the Encumbered Estates Court, made up to Saturday night, is now issued. From this document we learn that the total produce of the property sold in open court, by provincial auction, and private sale, amounts to the large sum of £31,000,000 sterling. The general head about the advantages certain to accrue to Ireland from the vast influx of English and Scotch capital, through the medium of this court; but it appears that the entire sum contributed by English, Scotch, and foreign purchasers amounts only to £2,214,846—a large sum, certainly, but inconsiderable when compared with £13,000,000 sterling paid by the Encumbered Estates Court. Another year ago this such a result as this would appear at this period? The report shows this most gratifying fact, that the Irish purchasers number no fewer than 6791 feeding proprietors, newly constituted, while there are but 1000 English and Scotch representing the £2,200,000 worth of property purchased on their behalf.

INSPECTION OF THE STIRLING AND CLACKMANNAN MILITIA.—General Viscount Melville inspected the Stirling and Clackmannan Militia on Saturday last, at King's Park, Stirling, in the presence of Colonel the Duke of Montrose and many hundred spectators. The regiment was put through a variety of evolutions by the Lieutenant-Colonel, Sir Alexander Maitland, Bart.; after which his Lordship expressed himself in terms of great satisfaction at the efficient state of discipline of the regiment, and the admirable manner in which they went through several most difficult evolutions. This regiment have offered their services to the Queen in any part of the world. They have already more than the number of men per cent of their population volunteers to the Army. These two counties may well feel proud of having given to the service of their country such a fine body of men; and the thanks of the country are due to Sir Alexander Maitland and the Duke of Montrose for the way in which they have exercised their command, and the patronage entrusted to their care in selecting good officers. Captain Denny, late adjutant, now on the staff as adjutant of the 60th Royal Rifles, and to his energy and exertions much is due.

THE ATTEMPT TO ASSASSINATE MISS HINDS.—The Government proclamation states that Patrick Bannon, a deserter from the Cavan Militia, is charged with being one of the party concerned in the horrible attempt to assassinate Miss Hinds, and with having fired the shots. A reward of £50 is offered for his apprehension. The unfortunate lady is reported to have taken a favourable turn.

THE MURDER AT SOUTHAMPTON.—Abraham Baker, who murdered his fellow-servant, Naomi Kingswell, at Southampton last Sunday week, has made a confession. It seems that after he had committed the murder he carefully dragged the body a different way, and soon after he was committed for trial he became aware of the dreadful situation in which he was placed, and sent for the Mayor of the town to make a communication to him. His justification of the murder is that he entertained a sincere attachment for his victim, and that she was perpetually tantalising him by accepting and rejecting his attentions, and that, after behaving to him in the most cruel manner for some considerable time, she finally parted him with contempt. He had a wedding ring in his possession when he was apprehended, so that it would seem that he had contemplated being married to the poor girl he murdered.

MURDER AND ROBBERY.—A woman about seventy years of age, residing alone in a cottage near Waterloo, by the side of the turnpike-road leading from Newcastle to Stamfordham, was murdered last night in a detached part of the county, and consists of only about half-a-dozen detached cottages, which are the resort of tramps, broom-makers, and vagrants of different kinds during the summer and autumn months.

NEWSPAPERS IN THE WORLD.—The following is supposed by the American *Publishers' Circular* to be the number of newspapers in the world:—10 in Austria, 14 in Africa, 24 in Spain, 26 in Portugal, 30 in Asia, 65 in Belgium, 85 in Denmark, 90 in Russia and Poland, 350 in other Germanic States, 900 in Great Britain and Ireland, and 2000 in the United States, or nearly twice as many as in all other nations.

MONETARY REFORM MOVEMENT AT NOTTINGHAM.

At the invitation of H. Thackeray, Esq., Mayor of Nottingham, Mr. Jonathan Duncan delivered two lectures on the monetary legislation of the years 1816, 1819, and 1844, at the Exchange Rooms in that city, on the evenings of the 16th and 17th inst. On both occasions the rooms were crowded by a highly-respectable audience. On the first evening the chair was taken by Charles Wright, Esq., the eminent banker, and nephew of Lord Overstone; on the second, the Mayor presided. As each lecture occupied two hours in the delivery, our report is necessarily abridged. We can only give the substance of the leading arguments.

1. Mr. Duncan commenced by referring to the panic now prevalent in the Money-market, and the extraordinary and rapid rise in the rate of discount. The war had compelled us to raise a loan in aid of our taxation. France, Turkey, and Sardinia had been driven to a similar necessity. In consequence of the high price of bread, remittances to a large amount had been made to foreign countries to obtain an increased supply of corn; and it was of course essential to retain an instrument of exchange, or legal tender, at home to carry on our home trade. The primary question, therefore, to be answered under these complicated circumstances was, could a single metal, gold, meet all these diversified requirements? Experience replied in the negative, notwithstanding the unexpected discovery of the Australian and Californian mines. The Bank of France was draining the Bank of England in what was termed an *irregular* and *artificial* manner; but the irregularity and artificiality simply consisted in buying our gold at its *market* price. This result was predicted by the Lords' Committee in 1819. "No accumulation of treasure" (see their Report), to whatever extent it may be carried, can render the Bank competent to satisfy the demands which will inevitably be made for gold, if the Bank are under an obligation to issue it at the rate of £3 17s. 10½d. per ounce, and if the parties, having a right so to demand it, can contrive to derive a profit of five or six per cent upon its exportation." This is the case at the present moment. France is giving more than £3 17s. 10½d. per ounce for gold; and as the Bank of England is prohibited by law from raising the price above the Mint rate, gold is exported as any other commodity would be under similar circumstances. It is easy to refer to a precedent. The late Mr. Rothschild, in his evidence before the Bank Charter Committee in 1832, stated that "when the Emperor of Russia (Nicholas) made war in Poland lately, gold which went from Hamburg to Petersburg and Warsaw was paying from three to four and five per cent profit; if five per cent will not pay it, ten per cent will be given." It is, therefore, plain that when kings or emperors want gold they will obtain it at any cost, and, therefore, it will be exported even while the foreign exchanges are in our favour, since emperors do not look at the operation with the eye of a merchant or cambist. They willingly submit to a loss to win the prize of ambition. Nicholas would gladly have lost, or given, twenty millions, or much more, for the possession of Constantinople; and his successor may even now act on the financial policy here indicated, and drain our Bank of its last ounce of gold, inflicting deep, and perhaps mortal, wounds on our monetary system. Under these views it is idle and silly to charge the Bank of France with acting upon an *artificial* system; the artificiality attaches solely to our legislation, which fixes an arbitrary Mint price on gold. It can only be secured against exportation by being permitted to rise as a commodity to its market price.

2. It was an error to suppose that the Acts of 1816 and 1819 restored the old standard of value, as the bullionists had affirmed. Prior to 1797 silver was a legal tender for any amount as well as gold; excepting in the ten years ranging from 1774 to 1784, during which silver in sale was restricted at one payment to sums of £25; but even then those silver coins which were of full weight still passed as legal tender for 8s. 2d. per ounce. The Act of 1816 limited silver as a legal tender to *forty* shillings; and thus a totally new system introduced; for, in substance, gold became exclusively our legal tender, was in conformity with the dogmas of the Bullion Committee of 1811. Mr. Huskisson was the oracle of that Committee, and he affirmed that it was "the essence of money to possess intrinsic value"—a doctrine frankly accepted without due examination. It was a mere figment put forward without an argument, and as foolish as the *dictum* of Lord Liverpool, who insisted that England ought to have a gold currency, because England was the richest country in the world. Without appealing to those notions of antiquity who used representative money as leather, or iron, deprived of its malleability, and therefore worthless as merchandise; or, citing the authority of Plato or Xenophon, it is sufficient to refer to Scotland as a living proof of the unsoundness of Mr. Huskisson's dogma. Scotland built her cities, cultivated her soil, constructed her harbours, and carried her trade to the extremities of the world, not with money of intrinsic value, but with money of representative value; and, what is very remarkable, while the Bank of England, resting on golden pillars, has repeatedly been on the verge of bankruptcy, and only rescued from the *Gazette* by Government interference; and, while the metropolitan and provincial banks of England have failed by hundreds, only one solitary Scottish Bank ever suspended payments, and it paid twenty shillings in the pound.

3. Our monetary system is in direct contradiction with the principles on which it professes to be founded. In his speech on the Bank Charter Act, delivered on the 6th May, 1844, Sir Robert Peel affirmed that "the measure rests on the assumption that, according to the principle existing to law, according to the ancient monetary policy of this country, the meaning of a pound is neither more nor less than a certain quantity of gold with a mark upon it to guarantee its weight and fineness; and that the engagement to pay a pound means nothing, and can mean nothing else than the promise to pay to the holder on demand, when he demands it, a definite quantity of the precious metals." It is reasonable to expect that a legislator should be conversant with common sense, and act on his own definitions; but Sir Robert Peel did not conform to this rule. He allowed the Bank of England to issue fourteen millions on a debt due to that establishment by the Government; the provincial bankers to issue eight millions, though to them no debt was due; Ireland was allowed six millions; and Scotland three millions. This aggregate of thirty-one millions is not guaranteed by a metallic equivalent, for the statute only requires that gold shall be held by the respective issuers when the notes exceed those thirty-one millions. Therefore the principle of the measure is violated, for gold is only provided for a *portion* of the notes, not for *all* the notes—an evident proof that Sir Robert Peel was conscious that a purely metallic currency was impracticable, although he had insisted "that the engagement to pay a pound means nothing, and can mean nothing else than the promise to pay to the holder, when he demands it, a definite quantity of the precious metals."

4. The lecturer having adduced a variety of reasons for condemning bullionism as a barbarous form of barter, destructive to the best interests of the industrious classes, and only beneficial to heartless and cruel usurers, proceeded to explain that system of representative currency which he described as the "Taylorian philosophy," considering Mr. John Taylor author of "Junius Identified," its earliest teacher, and ablest expositor. This system embraced two kinds of legal tender money—the one, Imperial; the other, Commercial. Imperial money would be coextensive with the annual taxation voted by Parliament, and consist of notes of one pound and upwards. Of course they would not possess intrinsic value, but a conventional value derived from the authority of the State that put them into circulation. These notes would assume the character of small Exchequer Bills, but they would not bear any interest; by which contrivance the country would effect a considerable saving. Government would pay its debts with this imperial money, and take it back from the people in payment of taxes at the same conventional value at which it was issued. The limit of taxation would be the limit of the notes. The notes would not be cumulative from year to year, as they would always be cancelled when paid back into the Exchequer for taxes. They would never be exported, because they would be valueless to foreigners, though valuable among ourselves. Assuming with accredited statists, that the whole property of the United Kingdom is worth five or six thousand millions, Imperial money would rest on that ample basis, instead of the narrow foundation of a fugitive metal. As it would never be exported, so neither would it be hoarded, because it would not bear interest, and none of its holders would ever be exposed to panic. No trader who had to pay Customs, Excise, Stamps, or other fiscal duties, would have any difficulty of getting hold of imperial money, as it would accumulate naturally, and will required for payment into the Exchequer; whereas, under bullionism the trader has frequently to pay, as during this week, a rate of discount to get hold of legal tender, which probably absorbs the whole of his profits. In this last case the interests of the Legislature is itself defeated, for when it takes more than the ordinary labour, or more than the ordinary products of labour, to buy a legal tender pound, taxation is practically increased, though the number of pounds paid remains the same, since more must be given for each pound.

5. Commercial money would be issued by *security* banks. Government has no right to regulate the *quantity* of commercial money, which will always regulate itself under the law of supply and demand; but it has a right, hitherto shamelessly neglected, to protect the public against bankers who may turn out to be men of straw. Let a number of persons, having real and tangible property in land, consols, houses, or other valuable possessions, unite it in one common stock, and apply to Government for an Act of Incorporation as bankers. Assuming that the aggregate of the securities deposited amounted to £100,000, that the Crown lawyers certified the legal title of the parties tendering them to those securities, and that the Government actuaries certified their value, then the Treasury would give notes to the company, on lodging their securities, to the amount of two-thirds or three-fourths of those securities. This would allow a margin for any decline in value. The notes would be declared legal tender; they would be marked with a distinctive die; and, should the Bank fail, the Treasury would be empowered to sell the securities, and thus every holder of the notes would be secured in the receipt of twenty shillings in the pound, in case of bankruptcy. No sane person would run upon a bank so constituted. These notes would always far more than sufficient and simple medium of exchange in our home trade, as imperial money would always furnish a safe and ample instrument of taxation.

6. Under such a system what would become of gold? It would be restored to its natural condition as a commodity, and, ceasing to be a legal tender, would rise and fall in imperial and commercial money, under the law of supply and demand. The working jeweller who wanted gold to make watches or trinkets out of it, would buy gold at its market price, just as the brazier buys copper, or the miller buys wheat. Gold might continue to be weighed and assayed as now, and made up into ounces or multiples of ounces, in which convenient form it would be available for exportation, and to adjust any adverse balance of trade. Foreigners take no heed to the moulded denominations of coin, which are conventional in all countries. It is the value in bullion contained that they estimate in exchange; and it is in the form of bullion, not of coin, that our sovereigns are by them regarded. If then they receive payment in ounces, or multiples of ounces, provided only the weight and purity of the metal are certified by authority, foreigners are perfectly satisfied. In the plan, therefore, recommended, we should always retain a legal tender for taxation and for domestic trade; and the export of gold would never create any disturbance in our home markets. Gold would be economised, as it would only have one regular function to perform, instead of three functions; it would only be wanted for foreign trade, and when it went abroad on a temporary tour, no panic would arise, and no usurer would thrust his sickle into the industrial harvests, reaping where he had never sown.

7. The lecturer next noticed certain popular delusions as he termed them, on the system of representative money. Writers more superficial than sound, more jocose than argumentative, have indulged in small witticisms on what they call the "little shilling," though they forget or wilfully conceal the fact that a little shilling was introduced by the Legislature when it concocted the modern system which those writers profess to admire and deem honest. When the Act of 1816 coined the ounce of silver into 66s. 0d., while it formerly was coined only into 5s. 2d., the weight of the shilling was reduced from 92½ grains to 87 grains; and thus those who receive their wages in silver have been robbed ever since that date. But this is not the sense in which the sneer at the "little shilling" is implied, for it is quite approved of by the very parties who are horrified at the weight of a light sovereign; the facetious gentlemen to whom we allude mean, by the little shilling, the depreciation of the pound of account. In examining this fallacy we shall clear it of doubt or verbal dispute by a careful definition of terms. Debasement happens when an inferior is mixed up with a superior metal, as copper with silver, or silver with gold; in such cases the weight of the coin is preserved, but its purity is lost. Deterioration happens when by fair wear and tear, or unlawful clipping, the coin loses both weight and purity. It is obvious that representative paper money cannot be exposed to either of these processes, though it would be easy to show from the confessions of bullionist statesmen that they have ignorantly, or wilfully for the purpose of delusion, applied both debasement and deterioration to paper money. We have now then only to consider the word depreciation, which can only signify an enfeeblement in purchasing power. Raise revenue by an income-tax, say of five per cent; if the income so taxed be £1000 a year, five per cent will excise or cut off one thousand shillings or fifty pounds. The person taxed has now only £950; if depreciation expresses an enfeeblement of purchasing power (and it means and can mean nothing else), then the person is left with little shillings. Suppose, then, where revenue is raised by an indirect instead of by a direct tax, and that tax is five per cent, the pound of account should fall in purchasing power from twenty to nineteen shillings, has anything happened different from what happened in the case of a direct income-tax? Clearly not. In both cases the little shilling makes its appearance. Bullionists quite overlook the action of indirect taxes, which add to the cost of production without adding to the value of the product. Taxation in a direct form falls on property, which is only justice; is it right, then, when the fiscal exaction from direct to indirect, that property should escape its share of fiscal burden, and insidiously transfer it to the back of labour? If that is what the bullionists desire, let them avow it, and the eyes of plundered industry would be open to the wrong. They repudiate such cruelty, but neglect to see that in the purchasing power of their pounds which obviously took place when the tax was direct, and consequently ought to take place when the tax is indirect? The fact is that, when a country raises its revenue by indirect taxation, money should not remain a constant, but a variable, quantity. As the tax is increased, its purchasing power should fall; as the tax is diminished, its purchasing power should rise. Five per cent excises one shilling from the pound; ten per cent excises two shillings; fifteen per cent excises three shillings; and so on; and in no case can an indirect tax be made to operate as a direct tax would and must act. Such is the rationale of the "little shilling;"—such is justice.

French assignats, when originally issued on the proposition of Mirabeau, were based on the solid security of the Church lands. Then they were the symbol of a reality and bore a premium. But when society became utterly disorganised, and fresh ruffians in succession floated on blood to power, and all responsibility had ceased, the assignat ceased to be the symbol of a reality, and became a worthless fiction without any basis whatever. It is, therefore, worse than folly, it is a crime, to assimilate in the slightest degree those instruments to the taxation money already described.

8. The lecturer then traced historically the variations in legal tender from the wooden tallies of Henry the First down to the Bank Charter Act of 1844, explaining the Act of Elizabeth, 1601, which adopted a double standard of gold and silver—the effect of the suspension of cash payments in 1797, and the effect of their resumption by the Act of 1816 and 1819—concluding this monetary sketch by an account of the Bill of 1844. He then minutely commented on Lord Overstone's "Theory of Trade," showing that his Lordship's principles were in direct and inevitable results of vicious legislation. He next explained the fallacy of a standard of monetary value generated from a rule of proportion established between gold and silver as commodities, that narrow rule of proportion having no necessary relation whatever to any other commodity than those metals themselves. Finally, he contrasted the state of our home and foreign trade under a metallic and under a representative system, and called upon the people of Nottingham, in a strong appeal to their common sense, to emancipate themselves from the yoke of bullionism, and support their Town Council in demanding from Parliament the repeal of the laws now in force, and never to relax their efforts till gold was restored to its natural character as a commodity, and allowed to find its market price in legal tender of the realm of England under the law of supply and demand

AUSTRALIAN IMMIGRATION.—The immigration returns before us, for the quarter ending 5th July, 1855, exhibit a balance in favour of arrivals over departures of 15,260. This includes Chinese, who continue to arrive in considerable numbers, and will do so, we believe, notwithstanding the stringent enactment which was passed at the close of last Session with the view of preventing their influx. As all events, regarding such immigration, the Legislature appears to be no longer necessary; the more extended information of our vast resources being apparently sufficient to supply us with as many of that very superior class—voluntary immigrants—as can be usefully employed. Indeed, there has lately been an outcry, which has been designated "destitution." We would be far from asserting that "distress" does not exist; but that either the colony, or our social or political arrangements, have necessarily caused or added to produce it, we do not believe for a moment. With the exception of a few cases, which are unavoidable wherever a large population is congregated, we believe the cause of the distress may be traced to the conduct of the individuals suffering from it.—*Melbourne Journal of Commerce.*

THE MINES OF MEXICO.—A pamphlet was lately published in Mexico under the title "Mexico's Foreign Trade since the Conquest." It contains some interesting statistical details respecting the produce of the gold and silver mines. The total value of the gold and silver coins struck at Mexico (the kingdom) from 1521 to 1821, together with articles made from the precious metals, amounts to 3,562,305,000 dols.; in the city of Mexico itself the above coinage amounts to 2,248,165,000 dols.; and the gold to 111,806,000 dols., together, 2,359,971,000 dols. The remainder was coined or wrought in the other towns of Mexico; but the whole of this colossal sum, with the exception of 100,000,000 dols., was exported. In the year 1690 the quantity of silver coined in the capital was 8,286,000 dols.; and in 1691 it amounted to 8,214,000 dols. From 1691 to 1700 the quantity diminished, until it dwindled down to 3,379,000 dols. After this year it gradually increased again till in 1809 its highest point was attained, the coinage for that year being 24,709,000 dols. In 1837 only 516,000 dols. in silver were issued by the Mint; but in 1838 it rose again; and in 1852, amounted to 2,770,000 dols.

SOMETHING MORE ABOUT THE POPULAR NUISANCE.

DEAR SUSAN JANE, —

I hope that this will find you well at present,
As it leaves your most obegient, number 40, Trumper-cresent.
You'll stare, no doubt, to see as how i've changed my situation,
And left them "screws" in Snorem-street, to their great aggaravation;
But, thanks to Bones, our butcher, i was only out for I day,
'Cos i left the "screws" on saturday, and got in here on monday.
I don't much like the partys, 'cos the cook declares they stint her
They *wont* stint me! and so I mean to stop at least the winter.
You want to hear, I dessay, susan, all about the matter,
It warn't the fault of missus, tho' she's bal enough, too, drat her!
I left without no warning, and serve 'em right! i wonder
Who to a first-floor lodger is going to nock under?
You know that Snorem-street's so very dull and dreary
Sometimes the postman's double nock sounds positively cheery.
Our butcher-boy was 52—no younger would come nigh us;
The milk's let down the ary, and the milkman's man is pious.
In fact, the street's so quiet, so well behaved, and lonely,
It's cruel—but they does it! they send our perlicemen only.
Now, "if i have a pashion," says a book of lady morgs
(Except for duck and green pea-), it's for talians and the foreigners,
But, as none come to Snorem-street, i says to our cook very,
"Don't you think a little music, now, would be uncommon jolly?"
A horgan once a day won't be a great expense, if any,
If its pade with broken vittles, and just now and then a penny;
So, consequently, as cook had not the least objection,
I went and found a horgan man and gave him our direction.
And such a horgan! susan Jane! it plays so loud and growling,
Tho' 3 mile from the surry Zoo. it set the beasts a howling.
And then the horgan-man hisself! he's just like muzzyroni;
His wiskers quite as black and long as tale of your old pony.
You know our number *was* 19—we told 18 and 20,
They did the same and very soon we'd horgan-men in plen
But, o, to think what mean things done by them as shou
better,
Our lodger was put up to it in a an ominous letter
He rings the bell and up i goes, says he to me, "Kess.
I hear 'tis you's made all the row,"— says i, "Sir, you're a
teller."
Well, then he went so very red—he's one of them short necks
Seemed as tho' he was about to have the happyplexhe.
Says he "You 'ussey leave the room, and send your
"Well, sir,"
Says i, "i hadn't come up-stairs unless you'd rung the
Well missus come, and she on course, did not make matters
But said she'd turn my boxes out and i—well then i let her.

Dear Muzzyroni comes each day and plays in
cresent—
I read once how a talian count h'self dress'd like a peasant,
And married Well, what nonsense, sure i'm stupid or
The parlour bell's been rung 3 times, so i'll go and see
wanted.

THE QUEEN AND THE SCHOOLS IN WINDSOR FOREST.—At a school meeting in Padiham, a few days since, Sir J. Kay Shuttleworth said—He was anxious to call the attention of the country to the example set by Majesty in her and the Prince some schools in the Royal forest of Windsor. The view the Queen took was, that a very large portion of the population resident in that district became dependent on the Crown, and employed as labourers on the farm or in the forests, or in the household duties connected with the Royal farms and so forth, she had therefore a personal responsibility in their well-being. The people were scattered over the districts between one town and another, in which there were no schools or means of education, and the children were brought up in a half-wild manner, very much in the same condition as in remote districts of the country far south of England. Her Majesty resolved that an efficient school should be established, and it seemed desirable that the school should be typical of the act of Royal munificence which was about to be accomplished, and not only worthy of the Crown, but an example to the country at large. Her Majesty made no stipulation whatever as to the cost, and he drew out a scheme which involved an expenditure of £1000 a year. It provided for the instruction of the children, not merely in the ordinary scholastic and religious knowledge, but also supplied the best form of instruction in common things—such as in gardening, in household economy, cooking, washing, making up clothes, &c.; in preparing dishes suitable for, and otherwise enhancing the comfort of cottagers, which latter were taught in kitchens and washhouses prepared for the purpose. Her Majesty not only assented to this plan being carried out (and the plan had been in operation during the last nine years), but she had promoted its success in every way; and all the linen worn by the Royal children, and a very great part of that used in the Royal households, was the work of the establishment. The Queen was in the habit of inspecting the place in person, and took a deep interest in its operations. The boys had a garden of several acres, in which they cultivated all that was necessary for cottage use. They had a pig which they jointly cultivated, and in addition they had small separate plots which they cultivated upon the plan of the common cottage gardeners. They were employed also in workshops, but they were chiefly occupied in gardening. He could assure them that this establishment did not simply exist as a sort of outside show, but was a subject of personal interest to her Majesty; was regularly inspected by her, and often by her different visitors at the Court; and the Prince of Wales was in the habit of examining the scholars in certain branches of their studies.

THE SOUND DUES.—The amount of revenue derived by Denmark from the Sound dues exceeds two million thalers (above £300,000), an important sum to a population of 1,500,000. The Danish Government is now said to be anxious to settle the matter by capitalising this amount, which would have to be raised by the various States interested in proportion to the amount of their yearly contributions. The United States and Prussia have on former occasions endeavoured to redeem this charge by the payment of a sum once for all, but were never successful, Denmark having hitherto had the support of Russia to fall back upon; now, however, it is understood that Russia has

SEBASTOPOL, FROM THE QUAY

SEBASTOPOL FROM THE QUAY OF FORT PAUL.

The Arsenal Creek, which occupies so large a space in this Engraving, is an arm of the sea, running up into the southern side of Sebastopol Bay. It is the natural outlet for the water from the ravines on the Woronsoff road, and also for those from the Valley of Death. The spectator, standing on the Quay of Fort Paul, commands a very extensive view of the buildings on the opposite side of the Creek. The shore is of the same precipitous nature as in most other places in the neighbourhood to which the sea has access. The most prominent buildings on the right hand are the Governor's palace, which was reduced to a skeleton by fire; the barracks, clock-tower, and a Greek church, whose gimcrack steeple formed a useful landmark in the distant view of Sebastopol. On the left stands the palace of the contractor who excavated the ground for the dockyard and the battered church of Peter and Paul, of which we lately gave an Engraving.

It was in the immediate vicinity of this spot that the brigade of General Eyre bravely fought its way on the memorable 18th of June, when the failure of the attack on the Malakoff, and the want of proper arrangements left it no other alternative but to find its way back to the Camp.

KAMARA, THE WINTER-QUARTERS OF THE PIEDMONTESE ARMY.—SKETCHED BY J. A. CROWE

PORT PAUL, SKETCHED BY J. A. CROWE.

KAMARA.

THE site before Sebastopol where the Piedmontese army is to winter, lies on a hill, commanding a fine view of Balaclava plain, on the Baidar side. Our Illustration shows all that remains of the village, which consists of a few fragments of walls, and the Greek church of the place.

Since the Sketch was taken by our Correspondent, the Piedmontese have begun availing themselves of the railway from Balaclava to Kamara. They are likewise beginning to construct huts of a very simple and not at all expensive style—a few beams as a framework for the roof, closely interwoven with branches, plastered over, and the whole covered with a layer of earth. This will do very well until the wooden huts, which have been contracted for by the Piedmontese Government, can be sent out or another change occurs. General la Marmora was, at the last date, about to remove his head-quarters to Kadikoi

The complaints about a short supply of water in the Crimea, of which we heard so much a short time ago, are now giving place to fears lest the rainy season may not have given them too much of that indispensable element. The most recent accounts relating to the weather speak of heavy rains which have rendered the low grounds a perfect quagmire. One good result of such abundant supplies of water will be to relieve the Sardinians and those other Allied troops which are encamped on the heights, from the fatiguing operation of going so far for their supplies of it, as they must have done at the time when our Artist drew the above Sketch. Where the subsoil is so hard, as on most of those hills, a very small amount of scheming will enable them to provid themselves with water in the immediate vicinity of the Camp.

ORDNANCE WHARF—BALACLAVA.

THE piles of shot with which this quiet little wharf is covered serve t mark the locality, otherwise the sober aspect of the scene is not exacti what one would have imagined in thinking of any portion of what so re cently was "the crowded harbour of Balaclava." But we must take int account the very great change which has passed over the character of th place since the taking of Sebastopol. Now that the bombardment is ov the quantity of ordnance stores landed at the wharfs, must have fallen o amazingly, while the bustle would no doubt diminish in an equal ratio.

THE ORDNANCE WHARF AT BALACLAVA

Balaclava has ceased to exist. There are only some dozen of the original houses left scattered here and there amid iron storehouses, mountainous piles of wood, heaps of coal, of corn, of forage, of shot and shell, and of stores multitudinous. The harbour is trenched upon by new quays and landing places, and two long wooden jetties project far into its waters at the shallow head of the harbour, and render good service in taking the pressure off the quays at the waterside. And yet, with all this huge accumulation of stores, such a ravenous devouring animal is an army, that there are some fears that we shall run short of fuel and of flour during the winter.

Memorabilia,

LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

"A little chink may let in much light."—OLD PROVERB

SHAKSPEARE READINGS.

THERE is some soul of goodness in things evil; and "The Emendated Perkins Folio" may yet, in a way little thought of by its adherents, do good service to the text of Shakspeare. Already, both here and in the United States, it has called into print many indignant remonstrants, who, but for that injurious attempt upon the textual purity of the bard, would have confined their comments to the margin of their well-thumbed volumes.

I have been led to this reflection by a small unpublished volume of Shakspeare annotations by Mr. Staunton, in which very many most important passages, hitherto deemed inexplicable without unwarrantable license of emendation, appear to me elucidated in a manner at once so simple and efficient as hardly to admit of farther controversy. As an example of the way in which this gentleman deals with some of the most inveterate Shaksperian difficulties, take the following:—

No. I.

This damn'd witch Sycorax,
For mischief, manifold and sundry kinds,
To enter human hearing, from Argier,
Thou know'st, was banished: *for one thing she did*
They would not take her life. Is not th a true?
The Tempest, act 1, scene 2.

Boswell remarks "That that *one thing* was which saved the life of Sycorax, the poet has nowhere apprised us." What puzzled Boswell has been a crux to every other editor, and few readers will be satisfied with Boswell's explanation, "that there was some novel upon which the fable of the 'Tempest' was founded, in which the circumstance was mentioned." In his explication of the passage, Mr. Staunton directs attention to the fact that while *Prospero* is speaking thus *Caliban* lies *yonder* in his den, and is denounced by his master, in other portions of the play, as "*A thing* most brutish," and as "This *thing* of darkness;" and Mr. S. accordingly proposes we should read YON for "one," and *bred* for "did." With these slight corrections of two very probable misprints, we obtain so clear and forcible a meaning, that we doubt if the most rigid stickler for the folio text will hesitate to accept the emendation.

——— for yon thing she bred
They would not take her life.

e., they spared her, witch as she was, for the sake of her child.

No. II.

Costly thy habit, as thy purse can buy,
But not express'd in fancy; rich, not gaudy,
For the apparel oft proclaims the man.
And they of France of the best rank and station
Are of a most select and generous chief in that.
Hamlet, act 1, scene 3

So all the folios. the quartos all read *chief for* "cheff."

Stevens reads —

Are most select and generous chief in that

Or—

Select and generous, are most choice in that

Ritson reads.—

Are most select and generous, chief in that.

Malone reads:

Are most select and generous chief, in that.

Interpreting "chief" as a term of heraldry.

Chalmers paraphrases the disputed line thus:

The nobility of France are select and generous above all other nations, and chiefly in the point of apparel, the richness and elegance of their dress.

Knight once followed Malone; but Dyce having laid it down that "of a" is a misprint of constant occurrence, and therefore is so here, Knight subsequently printed the line thus. –

Are the most select and generous, chief in that.

Collier, prior to the appearance of the Perkins folio, read the line as it is given in the quartos, understanding "rank and station" after generous. After the discovery of the Perkins folio, he, however, adopted the reading of his "old corrector":—

Are of a most select and generous choice in that.

It is in this posture of affairs that Mr. Staunton comes to our rescue, and, showing that "cheff" or "chief" is a mere typographical error for "sheafe," gives to the long disputed line a new and spirited turn, by reading

Are of a most select and generous sheaf in that.

As a mere conjecture I think this will be allowed to be highly ingenious; but, corroborated as it is by the following singularly happy quotations, it will, if I do not greatly err set this *quæstio vexata* at rest for ever:—

1. and with assurance that it is found in settlement and gentlemen of the best *sheaf*. BEN JONSON. *Magnetic Lady*, act II, scene 5.

I am so haunted at the Court and at my lodgings with your refined choice spirits, that it makes me clean of another garb, another *sheaf*.
Every Man Out of His Humour, act II, scene 1.

C. MANSFIELD INGLEBY, M.A.

The limited space allotted for our "Memorabilia" forbids us entering very deeply into controversies, even of Shakspeare; but when we are told that the MS. volume before us contains many hundred emendations, the greater part of which are equally felicitous with the foregoing, we shall not want further justification for returning to it at an early opportunity.—*Editor.*

QUERIES.

IN Cole's MS. 31, p. 79, I find the passage—"Dover is now Immortalised, and can boast not only of a Castle of *Julius Cæsar* and a Pocket pistol of Queen Elizabeth, but of a Cliff ennobled by Shakespeare and a Sepulcher with the bones of Churchill. N.B.—I hope your Mathematical readers won't make that a dividend *Ratio*, and find that *Julius Cæsar's Castle* is to Queen Elizabeth's pocket-pistol, as Dan Shakespeare's poetry to the bard Churchill." My object in quoting it is to ask, why the expression *Dan* Shakespeare is used.—F. W. G., Rainham.

DESIGNATION OF WORKS UNDER REVIEW.—Under what designation should English reviewers refer to that of Dr. Kitto which stand at the head of the review? There is a word, but I cannot find it. The Americans use *caption*. They say, "the second work in our caption" What should we say? BINGLEY

ANCIENT DANCES.—Can you, without any great sacrifice of space, give me some information about the dances called *bowet, peron*, and *canary*, and refer me to a work where I may gain more? —TERPSICHORE, Dunstable.

WHAT were the name and rank of the English Commandant of the Fortress of Chemnitz and of Breden, in Bettmay, when it surrendered to the French army under Du Gommier?—G. G. Downess, Isinor, near Barnstaple.

THE EFFECT OF INTELLECTUAL PURSUITS ON THE DURATION OF LIFE.—Can you afford me any data by which I may form an induence which great mental activity has in shortening or improving life? J. F., Warwick-sh.re.

[The following is a statement of the ages at which twenty men, eminent in various branches of literature and art, died. It seems to show that such pursuits are anything but prejudicial to the duration of life. Probably the regularity compensated for the sedentary nature of these habits. The list has been taken quite indiscriminately from a biographical dictionary, and is as follows: Ariosto, 59 years: Bede, 63; Boccaccio, 62; Chaucer, 72; Dante, 56; Guicciardini, 58; Leo X., 46; Leonardo da Vinci, 75; Luther, 63; Machiavelli, 61; Mahomet, 61; Melancthon, 63; Milton, 66; Michael Angelo, 90, Petrarch, 70; Raphael, 37; Shakespeare, 53; Spenser, 86; Tasso, 51; Wycliffe, 60: average age of the whole, 62½ years.]

FEW will contest that the five most eminent English authors now living are Macaulay, Dickens, Tennyson, Bulwer Lytton, and Thackeray. Three of the five—Macaulay, Tennyson, and Thackeray—were educated at Trinity College, Cambridge. Bulwer Lytton was also educated at Cambridge, at Trinity-hall; and Dickens is of no university. Again, the five most eminent English names in science and literature, equal to the most eminent of any age or country, are Bacon, Newton, Shakspeare, Milton, and Byron. Three of the five—Bacon, Newton, and Byron—were educated at Trinity College, Cambridge, Milton was also educated at Cambridge, at Christ's College; and Shakspeare was of no university. Is there any other college or any other university in any country under the sun that can compete in illustrious names with Trinity College, Cambridge? I know of none. If you can find a corner for these facts and this query in your "Memorabilia," you will much oblige your faithful servant, M. T. W—Oct. 15, 1855

ANSWERS TO QUERIES.

THE MAJESTY OF THE PEOPLE. The following extract from a common-place book in the British Museum, Add. MSS., 7106, though not an answer to Mr. W. Miller's inquiry, has sufficient bearing upon it, perhaps, to deserve a place among your entertaining Memorabilia.

"AN ODD COINCIDENCE.—Wee whose names are hereunto subscribed do respectively and severally depose and make oath that Sr Wm. Ashurst, Alderman of the ward of Bilnggate, did, on the 13th of January last past, at ye Sun Tavern at Billingsgate, hang invited thither by the Quest to dinner, at ye said meeting begin a health to our *Sovereigne Lord* or *Lords the People*, and accordingly drank ye same health.—Thom. Stevenson, Jno. Wilkinson, Arthur Ewing, John Wilkins. *Jurados* Feby. 9th 20th, 1689. *Corams me*, Adam Otley."—From an account of the celebration of Mr. Fox's birthday it appears that about a hundred years after the above event, on the very same day of the month, the Duke of Norfolk in the chair (at the Crown and Anchor Tavern), his Grace, among other toasts, gave the following:—"The Majesty of the People," which was followed by rapturous applause from two thousand persons present. A short time after it was announced that his Majesty had signified his pleasure that the Duke of Norfolk should be deprived from his appointment of Lord Lieutenant of the West Riding of the county of York, and also from the command of the Militia of that Riding. The cause of his dismissal originated in the proceedings at the Crown and Anchor Tavern on Mr. Fox's birthday, at which the Duke presided as chairman. From the same authority it would appear that "the Majesty of the People" was adopted as a standing toast a few months after the circumstances narrated. AN OLD WHIG.—St. James's-street, 22nd October, 1855.

"POOL'S HOLE" is the name of a country-dance tune. It will be found in the collection entitled "The Dancing Master," from 1690 to 1723. It is not included in any edition of earlier date. As a ballad tune it is known as "When the kine have giv'n a pailful," or "Still she answer'd 'No, no, no'" (which is the burden of that song). In that form it will be found with the tune in "Wit and Mirth; or, Pills to Purge Melancholy." 12mo, 1719, Vol. 2.—WM CHAPPELL, Bond-street

ROYAL MARRIAGES. "A. M. L's" inquiry on the subject of "Royal Marriages" will find an answer in the accompanying epitome of a very interesting letter by Dr. Birch, in reply to a request from David Garrick that he might be informed where he could obtain "the best printed form of the King's Marriage." The letter in question is among the voluminous correspondence of Dr. Birch. Add. MSS. Mus. Brit.:—

"Upon an hasty consideration of your question, I am inclined to think that no form of marriage suitable to the circumstances of his present Majesty can be produced either in print or manuscript. You will judge of the reasons of my doubts from a review of the several Sovereigns of this kingdom since the accession of Henry VIII. to the Throne. He was undoubtedly married to every one of his wives according to the ritual of the Church of Rome: his example on this point was followed by his daughter Mary, who was married to Philip of Spain, at Winchester, in July, 1554, by Bishop Gardiner, Archbishop Cranmer being then in prison. Her brother, Edward VI., and her sister Elizabeth both died unmarried. James I. was married several years before he came to England to the Princess of Denmark, at Upsan, in Norway; the ceremony being performed by Mr. David Lindsay, Minister, of Leith, in the French language. Charles I.'s marriage was solemnized at Paris, the Duke of Chevereuse being his proxy. Charles II.'s, from scrupling the office at church, he only took her by the hand in the presence-chamber at Portsmouth, and said the words of matrimony in the common Prayer-book, "I, Charles, take thee, Catherine," &c.; the Queen declaring her consent, and Dr. Sheldon, Bishop of London, standing forth and pronouncing them man and wife, in the name of the Father, &c. This I have seen a particular account of in a letter of Weston, Earl of Portland, to Lord Clarendon; and Bishop Kennet, in his "Register and Chronicle," p. 696, cites a manuscript to the same purpose.* The first marriage of the Duke of York, which was to Chancellor Clarendon's daughter, was a private one, at Worcester-house, Sept. 3rd, 1660, by Dr. Crowther, the Duke's Chaplain; the second, to the Princess of Modena, was proxy-wise, in Dover, on the 20th day of her arrival, by Dr. Crewe, then Bishop of Oxford, and at last of Durham. The marriages of his two daughters to the Princes of Orange and Denmark, and those of the late Prince of Wales and his sister, seem not to be within the limits of your inquiry; but the ceremonials of them, if wanted, may, I presume, be easily procured. The two last Kings, George I. and II., were married before they came to England.

* The following letter from Charles II. to the Chancellor, Hyde, descriptive of his bride, the Infanta of Spain, is extracted from the Lansdown MSS., Mus. Brit.:—

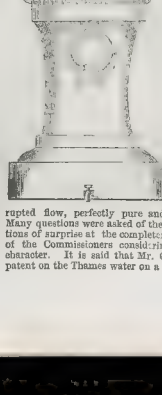
"Portsmouth 21, May, 8 in the morning.

"I arrived here yesterday about two in the afternoon, and as soon as I had shifted myself, I went into my wife's chamber, who I found in bed, by reasons of a little cough and some inclinations to a fever. * * * I believe she will find herself very well this morning as soon as she wakes. * * * I can now only give you an account of what I have seene which in shorte is her face, is not quite so exact as to be called a beauty, though her eyes are Excelent good, and not anything in her face that in the least degree can shoque one, on the contrary, she hath an agreablenes in her looke altogether as ever I saw and if I have any skill in visiognomy, which I think I have she must be as good a woman as ever was born, her countenance, as much as I can perceive is very good for she has wit enough and most agreable ways you would wonder to see how well we are acquainted already, in a worde I think myself very happy for I am confident our two humors will agree very well together. I have not time to say any more. My Ld. L— will give you an account of the rest.

"C. R."

PURIFICATION OF THE THAMES WATER.

THE accompanying Engraving represents a water clarifier invented by a Mr. Cheavin, a Lincolnshire gentleman, which deserves attention at a time when so many complaints are made about the dirty condition of the Thames. The newly-invented filter was brought before the City Commissioners at a recent meeting, by Mr. Deputy Holt. The patentee alleged, that by his invention, muddy, and even stinking water was instantaneously made sweet, varying from 200 to 10,000 gallons daily. It was so simple in its construction that, if properly attended to, it would not get out of order for twenty years; whereas all others soon became useless by being choked up—to remove which difficulty a top of the cylinder and blow-pipe attached to it Mr. Cheavin produced a bucket-ful of water which, but half an hour before, had been taken from the Thames at Southwark-bridge. It was very filthy, and of a deep green colour, stinking excessively. To the evident surprise of the whole party of the large body of the Commissioners present, the water, poured in at the top, instead of issuing in driblets from the tap, as in the case of the ordinary filters, poured forth in an uninterrupted flow, perfectly pure and bright, until the filter was emptied. Many questions were asked of the inventor, and the greatest demonstrations of surprise at the completeness of the invention were made, several of the Commissioners considering it to be of a wonderfully complete character. It is said that Mr. Cheavin will shortly have a trial of his patent on the Thames water on a far larger scale.



CHESS.

TO CORRESPONDENTS.

DOCK.—The Problem you have forwarded.—*White*: K at Q B sq, Kt at Q 8th; *Black*: K at Q B 5th, P at Q R 6th. White mates in six moves—very ancient. There is one upon the same principle in the early set European Chess work known

W. H. Why is such a one often written simply "Lord"? Until we know who is the applicant and why he is so, how can we move in the matter?

J. C. There is no error in Problem 597. If Black by the Bishop to K Kt 5th, White checks with Kt at Q B 4th and mates next move by Q to Her 5th

H. J. C. H. See the preceding notice to "J."

JARSAY. Your letters were both received, and any future one shall have attention although, as you must be aware, the publication of such lengthy dissertations in our Journal is not possible

W. W. Is shall be reported on next week

E. D. QUINCY, Illinois, U.S.—No such match was ever played

FREE.—The St. George's Chess-club is at 53, St. James-street, Piccadilly. You must apply to the Secretary

SOURCE OF THE SOUTHAMPTON CHESS-CLUB. The Chess amateurs of Hampshire and the adjoining counties are expected to muster in great force at the annual festival of the Southampton Club, which is fixed to take place at the Victoria Rooms on Friday, Nov 2nd.

TOURISTS. The price of which is merely nominal, may be had on application to Mr W Sharland Honorary Secretary Play to begin at four o'clock

THE TERM "SHACHROCH."—Can your learned friends, contributor, Dr. Forbes—to whom I am happy to acknowledge myself very much indebted for his able articles on the Early History of Chess—inform me what is the exact meaning of the term "Shachrock," and what connection it has with a similar name, which the great Tamerlane bestowed upon his son and successor?—Yours truly, M P—Travelers' Club, Pall-mall, Oct. 19 1855

SOLUTION OF PROBLEM No. 607, by Felix, C W., Sunbury, R. H., Brompton Barracks, Norvicus, Perseus, J T (Trevor), Beehiver, T J Hanworth, F T., Derby, Queechy, J. A. M. Fareham, Dr Fielding, of Norwich are correct

SIX SET Indubitably. Problem No 608 cannot possibly be solved in the way you propose.

LEGION AT CHESS.—Sir,—In the conditions of this bagatelle should be, "White forces Black to mate him in four moves."

G. W., J. T. C.—All very much below our mark

CHESSIC RUSE.—It is tolerably well constructed, but not sufficiently difficult

M. de C., Exeter. We are anxiously awaiting the promised games Can you not also favour us with a specimen of the "Excerpta" from the "Bibliotheque" which were required?

W. G., Whitby. Many thanks So far as published solutions are at all times acceptable.

E. DRURY. You must be good enough to state the question more explicitly, and the easiest way perhaps will be by means of a diagram

JUVENIS. The work of the book called "Amusements in Chess," written by Mr. Tomlinson, and published by Messrs Parker, of West Strand, which contains a great deal of pleasant and instructive matter about Chess, and is a very useful work for beginners

SOLUTIONS OF PROBLEM No. 606 by D. W. G., Dereven, C. W., Sunbury; Bachelor, Murphy, Franklin, are correct.

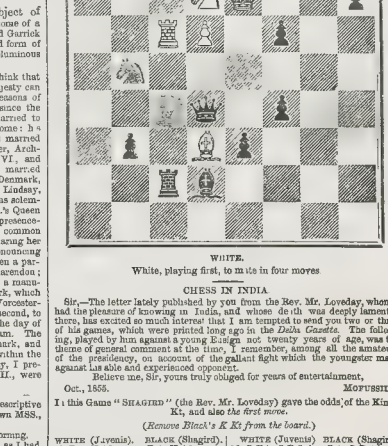
SOLUTIONS OF PROBLEM No. 605, by F. R., Norwich; Dereven, S. Turtle, J. A. M., Fakenham, Abel, S. W., T. M. G., Silvio, Perseus, Derges, F. T., Ernest, Old Salt, Mango, Smith, Murphy, D. D., are correct.

SOLUTIONS BY ENGLISH by Mercator, Andrew, C. W. of Sunbury, Anderson, Dereven, Excelsior, F. T., Derby, M. T. W., are correct. All others are wrong

SOLUTION OF PROBLEM No. 609.

WHITE.	BLACK	WHITE.	BLACK.
1. Kt to K 8th	P takes Kt	3. Q to K 6th (ch)	K takes Q
2 B to K 5th (ch)	K takes B	4. Kt to K 7th mate	

PROBLEM No. 610.
By Mr. W. GRIMSHAW.
BLACK.



WHITE.
White, playing first, to mate in four moves

CHESS IN INDIA

SIR,—The letter lately published by you from the Rev. Mr. Loveday, whom I had the pleasure of knowing in India, and whose death was deeply lamented there, has excited so much interest that I am tempted to send you two or three of his games, which were printed long ago in the *Delhi Gazette*. The following, played by him against a young Bengal not twenty years of age, was the theme of general comment at the time, I remember, among all the amateurs of the presidency, on account of the gallant fight which the youngster made against his able and experienced opponent.

Believe me, Sir, yours truly obliged for years of entertainment,

Oct., 1855. MOFUSSIL.

In this Game "SHAGIRD" (the Rev. Mr. Loveday) gave the odds of the King's Kt, and also *the first move.*

(*Remove Black's* K *Kt from the board.*)

WHITE (Juvenis).	BLACK (Shagird).	WHITE (Juvenis)	BLACK (Shagird).
1. P to K 4th	P to K 4th	16. Q B to Q R 3rd	Q to Q R 4th (*e*)
2. P to K B 4th	P takes P	17. Kt to K 4th (*f*)	B takes R (*g*)
3. K Kt to K B 3rd	P to K Kt 4th	18. Kt takes Q P (ch)	K to Q 2nd
4. P to Q B 4th	P to Q 3rd	19. Q to K B 5th (ch)	K to Q B 2nd
5. Q Kt to Q B 3rd	K B to K Kt 2nd	20. Q takes K B P (ch)	Q Kt to Q 2nd
6. P to Q 4th	Q B to K Kt 5th	21. Kt takes Q Kt P (*h*)	Q to K 8th (ch)
7. P takes P	P to Q B 3rd	22. R to K B sq	Q to her B 6th (*i*)
8. Q to Q 3rd	P to K R 3rd (*a*)	23. P to Q 6th (ch)	K to Q B sq (*k*)
9. P to Q 5th (*b*)	P to Q B 4th	24. Kt to Q B 5th	Q to K Kt 2nd
10. P to K R 3rd	Q B takes Kt	25. Q to her 6th	Kt takes Kt
11. R takes B	B takes K P (*c*)	26. Q to her R 6th (*l*) (ch)	K to Kt sq
12. P to Q R 3rd	P to Q R 3rd (*d*)		
13. P to Q Kt 4th	P takes P	27. R to Q Kt sq (ch)	Kt to Q Kt 2nd
14. P takes P	Q to her Kt 3rd (ch)	28 P to Q 7th	Q R to R 2nd
		29. R to Q 8th (ch)	K to Q R sq
15. K to B sq	Q takes P	30. Q to Q R 8th (ch)	

And Black resigned (*m*).

Notes by the Rev. Mr. Loveday

(*a*) In order to protect the K Kt Pawn, which White might otherwise have taken with safety next move.

(*b*) If K to K 5th would have been best play.

(*c*) Pawn takes Pawn would, perhaps, have been better

(*d*) Castling would not have been bad play.

(*e*) Q to her Kt 3rd would have been stronger

(*f*) This move leads to a series of brilliant strokes by the first player, highly creditable his skill, and indicative of first-rate Chess capacity

(*g*) Black paused here to consider the propriety of taking the Rook. He overlooked adversary's 21st move, and deservedly lost the game.

(*h*) This is well played. Were Black to take the Kt, he would lose the game immediately.

(*i*) Q to K sq would equally have entailed the loss of the game.

(*k*) Black cannot venture to take this Kt

(*l*) This is one in the best style of Chess play

(*m*) The attack from move 18 is admirably carried on by White, and the game well deserves to be recorded.

CHESS ENIGMAS.

No. 961.—By T. J. GROTJAN, of San Francisco.

White. K at Q B 7th, Q at K Kt 8th and Q B 5th; Ps at K B 5th, K 4th, Q 6th, and Q R 4th

Black: K at Q B 3rd, B at K B 6th; Ps at K B 2nd and 3rd, K 4th, Q 2nd, and Q R 4th. White to play, and mate in three moves.

No. 962.—By CAROLUS, of Dundee.

White: K at Q 4th, B at Q Kt 8th, Kts at Q B 3rd and Q B 5th, Ps at Q Kt 3rd and Q R 4th.

Black. K at Q B 3rd, P at Q B 4th. White to play, and mate in four moves.

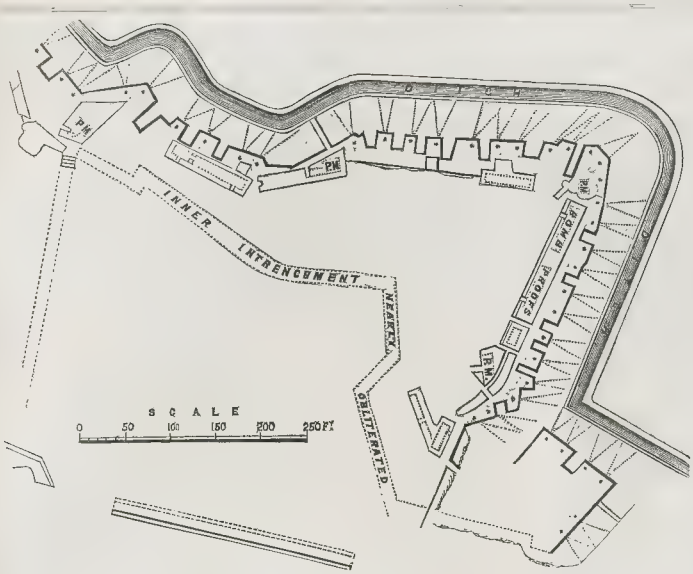
No. 963.—By the Same

White: K at K B 3rd, Q at Q 8 8th, B at K B sq, Kts at K B 4th and Q 5th, P at K R 4th

Black: K at K B 4th, Q at K R sq, R at K B sq and Q B sq, Kt at Q R 3rd, Ps at K R 3rd and Q R 6th. White to play and mate in four moves.

A Society of Masons and Master Stone-cutters has been recently formed in Vienna, for the purpose of restoring the cathedral of St. Stephen's, its original beauty.

The federal Swiss Government has prepared a bill, the tendency of which is to compel the companies to whom railways in Switzerland have been conceded to have permanent boards of direction residing in the Helvetic territory, and to have their real seat and all their working material there.

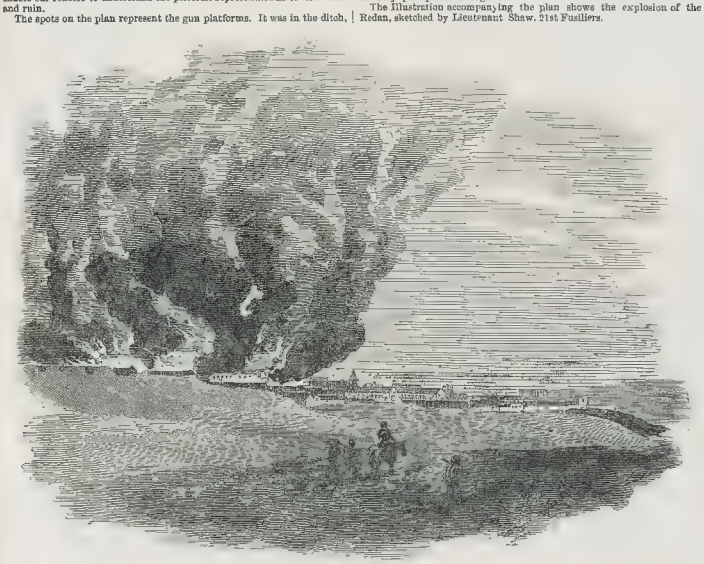


PLAN OF THE REDAN, (BASTION NO. 3)

We have been favoured by a Correspondent with the accompanying plan of the Redan, from a tracing received from an Engineer officer in the Crimea, who copied from a plan recently made by our engineers. It shows the exact form and dimensions of this formidable work, and will the better enable our readers to understand the pictorial representations of its attack and ruin.

The spots on the plan represent the gun platforms. It was in the ditch, on the right face of the bastion, the Correspondent states, that the heaviest portion of our loss was occasioned, owing to the four guns that raked it throughout. P.M. in the plan means "powder-magazine." The "bomb proofs" appear here and there on both sides the bastion. The traverses are very perceptible throughout.

The Illustration accompanying the plan shows the explosion of the Redan, sketched by Lieutenant Shaw, 21st Fusiliers.



EXPLOSION OF THE REDAN.

PRINCE GORTSCHAKOFF'S ARMY.—The reports respecting the departure of the Russian army are very contradictory. Certainly the encampments on the Inkerman heights have diminished in extent during the last few days. There is another the same number of tents, nor, as far as telescopic observations afford information, are there the same evidences of movement and activity. But these troops may have only moved to occupy other positions. On the north side of the roadstead the camps have also diminished in size and number. Four sheds only remain out of all the numerous rows and sheets which formerly composed the canvas town, or Russian Kadikoi. These sheds are apparently the only sufferers' stores which exist in this situation, and, in spite of the risk from the French shells which occasionally explode in their neighbourhood, they are generally seen with groups of the long-coated soldiery standing before them. The fire from the batteries continues very active. The enemy must be aware that comparatively little damage can result to the ruined town and suburbs against which their shell and shot are projected, while it is scarcely possible that ammunition and ordnance stores can be in such abundance on the north side as to admit of wasteful expenditure. This, therefore, it is argued, is another proof that the north side will be abandoned before the winter sets in. The shot and shell, which cannot be carried away, are being expended, and the guns worn out; and, at any rate, the enemy has the satisfaction of keeping us out of what remains of the town for the present. Some few troops are seen working at the new batteries placed to defend the sea-face of the north heights, but they are so few in number that they seem almost to be intended to attract our attention, and to act as a blind to other operations. Presuming that the design of evacuating the Crimea exists, some time must elapse before the great bulk of the military stores collected at Simpheropol and Bagtcheserai can be taken away, and, until these impediments are removed, the forts on the north side of the roadstead, and the fortified positions along the Mackenzie heights, cannot be abandoned. General d'Allonville, commanding the Cavalry Division at Eupatoria, is said to have reported that bodies of troops have been moving towards Perekop, by the roads of the interior. Troops can only march in very small bodies at a time from Simpheropol to Perekop, or, if in considerable force, must be rapidly conveyed, and water carried also. The only water afforded by the country is found in wells, and the supply from these sources is very limited in quantity, and brackish and bad in quality. It will require great dexterity and caution on the part of the Russian Commanders to evacuate the Crimea in the midst of the difficulties by which they are surrounded, without serious losses, if our Generals are on the alert.—*Letter from the Camp, Oct.* 8.

THE EXPEDITION FROM KERTCH.—In connection with the expedition to Orchakoff, another is talked of from Kertch towards Genitchi and the head of the Tchongar road recently constructed by the Russians. I heard some particulars about this road from a gentleman who heard them from Tartars at Kertch, who had gone over it. It leads from Perekop over the old road going round the northern shore of the Sea of Azoff down to Kannulle; here it branches off to the Genitchi road, passing the villages of Kiutshu, Buraki, Ochli, Kashkiskaben, and Taroshik. At the neck of the peninsula of Tchongar the new road begins; it crosses the peninsula in its whole length, and leaves it again where its southernmost point makes a bend to the east. By a bridge of 171 Russian fathoms in length it goes over to the peninsula opposite, and runs by Kirk, Bakush, Ounak, Kitol, Turkan-Surrak, Kirleut, Chokrali, Az, Tchambalde, and Kadaga, to Kopchak. At Sheik-eli it enters the road from Perekop to Kara-su-Bazar, but leaves it again at Konrat, and then goes by Tushli-Dar, Baran, Ilak, Akesh, K. Kabash, Bulatch, Balar, Kermashli, Buten, down to Ispat, where it crosses the Salghir, following from Bulatch the old Perekop road, passes Tshounk, and there unites at Karakui with the great Perekop road. The distances are from Perekop to the Tchongar-bridge eighteen hours, the Tartar travelling hour being about the same as the Turkish one, that is three English miles; from Kashkiskeu to the bridge there are three hours, from the bridge to Simpheropol twenty hours, from the bridge to Kara-su-Bazaar the same. At Genitchi there are two ferry-boats, each able to contain twenty-four arabas, which keep up the communication between the spit and the main land.—*Letter from the Camp, Oct.* 7.

The military attachés to the Russian Embassies at Vienna and Berlin, Generals de Beckendorf and de Stackelberg, have received orders to repair to Prince Gortschakoff's head quarters. Count Benkendorf will not return to Berlin till about the middle of November.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The French Empress took a carriage airing on Sunday in the Bois de Boulogne. In the evening there was a grand dinner at the Palace of St Cloud. Dr. Barralde, medical inspector of Enux Bonnes, has been nominated Physician in Ordinary to the Emperor and Empress.

Lord John Russell, who has recently purchased a seat at Rodborough, near Stroud, Gloucestershire, lately the mansion of Sir John Dean Paul, has taken up his residence there, and his arrival with his family was heralded by bell-ringing and the strains from a band of music.

On the 11th the King of Prussia gave a dinner, at which A. Von Humboldt, the statuary Rauch, the artist Schadow, and Dr. Barth, were present.

The Emperor of Austria arrived at the Palace of Vienna on the 18th from Schoenbrunn, and received in an audience Count Buol, the Minister of Foreign Affairs. Baron Prokesch-Osten and Count Rechberg were also received by his Majesty.

The Bishop of London and Mrs. Blomfield and daughter have arrived at the Palace, Fulham, from Switzerland and the German provinces on the Rhine.

The King of Sardinia has granted the title of Baron to M. Villa, a banker of Casale, for his numerous acts of public charity.

The Prussian army offered to the King, for the 50th anniversary of his entry into the army, which was celebrated the other day, a magnificent sabre, the hilt of which is of solid gold. It was presented to his Majesty by a number of Generals, at the head of whom was the Prince of Prussia. The Queen was also present at the ceremony, as chief of a regiment of Cuirassiers, and wore the colours of her regiment.

The King of Denmark, at the court and levee he held on his birthday, created the Countess of Danneberg to be present, and presented to her the foreign Ambassadors, requesting the latter to notify his marriage to their respective Courts. On New-year's-day she is to be elevated to the rank of Duchess.

Lieutenant-General the Hon. G. Anson is to be Commander-in-Chief in India, giving up Madras.

The *Invalide Russe* announces that the Emperor Alexander has not yet left Nicolaieff, and that he reviewed, on the 5th of October, the crews of the fleet, who had arrived from Sebastopol.

The Prussian Court will remove to Charlottenburg, near Berlin, about the middle of next month, and will remain there till Easter.

Nearly 2000 brave fellows from the Crimea have been entertained in Dublin at the expense of the Earl of Carlisle since his Excellency's arrival as Lord Lieutenant.

The Marquis of Bristol is said to have placed his mansion at Kemp Town at the disposal of Queen Amelia and certain portions of the Orleans family for a winter residence.

General Sir George Brown has gone on a Continental tour, accompanied by Lady Brown. He purposes to pass the winter at Nice.

Count Flicquelmont is engaged on a work anticipated by diplomatists with great interest. It is a diplomatic history of Europe since the Congress of Vienna.

According to the *Dublin Evening Mail* Dr. M'Hale, in imitation of the priest of Blarney, means to refuse the payment of the income-tax, on the ample ground that he has no income to be taxed.

The Count and Countess of Chambord will repair next month to Venice, where they intend to reside during the winter.

The proceedings against Mr. Curtis, the English Consul at Cologne, for enlisting Prussian subjects in the English Foreign Legion, have terminated in an acquittal.

THE ILLUSTRATED LONDON NEWS

No. 768.—VOL. XXVII.] SATURDAY, NOVEMBER 3, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

WHY THERE WILL BE NO WAR WITH AMERICA.

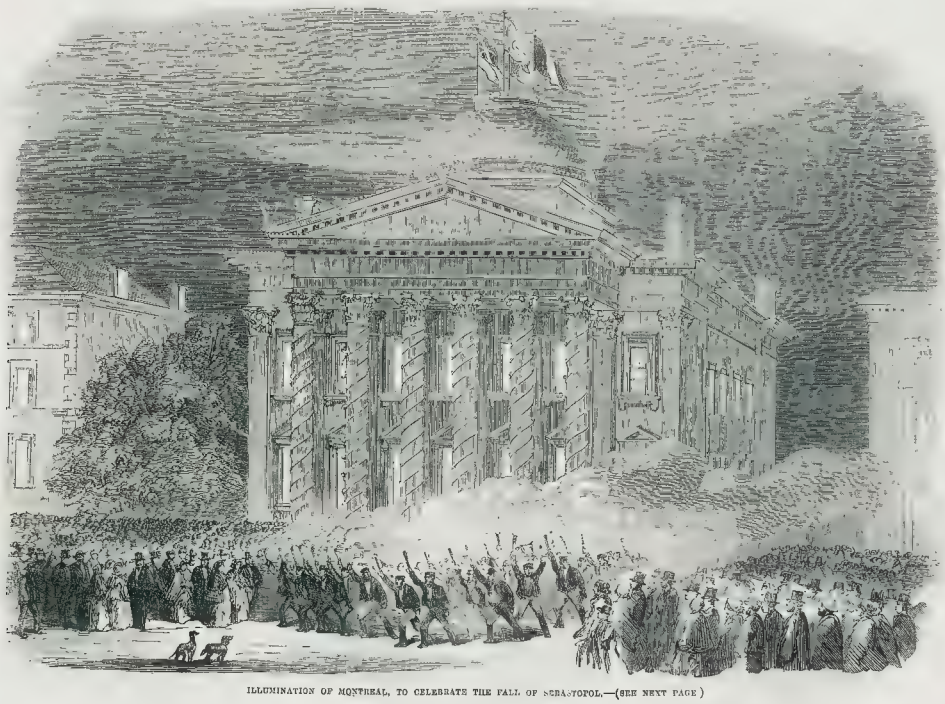
NOTWITHSTANDING the premature and ill-advised outcry that has been raised about a probable rupture between Great Britain and the United States of America, we cannot bring ourselves to believe that such a disgraceful and fratricidal event is even remotely possible. The people of this country would look upon such a war with horror,—unless it were absolutely forced upon them by insult unatoned and unexplained, or by positive assault on our honour or our possessions, on the part of the United States. Such insult or assault the United States have not offered; nor is it likely they will. It would be doing our brothers an act of gratuitous injury to imagine them capable of it.

Whence, then, the hubbub of the last few weeks? The statesmen of this country committed a mistake. They sanctioned the raising of an American Legion on American soil, to fight our battles against the Czar. In carrying out this worthless and unnecessary measure, our representative in the United States infringed the municipal law of the Union. The American Government demanded satisfaction. For this it is not to be blamed, either on a point of law of national policy, of morality, or of strict justice. Public opinion in the "old country" exonerates the Government of the United States from all blame in the remonstrances which, in strict discharge of its duty, it has thought proper to make; but it would not have exonerated the English Government if it had refused explanation and redress. To its honour our Government yielded the point immediately it was mooted; nay more, it yielded it with dignity and good feeling, neither denying nor attempting to palliate the error. The Government of the United States might have made a *casus belli* out of a refusal, and would in all probability have been supported in so doing by the bulk of the American people. But no such case remains, and both nations stand as they did before;—with this simple difference, that, having presumed too much upon a kindly sympathy which did not exist, and taken a liberty with a brother which he did not approve of, the English nation has learned, in a somewhat disagreeable manner, that consanguinity does not necessarily imply friendship.

We all live to learn—nations as well as individuals. The British people now see that there is more sympathy between Russia and the United States than they had imagined. Extremes meet. The most stringent autocracy and the most unbounded democracy in the world have sentiments and passions in common. The serfs of Russia and the negro slaves of America prove, in more senses than one, that there are bonds which unite the policy of the two great empires. Another point of sympathy is the aggressive spirit which animates their foreign relations. They are both young and ambitious. They both long to clutch the possessions of their neighbours. Mexico exists for the one as Turkey does for the other;—as a tempting morsel which makes the mouth water and the fingers itch;—a morsel often "grabbed at," but never wholly possessed. The late Czar, whose cunning was as boundless as his rapacity, was fully aware of these national predilections, and of the importance of entertaining and encouraging friendly relations with the juvenile giant of the New World. No travellers from any European nation were so welcome in St. Petersburg as the Americans. The travelling English, who penetrated almost everywhere, did not in any extraordinary numbers find their way to the banks of the Neva; but no American of any note ever came to Europe without thinking it imperative upon him to visit the capital of the Czar. Few, or none, of them ever returned to the "States" without scattering around them, at every step of their progress, the praises of the condescension, the ability, and the glory of Nicholas I. The result was a kindly feeling between Russia and the States, which would have existed under the circumstances quite independantly of the present war and the passions which it has engendered, and which was cultivated by diplomacy, and extended by the manifold and daily-increasing relations of commerce.

But whatever may be the amount of sympathy thus created—however much the Irish and Roman Catholic party in the Union may attempt to foster it, and thereby to "feed fat their ancient grudge" against England;—the sense of right and justice in the Union is too strong to permit its Government to invent a quarrel with this country for the purpose of going to war upon it. Even if it were so, Great Britain would be prepared for the contingency. All the astuteness in the world has not been monopolised by the crafty Muscovite or the ambitious Yankee. There have been clear-headed men in London and Paris as well as in St. Petersburg and Washington. These men have foreseen the dangers that were likely to arise from the arrogance of Ultra Democracy in the New as well as from that of Ultra Absolutism in the Old World, and have proved themselves quite competent to take measures of precaution against both. The happy alliance of Great Britain and France embraces all eventualities. While it lasts it will preserve the independence of Europe against any attack, come from what quarter of the world it may; and were the statesmen of America so ill advised as, out of sheer presumption and without reasonable ground of dispute, to meddle in our present quarrel with the Czar, the two great allies would not shirk the responsibility of including the United States in the number of their enemies.

But this will not be. The American people are neither led by



ILLUMINATION OF MONTREAL, TO CELEBRATE THE FALL OF SEBASTOPOL.—(SEE NEXT PAGE.)

that rabid faction of expatriated Irishmen who talk so loudly against England in the newspapers and platforms of the Union, nor by that of the lawless filibusteros and traffickers in slaves who desire, and have sworn, to accomplish the annexation of Cuba. If noise counted for anything, these "blatant bullies" would, perhaps, carry the day; but, as the anti-English party in the Union make up by bluster what they want in strength, we may safely calculate that the more they bellow the less likely they are to do harm. It is the silent dog that bites. The American Irish represent neither the feelings nor the judgment of the United States. Their howl is mere howl, and is as repulsive to the true American as to the true Englishman.

Filibusterism is more dangerous, because it is too much in accordance with the political necessities, and the secret as well as the avowed wishes of the great pro-slavery party, not to contain within its breast the seeds of a possible rupture with Europe on the great question of Cuba. But we do not think the danger to be imminent; and if it were it has been fully guarded against. The Americans may rely with safety upon the famous Munro doctrine, as long as they do not, under cover of it, attack a European State. Europe will not, and does not desire to, interfere with the natural growth and progress of the States in their own hemisphere. If Mexico is at some future day to be annexed, this country and all others in Europe will look upon the catastrophe in somewhat the same light in which they regard the struggle now going on in China. They will think it highly interesting, and destined at some future period to become of importance, but as one in which they have no present call to interfere. At the same time, if the States assail Spain, or any other of the Powers of Europe, and endanger by that means the stability of the European system, the Munro doctrine will become as idle as the breath which first spoke it.

American statesmen know full well that the time is not ripe for a declaration of war against Spain for the possession of Cuba. They feel that they cannot undertake anything so monstrous and so wicked. They are not strong enough. Their resources, mighty as they are, would be insufficient for the purpose. They could not with impunity so outrage the principles of international justice. If any portion of the citizens of the United States are so rash as to make private war for the possession of Cuba, they will speedily discover that private war is robbery, piracy, and murder—offences which any ship on the high seas, to whatsoever nation it may belong, is bound, if it can, to prevent and punish as a measure of police. The United States form too great, too just, too noble, too generous, too religious a nation to dare to sanction such a wrong. Were they governed by an irresponsible Czar they might, under the guidance of such a man, attempt the crime. But as a free nation they cannot do it. The attempt would array against them not only Spain, with England and France, but the anti-slavery States of their own Confederation. Filibusterism may try it, and the filibusteros will be hanged; but the United States will not attempt it, for if they did they would dissolve the Union.

Neither Filibusterism for Cuba, nor the hatred of the American Irish against England, nor the political sympathy existing between Russia and the United States, nor the dispute arising out of the enlistment of the Foreign Legion, nor any other cause, will disturb the amicable relations between Great Britain and America. Both nations know how to yield when they are in the wrong; and he who yields has in such a case the best of the quarrel.

THE FALL OF SEBASTOPOL -ENTHUSIASM IN CANADA.

THE glorious news that Sebastopol had fallen into the hands of the Allies created a universal sensation of joy from one end of this Province to the other. Immediately on the arrival at Halifax of the steamer bringing the news, the telegraph sent the glad tidings to every town and village in Canada, and a burst of enthusiastic joy from all classes of the people was the consequence. Quebec, Montreal, and Hamilton were immediately illuminated, and other towns and villages are all following their example. On official confirmation of the telegraphic news thirty-one guns were fired from the citadel of Quebec; and the joy of the soldiers stationed there, when they heard of the success of their gallant brethren, was most intense. In all the churches of the different denominations thanks were offered to Almighty God for the victory, and many of the clergy took occasion in their sermons to allude to the glorious event. Party feeling has always been strong in Canada; but on this occasion all, of all parties and of all races—English, Irish, French, and Scotch—united cordially in expressing their joy at the glorious victory, and in hoping that continued success on the part of the Allies may at length humble the aggressive spirit of Russia, and secure to Europe the blessings of peace. *Letter from Quebec, Oct. 4.*

At Montreal, on the 4th, there was a great display of illumination. All the public buildings, shops, warehouses, and many private houses, were lighted up. A few observe notice for their quaint mottoes and devices. At the *Gazette* office there were transparencies in the windows, with the inscriptions—"France and England; their descendants in Canada welcome their alliance, and rejoice together in their victories! Turkey, 'the sick man,' revives!" and a lantern, with the inscription—"Sebastopol: May every stronghold of tyranny fall as this has fallen!" and others. At the Mechanics' Institute, in addition to the devices displayed on Friday evening, were two transparencies with the inscriptions—"The fame of the heroes who have fallen will never die;" and "Simpson, Pelissier, the Allied Armies, the Navvies and Balaclava Railroad;" Victors of Sebastopol," with a crown in gas.

At eight o'clock the artillery fired a salute from St. Helen's, and after that they continued for some time to send up signal rockets of unusual beauty. The steamers in port—the *Cultivateur*, *Castor*, *Jacques Cartier*, and that of the Grand Trunk Railway—were decorated with lamps, the latter very beautifully. The *Quebec* also was similarly decorated, and sailed at a later hour than usual, with her lamps still lit, presenting a beautiful spectacle; and, as she passed, several rockets were sent over her from the Grand Trunk Railway wharf. In the upper harbour several vessels were similarly illuminated; and the *Montreal* and *Banshee* still further on in the canal basin continued the brilliant stream of light.

A Correspondent has enabled us to illustrate the brilliant scene in Montreal, with the Bank splendidly illuminated.

The building is a handsome erection in the Grecian style of architecture, and affords good scope for display. At the top of the dome floated the Turkish flag, surrounded by the English, French, and Sardinian colours; at the feet of which was a circle of brilliant red lights. Two rows of gas jets encircled the base of the dome, and there were bright particoloured lamps along the top of the entablature and sides of the pediment. On the apex of the pediment was placed the Prince of Wales' feathers, at the ends the letters V. and N., and in the centre a bright six-pointed star—all in gas. The Corinthian columns of the portico were encircled by gas jets; apparently growing out of each leaf of the capitals was a strong jet of gas. In the lower windows were transparencies representing Victoria, Napoleon, and a figure of Victory, with emblematical mottoes, whilst the upper were filled with, in the centre, a triumphal banner, descriptive of the fall of Sebastopol, supported on each side by the Royal arms of England and France. The City Bank on the right, and the Banque du Peuple on the left, were also brilliantly illuminated, and formed from the Place d'Armes a most striking *coup-d'œil*, more especially when towards the close of the night a grand display of rockets was seen from the dome.

The citizens throughout Montreal seemed to vie with each other as to who could do most honour to the occasion, and nothing could be more enthusiastic than their demonstrations of rejoicing. The whole city from end to end was one blaze of light—flags, lamps, and transparencies filled every window; the most humble houses in remote parts of the town, and even the apple-stalls (which in one district are remarkable for their number), testified to the feeling of joy being universal. Processions of the different companies of firemen and military paraded the streets during the greater part of the evening, accompanied by bands of music, and lent a charm to the attraction which will long be remembered in the city's annals.

THE AMERICAN QUARREL.

So far as we gather from the New York papers received by the last mail, President Pierce and his followers are trying to make as much political capital as possible out of the blunder committed by Mr. Crampton, the English Ambassador, in the matter of enlistment for foreign service. Taking the *New York Herald* and *Tribune* as the organs of the mass, it is clear that the object of the Government is to get up an angry feeling against England on the alleged ground of our having deliberately devised an infraction of the laws of the United States regarding foreign enlistment. This, however, is not the real ground of quarrel against England with the party in the United States under the influence of which the Government at Washington appears to be acting. That party's enmity to England arises from its conviction that England is hostile to its filibustering projects of foreign aggression. But it shrinks from appealing to the American people on such a ground, and therefore catches hold of the Crampton story as more likely to tell on the patriotic feelings of Americans. That our Government committed an error when it authorised recruiting operations in the United States is undeniable, but it had the courage and the good sense to confess that it had made a blunder. We have the authority of the *New York Courier and Enquirer*, one of the most moderate and well-informed journals in America, for stating that the English Government, on ascertaining the views of President Pierce and his Ministers, frankly consented to stop its operations, and expressed its regret at having unintentionally given umbrage. But this does not suit the views of President Pierce, who evidently wishes to foster a quarrel on our Government. The *New York Courier* publishes the instruction of the Honourable Charles Cushing, Attorney-General of the United States, to the District Attorney at Philadelphia, with reference to the Crampton case, and these are framed in a tone and a spirit that show not only they are intended for other eyes than those of the latter personage, but that the object of President Pierce's Cabinet is to drive matters to extremities.

It is well to remember, at a time when the pro-Russian press in the United States is making so loud a complaint against England for endeavouring to recruit her armies in America, that the first suggestion of foreign enlistment came from an American source. It is only a short time since we were told that 20,000 volunteer rifles might be had for the asking, and General Webb even went the length of assuring this country that the American people would rally *en masse* to our side if we needed their aid. After such offers of assistance, it is too bad to make such an outcry about the attempt to enlist a few hundred "loafers" in New York and Philadelphia.

The following is the naval force sent, and about to be sent, to the West Indian and American stations:—

Cormorant, 60, screw; *Pembroke*, 60, screw, sailed for Bermuda; *Hassle*, 60, screw, to follow; *Pascarel*, 84, sailed for Lisbon and West Indies; *Neptune*, 120; *St. George*, 120, supposed to be ordered from Lisbon for Halifax; *Bacchante*, 70, flag-ship of West Indian and American station, already there; besides smaller vessels.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

THE distribution of the medals of the Exhibition and the Beaux Arts, the termination of both, and the fête to take place at the former on the 15th of November, are the principal topics of interest at the present moment. Belgium is particularly happy in prizes, more especially in the sections of arms, musical instruments, and linen. It is a subject of considerable remark that the *Moniteur* displays much partiality in certain judgments on the productions of different countries. In one instance it cites the inferiority of the Belgian and Saxony *parquets*, or inlaid floors; while the fact is that those of Belgium are the finest in the Exhibition—acknowledged to be so by the French themselves; rewarded by a first-class medal; and so favourably noticed by the Emperor that he has given a large order for them. A great stir has been made respecting the affair of the gold medal in the first instance accorded to Henri Herz, and afterwards desired to be withdrawn simply, it is stated, because neither Erard nor Pleyel had medals of honour. *A qui la faute?* Certainly, from the mode in which the medals were distributed, whatever cavils the discontented might feel disposed to make on the grounds of want of judgment, taste, &c., none can be brought forward on the score of partiality. When the jury came to give its verdict on the merits of the different pianos, it did so without knowing the names of any of the manufacturers—each instrument being only designated by a number. At the close of the sitting, the votes being examined, it was found that the great majority pronounced decidedly on a certain number—that belonging to Herz's grand piano. Surely it is impossible for a prize to be more unquestionably merited. Pleyel's name only came in tenth on the list. So unjust was the idea of withdrawing the medal from Herz considered, that four out of the seven members that composed the jury declared their intention of resigning if it were carried out. The Emperor has decided that 200,000 francs are to be accorded for the expenses of the fête of the distribution of the medals. Before the space occupied by each nation is to be placed a trophy of the objects which have gained prizes; and at the entrance of the Building a gigantic collection of the most remarkable of all the various productions will be elevated. The former director of the Italian Opera is charged to erect these trophies, and to organise the fête.

On the following day will take place in the Building a concert under the direction of Hector Berlioz, executed by 1250 performers. All the decorations arranged for the fête of the preceding day will remain for this occasion. The concert will consist of 510 instruments and 740 voices; the orchestra containing 140 violins, 80 violoncellos, 30 harps, and 18 wind and percussion instruments; the chorus, 300 soprani and contralti of women's voices, 100 of children's, 150 tenors, 170 basses. Deputations from various French and foreign philharmonic societies will attend on this occasion.

The choice of Horace Vernet and Eugène Delacroix for two of the medals of honour has excited much surprise, their works gaining much more of a popular than of an artistic reputation; indeed the merit of the latter painter is one of those the most contested in France. The medals accorded to Leys (Belgian) and Landseer passed at once and with large majorities. This is a double triumph to our artist, from the generally-accorded fact that the Beaux Arts contained by no means the finest specimens of this talent. Indeed, with the exception of the "Sanctuary" and the "Forge," neither of them a large or important picture, none of his later or best works are there exhibited.

The first of November commences the clearing of the centre of the Exposition Universelle. The objects placed in the *pourtour*, or sides, remain in their places until the 15th; but, the most attractive productions being removed, the thing will be too incomplete and mutilated to present any very great attraction. There seems little or no chance of the petition we last week mentioned, requesting the prorogation of the Exhibition till May, being carried into effect. Very few of the exhibitors concur in this desire; they find the inconvenience and expense of such an arrangement likely much to surpass the advantages that might possibly accrue to them. What, indeed, could they gain by the plan? There has been time and opportunity for the display of their productions to all Europe—all the world; and, if Europe and the world in general did not choose to come *en masse* to visit them in 1855, they are not more likely to do so in 1856. They, therefore, prefer to sell their works now, if they can, and not be burdened with the risk and expense attendant on keeping them out of the market and on their hands for another year.

The twelfth volume of Thiers' "History of the Consulate and the Empire" has just appeared. It is preceded by a preface, in which the author resumes, in a succinct form, and with much moderation and impartiality, the causes of the downfal of Napoleon's monarchy. These he attributes to the absolute principles he adopted. Between the disadvantages of absolutism and of liberty (!) M. Thiers proceeds to draw comparisons, and finds that those of the latter, though very great, are minor to such as are produced by the former.

At last the painful uncertainty which attended the fate of Villars, the actor of the Gymnase, whose disappearance gave rise to so many distressing conjectures, has been solved. The boatmen of the Seine discovered a corpse in the river near Bas-Meudon, on which were found no papers or any means of tracing its identity. At the Morgue it was recognised as that of the unfortunate Villars. In addition to the causes already named as tending to this fatal dénouement, it is said that a certain degree of mental weakness, inducing him to imagine that in his latter days he would be exposed to want, is likely to have aided in leading to this fatal termination to his career.

Mdlle. Rachel, *La Grande*, has sung her "Marseillaise." Brother Jonathan thinks Jenny Lind would have sung it much better; but, however, she has done what she could, and *il ne faut pas être trop exigeant*. Mdlle. Rachel would not play any more on the French stage; Mdlle. Rachel certainly would not play *Medée* on any stage, perhaps not, that is what we shall see, and soon. When everybody said adieu to *La Grande*, we said *au revoir*—time will tell.

At the Opera a work entitled "Panurge," and "Le Corsaire," are in rehearsal. The Théâtre Français expects to do great things with "Joconde," played by Mdme. Plessy. Samson, the oldest actor, we believe, on the French stage, purposes quitting the Français in the spring. At the Italian Opera, Mario commences with the "Barbière." Among the most successful pieces at present in representation are "Le Médecin des Enfans," at the Gaîté; "Les Lavandières de Santarem," at the Théâtre Lyrique, the music by M. Gevaërt, a Belgian composer, is charming, and very well sung by Mdme. Deligne, Lauters, who replaces Mdme. Marie Cabel; and "Rose de Bois," at the Variétés, a very amusing little vaudeville, more amusingly played by Lassagne.

KING BOMBA AND LOUIS NAPOLEON

It will be seen from the following official statement, which appeared in the *Moniteur* of Tuesday, that the King of the Two Sicilies does not intend to quarrel with France at present:—

On the 16th of August last the *Gorgone*, steam-frigate, at anchor off Messina, celebrated the fête of the Emperor. The Military Commandant of the place, although duly warned by the French Vice-Consul and the Civil Intendant of Messina of what was going on, abstained from conforming to the usages observed in such cases among friendly nations, and did not hoist the Neapolitan flag. The Government of the Emperor having complained of this want of courtesy, the Minister of Foreign Affairs of the Two Sicilies has just, by order of his Sovereign, sent a note to the French Minister at Naples, which happily terminates this untoward incident. The Neapolitan Government expresses regret that the Military Commandant of Messina should not have acted in the suggestion of the Civil Intendant, and gives an assurance that formal instructions have been given which will prevent a recurrence in the ports of the Two Sicilies, of an omission which called forth the just complaints of the Government of the Emperor.

AMERICA.

The steam ship *Pacific*, which left New York on the 17th ult., arrived at Liverpool on Sunday.

The statement that Mr. Buchanan has been instructed to demand from the British Government the recall of Mr. Crampton has been contradicted. In reference to this contradiction, the Washington correspondent of the *New York Daily Times*, from whom the statement appears to have originally emanated, says:—"The contradiction is without the slightest particle of authority, is nothing but a random guess, and happens to be wholly untrue. What may have been the form of the representation in reference to Mr. Crampton's connexion with the enlistment of recruits for the Crimea I do not pretend to affirm; but that it was equivalent to a request for his recall I have sufficient reasons for believing, and the substantial correctness of my former statement on the subject is confirmed by circumstances which have since come to my knowledge."

The *New York Herald's* special despatch from Washington states that Mr. Mason, the American Envoy to France, will be recalled if he cannot satisfactorily explain his attendance at the "Te Deum" in honour of the fall of Sebastopol."

The Washington correspondent of the *Herald* speaks of a despatch received by the Secretary of State from the United States Minister at St Petersburg, "notifying him of an extraordinary diplomatic appointment to the United States. The person thus selected by his Imperial Majesty is known in the diplomatic world for more than ordinary ability, besides having possessed the confidence of the deceased Emperor. He comes charged with the highest diplomatic power known in the Russian Court, and his arrival here is shortly expected. I understand that the ordinary affairs of the Russian Minister, as now existing, will be permitted to go on as usual. I also understand that, after the lapse of time, the declaration to the United States (as the will of the Czar) would be made, announcing as a Russian order the entire freedom of those seas and ports to the commerce of the world which are now one of the principal causes of the continuance of the war. With the present blockade of the Allies this will not amount to much; but in the event of peace it may result in the establishment of a new order of things on the basis of Free-trade, to the general advantage of the world."

From San Juan it was learned that Colonel Kinney had resigned the Governorship, and that a meeting had been called to make a new selection. The English Consul had notified the Colonel that, in the event of his re-election, his authority would be recognised by him as the British representative.

We learn from Havannah, under date of the 8th ult., that despatches had been received from Madrid condemning the action of General Concha in maintaining the volunteers of the island in arms during a time of peace and quiet. Senor Morales, of New York, who had arrived in the *Georgiana*, was arrested by the Spanish authorities, and put on trial, for having in his possession some so called revolutionary papers. He was found guilty, and sentenced, as reported, to ten years' labour in the chain gang. The subscription list of the Spanish Bank was closed by Governor Concha on the 6th ult. Five hundred and fifty-five individuals had taken part in the loan, representing a capital of 3,000,000 dollars. In the royal lottery four tickets had drawn a sum amounting to 104,000 dollars. A registration of the residence, profession, trade, or business of every inhabitant of Cuba was ordered by Government, under oath before the 15th of November, for Government purposes. Several saint-day fêtes had taken place, as well as grand reviews of the troops in Matanzas. The opera season ended with a benefit to the tenor Tiberini.

We have the following way of San Francisco news from Japan. When the representatives of France, England, and Russia have been engaged in negotiating treaties with the Japanese, the Governor of Simoda has issued a proclamation denying the right of Americans to reside in Japan, except in case of shipwreck or distress, thus practically repudiating the treaty entered into with the United States, and reducing the rights of its citizens to the mere privilege of visiting the ports of the kingdom as harbours of refuge. The correspondence and negotiations on the subject are published at length in the San Francisco papers; they fill several columns.

News from Mexico to the 24th September had been received. Governor Vidaurri, Commander-in-Chief, had decreed the adoption of the Cuballos tariff in a popularly modified shape, and the ports of Matamoras, Piedras Negras, and Camargo, opened foreign commerce on the promulgation of more definite instructions. Vidaurri had also on the 21st of August, that the name of every man belonging to Santa Anna should be struck from the military rolls of the State, that the officers should be held responsible as criminals for the deeds done and blood shed in the Dictator's name. In the State of Zacatecas had revolted, and Gen. Garza had entered San Luis Potosi at the head of three thousand freemen. Santa Anna's Generals, Guitian, Cruz, and Parrodi, thereupon fled to Guadalajara. All over the country the struggle seemed to be whether the whole people or the military should rule.

THE OVERLAND MAIL.

The steamer *Calcutta* arrived at Trieste on the 31st October, 120 hours from Alexandria, with dates from Bombay, October 3; Malta, September 27; Calcutta, September 23; Hong-Kong, September 15; Shanghae, September 7. The Santhal insurrection is dying out. Mr. A. V. Cowell, collector in Bhaibar, has been murdered by the Mopahs. The monsoon is at an end at Bombay, the fall of rain having been only forty-five inches, or twenty-five inches short. The crops will be one quarter less than the average yield. The ship *St. Abbs* has been lost on a reef near Madagascar, with seventeen of the crew and five passengers drowned.

THE WAR IN THE CRIMEA.

Except a statement made on Russian authority, that up to the 29th ult. nothing of importance had taken place either in the Crimea or in the estuary of the Dnieper and Bug, the last week has brought almost no addition to the war news. It is evident, however, from all the accounts, that the operations of the Allies will drive Gortschakoff either to give battle or attempt a retreat within a very few days. Letters from the Camp up to the 20th have comparatively little interest, and shew that the designs of the Generals were a close secret.

Three new batteries have been erected by the Allies at Sebastopol, but their fire was not actively maintained. The attack on Forts Constantine and Catherine was delayed by the expectation that the Russians would evacuate the north side, for which operation they appeared to be preparing. The Sardinian Division, with the English and French cavalry, had returned to their former lines on the Tchernaya.

Prince Gortschakoff announces on the evening of the 28th that the enemy (the Allies), after strong demonstrations from Eupatoria in the direction of Simpheropol during which their operations were constantly harassed, and their left flank threatened—returned yesterday (the 28th) to their camp at Eupatoria

Despatches from Nicolaieff, of the same date, announce that there were no more than sixty sail of the enemy's fleet in sight, two of which were steamers. Only five gun-boats were anchored within the liman of the Dnieper.

A private letter from the Crimea, dated the 20th (in the *Globe*), states that the French would probably retain possession of Kinburn during the winter; but that a large portion of their force, and the whole of Spencer's Brigade, were expected back at head-quarters before long. Sir Colin Campbell's expedition to Eupatoria had been countermanded, and the only British force there was Lord G. Paget's Brigade of Light Cavalry. The health and condition of the troops in and around Sebastopol were all that could be desired

THE CAPTURE OF KINBURN

The following telegraphic despatch from Nicolaieff, October 17th, forwarded to St. Petersburg by order of the Emperor, appears in the *Invalide Russe*:—

From the position of the fortress of Kinburn, which stands on the extreme point of the tongue of land of the same name on the left bank of the liman of the Dnieper, the communication between it and Nicolaieff was through Ochakoff only It was maintained by oared barges, and the optic marine telegraph established at Ochakoff. On the appearance of the enemies' ships before Kinburn, the direct communication was cut off

From the intelligence received by this telegraph to-day before yesterday, yesterday, and to-day, we learn the following: The fortress of Kinburn, after having sustained (on the 15th) a heavy cannonade from the enemy's gun-boats, floating batteries, and steam-frigates, replied by a quick and well-directed fire from its guns. At the fall of night the fire ceased on both sides. Yesterday (16th) it was resumed and continued throughout the day, but was not so heavy. This morning (17th), at nine o'clock, eleven steam-frigates and a ship of the line of 90 guns reinforced the enemy's fleet, and the whole of the ships simultaneously commenced a most violent vertical and horizontal fire on the place

This *feu d'enfer* continued till half-past two in the afternoon, when the fortress—on the interior of which all the buildings were in flames—ceased to fire, and the enemy ceased firing also.

At three o'clock two boats with a flag of truce approached the fort. Half an hour afterwards the enemy's troops—a part of the land force that had been disembarked—entered the place. The vessels anchored inside the point moved to the Ochakoff side, and towards the Nicholas battery on the opposite bank; but up to this evening they had not opened their fire.

THE TURKISH VICTORY AT KARS.

Our latest advices from the seat of war in Asia, by the *Samois*, which left Constantinople on the 22nd ult., state that communication with Kars was practicable, if not entirely open. A previous despatch from General Williams to the Earl of Clarendon contained ample details of the battle on the 29th of September, which lasted seven hours. He estimated the loss of the Russians at 2500 killed, and nearly double that number wounded; but later accounts make the loss of the enemy much greater. An official despatch, dated Kars, Oct. 3, four days later than General Williams's account of the battle, states that the number of Russians buried on the 30th ult. and the last inst. was 4466; that of the Turks, 613. The number of wounded, if calculated at the rate of five to one, will make the total Russian losses at 20,000, and that of the Turks at 3000 *hors de combat*.

The enemy had not, by the accounts of the same date, withdrawn from his camp in front of Kars, nor was there anything tending to lead to such a belief

Omer Pacha has transferred his head quarters to Soukum-Kalé, and on the 4th ult. sent forward Osman Pacha's division, which had just arrived from the Crimea.

OBITUARY OF EMINENT PERSONS.

THE REV. WILLIAM BLOW

THE death of this gentleman took place at the time since, at his residence, Cannock, in the county of Stafford. He had reached the advanced age of seventy-eight years, and was the eldest son of Geo. ge Collis, of Stourbridge, in the county of Worcester, merchant, by Anne, his wife, daughter of Benjamin Robins, of Dunsley Hall, near Stourbridge. He married Maria, daughter of Richmond Aston, Esq., of Beacot Hall, in the county of Stafford, by whom he leaves numerous issue. Mr Collis was educated at Oxford, and held the living of Norton Canes, Staffordshire, upwards of half a century, and was an active and efficient magistrate for that county.

SIR J. B. WILLIAMS

SIR JOHN BICKERTON WILLIAMS, LL.D., F.S.A., who died at his seat, the Hall, Wem, Salop, was the only son of W. Williams, Esq., by his wife, who was the second daughter and coheir of John Bickerton, Esq., of Sandford Hall, Salop (the representative of the Dukedom of Cheshire). He was born in 1792. He was formerly in the legal profession at Shrewsbury, from which, however, he had long since retired. He served the office of Mayor of Shrewsbury, and was Alderman of the Corporation of that town till he removed to Wem. He received the degree of LL.D. from Middlebury University, Vermont (U.S.), and was elected a Fellow of the Society of Antiquaries in 1824. He was the author of the life of his celebrated collateral ancestor, the Rev. Matthew Henry (the commentator), and of his daughter, Mrs Shepherd, also the Life of Sir Matthew Hale and of W. H. Lucas. Sir John Bickerton Williams was knighted in 1837, at the request of the Duke of Sussex, immediately after her Majesty's accession to the throne

FREDERICK LUCAS, ESQ., M.P.

FREDERICK LUCAS, Esq., M.P. for the co. Meath, was son of Samuel Lucas, a member of the Society of Friends. Mr Frederick Lucas was born in 1812, and conducted his education at the London University, in Gower-street. He was among the earliest students of that institution, and was one of the first to get a prize there. He was called to the Irish bar by the Hon. Society of the Middle Temple, in Easter Term, 1839; the following year he became a member of the Church of Rome, and stated publicly the grounds of his conversion, in a pamphlet, entitled "Reasons for becoming a Roman Catholic." Mr Lucas, in 1840, started the *Tablet*, a Catholic journal, in London, and in 1843 he started the publication of that paper to Dublin, where it has since been carried on. He was one of the secretaries of the Irish Tenant League during its brief existence. In 1852 he was elected, through the influence of the Roman Catholic priesthood, member of Parliament for the county of Meath, in the place of Henry Grattan, Esq., who had worthily represented that county for many years. Mr. Lucas advocated in the *Tablet* the rights of the Irish priesthood to interfere in politics, and, on this being objected to by the Roman Catholic hierarchy in Ireland, the decision of the question was referred to the Pope, and Mr Lucas went himself to Rome On his return thence he was seized with a severe illness, which terminated fatally on the 22nd ult., at the residence of his brother-in-law, Skidmore Ashby, Esq., at Church-street, Stoke, Staffordshire. Mr. Frederick Lucas, as a politician, was a violent supporter of the Ultra party to which he had attached himself: in private life he was very amiable: and in every respect, whether public or domestic, he was allowed by all to be a highly honourable and conscientious man. Mr. Lucas married, in 1840, Elizabeth, eldest daughter of William Ashby, Esq., of Staines, and leaves issue a son.

SWORD-FISH CAUGHT AT GRAVESEND.—On Friday (last week) a fine specimen of the sphyæne or sword-fish, was taken off Gravesend, and is now in the possession of Mr Clarke, fishmonger, 8, Arabella-row, Gravesend-place The extreme length of the fish is 7 feet 5 inches; girth, 33 inches; length of the "sword," 2 feet 5 inches.

A DAY DREAM IN GUILDHALL.

I LATELY was in old Guildhall (I cannot tell the day),
And, being in a dreamy mood, I mused some time away.
I thought, as up and down I strode, "How many a race has gone
Since great Dick Whittington laid down this floor of Purbeck stone.

"How many a feast has here been held since Goldsmith Sha was May'r,
Whose hundred cooks taught City men the might of City fare."
Thus Fancy held my mind in thrall, and for a time did seem
To bring before me all the past, but not as in a dream.

I saw long trains of ancient men tricked out in every shape
A mob, of whom some seemed to shout, and some to stand agape.
Brave Knights (not common Men in Brass), each on a proud *destrière*,
There rode mid rows of diamond eyes of London's "ladyes fayre."

And Gog and Magog had their place, in bran-new robes of paint;
Trainbands, and banners blazon'd with devices strange and quaint.
Then came a troop of fat, grave men (each was a palfrey's load),
Midst whom, in chain and miniver, great London's Lord Mayor rode.

Then drums and trumpets seemed to make what's aptly termed "a noise."
A thousand flat-caps filled the air, thrown up by 'prentice boys.
And then I saw the river Thames,—O 'twas a pleasant sight!
Not as it is—a pea-soup stream, but water crystal bright;

And gilded barges, every one made double—shade and boat,
(The thought's not mine) with men of mark, towards Westminster did float.

And wherries filled with merry frights were going to and fro.
It was a gallant sight, indeed, that olden Lord Mayor's Show.

A pause—a change—and then methought I saw a draggled crowd
Of London trulls and pickpookets by grim policemen cowed.
And here and there, at attic height, a gaping cockmaid leant,
To see the Lord Mayor's Show pass by, and wonder what it meant.

(And are those men in seedy coats, with dirty flags unfurl'd,
To be a fitting pageant for the city of the world?
Is that old coach—state coach, forsooth—now groaning as it goes,
To be the glory and the pride of London's Lord Mayor's Shows?)

The scene was changed, and old Guildhall shone out a blaze of light,
And full three hundred serving men burst forth upon my sight.
Each waiter bore a mighty bowl of what I could not see,
But some one said 'twas calpash, and some 'twas calipee.

More than two hundred fowls all truss'd, some fat and some half-starved,
Came strutting in rolled on their backs, as praying to be carved.
Barons of beef then rolled along, each looking grandly big,
And then vast hams—each might have borne an aldermanic pig.

Blancmange, cakes, creams, and jellies came, as though they'd never stop,
Methought each City pastrycook had hither sent his shop.
Then rushed a crowd of gorging men, and gorgeous dames also;
So knew I that this was the feast that ends the Lord Mayor's Show.

And, as I looked upon the scene, a mist rose 'fore my eyes,
When it had passed, the revellers, too, had gone, to my surprise:
And there were heaps of shining gold strewed all about the board;
In all the soup-tureens, methought, new five-pound notes were stored.

Another change!—a solemn change! I looked up in the air,
And, to my horror and affright, saw blood red clouds were there.
Anon they slowly rolled away, and showed a field of fight,
So dreadful that e'en now the page seems red on which I write.

A thousand 'gainst five thousand men rushed onward full of life.
Two hundred men came only back, so fierce had been the strife.
And some of them had shattered limbs, and some came back to die!
Ah! better had they died in fight—so great their agony.

Where'er I looked about that place I saw some work of death,
Until my tears, which would not flow, had well nigh drown'd my breath.
Another change! and then I saw thousands of widow'd wives,
And little children calling out, "Give back our fathers' lives!"

A vain request! but ne'er the less they cried and cried again,
"Give us our fathers' lives!" Alas! who can restore the slain?
"None," said a voice (I could not see where 'twas the speaker stood);
"But for the evil done the dead do to the living good.

"Let not you weeping women feel they have no hope in life,
That when the bullet struck the man it also struck the wife.
Cast not those helpless children forth, of no man's love a part;
Stand in THEIR stead who fell to spare the dear ones of your heart.

"Waste not in worse than idle pomp the treasure scatter'd here,
But guard and tench those gather'd round the soldiers' gory bier."
Another change!—and in Guildhall (dreams are but dreams you know)
I saw the voice had been obey'd ah: what a LORD MAYOR'S SHOW. L.

GUARANTEES BY LAW FOR SECURITY OF BANKS. Most Legislatures have framed laws with the view of giving security for property entrusted to bankers; but it has been found that this object has not been attained. Thus, in the United States, after the crisis some years back, it was decreed that all banks of issue should deposit Government securities to the amount of their circulation. Notwithstanding this, several banks failed last year, and the notes fell to seventy, or even twenty, per cent of the nominal value, according to the dividend expected. Where this dis-location? Indeed, has frequently been the case—but still more, because the securities deposited, though offering sufficient security for the issue, were no security for the other debts, generally far heavier, liabilities. The Bank of England is bound by the Act of 1844 to deposit bullion for the amount of notes above fourteen millions If the Bank issues one £5 note in excess the charter is forfeited. But the Bank of England has constantly six or eight millions on hand belonging to the Treasury, and a much larger sum held chiefly by bankers and private individuals. For these securities there is neither [illegible] the solvency of the manage-ment. Scotland has always enjoyed a free banking system, but by the Act of 1845 the issues of each bank, [illegible] bullion, must be deposited for all notes above the then current amount of about three millions. The issue of the Scotch banks is at present about four millions and a half; the private deposits in their hands forty millions. What advantage does a law afford which demands security for one million and a half, but none for forty millions? Such laws create the idea that there is security, abate the caution and watchfulness which alone can lead to secure again at loss, diminish competition, and deprive the public of much of the advantage of the banking system.—Extracted from the *Journal für Verthschaftliches Handels Blatt*—a Berlin newspaper, No. 147. (dated 22nd, 1855.)

WILLS.—The will of the late Thomas Kelly, Esq., Alderman, bookseller and publisher, was proved under £30,000. He has bequeathed to each of the eight following institutions £100:—The Bookseller' Benevolent Institution; the Retreat at Watford; Sea-Bathing Infirmary, Margate; St. Mark's Hospital, City road; Deaf and Dumb Asylum; St. Ann's School; Christ Church school, Spitalfields; and Church Missionary Society. Putney Sillaoe, Esq., of Pelwall hall, and Bedford-place, £140,000 personalty. W. Lowless, Esq., solicitor, £12,000. Rev. W. H. Stevens, £45,000. Rev. John Barrows, Caius College, Cambridge, £8,000, within the province of Canterbury. Captain C. A. Broke, R.E., £14,000. Captain D. F. B. Buckley, Scots Fusiliers, Sebastopol, £5000. Mrs. Ann Brown, of Sydenham, £20,000; and has bequeathed to the Church Pastoral Aid Society £500; Church Missionary £500; Girls' Charity School, St. John's, Horsleydown, £500; Surrey Dispensary, £500; London Hospital, £500; Scripture Readers' Society, Ireland, £500; Seamen's Hospital, London, £500; National Truss Society, £150; Idiots' Society, Redhill, £150; Royal Free Hospital, £150; Ragged School Union, £150; St. Thomas's Hospital, £150, Dispensary at Sydenham, £150; School for Indigent Blind, £200; and London City Mission, £400.

IN CONSEQUENCE of the failure of the grape crop in Portugal, the price of the commonest wines has risen so high that the poor have been deprived of their ordinary beverage.

NOTES OF THE WEEK.

THE verdict of a jury, and a sentence of transportation for fourteen years, have brought to a close the career of Sir John Paul and his partners in crime; but who can say where or when the consequences of their frauds will cease to work out in misery and suffering for those who have been cruelly plundered? It is almost impossible to estimate the amount of wretchedness which is caused by such a catastrophe as the failure of a banking-house. Scarcely a condition of life but has its representative among the losers. The old man's savings, the widow's jointure, the orphan's portion, the son's premium on entering business, the daughter's marriage dower, the child's school provision, are all swept away by such an event, and sorrow knocks at every door in the family mansion. That all this trouble should be caused by indiscretion, by loose in legitimate adventure, by collateral misfortune, is bad enough; but, when one looks at it as produced by wanton and wicked perseverance in extravagance at home and speculation abroad, it is difficult to repress one's indignation. A very small portion only of the press has ventured to urge that the righteous sentence which has been awarded is "too severe;" and it is remarkable that this plea comes from the organ of that religious party to which Sir John Paul's hypocrisy attached itself. It would seem as if the influence of his vile cant had not subsided even with his entrance into Newgate. Assuredly the sentence is generally regarded as a most just one; and had Paul and his accomplices been doomed to hard labour for the rest of their days they would only have to undergo that to which their wickedness has condemned numbers of honest men, now compelled to re-engage in the hard toil of the struggle of life.

The revival of agrarian outrage in Ireland, as exemplified in the murder of poor Miss Hinds, is a lamentable proof of the hopelessness of dealing with a brutalised peasantry in any but one way. In this case it is clear that the neighbours of the unfortunate lady knew that she was to be destroyed, those who would be likely to be suspected showed themselves ostentatiously, in order to have the *alibi* complete. Hired assassins did the work, and the lower classes abstained from rendering any assistance in apprehending them—some, indeed, are said to have expressed exultation. It is possible to do much with fiery, revengeful, but generous natures; and by dint of persevering trustfulness, and the endeavour to understand and be understood, we can at length bring them within the bounds of civilisation and self-command. But with these cold-blooded scheming savages the case is entirely different, and we fear that the same remedy which the Americans have held to be the only one effective with the savages of their own country, namely, the driving them out of the district, is the single method of mastering a malignant and cowardly population. It should be done by system. Where a murder is committed, and the people are shown to have connived at it, the landowners should act in concert, and evict the entire population of the district. Where this is less practicable, heavy taxation, with the constant pressure of the military to enforce it, would, to a certain extent, inflict chastisement; but the more effectual course would be to clear a district whose inhabitants are a foul blotch upon it. Mr. Grattan's boldness in declaring that he will now have rent from the wretches to whom he has been but too indulgent, and that in default he will sweep them from his estates, deserves all praise; and every decent Catholic and Protestant in the locality should unite to support him. The indignant terms in which Mr. Murphy, chairman of the Cavan sessions, denounced the crime and the accursed system under which such outrages are committed, will be echoed wherever his address is read.

The American "difficulty" does not appear to be lessened, and it will certainly continue for a long time to occupy angry pens on both sides of the Atlantic. The Government of President Pierce is distinctly charged, by some of the best of the journals of the States, with fostering popular animosity against England, for the sake of electioneering gain. On the other hand, it would seem that our representatives in America have acted an unwise part in endeavouring to raise recruits for the war, contrary to the will of the American Government. The latter has, of course, a right to interdict our recruiting; and it is unfair and unworthy in us to seek to evade its decision. It is, however, a remarkable proof of the sulky ill feeling entertained by certain portions of the American people against England that a nation only too eager to mix itself up in quarrels, and ready to send out its buccaneers and filibusters against anybody who can be attacked with hope of success, or even without much of such hope, should be so fastidious about a few hundreds of adventurers being engaged in the cause of our Allies. We shall patch up this quarrel; but the two countries have to learn a good deal more of each other before that cordiality, about which so much is said in after-dinner speeches, when "those who speak the tongue of Shakspeare" can see nothing but brothers in this land, begins to be a real *entente cordiale*.

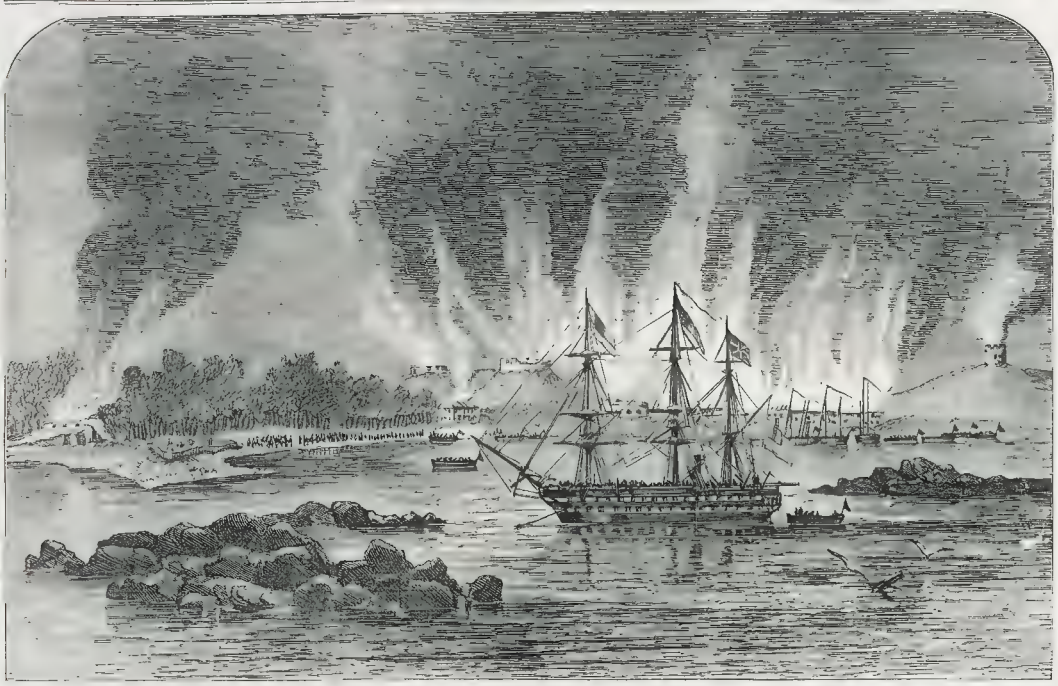
The expulsion of the three contemptible though malevolent "Reds" from Jersey has been followed by a far larger measure of extrusion, which we might regret, for the sake of a name or two in the list of those ordered to depart, were it not that the mischievous character of the conduct of an intellectual man is increased by the ability he has of promulgating his sentiments. A sort of manifesto from the pen of Victor Hugo, and signed by himself, his sons, and others, thirty-four in all, has been issued, and in this, after pouring forth every kind of insult to the Emperor of the French, and alleging that he is a traitor under sentence, and that England is in alliance with crime and treason, the writers say: "Now banish us." They have been taken at their word. It is impossible not to wish that the author of one of the most magnificent romances of the age, and of many others that is an ornament to literature, had not left it possible for him to be otherwise dealt with: but M. Victor Hugo has chosen for himself. He might have dwelt in peace in an English home, but he would not accept it even upon the moderate terms of abstaining from insult to the Crown that protected him.

A couple of impostures—one in high the other in low life—come to light at once. "We give the sex the *pas*." A worthless woman, who has had so many names that it is difficult to say which belongs to her, has concluded a remarkable series of adventures; in some of which, while actually impostor, perjurer, and thief, she has contrived to pass herself off as an injured and helpless victim. The favourite device was to represent that she was a stranger in the locality she selected for her operations, and that she had been robbed of her little all—now by a boyish pickpocket, now by a porter, and so on; and she has caused innocent persons to be apprehended, and even sentenced, through her false accusations. But all roguery comes to an unlucky end; and, between a chapter of curious accidents and a photograph of herself (feminine vanity helping to betray her), she has been recognised by the police of half-a-dozen towns, and the game is over. The other adventurer has also plenty of names, being no less a person than Leon-Jacques Prince of Armenia, Prince of Armenia, Prince of Georgia, Prince of Georgia and of other places, and heir-presumptive to the throne of Armenia and Georgia, who has been carrying on a splendid imposture, declaring himself exiled from Russia for having plotted against the Emperor, who had confiscated his estates, worth fifteen millions of francs. He has victimised "good society," which, with all its pretensions to superior discernment, is gulled more easily than anybody (except, to borrow Sir Peter Laurie's indignant phrase, "those fools, London tradesmen, who will never be taught caution"); and of course hotel keepers and others have been his dupes. Berlin was his last scene, where he wore a silver star and red enamelled cross and gold spurs, and carried a heavy gold-mounted riding-whip. Must it be added, that he is now in the House of Correction at Berlin, and turns out to be a Dutch Jew, named Joseph Johannis?

DESTRUCTION OF RUSSIAN BARRACKS AND MAGAZINE AT HANGO.

(From a Correspondent.)

SINCE the arrival of H.M.S. *Blenheim* at Hango, on the 20th September, Captain Ball, with the gun-boats *Snap*, *Stork*, and *Lark* under his orders, has been actively employed in annoying the enemy. He has succeeded in raising ten guns of very large calibre which the Russians had sunk at the time of their blowing up the fortifications, and he has destroyed a chain of telegraphs leading from Hango to Eckness—the military head-quarters



DESTRUCTION OF RUSSIAN BARRACKS AND MAGAZINE, AT HANGO.

of the district. A large body of troops was stationed at Hango at the time of the *Blenheim*'s arrival, who kept up a rifle fire on her boats and the gun-boats whenever they came within range, but by a system of annoyance at different points, and particularly by proceeding to Eckness in the gun-boats and engaging the batteries there for upwards of two hours, Captain Hall has forced the troops to withdraw from his neighbourhood

On Monday, the 8th, Captain Hall landed with a party of marines and blue-jackets, under cover of the *Blenheim* and gun-boats, and destroyed their barracks and magazine, and also a cavalry barrack and stables. A procession was afterwards formed, and proceeded to the burial-ground where the murdered men of the *Conch* now sleep, the band of the *Blenheim* accompanying, and the flags of the ships hoisted half mast. The funeral service was read at the grave, the Chaplain (Rev. Mr. Alexander) adding an appropriate prayer. A headstone was also erected, with an inscription, briefly detailing in English and Swedish the lamentable facts of the case; as also that the wife of the murdered Finnish Captain had died from the shock she sustained on first hearing of the catastrophe.

The following is the inscription on the tombstone:—

Sacred to the memory of the British Seamen and a Finnish Captain who were cruelly murdered by Russian Soldiers, commanded by a Russian Officer, while landing at Hango under the protection of a Flag of Truce. Also to the memory of the Wife of the unfortunate Captain, who expired on hearing of the said catastrophe.

BURNING OF RUSSIAN TIMBER-VESSELS AT OLD SALIS.

THIS destruction of Russian property took place at Old Salis, a small town situated at the mouth of the river Salis, which flows into the Gulf of Riga. On Tuesday, the 25th of September, a couple of large steam-frigates, under the British flag, arrived off the mouth of the river, and cast anchor within gun-shot of the town. A boat was immediately lowered, which, manned by an officer and seven sailors, proceeded to sound and reconnoitre the mouth of the river and the channel. On having accomplished this they gave a signal to the ships, when four more boats, containing four officers and fifty-four men, pushed off and joined the first boat. These five boats then pulled in towards the shore, the foremost of them displaying a white flag in her bows: this was answered by a similar one hoisted on the flagstaff on the shore, in the hope of thereby saving ten timber-vessels which were lying at anchor about a verst up the river, without their masts and rigging. Whilst the lastly-arrived four boats lay on their oars, the first one approached the landing-place. The English officer in command inquired of Herr Von Bhaghel, the principal proprietor and inhabitant of Old Salis, whether the vessels lying in the river belonged to the Government, or were private property. This gentleman replied that they belonged to him and his people, upon which the Lieutenant expressed his regret, but his positive orders were to destroy them, and all others they might find along the coast. Representations and entreaties were of no avail: the sailors set fire to all the vessels, after which they returned to their frigates. As soon as the latter were out of sight, attempts were made by the inhabitants of Old Salis to extinguish the flames and save some of the burning vessels, but without much success, as only two were partially saved, whilst the remaining eight were burned to the water's edge.

DESTRUCTION OF RUSSIAN VESSELS AT OLD SALIS.

REER POINTEE (SANTHALS' COUNTRY), ON THE GANGES.

RUINS OF THE OLD MAHOMETAN PALACE, AT RAJ MAH'L, ON THE GANGES.

THE SANTHALS.

THE locality of the recent outbreak of the Santhals has already been illustrated in our Journal; and, by favour of a Correspondent, we are now enabled to represent the precise objects which gave rise to the quarrel in Oude, now happily terminated by a reconciliation of the contending parties. The quarrel originated in a conflict between the Hindoo and Mussulman sections of the population in the city of Fyzabad, the old capital of the State. In this place there was a celebrated Hindoo temple adjoining a Mahometan mosque. The mosque had fallen into ruins, and the Mahometans, having been opposed by the Hindoos in their desire to repair it, retorted by profaning the precincts of the temple. They were attacked by the Hindoos, and completely beaten. The desperate nature of the riot itself may be inferred from the fact that the vanquished party lost 113 men killed. The tumult was aggravated by the fanaticism of the King, who threatened himself to adopt the cause of one of the parties. Such a policy was, of course, opposed to the views of the British authorities, and it was under fear of the consequences which might ensue that the dispute seems to have been made up. Of a somewhat similar description, though less in magnitude, is the outbreak reported in the territories of the Guicowar, a Hindoo Prince, between two rival sects of Mahometans, where the Political Agent sent for troops to oversee both parties together, and thus prevent bloodshed.

The three principal headlands of the country occupied by the Santhals are Raj Mah'l, Reer Pointee, and Pattergotta. We have engraved from our Correspondent's Sketch the remains of the Mahometan palace at Raj Mah'l; a picturesque ruin, with beautiful foliage clustering around its massive towers and mantling its walls; whilst a group of boats, and the arrival of passengers, give life to the scene of desolation and decay. The above Sketch shows Reer Pointee, the second headland of the hill-country on the Ganges, with the mosque embosomed in foliage, and in picturesqueness rivalling the first scene.

THE SCREW-STEAMER "KHERSONESE," OF LIVERPOOL.

THIS noble ship presents another instance of the rapid progress now being made in the construction of iron vessels. In her are admirably combined all the qualities necessary for a sea-going vessel: she is full rigged, and, as her dimensions will show, capable of carrying canvas with any ship afloat: her length of keel is 222 feet, her length on deck being 235 feet; breadth of beam, 39 feet; depth of hold, 22 feet 11 inches: builder's tonnage, about 1700. It is intended at present to erect such a saloon for cabin passengers aft, and house forward for the officers, engineers, &c., as to leave an extensive area of main-deck as a promenade clear for passengers or troops, or accommodation for the transport of horses. Her 'tween-decks present a clear space of 180 feet long and 7 feet high, well ventilated. She has five bulkheads, two of which run to the upper deck; she has capacity for over 2000 tons cargo, after leaving ample room for her engines, machinery, and coal. Her engines, constructed by Messrs. Randolph, Elder, and Co., of Glasgow, are nominally 200-horse power; but this only faintly represents the actual power, which will combine safety with great speed.

The *Khersonese* was built by Messrs. Robert Hickson and Co., on the beautiful piece of land known as Queen's Island, forming one side of the harbour of Belfast, and is the largest vessel ever built in Ireland. She was launched on the 4th inst., and, on entering the water, was greeted by the cheers of thousands of the inhabitants assembled on the island and opposite quays. The material is of the best and heaviest used for ships of this size, put together on the firmest and most approved plan; and forming, on the whole, as handsome and as useful a ship as any afloat. Mr. James Alexander, of Liverpool (with whom is associated Messrs. James Johnson and Co., of same place, and Messrs. A. and C. Taylor, of Dublin), is the managing owner of the *Khersonese*; and we understand they are so highly satisfied with her model and construction that they have arranged with Messrs. Robert Hickson and Co. to build another ship of about 2000 tons, which is now well advanced, and will be launched in about three months.

"RALPH WARD JACKSON, FOUNDER OF WEST HARTLEPOOL." FROM A PAINTING BY MR. GRANT, R.A.

TESTIMONIAL TO RALPH WARD JACKSON, ESQ.

THE inhabitants of West Hartlepool have just paid a graceful tribute of respect to the founder of that port, Mr. Ralph Ward Jackson, by presenting that gentleman's portrait to the town in commemoration of his eminent public services as the originator of the new port. In order fully to appreciate the value of these benefits, it will be requisite to glance at the circumstances which have given rise to this new provision for one of the most important branches of our national trade.

For ages the principal supply of coal to the London market had been obtained from the counties of Durham and Northumberland. When the natural outlets of this coal-field—the rivers Tyne and Wear—having become insufficient for the yearly increasing demand, other ports on the shore of the above counties sprang into existence: thus, in Durham, arose Seaham, Hartlepool, Stockton, and West Hartlepool—the youngest being the latter port.

The rapidity of its rise has few parallels in our local history. Ten years since, where its spacious and substantial docks now are, was a shore, with barren hills of blown sand; and where now stands the town, with a population of 8000 inhabitants, with its church, chapels, cemetery, Athenæum, &c., the wild rabbit burrowed in safety and solitude. The old harbour of Hartlepool was of importance in early times: it was the port of the Bishop of Durham as Prince Palatine; and when King Edward III. required a fleet it furnished five ships to the Royal Navy. The place had, however, dwindled almost to a fishing village, when, twenty years ago, its harbour was greatly improved, and docks were formed to facilitate the shipping of coal.

This accommodation, although considerable, proved insufficient for the produce of the district; and about one mile south of the town was founded the port of West Hartlepool. In the spring of 1846 the ground was first broken; and the first dock was opened in June, 1847; another dock was completed in 1852 (see the Engraving in the ILLUSTRATED LONDON NEWS); and a third dock will be ready for opening in a few months. The number of vessels entering West Hartlepool harbour within the last twelve months was upwards of 5000; and the quantity of coal and coke shipped from this port was upwards of 800,000 tons.

Besides a home and foreign trade for coal and coke, West Hartlepool has a constantly increasing intercourse with Hamburg and other Continental ports. Commencing with 1853, the value of its exports has risen from £ in that year, to £49,500 in three months of 1854; and £176,040 in three months of 1855. Its import trade is also great, receiving corn and other supplies from abroad, and distributing them by railway through the populous counties of York and Lancaster. This rapid development, surprising as it is, and evidently only in its infancy, has been the work of one master-mind, Mr Ralph Ward Jackson, of Greatham Hall, in the county of Durham, who has toiled with an industry and ardour alike unwearied and successful in working out this gigantic enterprise.

The family of Mr. Jackson have long been resident on their property at Normanby Hall, in Cleveland. They are descended from the ancient family of the Ducketts, one of whom, Sir Lionel Duckett, Lord Mayor of

THE NEW SCREW CLIPPER-SHIP "KHERSONESE."

London in 1578, was partner with the celebrated Sir Thomas Gresham, who built the first Royal Exchange in London.

The name is otherwise commemorated in our national annals. At Marton, in Cleveland, within a few miles of Mr. Jackson's estate, was born the great circumnavigator, Captain Cook, who named the noble harbour he discovered in New South Wales, "Port Jackson," to perpetuate his gratitude and friendship for Sir George Jackson, Bart., one of his earliest benefactors. Sir George was the great-uncle of Mr. Ralph Ward Jackson, and married the grand daughter of George Duckett, and assumed the name and arms of Duckett. He was Secretary to the Admiralty, and Judge Advocate of the Fleet.

Mr. Jackson, as the founder of West Hartlepool, has nobly contributed to the distinction which his family have thus enjoyed in the records of British trade and commerce; and the inhabitants of the new and thriving port, and others interested in its prosperity, have, as a tribute of their gratitude and esteem, just placed the portrait of Mr. Jackson in the principal public building of the town. This picture has been painted by Mr. Francis Grant, R.A., and is a fine work of art. The portrait is full-length, and an admirable likeness. The picture was presented to the town at a meeting in the Athenæum, at West Hartlepool, on the 23rd ult., by George Leeman, Esq., of York, as Chairman of the Subscribers. The presentation was followed by a public dinner, at which upwards of 170 persons were present, including Mr. Jackson and his son; Mr. Leeman presiding. The picture, which was at the head of the room, bears on a shield the following simple and appropriate inscription: "Ralph Ward Jackson, founder of West Hartlepool."

The portrait of Mr. Jackson is now in the hands of the engraver, and the print will shortly be published by Messrs. Graves, by whose permission, conjointly with that of Mr. Grant, the accompanying Illustration has been copied.

CALENDAR FOR THE WEEK.

SUNDAY, Nov. 4.—22nd Sunday after Trinity. Lord Tenterden died, 1832.
MONDAY, 5.—Battle of Inkerman, 1854. Gunpowder Plot, 1605.
TUESDAY, 6.—St. Leonard. Princess Charlotte died, 1817.
WEDNESDAY, 7.—First *Gazette* published, 1665. Milton died, 1674.
THURSDAY, 8.—Hailey Lorn, 1656. Camden died, 1623
FRIDAY, 9.—Prince of Wales born, 1841. Lord Mayor's Day.
SATURDAY, 10.—George Fox died, 1690. Martin Luther born, 1483.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING NOVEMBER 10, 1855.

Sunday.	Monday.	Tuesday.	Wednesday	Thursday.	Friday.	Saturday.

LIST OF ENGRAVINGS
IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

SKETCHES FROM THE CRIMEA:
Portrait of General Sir William John Codrington, the new Commander in Chief in the Crimea (from Fenton's Crimean Photographs) page 520
Scene in the Café National at Simpheropol (from a Drawing by Wilfhald Richter) 520
Spahi and Zouave (from Fenton's Crimean Photographs) 524
Portrait of Prince Gortschakoff, Commander-in-Chief of the Russian Army in the Crimea 528
Allegorical Design of the Fall of Sebastopol 528
Destruction of the Southern Part of the large Barracks at Sebastopol ... 529
Retreat of the Russians from the South to the North Side of Sebastopol (Two Page Cut) 536-537
Illumination of Montreal to celebrate the Fall of Sebastopol ... 513

SKETCHES FROM THE BALTIC:
Destruction of Russian Barracks and Magazine at Hango 516
Destruction of Russian Vessels at Old Saha 516
Peer Pontee (Santhals' Country), on the Ganges 517
Ruins of the Old Mahomedan Palace at Raj Mahl, on the Ganges ... 517
Portrait of "Ralph Ward Jackson, Founder of West Hartlepool" (from a Painting by Mr. Grant, R.A.) 517
The New Screw Gipper-Ship "Khersonese" 517
Recent Discoveries at Nineveh: Colossal Statue, Back and Front View ... 521
Trench—The only discovered Slab showing a Figure of the Queen ... 521
The Lattice Plant, just received from Madagascar 524
The Arctic Expedition and Forlorn Hope Having Fort Resolution, in Search of Sir John Franklin's Party 525
The British and Foreign Sailors' Institute, Shadwell 525
Commencement of the Pernambuco Railway, on the Island of Nogueira ... 525
Hobson's Conduit, Cambridge 530
Fox-hunting—Two Engravings 532
Australian Fauna, in the Zoological Society's Garden, Regent's-park 532
The Dublin and Wicklow Railway—Tunnel at Killiney-hill 533
The Dublin and Belfast Railway—Viaduct across the Boyne, near Drogheda 533
Illustration to English Songs and Melodies—"O! Old a Spade" 540
The Captured Russian Guns at Portsmouth: Diagram of Wheel—Expanding Cheek-piece—The Trail 542
Naval Gun Carried at Kertch, mounted with an English-made Gun, taken from the Russian Admiral's Flag-ship by Captain Lyons 544
Fortress Gun from Somarsund 544
Russian Field Gun captured at the Battle of the Alma 544
Pursuit of a Chinese Pirate by the Boats of H.M.S. *Racehorse*, in Pinghai Bay 544

BOMBARDMENT OF KINBURN.—We have received from our Special Artist and Correspondent the following Sketches of the ATTACK and CAPTURE OF KINBURN, to be engraved in the ILLUSTRATED LONDON NEWS of next week:—1. The Artillery Landing Guns. 2. Troops Landing on the Beach. 3. The Bombardment. 4. Spit Battery—Otchakoff in the Distance. 5. Fort Kinburn, and Village on Fire.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 3, 1855.

IN addition to the three preachers of assassination and defamers of the Queen of England banished by the Governor of Jersey from that island, thirty-eight French and other exiles have been ordered by the same authority to depart from its shores within a week. The offence committed by the eight-and-thirty was a published vindication, signed by their names, of the principles and conduct of the three original delinquents. The case at first sight appears to be a harsh one; but we think a little investigation will prove the punishment inflicted to have been just as well as necessary.

This country is the home of the exile so long as the exile obeys our laws, and as long as the Sovereign does not "see occasion" to withdraw the protection which he enjoys in common with the native-born subjects of the Crown. An attempt has been made to excite sympathy for the Jersey exiles, many of whom (the admirable novelist and great poet, Victor Hugo, among the number) are men of high character and attainments; but we think it can be shown that such sympathy would be misplaced; and that, considering the indecency as well as the magnitude of the offence to which they have given both aid and countenance, their punishment is extremely light, and—what is of more importance to the British people—in entire accordance with the spirit as well as the letter of the law.

In the first place, the exiles who have deliberately recommended the assassination of the Emperor of the French—in a French newspaper, published for the French and not for the English people, and smuggled from Jersey to the neighbouring shore of France—have been ordered to leave Jersey. This is the whole of their punishment. They have not been shipped off to France, as they might have been; but have been left free to go whithersoever it pleased them—to any part of Europe—to England or to America. They have chosen to come to London; where, if they conform to the laws, they may live in peace. Their banishment has been called an act worthy of Judge Lynch—a piece of popular tyranny unworthy of a free people; and the Governor, in whose name and by whose authority it has been committed, has been denounced by English newspapers claiming to speak on behalf of the principles of the British Constitution. But, while the punishment, under the flagitious circumstances of the offence, must be considered extremely light, it is easy to show that it is neither tyrannical nor unjustifiable. Jersey is no part of the realm of Great Britain. It is a possession of the Crown, enjoying its own laws and customs;—a fortress, as Gibraltar is, under the command of a purely military Governor. In the banishment of these exiles without form of trial the Governor has acted upon his right; and, if it shall please him to enact to-morrow that no foreigner whatsoever shall remain in the island, there is no power in England to call him to account except the Crown which appointed him. The British Parliament has no control in the matter. While such is the state of the law in Jersey, it should be remembered—as any one can see who will read Blackstone on the subject—that the law of England on the subject of aliens is precisely, or nearly, the same; and that the Crown, independently of the statute law, has an inherent right to banish aliens who do not "behave peaceably," and whenever, for any other reason, it may "see occasion" for such exercise of its prerogative. In being allowed to come to London, the Jersey exiles have been treated with great lenience and forbearance, and it is to be hoped for their own sakes that they will profit by the warning. It is of no use for men like Victor Hugo and his compatriots to pretend that the English Government punishes them for disapproval of the public life and conduct of the Emperor Napoleon. The fact is not so; and they know it. To disapprove of the means by which the Emperor of the French succeeded in seating himself upon the throne, and to animadvert upon his domestic or foreign policy, are no offences in this country. Our press is free, and so is the platform, and either Frenchman or Englishman may say what he pleases on the subject. But if either Frenchman or Englishman shall openly preach assassination shall recommend it as a virtue—shall exalt the character of a wretch like Pianori, and call upon his hearers or readers to imitate so glorious an example—he will find the law sufficiently strong to reach him. If to the apotheosis of an assassin they add unmanly outrage against an innocent lady, and that lady a personage so beloved and so exalted as the Queen of Great Britain, they will remove themselves still further from the companionship of honourable minds. Even Pianori was not the slanderer of a woman.

We are sorry to see that political zeal should have led a man like Victor Hugo into such company. Let him avoid it. His is a name of which France has reason to be proud. Changarnier, Bedeau, and other exiles of the *coup d'état*, do not herd with men who deify the dagger in the hands of the assassin; and why should Victor Hugo?

THERE was a sort of decorous pretence of making a mystery about a fact of which every one was aware, namely, that General Simpson had ceased to command the Queen's forces in the Crimea, and that he had been succeeded by General Codrington. It was stated to be proper that the new appointment should not be discussed at home until the telegraph had announced that General Codrington had acknowledged his promotion. It may be presumed that he has now done so, and that there is no need for further mystification about "other names having been mentioned;" and we may, therefore, be permitted to congratulate the nation on the delivery of our noble army to a General whose years do not exceed fifty, and who has not served in the Spanish peninsula.

General Codrington, who inherits a name illustrious in the annals of victory, has in his favour more than the two circumstances we have mentioned. He has done his work exceedingly well during the earlier part of the Crimean campaign, distinguishing himself at the great battles. There appears to have been misapprehension, and consequent injustice, in regard to his conduct on the Redan day; and explanations which have since been afforded tend to show that Codrington had done all that was in his power, and that his reply to Windham's application for assistance was the only one which he was in a position to give. He therefore enters upon his command with no unfavourable antecedent; and it is most probable that an active and observant soldier, with such experiences as he must have acquired since the landing in Russia, and with the warnings which the failings of his predecessors must have given him, will acquit himself at the least creditably. We, at home, have, on our parts, also learned too many lessons to indulge in any sanguine hopes; but it appears to us that this third General of the Crimean war possesses advantages lacked by his predecessors, and should have capability of profiting by them. He heads a victorious army, no longer suffering from disease, discouragement, and privation; a discomfited and struggling foe—powerful, however, even in defeat—is before him; and he is called upon less to make novel and extraordinary exertions than to bring shrewd sense and unremitting energy to bear upon a situation of responsibility rather than of embarrassment.

That responsibility is certainly not diminished by the alleged intentions of the Allies. It is said that the Generals have no idea of endeavouring to strike a decisive blow this year, but that, having forced the enemy into a position whence he cannot move without a collision, have resolved to "watch" him, trusting to weary and starve him out, or to leave the initiative to his own discretion. At the present moment there exist no means of definitively ascertaining whether this policy has not been assumed at home from the indications afforded by military movements. It is not probable that as yet any formal information as to the designs of the Generals would be divulged. But, judging from appearances, we are indisposed to concur in the belief that the year's work is done; and we do not see how such a conviction is reconcilable with the general operations of the Allies, or with their last reported movements. Everything, in our opinion, points to the conclusion that the Allies look to an early termination to the struggle in the Crimea; and, unless we misinterpret their view, it is that Prince Gortschakoff will be compelled by circumstances to precipitate a final contest. That he himself has that belief is evident from the plenary power which he has procured from St. Petersburg—namely, to defend or "abandon" the Crimea, as he may think proper. He was sent to defend it; and, for this purpose, therefore, he needed no new authority; it is in the permission to abandon that the document has value and significance. His position is becoming untenable, and the Allies are drawing round him. They have made, he says, strong demonstrations from Eupatoria, in the direction of Simpheropol; but he adds, with his usual *sang froid*, "finding their movements disturbed, and their left flank threatened, they returned to Eupatoria." The Prince's interpretation of this demonstration, and of the reasons for its termination, are, of course, of slight value, but the fact itself is valuable, and will not, we think, when the despatches arrive, be found to be the isolated affair Prince Gortschakoff affects to imagine. But, should the supposition to which we have adverted be well founded, and should the Generals have resolved to watch, and wait the pleasure of their enemy, General Codrington will not find an easier duty before him than that of forcing on an encounter. To fight the Russians is what every man in the army is eager to do; but to hem in that cunning and determined foe for weeks and months, to observe his shifty demonstrations, to cut off his resources, and to be prepared alike for a sudden and despairing struggle, and for an artful and rapid manœuvre, is work which may well bring out whatever there is of ability in our new General.

Until the receipt of the admirable letters from our Correspondent in the East, which appear in another column, we had no definite tidings of the movements in the liman of the Dnieper, and for the little we knew we were indebted to St. Petersburg. Our Correspondent gives full and interesting details of the operations of the Expedition to Kinburn from the date of its departure from Odessa to the capture of Kinburn, and the subsequent destruction of Otchakoff by the Russians. At this point our correspondence ends. We shall scarcely hear of the blow next to be given until Kherson has fallen. The Czar, who is said to have become excessively superstitious—other reports put the case more painfully—is praying to all the saints in the calendar, and has had an old image, of great sanctity, disinterred, repaired, and beautified, with a view to the utter discomfiture of the invaders. This military expedient, however, was tried just a year ago at Inkerman, but it was not so successful as to warrant the Emperor in altogether relying upon it on the present occasion, and, therefore, he has also had recourse to a secular device—that of ordering a fresh levy of ten men in every thousand throughout the empire. That he despairs of the Crimea is probable; that he intends to carry on the war is equally so; and we are bound to recognise the energy with which he recruits, and the prudent method in which he prepares his forces, distributing his young militia among the older troops, that the former may be instructed and encouraged while the latter are reinforced. *Festinate hoste* we have much to learn in these respects; and, as the war is to proceed, let us hope that our authorities will prefer sense to system, and that in the spring the armed serfs of Russia may find themselves confronted by a new and disciplined body of armed freemen from Britain.

THE COURT.

The Queen has received a distinguished circle of visitors during the week at Windsor Castle. On Monday their Royal Highnesses the Duchess of Cambridge and the Princess Mary and his Royal Highness the Duke of Cambridge arrived, remaining on a visit until Thursday.

Among other distinguished personages honoured with the Royal hospitality we may mention his Serene Highness Prince Edward of Saxe-Weimar, his Excellency the Ambassador of France and the Countess de Persigny, his Excellency the Portuguese Minister and the Countess Lavradio, his Excellency the Belgian Minister and Madame Van de Weyer, the Earl and Countess of Clarendon, Lord Panmure, Sir Charles and Lady Mary Wood, and Major-General Sir Richard England.

On Friday se'nnight the Queen and the Prince came to town by the Great Western Railway, and called upon her Royal Highness the Duchess of Gloucester, at Gloucester House, returning to Windsor Castle the same afternoon.

On Saturday last the Prince Consort, attended by Major-General the Hon Charles Grey and Colonel Seymour, went to Pinner to preside at the formal opening of the Commercial Travellers' School, returning to Windsor at a quarter past four o'clock. In the evening the Royal dinner party included her Royal Highness the Princess Royal, the Belgian Minister and Madame Van de Weyer, and Sir James Clark.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, Prince Alfred, and Princess Alice, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle. The Hon. and Very Rev. the Dean of Windsor performed the service, and administered the Sacrament of the Holy Communion. The Duchess of Kent attended the service.

On Monday the Prince Consort enjoyed the sport of shooting in the Royal preserves. The Prince of Wales and Prince Alfred rode out on horseback. The weather on Tuesday and Wednesday prevented the Queen taking her accustomed out-door exercise; but on Thursday her Majesty and the Prince took both walking and driving exercise.

His Excellency the French Ambassador and the Countess de Persigny returned to the French Embassy on Tuesday, from visiting Viscount and Viscountess Palmerston, at Broadlands; and the same evening left town on a visit to her Majesty at Windsor Castle.

The Countess Stanhope met with a serious accident while in the act of going on board the English steam-boat in Calais harbour on Wednesday se'nnight. Her Ladyship by some means missed her footing, and, falling, fractured her arm. The Countess returned to the port; and, the arm having been set, she is progressing favourably.

Lord Raglan arrived in town a few days since from Hanover. The noble Lord, it is said, has resigned the appointment he held at the Court of the King of Hanover.

The Bishop of London has suffered a second paralytic attack, and his condition leaves no hope of his being able to resume his episcopal functions.

HONOURS TO LORD PANMURE.—It is announced in the *Gazette* that the Queen has conferred the Order of Knighthood and Cross of the Bath on Lord Panmure.

THE HUME MEMORIAL.—In addition to a monument to the memory of the late Mr. Joseph Hume, the committee proposes to found a scholarship in the London University, in commemoration of the services which he rendered to that institution. Colonel Sykes, Sir James Duke, and W. Williams, Esq., M.P., are the joint trustees and treasurers of the Hume Memorial Fund.

DISTRESS IN POLAND.—Destitution is at its climax in Poland, and the dearness of provisions so great that the poor can hardly find the bare means of existence. Prince Paszkewitsch has opened public granaries at Warsaw, and given orders for baking every day, at the expense of the State, large quantities of bread, which will be given to the destitute at half the regular price. The first subscription has not commenced yet, but this is solely on account of the difficulty of feeding; it is probable that recruiting will proceed during the winter. The news respecting the successes of the Allies has produced great excitement in Poland.—*Letter from Posen.*

THE REFUGEE QUESTION.—The question of the refugees has led to communications between England and several of the Continental Governments. The French Government entertains the same views on the subject as Austria; and it is certain that M. de Persigny has received orders to support the representations of Count Colloredo at the Court of St. James. It is thought that England will on this occasion be disposed to satisfy the wishes of the Continental Powers. The latter, it is said, demand that the Alien Bill of 1848 shall be brought into effect, and that a clause shall be added to it enabling the Government to expel, as a measure of police, any suspected foreigners who may give rise to well-founded complaints on the part of the Governments which are on friendly terms with England.—*Letter from Vienna (Cologne Gazette).*

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, NOV 1.

Month and Day.	Corrected Reading of Barom. at 32° F.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°				Inches.
Oct 26	29·14	56·0	42·1	49·0	+ 0·3	88	S W	0·20
" 27	29·27	52·5	35·8	42·9	− 4·6	90	S W.	0·11
" 28	29·00	52·7	42·1	47·2	− 0·9	91	N E.	0·05
" 29	29·60	45·1	39·0	42·0	− 6·0	92	N.	0·15
" 30	29·66	54·9	41·1	48·1	+ 2·1	95	N	0·05
" 31	29·66	49·0	43·0	46·0	0·0	95	N	1·52
Nov. 1	29·64	49·0	38·4	43·7	− 2·9	76	N.	0·40

Note.—The sign + denotes above the average and the sign − below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer decreased from 29·14 inches at the beginning of the week to 28·11 inches by the 26th; increased to 29·66 inches by the 28th; decreased to 29·05 inches by the 30th; and increased to 29·64 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the sea, was 29·83 inches.

The mean temperature of the week was 44°2—being 2°3 below the average value.

The range of temperature during the week was 21·2°.

The mean daily range of temperature during the week was 10·4°.

Rain fell during the week to the depth of rather more than 2½ inches, of which above 2 inches fell from noon on the 29th to the evening of the 31st: rain returned without intermission almost the whole of the time.

For the average of the month, reading to the barometer at the level of the sea was 29·995 inches, and the corrected reading at Greenwich month, 1·115 inch. The highest reading of the thermometer during the month was 67°5° on the 2nd; and the lowest was 31·0° on the 25th. The range of temperature during the month was therefore 36·5°. The mean of all the highest readings of the thermometer by day was 53°, and of all the lowest by night was 44·1°; the mean daily range of temperature during the month was therefore 10·9°. The mean temperature of the month was 41·1°—being 1·2° *above* the average of 38 years. The mean temperature of evaporation for the month was 43·7°. The mean temperature of the dew point was 40°. The mean degree of humidity was 91 (complete saturation being represented by 100). And the fall of rain during the month was 2 inches.

Lewisham, November 2, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—The births of 737 boys and 790 girls, in all 1527 children, were registered within the metropolitan districts during the week ending last Saturday, exceeding the average of the ten corresponding weeks of the preceding ten years by 115. The deaths of 705 persons were registered during the week, while the corrected average of the corresponding weeks of the previous ten years was 1079. The weekly deaths would amount to 856, if the annual rate of mortality did not exceed the natural rate of 17 deaths in 1000, so that in the present week 67 deaths by unnatural causes have been recorded. Of the 903 persons who died, 47 were under twenty years of age; 129 were twenty and under forty; 155 were forty so sixty; 155 were sixty to eighty; and 24 were eighty years and upwards. To zymotic diseases 260 deaths are attributed, including 70 by small-pox, 58 by scarlatina, and 46 by typhus. To tubercular disease, 167, of which 118 are due to consumption; to diseases of the brain, nerves, &c., 113; to diseases of the heart, &c., 40; to diseases of the respiratory organs, 122; to old age, 35; and to violence, privation, cold, and intemperance, 30 deaths are attributed.

BUST OF HER MAJESTY.—On Monday the Lord Mayor presented to the Court of Common Council a beautiful bust of her Majesty the Queen, to be placed in the Council-chamber. The bust is an admirable likeness, and, as a work of art, is highly creditable to the sculptor, Mr. J. Durham. Immediately after that presentation a letter was read from Mr. Richard N. Philipps, R.S.A., private secretary to the Lord Mayor, inclosing a cheque for fifty guineas, the interest to be applied as a prize in the City of London School.

REPRESENTATION OF SOUTHWARK.—Sir Charles Napier and Mr. Scovell have addressed several large public meetings of the electors during the last week. The latter candidate is in favour of the war, and is a decided Reformer, although not quite so much of a Radical as Sir Charles. The main point of difference between the two, however, is with reference to the personal question between the gallant Admiral and the Ministry. Those who think Sir Charles was ill-used, and that he ought to have an opportunity of vindicating himself in the House of Commons, will give him their support. Those who believe that the public service would not be promoted by my such "causes will vote for Mr. Scovell. There was a report that the Peace party intended to bring forward Mr. George Thompson; but they have deemed it more prudent not to make an exposure of their weakness in Southwark. The report that the Russian candidate was at the very bottom of the poll would have been very discouraging to the Czar, and might have had some effect in exposing the fallacy of the statement made by the ex-M.P. for Leicester, Mr. Baines, that the people are beginning to come round to his views regarding the war.

THE LONDON OMNIBUS COMPANY.—The arrangements for the formation of this company are progressing favourably, and it is expected that by the commencement of next year it will have completed the purchase of omnibuses, for the purpose of introducing the new servie. They comprise the omnibuses running on almost all the leading lines of thoroughfare between the eastern and western suburbs of the metropolis, and several of the chief north and south communications. The managers of the company (who, we understand, are two very experienced omnibus proprietors) expect to be able to introduce, at a very early date, the system of "correspondence," which has been so profitable to the omnibus company in Paris, and so beneficial and convenient to its citizens. In carrying out the same system in London, the fares, on the average, are not to exceed about a penny per mile, as it is intended that the charge between the Bank and Charing cross or Tottenham-court-road shall be fixed at threepence. The basis of the company's operations is to be cheap fares, combined with other advantages to the community, which a large company, whose vehicles are circulating through every part of the metropolis, can alone offer. We believe that the same speed as at present will be maintained, but racing and other annoyances incident to violent competition will be got rid of. An unceasing current of omnibuses is to be kept in motion, one succeeding another as rapidly as the wants of the public may render necessary. The drivers are to wear a dress of one uniform, and each man will have a number on the collar of his coat, so that he can at once be identified in case of misconduct. As several accounts, all more or less inaccurate, have been circulated concerning this undertaking, the foregoing statement, the correctness of which may be relied upon, will be acceptable to the public.

CONSERVATION REFORM.—After a long discussion on corporation reform, concluded in the Court of Common Council on Monday, the following resolution was passed by a large majority:—"That it is desirable to confer with her Majesty's Government on passing through Parliament a bill for the reform of this Corporation, and that a committee of three aldermen and twelve commoners be appointed for that purpose, and to report to this Court." The following members were then appointed to confer with the Government upon the subject of the bill:—Alderman Finnis, Alderman Cubitt, Alderman Eagleton, Mr. W. Jones, Mr. Abraham, Mr. T. H. Fry, Mr. R. H. Hall, Mr. W. L. Taylor, Mr. T. Parker, Deputy Hale, Mr. Lloyd, Mr. Wood, Mr. Rose, Mr. Cox, and Mr. Gresham.

ROBBERIES OF BANK-NOTES AND GOLD.—On Tuesday last orders were communicated to the various police stations in the City and other parts of the metropolis for the detention or apprehension of Charles Kaye, formerly clerk to Mr. John Wholey, of Dewsbury, who has decamped, carrying away his master's cash-box, containing, gold, silver, and banknotes amounting to upwards of £200. It is supposed that he is now in London, and designs to leave the country. The second case is that of a man named Jones, clerk to a merchant in the City, in the neighbourhood of Eastcheap, who stole a cheque for which he received Bank of England notes to the amount of £540—viz., twenty £20 notes, Nos. 37,409 to 37,428, dated Aug. 7, 1855; and two £20 notes, Nos. 30,576 and 30,577. He is described as 5ft 8in. inch high, twenty years of age, and having red hair and whiskers. He was last seen at the Swan Tavern, Hungerford. A large reward is offered in each case.

EXPLOSION OF GAS AT THE UNITED SERVICE INSTITUTION.—On Monday afternoon, between two and three o'clock, a fearful explosion of gas took place at the United Service Institution, Middle Scotland-yard. A strong smell had been experienced by those engaged on the premises; and on Monday two men were sent to examine the pipes, it being at first imagined that the mains leading into the building had become defective. Finding that the gas seemed to escape in greater body in the basement, the men lighted a candle, for the purpose of going down to test the pipes, but before doing so they were both cautioned by the officials of the place. They had, however, scarcely entered the underground department when an explosion occurred, which set fire to the wearing apparel of one man, terribly burnt another, and dislodged three or four large flagstones on the ground-floor. The gas had got into an old drain in the roadway, and the moment the candle came in contact it blew up the earthwork and paved carriage-road for nearly thirty feet. One of the men was badly injured, and was taken to the hospital.

WAREHOUSEMEN AND CLERKS' SCHOOLS, NEW CROSS.—The annual dinner of this excellent charity will take place at the London Tavern, on Monday, the 12th inst., when the Right Hon. Lord John Russell, President of the Institution, will take the chair.

ANOTHER MEETING IN HYDE-PARK

The various delegates appointed at the meeting in Hyde-park last Sunday week were in attendance at the same place last Sunday, to give their reports, and to state what the millers had said should be the market price of flour during the ensuing winter; but upon the chairman announcing to explain what would in all probability be the price of flour, and consequently the charge of the 4lb. loaf, a scene of indescribable confusion took place, and loud cries of "No monopoly" ensued. Order, however, was soon restored, when a man standing at the rear of the chairman moved that those who could not hear should be allowed to hold two, three, or four separate meetings in different parts of the Park. Without putting the resolution to a show of hands four meetings were formed.

One of the speakers began by stating that Sir Benjamin Hall was no doubt a good man, and respected by the labouring people; but in Parliament his new bill, which, having now passed the Legislature, every one was enabled to see was calculated to carry out nothing more nor less than class legislation (Hear). Would it be believed by that meeting that, in order to be qualified to become a vestryman under Sir Benjamin's bill, he must be rated at—he could not say whether it was £20 or £40 per year? (Cries of "Shame!" and "Let us go and see him!" and "We will make him alter his bill; if not, we will screw his house as we did Bobby Grosvenor's!")

Another man cried out, "I know where Sir Benjamin Hall lives; come with me, and I will show you what to do." In a moment a tremendous mob, probably 500 persons, followed this misguided man towards South-street-gate, leading across Park-lane, when, to their astonishment, they met two police-constables on horseback, with cutlasses at their sides. The at once struck terror into their minds; but, the officers passing along quickly, the mob made for the mansion at the corner of the street, and would, no doubt, have riddled the place had the same officers not returned at a sharp trot. The officers on horseback rode backward and forward, and eventually succeeded in clearing Park-lane and South-street of the populace, when two respectably-dressed men were seen near the Victoria-gate, and the mob at once made an onslaught upon them.

The mob then started off in the direction of Mayfair, and, having reached Curzon-street, commenced smashing the windows. Another part of the crowd went along South-street, and pelted a public-house, breaking one or two of the windows, and nearly killing a gentleman who was writing in the parlour The destruction of property, however, was far more serious in the neighbourhood of Mayfair, and would have been still greater had it not been for the timely arrival of the police

Several persons were taken into custody, two by Mr. Inspector Jackson, of the D division; but there is too much reason to believe that the principal ringleaders escaped; and there is no doubt but their object was simply to get up disturbances to perpetrate robberies, as several persons had their pockets picked; and it was stated that an inspector of police, in plain clothes, well known for his discrimination in detecting offenders, had been robbed of some amount of money whilst listening to the speakers in the crowd.

By eight o'clock the park and the streets adjacent began to assume their usual state, but the police were wisely kept in reserve in case of a fresh outbreak

The number in the park must have been upwards of 20,000, and so threatening did things appear at one time that the gates of the Marble Arch were closed against the populace. There were about twenty mounted police officers in the neighbourhood, and the calculations made by the police, about five hundred persons per minute entered the gates of the park during the holding of the meeting, or rather of a series of meetings.

William Jones, 15, Jason-street, Arlwick, 14, and Henry Wheatstone, 15, were brought up at Marlborough-street, charged with creating a disturbance and throwing stones at the police in Hyde park. The charge having been fully proved, they were committed for one month each to the House of Correction.

FIREWORKS IN THE CITY ON THE FIFTH OF NOVEMBER.—The trustees under the Act of Parliament for the improvement of Great Tower-hill are taking the most decisive measures to prevent the great disorder which on the occasion of the 5th of November of previous years had occurred in Great Tower-hill from the collection of persons discharging squibs, crackers, and other fireworks contrary to law. They have given notice to all the inhabitants of that locality "that no discharge of fireworks will be permitted within the trustees' estate, and all persons discharging fireworks within the said inclosure or any other part of Great Tower hill are hereby cautioned that they will be subject to such proceedings on the part of the police as the law directs." The notice is signed "By order of the trustees; and Mr. D. W. Harvey, the Commissioner of the City Police, has issued specific directions to the force upon the subject, and expresses confidence in the co-operation of the householders for the preservation of the peace on the day in question.

A BURGLARY FRUSTRATED.—On Tuesday morning, between the hours of two and three o'clock, a very determined burglary was frustrated at Messrs. Harrison and Sons' extensive ribbon and silk mercers, 59, Paul Churchyard. The burglars had entered a new building at the corner of Carter-lane, passed over Messrs. Cook's premises, and let themselves down into the warehouse, having previously gained access to the roof. They then proceeded into the warehouse, where they regaled themselves, and commenced packing up every available article. The porter, who slept in the warehouse, hearing a noise, went to the spot, when he was set upon and fiercely attacked by three men. A desperate struggle commenced, during which time a number of heavy blows were given and received. The man was at last carried to the top of the building, and threatened that if he made the least noise they would drown him in the water-tank. Escaping, however, from their hands, he ran down-stairs and sprang his rattle, which instantly brought Sergeant Frimby and numerous other constables to the spot, who started off in pursuit of the burglars, but were unable to capture them. They left behind them all their housebreaking implements, rope-ladders, &c.

STATE REFORM ASSOCIATION.

On Wednesday evening week a crowded and highly-respectable meeting was held in the Commercial-road Hall for the purpose of receiving a deputation from the committee of the State Reform Association. The Rev. J. B. Standing, who was called to the chair, said he had read the addresses of numerous Reform Societies, all of them professing to advance what acknowledged to be the principle of open and free debate. This movement contemplated a large extension of the people's rights it was based upon the only principle by which a movement could hope now to attain success—that of manhood suffrage. The association also went for a system of national education: it was pledged to use its best efforts to secure for every child in the country a primary education; and he advised the people to look to this matter: by supporting this agitation they would not only be securing liberty to themselves, but they would also be securing to their posterity an inestimable boon.

Mr. William Hodgkinson, secretary to the association, read the address of the committee, and afterwards moved its adoption at the meeting. He entered at some length into the origin of the movement, and the principles of the Charter which had been acknowledged at all their meetings. All honour to Messrs. Ingram and Duncan, and the men who had thus so manfully stepped forward to urge onward the tide of popular enthusiasm. Unfortunately the Reform party had been too much split into sections. Reform associations had hitherto grounded their movements upon the narrow basis of expediency. Some were for an educational suffrage, some were for household suffrage, while others saw in the ballot and in great electoral districts a panacea for all the evils in the State. This association abjured all little questions of expediency; they sought not to enfranchise trades and money, nor even to enfranchise only brain; they came forward upon a broad, natural principle to secure for man, as man, the political rights due to his manhood.

The adoption of the address was then put from the chair, and carried unanimously.

A branch association was then formed, and the Rev. J. B. Standing, and Messrs. Goldin, Fry, and several others, were appointed a committee to superintend the management of the local business.

Thanks were voted to the deputation and the chair, and the meeting was adjourned till the next Wednesday evening. At the close of the meeting numbers came forward and registered their names as members of the association.

On Monday evening last an influential and well-attended meeting was held in the Lecture hall, London-lane, Hackney, called to consider the objects of the State Reform Association. Several of the leading reformers of Hackney were present. Dr. Oxley, having been unanimously called to the chair, said he believed the objects sought by the association were entirely consonant with the essential principles of right and justice. As to the suffrage, he had for many years been of opinion that every sane and upright man had a right to vote at Parliamentary elections. Let them remember that was the opinion of an old Radical of fourscore. He was glad to see the people of Hackney so prominence to the two great principles of manhood suffrage and education. For himself he thought that education should be compulsory, as it was in Prussia, because, for the many different kinds of schools established by private benevolence, and he might mention the Jubilee and Lancasterian schools, the working classes were slow in availing themselves of such advantages to their children. Let the people support such institution—let them do their duty in this matter—and then all the evils in the State might speedily be eradicated.

Mr. William Tidd Matson, Mr. John Ingram Lockhart, F.R.A.S., Mr. John Matson, Mr. Freestone, and Mr. Jas. Linwood addressed the meeting in support of the association.

The Rev. Henry Gregory said he was glad to find the State Reform Association giving a primary attention to the question of national education.

The address was then unanimously adopted, and the meeting adjourned, at a late hour, to Monday, November 12.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE talk in Paris at Meurice's, and elsewhere in English circles, turns on English Art. One of the highest honours in the gift of the Emperor, the gold medal of the greatest value, has been assigned to an animal-painter—to Sir Edwin Landseer. The surprise is great, but is it natural? many ask. The skill of the engraver has extended Landseer's reputation beyond the restricted circles to which other artists are confined. His popularity is a proof of his skill. His subjects are essentially English: and he is, he is said, the Court painter. In giving the gold medal of honour to Landseer the French will please Royalty, so it is alleged, and the Royal Academy as well. The propriety of the selection may well be doubted The best judges in England would not have given the medal to Sir Edwin. The two men who stand the highest in the English school as seen in Paris, and more largely still in England, are Mulready and Leslie. They deal not with dogs and deer, with tethered rams, and cat's-meat barrows; but with human emotions, with men and women. Landseer, it must be admitted, is seen to great advantage in Paris: his best works are there. But so are the best works of Leslie and Mulready. What will Mr. Sheepshanks (that liberal and enlightened contributor to the Exhibition) say to this slur on his favourite artist? Above all, what will Mr. Cole say? Nay, what has Mr. Cole done?

English sculptors are not in the best humour with the rumoured judgment of the Parisian jurors. They have not had justice done them. The highest honour assigned to an English sculptor is an honour of the third rank. Gibson, who works in the spirit of the antique and of Flaxman, has, in spite of the exertions of Mr. Labouchere, Mr. Marshall, and Mr. Westmacott, been given no higher honour than a third-class medal. His "Hylas surprised by the Naiads" merited a better recognition; but English sculpture is too much in repose to please French peculiarities. His name has, consequently, been withdrawn (so the last rumour went) from further competition, and the medal for English sculpture has again to be given away.

Publishers are busy preparing the way for Mr. Macaulay's continuation and Mr. Dickens' "Little Dorrit." What new works they can bring out before them they are busy forcing, and what they cannot get ready they are keeping back till the History and the Novel have "blown by." The last week of November will see readers of every class either with two thick chocolate-coloured octavo volumes before them, or with a pamphlet of thirty-two pages between two green leaves. Continuations seldom support the fame of what has gone before. In seeking to satisfy the severer students of history, Mr. Macaulay, it is said, will lose that larger body who read to be amused, and who are content to accept as facts whatever is put in a captivating manner. "If Mr. Macaulay's first two volumes were not English history," so his admirers exclaim, "they were certainly very like it: and most assuredly very much better than what has hitherto passed as English history."

Some of our contemporaries are unnecessarily indignant at the supposed wanton destruction of works of art just committed by Mr. Boys, of the once well-known firm of Moon, Boys, and Graves. Mr. Boys is a Vandal of the worst class!—so our contemporaries exclaim; he has destroyed engraved steel plates, from which impressions might have still been taken almost without number, and always to the interest of Art. But is this the case? We will grant that a steel plate is capable of being worked almost to the thinness of gold-leaf; but we deny the propriety of taking impressions from any plate after it has lost the characteristic beauties which at first recommended it to notice. Mr. Boys has worked his plates nearly into a hack state before he condemned them to the blacksmith's anvil. To multiply impressions of a plate after it is past working is not to advance Art, but to retard it. Compare an early proof of Mr. Cousins' "Bolton Abbey" with any late impression from the same steel, and the veriest tyro in Art will see at once that they have hardly any one quality of excellence in common.

Mr. Maclise has just returned from his *first* visit to Italy. He is full of what he has seen, and talks of

> Caracci's strength, Correggio's softer line,
> Paolo's free stroke, and Titian's warmth divine.

We shall be curious, as his many admirers will be, to see what effect his visit will have on his next pictures. He is too observing not to profit by what he has seen. He will assume some Italian disguise and win new honours in another line.

The Cambridge antiquaries of the year 1855 are not such Goths in Art as the Oxford antiquaries were of the last half-century. The Oxonians gave their Carfax Conduit to any one who would take it away; and it is now at Nuneham, far from the place for which it was designed. The Cantabs, finding Hobson's Conduit a little in the way, are about to carry it with tender care to another part of the town—to the end of Trumpington-street. We are sorry for the removal, and shall miss the Conduit in its old quarters. The removal of the monument of the University carrier was, we are assured, a matter of "Hobson's choice."

Mr. Dickens is sitting for his portrait in Paris to Ary Scheffer. The best existing portrait of the great novelist is that by Maclise, made familiar to his many admirers by the art of the engraver. Mr. Maclise's likeness represents, and very truly too, the author of "Pickwick" and "Nicholas Nickleby." The portrait by Scheffer will give us the author of "David Copperfield," of "Bleak House," and of "Little Dorrit." Of our early novelists we have but very imperfect portraits. Fielding is known to us by a solitary profile made after death, and from memory, by the caricaturing hand of Hogarth; the face of Smollett exists only in a poor portrait (we believe by an unknown hand), which shows more of the gentle nature of the husband and father than of the observing novelist and delightful poet; and Richardson is represented in his portrait, by Highmore, rather as the rich printer of Salisbury-square and North End, than the author of "Pamela" and of "Sir Charles Grandison."

This week has given us a capital letter—signed by Thomas Carlyle, Charles Dickens, and John Forster—addressed to the public through the *Times*, in behalf of the god-daughter of Samuel Johnson, who is living with her sister in a state of great poverty, at No. 5, Minerva-place, Newcross, Deptford. The letter is evidently written by Mr. Carlyle, and it is in his very best manner—manly and unmistakable. The object of the letter is to obtain a sum of money—about £400—just sufficient to purchase an annuity for the two living representatives of Johnson. There cannot be a doubt of the success of the appeal. The elder sister, Johnson's god-daughter, is mentioned by Johnson in his will. While on this subject we may mention, incidentally, that Mr. Walter Savage Landor is renewing the claim of the great-grandson of Defoe for some Government support. We are glad to see that there is such hearty "life in the old boy yet;" and hope that his appeal in behalf of the last representative of Defoe—"who has lived seventy-seven years, and whose dim eyes cannot look far into another"—will be attended with success. "If," says Mr. Landor, "Milton wrote the grandest and the most energetic and eloquent prose of any writer in any country; if he stood erect before tyranny and covered with his buckler not England only but nascent nations; if our great prophet raised in vision the ladder that rose from earth to heaven, with angels on every step of it—lower indeed, but not less useful, were the energies of Defoe. He stimulated to enterprise those colonies of England which extend over every sea, and which carry with them, from him, the spirit and the language that will predominate throughout the world. Achilles and Homer will be forgotten before Crusoe and Defoe."

THE twelfth volume of "L'Histoire du Consulat et de l'Empire," by M. Thiers, has just appeared. In the preface the author discusses the causes which produced the fall of the monarchy of Napoleon I., and attributes them to the absolutism of the Imperial form.

THE NEW COMMANDER IN THE CRIMEA.

LIEUT.-GEN. SIR WILLIAM JOHN CODRINGTON, K.C.B., who has been appointed to succeed General Simpson as Commander-in-Chief of the Army in the Crimea, is the eldest surviving son of Admiral Sir Edward Codrington, G.C.B., whose name is so intimately associated with the great exploits of England upon the sea at the close of the last and in the early part of the present century; and whose crowning achievement was the victory of Navarino, when the squadrons of England, France, and Russia acted under his general directions. Sir William was born, we believe, in 1805, and is now in his 50th year. He entered the Coldstream Guards in 1821, and rose through the different regimental steps to the rank of Captain and Lieutenant-Colonel. He received the Brevet rank of Colonel in 1846, and became a Major-General in the Brevet of June 20, 1855.

During his connection of thirty three years with the Coldstreams, Sir William Codrington enjoyed no war experience. He was known in his regiment as a very steady officer, fond of his profession, and kind and courteous to those around him. His promotion to the rank of Major-General last year left him unemployed just at the commencement of the war, and he went out to Turkey as an amateur. Shortly before the sailing of the expedition to the Crimea, Lord De Ros, who held the office of Quarter-master-General to the Army, was compelled to return home by ill-health, and Brigadier-General Airey was appointed to succeed him. This left the command of a brigade to be filled up by Lord Raglan. General Codrington was at hand, his qualities were known, and within, we believe, a few hours of the departure of the expedition from Varna he was placed at the head of the First Brigade of the Light Division, then composed of the 7th, 23rd, and 33rd Regiments. The distinguished part played by the brigade and its commander at the Alma need scarcely be repeated here: it is sufficient to say that, unlike the case of most of the general officers present, it was Codrington's first engagement, and the perfect coolness and absence of excitement with which he went through the day were remarkable. At the battle of Inkerman it was General Codrington who first became aware of the Russian approach; and the incident has been related as an illustration of the habitual care and watchfulness of the General:—

It was a little after five o'clock this morning when Brigadier-General Codrington, in accordance with his usual habits, visited the outlying pickets of his own brigade of the Light Division. It was reported to him that "all was well," and the General entered into some conversation with Captain Protyman, of the 33rd Regiment, who was on duty on the ground, in the course of which it was remarked that it would not be at all surprising if the Russians availed themselves of the gloom of the morning to make an attack on our position, calculating on the effects of the rain in disarming our vigilance and spoiling our weapons. The Brigadier, who has proved a most excellent, cool, and brave officer, turned his pony round at last, and retraced his steps through the brushwood towards his lines. He had only proceeded a few paces when a sharp rattle of musketry was heard down the hill, and on the left of the pickets of the Light Division. It was here the pickets of the Second Division were stationed. General Codrington at once turned his horse's head in the direction of the firing, and in a few moments galloped back to turn out his division. The Russians were advancing in force!

In the battle, the commencement of which the *Times'* Correspondent thus describes, General Codrington's gallantry was more than once noticed by Lord Raglan; and when Sir George Brown was obliged to go to Malta, in consequence of a wound received that day, Codrington was selected to command the Light Division. During the long and dreary winter, more trying by far than the sharp and sudden shocks of war, General Codrington never left his post for a day. He was always to be found ministering as far as possible to the wants of his men, and sustaining his officers under the most gigantic discouragements. Sir William Codrington has not been a day absent from duty from the landing at Old Fort to the present moment: a better proof of his physical qualifications could not be adduced.

When the new campaign commenced with the spring (says the *Globe*), General Codrington again became a leading actor in the scene. It was he who superintended the arrangements by which General Shirley so gallantly won the Quarries on the 7th of June; and, when the final assault was made on the 8th of September, the Commander-in-Chief's opinion was evinced by his selection of him to conduct the attack on the Redan. Of the generalship displayed on that occasion some hasty and intemperate, and some careful and valuable, opinions have been expressed. The fact, however, that those most competent to judge approve of the conduct of those who were in command must be taken as decisive of a point which among civilians must be always a vexed question.

GENERAL SIR WILLIAM JOHN CODRINGTON, THE NEW COMMANDER-IN-CHIEF IN THE CRIMEA.
FROM FENTON'S CRIMEAN PHOTOGRAPHS.

As regards Sir William Codrington we can only express our belief, from all we hear of the sentiments of the army, that, if a Commander-in-Chief were to be selected by the suffrages of the troops, an enormous majority would ratify the choice which the Government had made, in the confidence that it will redound to the honour of the British arms.

The accompanying Portrait of the General is from one of Mr. Fenton's admirable Photographs taken in the Crimea; and has been copied by permission of Messrs. Agnew, publishers, Manchester.

THE LAST HOURS OF SEBASTOPOL.—On the night before the assault two considerable fires—one near Fort Nicholas, the result of shells from our 13-inch mortars, the other in the town—had burnt briskly, and the conflagration continued next day. These the garrison tried to stop. In the evening of the 8th the figures of many men might be seen darkly hovering on the roofs of a large building, where they were trying to extinguish the flames that lit up the whole interior, and burst from every window. But now their efforts were all for destruction. After every explosion the fires augmented, till, towards morning, the whole city and its suburbs were in flames, sending one vast column of smoke upward, which leaned heavily, from the pressure of the wind, now almost lulled by the cannonade, towards the head of the harbour, over which it hung in a vast canopy. Soon after daybreak, one terrific explosion, surpassing all the rest, pealed through the Camp, and a cloud, which seemed like the upheaving of the whole promontory, rose in earthy volumes, and hung for a space a blot upon the landscape, pierced murkily by the rays of the rising sun. The harbour gleamed of a dusky yellow amid the dark-grey hazy capes and buildings. Fort Paul, veiled in smoke, but visible, remained standing on its jutting mole till afternoon, when a fire in a building near communicated with its magazine, and it was hurled into the air. When the dust of the explosion subsided, nothing was left of it but a heap of loose stones. The motives of the Russians in setting fire to the city are not quite clear, or, at any rate, are questionable in point of expediency. At the conclusion of the war, they might look on it as likely that they would resume possession, and the consideration might have restrained them. But their traditionary stroke of policy in burning Moscow seems to have impressed on the national mind a general idea of the virtue of incendiarism; and the catastrophe of Russian towns and fortresses, like that of a Vauxhall entertainment, would appear incomplete without a general conflagration. The whole garrison withdrew unmolested under cover of the night. —*Blackwood's Magazine for November.*

SIMPHEROPOL.

IMMEDIATELY after the fall of Sebastopol the consequences began to be felt at Simpheropol. A letter from St. Petersburg states that "a great number of the inhabitants of that place have already abandoned it. That town had profited materially from the siege of Sebastopol. According to a letter of the 7th Sept., its population at that date amounted to 70,000; and they were constantly increasing by the arrival of persons of all denominations, principally tradespeople. It at last became impossible to procure lodgings. Rents were as dear as at St. Petersburg. Not less than fifty roubles (the rouble is somewhat under 4 *l.*) a month were asked for a place which before had been only worth about 140 roubles a year. Firing had also become excessively dear; but bread continued at a moderate price, in consequence of the constant arrivals from New Russia and the distant provinces. The number of shops, which before 1855 was only 438, is now 800."

Our Illustration—a scene of the interior life of Simpheropol—is from a drawing taken by Willibald Richter, of Vienna. It shows the Café National, with a group of *habitués*. Commencing from the right hand, the first and second of the company are Tartars of the Crimea; next is a merchant of Sinope of the better class; next is a Tartar; a Turk from Mecca; a wealthy inhabitant of the Crimea; and a Turk of Mecca; the whole presenting an interesting scene of Crimean costume and manners.

SCENE IN THE CAFE NATIONAL, AT SIMPHEROPOL.—FROM A DRAWING BY WILLIBALD RICHTER.

RECENT DISCOVERIES AT NINEVEH.

In 1853 the Assyrian Excavation Fund was established in London for the purpose of prosecuting still further the researches which have conferred such well-deserved honour and fame upon Mr. Layard. The conduct of the expedition was intrusted to Mr. Loftus, who had previously made important discoveries in the rarely-visited regions of Lower Chaldea and Susiana, whilst attached to General Williams' Commission on the Persian frontier. Mr. Boutcher accompanied him to make drawings of the result of the excavations.

As Mr. Hormuzd Rassam and M. Place were at that time conducting researches in Assyria respectively on behalf of the British and French Museums, the expedition proceeded into Babylonia, and commenced its labours at Wurka, Senkereh, and the adjacent ruins. At the first-mentioned locality the whole front of a building was uncovered, which revealed at once more information concerning Babylonian architecture than anything previously discovered. Only one sculptured slab was however found. It represented simply the figure of a man armed with a spear, and was much decayed and broken. Vast quantities of tombs were found containing vast additions of various ages, gold ornaments and minutely inscribed clay tablets—one of the latter bore impressions of both Greek and Babylonian seals of the age of the Seleucidæ—the latest cuneiform writing yet brought to light. At Senkereh (*Erech* of the Bible, according to Colonel Rawlinson) the dedicatory cylinders of Nebuchadnezzar were

NINEVEH TRENCH

COLOSSAL STATUE.

discovered in the foundations of the Temple of Phara. Here also were found a number of vaults containing stamped and inscribed tablets in clay envelopes (1500 years B.C.) bearing externally the same inscriptions as the inclosures. Another tablet was found with an inscribed list of *square roots*; confirming, as explained by Colonel Rawlinson, the statement of Berosus that the ancient Babylonians employed a sexagesimal as well as a centesimal notation. Various other discoveries were made, which we have not time now to particularise.

Meanwhile, in Assyria, on the north side of the mound of Kouyunjik Mr. Hormuzd Rassam, after more than a year's unsuccessful labour, was rewarded by the discovery of an entirely new palace—that of Assur-bani-pal, the son of Essarhaddon. He had just time to work out what

THE ONLY DISCOVERED SLAB SHOWING A FIGURE OF THE QUEEN.

then appeared to be the whole of the palace remaining, when the Museum grant terminated, and he returned to England. The walls of this palace were lined with bas-reliefs of greater variety and excellence than any which the Museum yet possesses. One whole room was devoted to Lion Hunts, sculptured with remarkable vigour. Other slabs represented the exteriors of palaces, delicately-carved plants, battles, sieges, processions, &c. In one respect Assur-bani-pal's palace differed from those of his predecessors—In the absence of winged bulls at the entrances. Their places were supplied with lion-headed, human-bodied, griffin footed figures, armed with daggers, side by side with human figures. Eight cases from this palace were at once packed and sent by rafts down the river for shipment to England.

Whilst Mr. Loftus continued to prosecute his researches in Babylonia, Mr. Boutcher started for Nineveh, took possession of the deserted mounds and made drawings of the sculptures which had not been transported and made drawings of the sculptures which had not been transported and made drawings of the sculptures which had not been transported and apparently the whole of the palace had been uncovered, but shortly after Mr. Loftus regone, his colleague, the exterior wall was discovered some two hundred feet distant from, and twenty feet below, the floor-level of the rest of the edifice. It was built of sun-dried brick, and a basement of three courses of rough stone, by no means resembling the more preconceived notions of Assyrian architecture. The second Engraving shows this wall, with the trench which was cut to trace the continuing face of it. Many miles of similar tunnels have been made in the old Assyrian city.

At the western corner of the palace, at this lower [illegible] there was a doorway which consisted of two colossal bases with slabs on either side, and a sculptured slab at the foot of one of these slabs formed [illegible] door-way. Here were their names stamped in cuneiform characters. All containing the royal titles and [illegible] of the [illegible] entrance. All containing the royal titles and [illegible] of the [illegible] entrance. All containing the royal titles and [illegible] of the [illegible] entrance

marking out their encampment, and Major Bent and his brother engineers traced the lines of a work and trench to protect us against the enemy landward. I know of no real grounds to dread the appearance of a large body of Russians from the direction of Kherson. But it was proper to guard against a surprise during the night, when the darkness might prevent our steamers from effectually protecting the troops, and a barrier of some strength was soon raised at proper points. In the meanwhile the enemy had not been allowed in quietness to watch our landing; but at three o'clock French and English mortar-vessels, having taken up position at the distance of 2500 yards to the southward of the principal fort, and being supported by a large number of steamers, opened fire, not only on the main works, but on a circular battery protecting the gate and drawbridge. In a few minutes after the opening of the fire, the town outside was in a blaze, and in a short time burned fiercely. Whether it was set fire to by the Russians or by our shells I cannot say, but probably the enemy did the work of destruction themselves to prevent the approach by land towards their fortifications. The practice was good, but the Russians were known to be strongly protected by casemates, and they were not forced from their barbette guns during any portion of the day. Their fire in return was, however, utterly thrown away, the range being extreme, and their shot and shell plumping into the water wide of the mark. At sunset the firing ceased, the mortar-boats were hauled out of action, and the steamers withdrawn. The army settled down in its new camp, where the greater part of the troops bivouacked.

Oct. 17.

A strong breeze, a rolling surf, boats swamped on the beach, inactivity on board the fleet, discomfort on shore—such were the characteristic features of the 16th of October in the vicinity of Kinburn. The wind blew so directly on the coast that no stores or horses could be landed. No attempt was made to annoy the Russians; and the firing, when there was any, was directed against the gun-boats in the lagoon, or some bolder boat than others showing itself in proximity to the guns of the fort. During this period of apparent inaction the Admirals and Generals arranged their plans for the attack of Kinburn and Otchakoff on the following morning; and, the weather having become propitious by a change of wind to the north-east during the night, the action commenced at nine in the morning by three French floating-batteries and six English mortar-boats opening fire with great precision and effect. The mortar-boats had been placed in their proper berths at an early hour; the floating-batteries took up theirs under steam, and were greeted by a vigorous fire from the enemy. Shots fell thickly round them as they moved slowly on, and then there was a pause. The broad ensign of France floated large on the low hulls, as they lay like rafts on the water. Then it was concealed by the rapid discharges which poured incessantly from their huge mouths. Furious and fast were the fires of the Russians in reply. Their artillerymen might be seen ramming down and firing the heavy pivot-guns on the ramparts, whilst shot and shell fell thick around, and dark columns of sand and smoke, united with the white streams from the vapour of powder, cast a gloomy shadow over the works. Still more powerful and numerous became the fires of the Allies, as gun-boats and steamers came into action, covering the devoted fort with showers of balls and columns of flame. While such was the prospect in front of the southernmost work of the spit, another not less terrible was to be noticed in front of those to the northward. A squadron of heavy steam-frigates and gun-boats was moving up to force the passage of the lagoon, and fighting the Central Battery, the Spit Battery, and the works of Otchakoff; and, as fresh ships came slowly into action in front, in flank, in rear of the devoted works of Kinburn, it became evident that a few hours would decide the unequal encounter. A fire kindled by our shells was raging with great violence in the principal fort at ten o'clock, the flames playing round the houses and barracks, and licking the sides of the works, the guns and gunners showing in the glare distinctly as they loaded their pieces.

I had landed in the morning early to witness the progress of the action, and was watching the fort at a distance. I saw its efforts become more feeble as our fire became more intense. The flames stretched over the buildings, and sent up volumes of smoke. The guns were silenced one after the other, the men falling at their posts or running away; some of the pieces dismounted, others broken at the muzzle, or struck at their breech. One poor fellow was visible ramming desperately at a gun, when a shell came down upon him and he fell. The destruction all around was rapid. The stone faces of the walls were crumbling into the water; the earthen parapets were dwindling every minute, heaps of the earth darting into the air; the gateway and drawbridge were blown in, and the beams which formed them dashed away in splinters. Balls fell into the ditch, sending showers of water into the air, and many projectiles passing over the work fell harmless into the lagoon. The fire of the enemy had become so feeble by this time that I moved up towards the village of Kinburn, to gain a nearer view. The French 56th Regiment and Chasseurs Indigènes, the 14th Chasseurs d'Afrique, had formed in rear of the houses, and a half-battery of Artillery accompanied them. Passing these and entering the village, I came to a trench thrown up by the French, at a distance of 900 or 600 yards. Unarmed soldiers were hovering about the houses carrying off plunder. Pigs were rushing about the gardens, and caught by the men. They were instantly slaughtered and carried away. Not an English soldier was near; but General Bazaine was close by, bringing up and posting troops to intercept the Russians in case of a desperate sally. The Russian flag still waved on the flagstaff at eleven o'clock, but then a shot from one of the ships carried it away. No other flag was hoisted in its place. The enemy could not show himself, but passively resisted by taking refuge in the casemates and bombproofs. In the meanwhile the steamers and gun-boats had forced the passage of the lagoon, and silenced the batteries at the end of the spit and on the shores of Otchakoff. Continually on the move, and firing as they went, they swept down the defences of the Russians—silencing their guns, killing the men, or forcing them to take refuge underground. Then a grand movement of the fleet took place. The Admirals and their three-deckers were observed at noon entering into action in splendid order, French and English advancing in line under steam, and approaching close in to the land. The fleet in the lagoon closed in at the same moment, and simultaneously heavy broadsides were poured in from all quarters. The central fort was the only one which replied, and then only with a solitary gun at long intervals. Nothing of a grander or more imposing effect could be witnessed than the three-deckers wearing round to deliver their fire, their jibs set to bring their guns to bear. Three times the *Montebello*, commanded by the French Admirals, delivered a broadside from every gun in her sides. As she did so she became lost in wreaths of white smoke. The iron shower swept over the fort with a din that surpassed all other sounds, and the air reverberated with the war of ordnance. All round the enemy the fire was given in continuous discharges, and there was no pause. Rockets poured in from a French gun-boat added one to the many incidents of the moment. Then it was that the Russians gave signs of surrender. A struggling form was seen on a corner of the ramparts, waving a white flag as a token. The firing ceased as by magic. A French nine-pounder from the village poured forth its discharge three times, and then the white and France, put off from the Admirals' ships with the bunting of peace at its bows; and two white flags floated at the mains of the *Royal Albert* and *Montebello*. From the ships in the lagoon, and those in the Black Sea, boats approached the shore, and a sailor planted the white standard in the village, where the French General, Admiral Stewart, and their officers stood. The troops closed upon the fort, encircling it with a line of men; and then a straggling line of Russians began to issue from the eastern gate of the fort, throwing down their arms in a heap as they passed between a line of French-men. During this time the conditions of surrender were offered in the work to the Russian Commandant, who was found in the magazine, surrounded by three hundred men. Although numbers of his soldiers were at that moment giving up their arms outside, still he clung to the idea of resistance, and asserted his resolution to perish where he stood. The efforts made to persuade him that he had no course left but to yield himself a prisoner he treated with disdain, growing apparently more obstinate as he was pressed. But these moments of discourse were sufficient for our purposes, whilst he remained obstinate, the number of his supporters diminished, the men around him dwindling in a short time to such a handful that, looking round him with a fearful look of despair, he slowly left the place on which he stood, giving directions to his servants to put a few things together for his use. His manner at this moment was similar to that of one who had lost his sobriety by drink; and it was not without some grounds that the conviction of his being tipsy was strengthened in the minds of those who saw him, when it became evident that most of the Russian soldiers who surrendered were drunk. They staggered under the effects of liquor as they issued from the works, some of them uttering inarticulate expressions, others endeavouring to fondle the French soldiers crowded outside, and most of them talking loudly together with a thickness of utterance peculiar to men in their condition. It was evident that the men and not their leader had surrendered the place, consulting their own safety and supplying their own tastes at once by yielding after having broken into the spirit-stores of the place. Many of them were of large size, whilst others were of the lowest stature. All had their packs on, an extra pair of boots, and a tin water-canteen. They took away with them large black loaves of bread, weighing at least ten or twelve pounds. Some of them had sacks filled with I know not what: and many held in their arms pictures representing the Virgin and Saviour. The Commandant was preceded in his march to the place of surrender by a procession bearing three large altar-pieces, containing Scriptural subjects, one of which was an effigy of the Saviour on the tomb. Several large church banners followed, and then the old General appeared, dressed in a long grey *capote*, with a white cap and red band on his head, two swords, and a pair of pistols. He advanced with a faltering step to the spot where Admiral Stewart and General Bazaine stood, and tears were in his eyes as he threw down his arms in token of submission. The French and English officers took off their caps to him, returned him his arms, and gave him a chair to sit on.

The old General appeared to be a man of fifty-five, lean and bony. His eyes were grey and hollow, his eyebrows and moustache grey, and his cheekbones were the most prominent part of his face. He looked round him as he sat and spoke some words in Russian, which no one understood, but from the manner in which he shrugged his shoulders it appeared as if he intended to express his feelings as to the surrender. He could not help it, he seemed to say—it was the fortune of war. An interpreter was found after a time, who informed the General that he would be placed on board ship if he pleased. To this he agreed, but objected to walking. He was a "Cavalierist," he said, clapping his thin limbs with his bony hands, and looking at them as if he would hint that he was not very strong upon them. Then suddenly he darted out of the group of general officers, and stepped rapidly up to an orderly hussar who stood near him. He stared in the man's face, then went round the horses to ascertain their points, saw three or four more horses, looked at them in the same manner, shook his head, and then rushed back to resume his seat. Many spectators, General Bazaine, Sir Houston Stewart, and numerous captains of our fleet stood by, wondering at his movements. In the meanwhile the prisoners of war, of whom the greater part had by his time surrendered, formed a curious crowd of jabbering men, gesticulating amongst themselves, stumbling over one another in various stages of intoxication, or lying on the ground, helpless in their cups, and blaspheming in Russian. The sober ones sought for lights to kindle their pipes and cigarettes, or water to quench their thirst. A group of six or seven officers—only known from the soldiers by their sword belts—stood aloof, apparently unmoved by the scene before them. In the midst of all the fort still continued to burn and crackle; Frenchmen were busy plundering; and knots of English naval officers were discussing the merits of the day's firing from the different ships of the fleet. The sun was sinking behind the horizon of the Black Sea when the prisoners were forwarded on towards Camp, in straggling groups of twenty or thirty.

Oct. 19.

The engagement of the day before yesterday has not cost us a man. The Russians lost 43 men killed and 114 wounded. Upwards of 1200 prisoners were made. I visited yesterday somewhat rapidly the works captured by the Allies, and found them less strong than I had imagined. The Spit Fort and Central Redoubt were new works recently erected by the Russians. The first was a wooden casemated fort, built of heavy wooden logs covered with sand. It was pierced for eighteen guns, but only mounted ten, and in most places it was evident that the enemy were working hard to improve the defences. The ground was unfavourable, as was proved by the result of the engagement. The battery was fought by five ships—the *Hannibal*, *Terrible*, *Tribune*, *Curaçoa*, and *Dauntless*. In ten minutes after the opening of the fire the guns were silenced and the Russians driven from their pieces. By previous knowledge of the bearings the ships were enabled to fire with the utmost precision, whilst the Russians were baffled by the movements of their enemies, who steamed so close in that the shot passed over them, the gunners being unable to depress their pieces sufficiently. Their embrasures were almost instantly choked with sand. I counted as many as seven shot through one opening, a proof of the terrific precision and rapidity of the fire during the few moments that it lasted. The principal fort is an old relic of Turkish engineering, modernised by the Russians. I only saw the external parts of it, in consequence of the determination of the French General not to allow any but Frenchmen and officers in uniform to enter. The result of this order—overbearingly carried out by the officers and men in charge—was the cause of a great deal of heart-burning and discontent; and, for whatever reason it was made, was impolitic and unwise. Nothing can surely be more necessary than that cordiality should exist between the men in both Camps; and the real means of ensuring that cordiality is for the Generals to understand each other, and take proper means to see each country fairly represented. Instead of this, the fort, which was captured by the joint efforts of the Allies, was left entirely under the charge of the French General, who gave orders and made arrangements annoying to the feelings of many of the English. Nor was this unintentional, as it appeared: for I heard the officers posting sentries on the evening of the surrender distinctly give the following orders:—"You are to prevent any Russians issuing from the walls to do so with their arms, and you are to be careful that no English shall pass into the fort under any pretext whatever." In the morning the order was so far modified that English officers in uniform were permitted to enter; but non-commissioned officers and soldiers of the English force, sailors, and others, were kept out—your own Correspondent being amongst the number, together with several other gentlemen whose only anxiety was to obtain a glance at the work of destruction performed by the fire of the ships. As to the contents of the place, whether valuable or not, there could be no desire on the part of the French to prevent us from handling them; for the soldiers had effectually destroyed or carried away everything before an Englishman appeared. The order, therefore, only existed as one that prevented the satisfaction of a very laudable curiosity, and as such was very fairly considered annoying and petty.

From the main fort the spit of Kinburn stretches out into the sea for about two miles, and a covered way leads soldiers in safety to its furthest extremity. As I wandered past the Central Redoubt, a slighter one than the rest, into the Spit Battery, I found the English Admirals, Sir Edmund Lyons and Sir Houston Sewtart, and Captain Mende, Sir Thomas Pasley, and other officers, busy in one of the casemates discussing lunch, while Captain Macnamara, of the Royal Marines, stood by doing the honours of his quarters, and an interpreter was rendering into English the details gathered from the mouth of a Russian deserter caught during the night. This poor fellow, it appears, had made his escape from Otchakoff during the night in a boat, and was several times fired at by our steamers, which sent out boats to capture him. It was said to appear from his statements that the Russians had already sent men round to reinforce Kinburn, but that our movements were too rapid for them. The Emperor was at Nicolaieff superintending new works for the defence of that place, and two Grand Dukes were at Odessa. It was also stated that a Russian officer crossed over from Otchakoff to Kinburn on the night of the 16th to ascertain the state of the works after the short bombardment of that day. The Governor informed him that six men and one woman had been hit, and that the place could resist two months. How far this last prediction was realised the sequel has proved.

The Russians blew up all the works of Otchakoff on the morning of the 18th.

(The Sketches which accompanied these Letters will be engraved in next week's ILLUSTRATED LONDON NEWS.)

PORTRAIT OF GENERAL WINDHAM.

BY SHARP AND MELVILLE.

IN the ILLUSTRATED LONDON NEWS of the 6th ult. we had the pleasure of presenting an Engraving of a very fine portrait of General Windham, who achieved for himself imperishable renown in the memorable attack on the Redan on the 8th September. This engraving was taken by permission from a very fine photograph, by Messrs. Sharp and Melville, of Old Bond-street; and since its publication the artists have completed a life-size portrait of the original in oils, in which the likeness and character are admirably preserved. We are induced to attach the more interest to this production as it is one of many instances of the application of photography in aid of painting, by which the grand essential of truth fulness is combined with the grace and beauty of Art. The process by which the miniature photograph is brought to bear to this end is through the intervention of the camera-obscura, which magnifies the original to half life-size, and by this the lines and proportions of the painting are determined. The talent bestowed upon all the works of portraiture at this establishment is of a superior order; Mr. Sharp being a photographist of many years' reputation, and Mr. Melville an artist of considerable merit, and whose abilities have obtained for him the patronage of her Majesty on several occasions. In the processes adopted by these artists some of the portraits are painted in opaque colours, and others in transparency; the latter are very remarkable and satisfactory in effect, the lines and lights and shades of the photograph showing through the colours.

This fine portrait of General Windham has been purchased by Mr. Agnew, of Manchester, with a view to publication; and yesterday it was sent down to Norwich, the gallant hero's county town, for the purpose of being exhibited.

TRIAL AND SENTENCE OF MESSRS. STRAHAN, PAUL, AND BATES

The trial of Sir John Paul, and his partners, Messrs. Strahan and Bates, was brought to a close on the afternoon of Saturday last. The chief reliance of the counsel for the prisoners was, that they had brought themselves within the protecting clauses of the Act of Parliament by the disclosures which they had made. This was effectually disposed of, however, by the Attorney-General. Baron Alderson, in summing up, said the first question for the jury would be, did Sir John Dean Paul sell the securities? If he did so he was guilty of a misdemeanour under the Act of Parliament, and was punishable accordingly. Then the jury would have to consider whether the other prisoners were parties to the transaction. Orvilly, a partner was responsible for the acts of his co-partners, because, by the agreement between them, they were the agents in all acts done by the firm. But he was not, and could not be, responsible for acts done by his copartners criminally unless he authorised a criminal act committed. It was a misfortune for anybody's slightest partner of a man who did a wicked and unlawful act, but he could hardly conceive that Mr. Strahan and Mr. Bates, who took an active part in the business, never went into the strong-room, and never looked after their securities. Possibly the case was not so strong against Mr. Bates as against the other partners; but that must be left to the jury. In reference to the legal question raised, he thought the Act of Parliament never contemplated that such disclosures should be made to avoid a trial for a misdemeanour the penalty of which was fourteen years' transportation. The disclosures in these cases were nothing more than a farce got up to be acted in the Criminal Court, and not for any purposes of bankruptcy. He (the learned Judge) should ask the jury to express an opinion upon the point, not that probably it would be worth much either way; but the question might be raised elsewhere, and he should like to have the opinion of the jury in that event. His own opinion upon the matter was very decided, and he had no hesitation in expressing it.

The jury retired at twenty-five minutes before one, and after an absence of half an hour returned into court with a verdict of "Guilty" against all the prisoners.

Baron Alderson: What is your opinion about the other portion of the matter?

The Foreman: That there has been no disclosure within the meaning of the Act.

Baron Alderson: That is your opinion. You think the disclosure was not a *locus fide*?

Serjeant Byles: I should like your Lordship to ask the jury whether they think the prisoners made the disclosures merely for the purpose of coming to this court?

Baron Alderson: That is evidently the opinion of the jury,—that it was a mere sham.

Baron Alderson (who laboured under deep emotion) sentenced the prisoners in the following terms:—William Strahan, Sir John Dean Paul, and Robert Makin Bates, the jury have now found you guilty of the offence which is charged against you in the indictment—the offence of disposing of securities intrusted to you by others for safe keeping, but which you have appropriated, under circumstances of temptation, to your own advantage. A more serious offence can hardly be imagined in a great commercial community like this, and the punishment for such an offence must be commensurate with its magnitude. All persons in your position should be especially careful, for your example is of the highest importance. You have held a high position in the commercial world, and at one time that position was doubtless a most honourable one. I very much regret that it comes to me to pass any sentence upon you, and yet the public interest requires—justice requires it; and it is not for me to shrink from any duty that properly belongs to me in the position I occupy. I could have been glad if it had pleased God that somebody else had been called upon to sentence you; for I have seen one of you under far different circumstances—in a high office, sitting by my side, in the exercise of my judicial functions. The present lamentable case teaches us most emphatically that we should all pray not to be led into temptation—not to commit such grievous offences as that of which you are now found guilty. You have been well educated, you have held high positions, and you feel your present condition more acutely, probably, than some others might do. It will grievously afflict those who are connected with you, who will most sensitively feel your present disgrace. All that I have to do is to say that I cannot conceive any worse case of the sort under the Act of Parliament; and, as I cannot conceive a worse case, I must pass the extreme sentence which that act imposes. The sentence of the Court is, that you be transported for fourteen years.

During the delivery of this sentence, which very painfully affected the learned Judge, Sir J. D. Paul clasped his hands together and trembled violently. Mr. Bates and Mr Strahan were more calm in their demeanour. Sir J. D. Paul appeared anxious to speak, but he was removed from the dock with the other prisoners,—Mr. Strahan going first, Mr. Bates second, and Sir J. D. Paul last.

A few minutes afterwards the Court was cleared, and the session was brought to a close.

THE PRINCE OF DENMARK.—The conflict which has sprung up between the Hereditary Prince of Denmark and the Ministers, on account of the refusal of the former to accept the new constitution, is far from being terminated. A Copenhagen journal, the *Berlingske Tidende*, hints that in case the Prince persists in his refusal he may perhaps be deprived of his rights to the Crown. The negotiations now pending, and which are being carried on by the Minister of Finance, rest on new bases. The Prince is no longer required to accept completely the fundamental law; all that is asked of him is the promise to work no change in it hereafter, unless in a constitutional manner. It is thought that, notwithstanding these concessions, the two parties will not be able to come to a good understanding.

SPAHI AND ZOUAVE.

This is another of Mr. Fenton's beautiful Photographic Pictures from the Crimea, and is engraved by permission of Messrs. Thomas Agnew and Sons, Publishers, Manchester. The portrait-figures are the Spahi and Zouave, personal attendants of Marshal Pelissier, at the seat of war

A writer in *Le Nord*, the Russian organ published at Brussels, professes to be greatly alarmed at the prospect of England being about to summon to her aid an immense army of Turkish Spahis, in order to make up for her want of soldiers at home. From a careful study of English history he has ascertained that an officer named "Clève" (Clive) conquered India during last century by means of the Indians themselves, whom he organised in the English fashion; and in forty years as we are told, the Company possessed two hundred thousand Spahis, better known in this country as Sepoys. Of course Louis Napoleon is warned against a similar exhibition of our encroaching spirit. The Turkish Contingent is nothing else, according to *Le Nord*, than a body of Spahis, by whose aid we intend to make ourselves masters of Turkey. The figures represented in the accompanying picture belong to the French army in the Crimea, in which there is too large a number of Algerians and other Inhabitants of the East to leave any room for jealousy or suspicion at the steps taken by this country to increase our small army by the formation of a Turkish Legion.

SPAHI AND ZOUAVE.—FROM FENTON'S CRIMEAN PHOTOGRAPHS.

THE LATTICE PLANT.

The new and curious aquatic plant from Madagascar, called the Lattice Plant (*Ouvirandra fenestralis*), must be placed among the most remarkable of our recent botanical acquisitions. Its existence had been for some time known to botanists through a few dried leaves sent from Madagascar by a traveller, who was unable to transmit living specimens of the curiosity he had discovered; and it was not until within the last few months that this desirable object could be attained, when several living plants were brought over to England from the above-mentioned country, by the Rev. Mr. Ellis, a missionary. This gentleman shortly transferred the whole stock to Messrs. Veitch, of the Exotic Nursery, King's-road, Chelsea, by whose kind permission the accompanying Sketch was made from the specimens in their possession. The plants under their hands are thriving extremely well, and will be found worthy of a visit from the curious in these matters.

The interest of this plant lies in the extraordinary structure of the leaves, which, unlike those of any other known plant, are made up of the ribs and cross-veins only; the interstices, which in other leaves are filled up with cellular tissue, being here left almost entirely open, so as to give the leaf the appearance of a piece of curious net or lattice work, from which is derived its common name—the Lattice Plant.

That the beauty of this unique vegetable curiosity may be thoroughly appreciated, it must be seen growing in its natural situation—submersed in water, with every motion of which the lace-like leaves take the most graceful, undulating curves. The plants at Chelsea Nursery are placed in broad glass pans, which allow the structure and movement of the leaves to be perfectly visible by the light transmitted through the sides. The temperature required is about 75 deg.

As far as can be judged from so short an acquaintance with its habits, little difficulty is to be anticipated in the cultivation of this plant, which will probably be, ere long, as extensively distributed among the collections of this country as, from its great interest and beauty, it fully deserves to be.

Board of Trade Returns.—The official returns relating to the trade and navigation of the United Kingdom for the month ended the 30th September last, show that the value of English and Irish produce and manufacture exported during that period was to the extent of £9,072,659; which, as compared with the same period in 1854, shows a decrease of £188,306—the total last year having been £9,261,565. For the nine months ended the 30th September last the total value of our exports is given at £69,226,857, against £76,857,724; being a decrease of £7,431,087. The importations of foreign and colonial produce also exhibit a general falling off. The navigation returns show a decrease of tonnage employed in the foreign trade entered inwards of 214,092 tons; but an increase in the clearances outwards of 19,871 tons. Of the vessels employed in the coasting trade, the arrivals inwards give a decrease of 236,452 tons, and a decrease in the clearances outwards of 257,076 tons.

Finances of Holland.—According to an official return of the Ministry of Finance of Holland, the taxes have produced during the first nine months of 1855 the sum of 43,788,402 florins, the estimate having been 41,850,217; so that the income of the whole year is likely to exceed the estimates by at least two millions of florins, even supposing that the receipts of the last quarter should not be in the same proportion as for the first nine months.

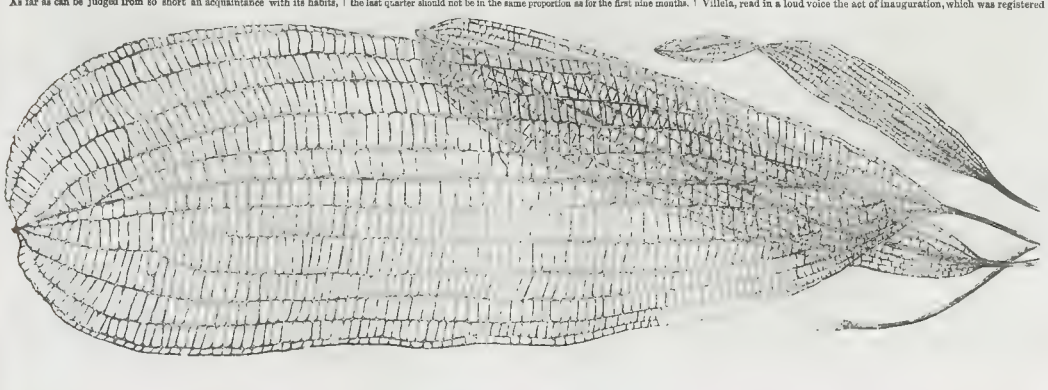
COMMENCEMENT OF THE PERNAMBUCO RAILWAY.

The introduction of railways in the rich and extensive empire of Brazil marks the commencement of a new era in that country. its immense resources, by the aid of this modern contrivance for facilitating locomotion, will, it is expected, develop themselves with a rapidity corresponding to the natural advantages possessed by that country, and to the difficulties of land transit hitherto experienced. We understand that the Imperial Government of Brazil guarantee a very large interest upon the capital invested by the shareholders in this undertaking.

The works of the line were commenced on the 7th of September—the anniversary of Brazilian independence—at five o'clock in the afternoon, on the Island of Nogueira. On the left of the line had been raised a pavilion for the reception of the persons who had been invited to assist at the ceremony. Its front was 140 feet long, and formed the base of a square, through the middle of which passed the railroad, indicated by a long line of flags. Opposite the pavilion was raised an altar, appropriately decorated for the performance of the religious ceremony, with a white cross in front, and trophies of small flags at the corners. At the front of the pavilion and over the principal entrance, rested the Imperial crown upon a cupola, surmounted by trophies of arms, and above waved the Imperial colours, the flags of every nation flying from all parts of the grand square. This square was ornamented with moss and the branches of odoriferous shrubs, having only one entrance, at which were placed two sentinels. At half-past four o'clock his Excellency the President of the Province arrived, followed by the Commandant of Arms, Monsenhor Muniz Tavares, the Commandant Inspector of the National Guards, the Chief of the Police, the Director of the Faculty of Law, the Chief of the Naval Station, the Captain of the Port, the Secretary of the Government, the Director of Public Instruction, the Judge "dos feitos da Fazenda," the Procurador fiscal da Fazenda," the Chief of the Imperial Treasury, the Vice-President of the Province, the Chief of the "Consulado Geral" and Board of Customs, the Colonels of the 2nd and 3th Battalions of Infantry, Provincial Deputies, Prelates of Religious Orders, and ladies of distinction. His Excellency directed his steps to the pavilion, where Mr. Furness, Mr. F. de Mornay, and the Director of Public Works awaited his arrival, and where were already assembled a great many ladies, public functionaries, and citizens of note.

After resting twenty minutes, his Excellency, and the dignitaries who accompanied him, proceeded to the altar, where upon a table covered with a richly embroidered silk cover were placed nine silver salvers, containing the symbolical instruments and emblems of the works that were about to be commenced. There—in the absence of the Bishop, who could not attend on account of illness—Monsenhor Muniz Tavares (ordered to officiate by his most Reverend Excellency) delivered the appropriate orisons; and, the silver salver having been delivered to the authorities present, every one approached the centre of the square, where the working men were assembled, and who were then "blessed" by the Monsenhor. Mr. Furness, now advancing, presented the President with a handsome barrow of mahogany and a silver spade. His Excellency then removed the first sod of earth; the other public functionaries and even the fair sex assisting in the same way the commencement of this important work.

On the conclusion of the ceremony the company returned to the pavilion; where the Official Registrar of the Government, Mr. Valentin Villela, read in a loud voice the act of inauguration, which was registered



THE LATTICE PLANT, JUST RECEIVED FROM MADAGASCAR.

THE ARCTIC EXPEDITION AND FORLORN HOPE LEAVING FORT RESOLUTION, IN SEARCH OF SIR JOHN FRANKLIN'S PARTY.

in a book especially provided for that purpose, and was signed by all who were present.

At half-past six o'clock the invited guests adjourned to a country-house in the neighbourhood, where in one of the largest rooms a delicious and profuse collation had been prepared by Mr Furness. In this happy and convivial meeting toasts relative to the object which brought them together were proposed and responded to with the greatest enthusiasm. In these toasts were not forgotten those whose names are so identified with the Pernambuco Railroad. Vivas rang through the assembly for his Majesty the Emperor of Brazil, for the Constitution, for the members of the General Assembly, for the President of the Province of Pernambuco, the Councillor of State (José Bento), for the members of the Provincial Assembly, for the Marquis of Olinda, and for the projectors, the Messrs. de Mornay. Three thousand persons assembled to witness the ceremony; and, though they returned to their homes long after midnight, by canoes, over a wide expanse of water, no accident of any kind occurred to cloud the joy of this auspicious day.

THE MADRAS RAILWAY.—On Aug. 11, Lord Harris, accompanied by a party of gentlemen who represented nearly all the interests in Madras, made an experimental trip on the railway to Chinnamapettah, about thirty-five miles distant. A large body of natives was also invited. Vast crowds were assembled to witness the departure of the train; the ramparts and tops of houses adjacent were densely crowded with spectators, and the road was literally lined on either side with dusky swarms for upwards of a mile. Some were observed making reverential poojah to the engine; while others fairly turned tail, and took to their heels across the paddy-fields The carriages are capitally finished and fitted, and the whole of the arrangements reflected the highest credit upon the railway officials. The party stopped to inspect the masonry bridge over the Cortelliar, and then proceeded to its destination, where, in an umbrageous tope, the Governor's tents had been erected, and a capital tiffin was served. Lord Harris, in a few words, proposed "Success to the Railway, and the health of the Railway Engineers and Officials." His Lordship remarked that he believed that the railway works had been carried on more speedily in Madras than in any other part of India; and after the monsoon some seventy miles will be opened to the public, the first turf having been turned by Sir Henry Pottinger only two and a half years ago. Major Jenkin briefly returned thanks, after which the company returned to the carriages, and reached home safely and well satisfied, at about a quarter past six. The maximum speed timed was thirty-seven miles an hour. The railway was not available to the public for traffic until after the burst of the monsoon.

THE FRANKLIN EXPEDITION.

A CORRESPONDENT, writing from Fort Resolution, Great Slave Lake, 1st July, describes the starting of the Arctic Expedition and forlorn hope in search of any survivors of Sir John Franklin's party, from the above place, late on the evening of the 22nd June, on their way to Great Fish River and the Arctic coast. The party consisted of three canoes, two officers (Messrs Anderson and Stewart), and eighteen men, and the ladings of three months' provisions, besides presents for the Esquimaux and the men's clothing.

Fort Resolution, the rendezvous and starting-point of this expedition is situated upon a bay of Great Slave Lake, about midway between the mouths of the Buffalo and Slave Rivers, partly sheltered to the seaward by groups of well-wooded islands. The fort consists of three dwelling-houses, a store, and trading-shop, surrounded by stockades and bastions, besides outhouses. A small farm, with eight or nine head of cattle, is attached to the establishment. The situation is rather a pretty one, as the point, clear of all large timber, stretches a considerable distance into the clear waters of the lake, upon the produce of whose fisheries depend in a great measure the lives of the inhabitants of this Arctic settlement.

The evening on which the expedition took its departure was fine and calm, and the three canoes, accompanied by another from the fort, swept swiftly and lightly over the unruffled surface of the lake, to the inspiring strains of numerous paddling songs "La belle Rose," "La claire Fontaine," "Les trois Soldats," "La Bergère;" and numerous other choice specimens of the north-west muse awoke the wild echoes of the Moose-deer Island, and swept over the waters until the woods upon the mainland responded to the song. The officers and men were in high health and spirits, ready to risk their lives in this humane undertaking, with the fearlessness and contempt of hardship so characteristic of the Hudson's Bay Company's officers and men. God prosper them, and success attend their efforts!—and may He to whose decision all human things must submit bring them safely through their perilous trip once more to the bosoms of their anxious families! The accompanying Sketch shows the Expedition Canoes leaving Fort Resolution.

THE SAILORS' INSTITUTE.

WHEN we consider that the property belonging to Great Britain which is always on the sea amounts to £80,000,000 sterling, it must be allowed that the whole nation is, of necessity, deeply interested in the character of that large and useful class to whose temporary guardianship this vast amount of wealth is committed in its transport across the ocean. That they should be sober, honest, intelligent, virtuous, and even religious, would seem a matter of the first concern, especially to those who are connected with commercial enterprise and maritime pursuits.

It will be readily acknowledged that our seamen possess many noble qualities; but, as far as it respects both morals and religion, it must be confessed that they are, as a class (happily, however, with many exceptions), lamentably deficient.

Whatever apology may be admitted on behalf of the simple-hearted and confiding sailor, when the peculiar perils and privations of his ocean life are remembered in connection with the allurements and temptations which attend him on shore, the painful facts remain. Illustrations of these abound in the neighbourhood of the docks, in the east of London, where gin-palaces and beer-shops abound, and the number of houses of the worst character exceeds belief. It is in the midst of such associations that our sailors are drugged, robbed, demoralised, and ruined.

The Directors of the British and Foreign Sailors' Society, who already sustain an efficient staff of active missionaries, daily employed in the visitation of ships and lodging-houses, and the circulation of the Scriptures and religious tracts, propose, therefore, to erect in the very midst of

THE BRITISH AND FOREIGN SAILORS' INSTITUTE, SHADWELL.—FIRST STONE LAID ON THURSDAY LAST.

these scenes of evil a Building, to the character and objects of which they very earnestly invite the consideration of all patriotic and Christian men. The first stone of the new edifice was laid by the Lord Mayor, on Thursday, with the accustomed ceremony.

The edifice will occupy a piece of ground in Mercers'-street, Shadwell, 74 feet frontage by 72 feet deep. In the plans the ground floor is occupied by a library and reading-room, 21 feet by 16 feet; a refreshment-room, 20 feet by 16 feet; a savings-bank and secretary's room, 21 feet by 10 feet; a board-room, 25 feet 6 inches by 19 feet; and a lecture-hall, 50 feet by 40 feet, fitted up with an end gallery and raised platform, and capable of holding about 600 persons. The one-pair floor contains three large class-rooms and housekeeper's apartments. The tower is intended to be used for nautical purposes, and for ventilation, &c. The basement will be occupied as offices for the cooking department and for stores. The building will be of commanding appearance, having bold three-quarter columns and pilasters, on Portland stone plinths, to the front and north side, in the street adjoining, with a large centre pediment. The architect is Mr. Charles G. Searle, of the Poultry; the builder, Mr. Thomas Ennor, of Harding-street.

COMMENCEMENT OF THE PERNAMBUCO RAILWAY, ON THE ISLAND OF NOGUEIRA.

THE THEATRES.

HAYMARKET.—A new play, in four acts, was produced on Saturday, written by Mrs. Lovell, the translator of "Ingomar," and entitled "The Beginning and the End." Each phase of the drama occupies two acts. The first presents a poor clerk and his wife—*Joel* and *Hester Lambert* (Mr. Chippendale and Miss Cushman)—as dependants on an old Dutch merchant *Hogkmen* (Mr. Rogers), who is at the point of death and about to make his will. *Hester* acts in the capacity of his nurse. She contented with her position, and fearful of the future, particularly as it regards her children, she conceives the design of substituting for the real will a forged document made in her husband's favour, and in this mood compels her husband to imitate the testator's handwriting, to which ultimately, at the moment of death, the latter affixes his signature. The guilty pair, free from all suspicion, inherit the miser's property; but find that the possession of wealth under such circumstances is a heritage of remorse, suspicion, and danger. *Joel Lambert* takes refuge in brandy, and *Hester* feels herself continually in peril from his drunkenness and restless state of mind. At length her worst suspicions are realised. One *Mat Hall* (Mr. Howe), a common thief, was in the pantry when the true will was committed to the flames; and after a while recognises *Joel*, and obtains an interview with him. In a few minutes he extorts a full confession from the culprit, and forthwith proceeds to take advantage of his knowledge. He demands to be treated as one of the family, and even stipulates for a marriage with *Rachel*, their daughter (Miss Swanborough). Great, in consequence, is the misery into which *Hester* is thrown; and, though the literal truth of it seemed to offer a certain portion of the audience, there can be no doubt of the Tenters kind of gothic exhibited in its composition It was announced for repetition on every evening during the week.

PRINCESS'.—The accession of Mr. Frank Matthews to this theatre is an important advantage. His talents are in many respects unique, and in particular are well suited to a drawing-room style of acting, being principally engaged in minute portraiture, with a slight dash of the extravagant in the general characterisation. To exhibit these peculiarities we need only refer to his performance in an immaculate, scarcely relieved by the latter clause of that after variety of delineation., the drama of "The Wonderful Woman" and "The Critic" were on Saturday revived; when the cobbler *Crispin* and *Sir Fretful Plagiary* were pleasantly illustrated by this favourite performer, and in his richest vein.

MARYLEBONE.—The play of "Wife or no Wife" has been restored to the London stage. It was here reproduced on Monday, Miss Edith Heraud performing *Olympia* with her usual success.

THE LYCEUM.—Some ten years ago London was aroused by the announcement that a gentleman was prepared to stand up in public and be shot at by any one who picked to exercise his sporting propensity in shooting the modern Achilles. The sportsman was to aim as correctly as he could, and the man aimed at was to catch the bullets. That man was Mr. ANDERSON, the Wizard. He was shot at many hundred times in the course of the season, but escaped unscathed. Some have failed to so much perform this feat of astonishing dexterity, and whose curiosity may since have been excited concerning it, will not be displeased to learn that Mr. ANDERSON has announced the feat for performance at the Lyceum during the ensuing week. We believe on this occasion it is to be effected in a novel manner, so as to render the Wizard's invulnerability more apparent. We must not omit to mention the pleasing appearance of the Lyceum on Saturday mornings, the upper part of the house being filled with the children of the various free schools in the metropolis. Some two or three Saturdays since the children of the Caledonian Asylum were invited, and some comments have been made condemnatory of their having been taken on the stage and regaled with cakes and wine. We understand, however, that their appearance on the stage was at the express wish of some of the directors of the asylum, whose desire it was that the public should be interested in some fourteen of the children who are orphans of Crimean heroes One of the directors addressed the audience, compling his remarks to Mr. Anderson with an appeal on behalf of the institution, which is thus administering to a national want at a period of national calamity.

"PATCH WORK" is the *bizarre* title of a new entertainment, of a musical and illustrative character, about to be produced in Dublin by Mr. and Mrs. Howard Paul. It will take place in the Rotunda, the decorations for which have been made expressly for it in Paris by an artist of eminence.

HONOURABLE ARTILLERY COMPANY.—On Tuesday this society held a Soirée Musicale et Dansante, which was gaily and generously attended. The hall of assembly was profusely decorated with stands of arms, old armour from the Tower, field-pieces, and military trophies; the mess-room being also ornamented with flags and other appropriate embellishments. Strict military time was kept in all the arrangements The concert commenced punctually at eight. The programme consisted of the Misses Lucy [illegible], [illegible], Miss Rainforth, Mr. Cummings, and Mr. Lockey. The songs of the "Queen's Letter," and "Bohemia," were sung with great effect by Mr. F. Fuoge. The dancing followed the concert, and was continued until two o'clock. Crowded as the room was, such were the care and attention of the conductors of the entertainment that it was thoroughly enjoyed by the ladies and gentlemen, in fashionable and regimental costume, who constituted the happy assembly. We understand that the entertainment itself is an innovation on routine; but we think it was more than justified by the result.

THE TURF.

THE silent civic voices of Mr. Davis and the minor satellites of the Ring, in the west are dreary seasons, strongly reminds us of "a falling out of hunting," as the old saw has it, "but they will not fade into their winter silence just yet. Coventry Autumn is fixed for Tuesday, but rather a "ragged regiment" of thoroughbreds is kept in training for November, and two steeplechases will take the sport of the week. Yesterday was the first of fixtures at Lutterworth, on Wednesday and Thursday; while the Cowbridge fixture on Friday concludes the former of these days, and its three event steeplechase to-day. Cork celebrates Monday (Nov. 5th) with some steeplechase meetings, and the leading feature is to be found in the "Lieutenant's Cup" that day, along with Cavalier and five more of "Mr. Howard's." This mare won £10,075, besides three Cups, in eleven out of sixteen races—rather a fine return for a 350 guinea yearling purchase. John Day's best horses have been trained with Scott in the Derby setting; and four speculators have just been favoured with *qui tam* informations, for fitting with the "black and red," in the little back chamber of the Doncaster Rutting grooms, on one of the September race-evenings. The informer has [illegible]

It would have been well "or betting men if they [illegible] followed the [illegible] four out of the seven [illegible] been won [illegible] [illegible] Six Sykes, and [illegible] [illegible] Lightfoot, with its filly, [illegible] was quite up to the mark of former years [illegible] peculiar interest, as the owners of Yellow Jack and Peter Wilkin[illegible] vo. chaffed us a peep at their "veiled prophets." [illegible] prove but a very poor [illegible] [illegible] [illegible]

AMUSEMENTS, &c.

CRIMPTON and HOOPER'S GRADUATED GROOVELESS NEEDLES.—"Lent-Cal Philpe having received the commands of his Royal Highness the Prince Albert to thank Messrs. Crimpton and Hooper for the very curious specimen of the perfection to which has been brought the art of making the eyes of needles."—Buckingham Palace, July 6, 1855.
On 30th May, 1854, Messrs S. and Co. had the honour of presenting the Master of the Mint, Sir John Shelley, a Manufacturer at Reddich for imitating the Labels of their Needle Packets.
Sold by all Needle Makers.
Rose and Fret-class Goods made by SHRIMPTON and HOOPER, Needle Manufacturers, Established more than a Century.
Albion Works, Studley, near Redditch, Worcestershire, and 10, Gutter-lane, London.

WANTED, CLOTHES.—Mr. ANDREWS, 16, Leicester-square, Leicester-square, will give the highest price for every description of Left-off Clothes, Uniforms, Ladies' Habits, Gold Lace, Boots, Furs, Jewellery, Plate, Musical Instruments, Cameras, Guns, Rifles, Pistols, Swords, Telescopes, Watches, Books, Linen, Bedding, Carpets, Oil Cloths, Window Curtains, Fenders, Fire-irons, Kitchen Utensils, Culinary Articles, Cutlery, Glass, China, Stoves, Ranges, Grates, Mangles, Wringing Machines, Perambulators, Cots, Cradles, Children's Carriages, Saddles, Bridles, Harness, Portmanteaus, Travelling Bags, Dressing Cases, Writing Desks, Boxes, Trunks, Hats, Caps, Bonnets, Shawls, Scarfs, Feathers, Artificial Flowers, Lace, Ribbons, Gloves, Hosiery, Perfumery, Fancy Articles, Toys, Sporting Dogs

PRINCE GORTSCHAKOFF.

Of the eventful life and distinguished services of this Commander-in-Chief a copious memoir appeared in the ILLUSTRATED LONDON NEWS for Dec. 3, 1853. At this period the Prince filled the post of General-in-Chief of the Russian Forces in the Danubian Principalities. Upon the recall of Prince Menschikoff from the command he had held in the Crimea since the commencement of hostilities, he was succeeded by Prince Gortschakoff, which important post he now holds; and the confidence reposed in him by his Sovereign is attested by the following intelligence received from Vienna on Tuesday last, stating that "General Prince Gortschakoff has received, through General Stackelberg, full powers from the Emperor to defend or abandon the Crimea, according to circumstances, without incurring any responsibility for the determination to which he may come."

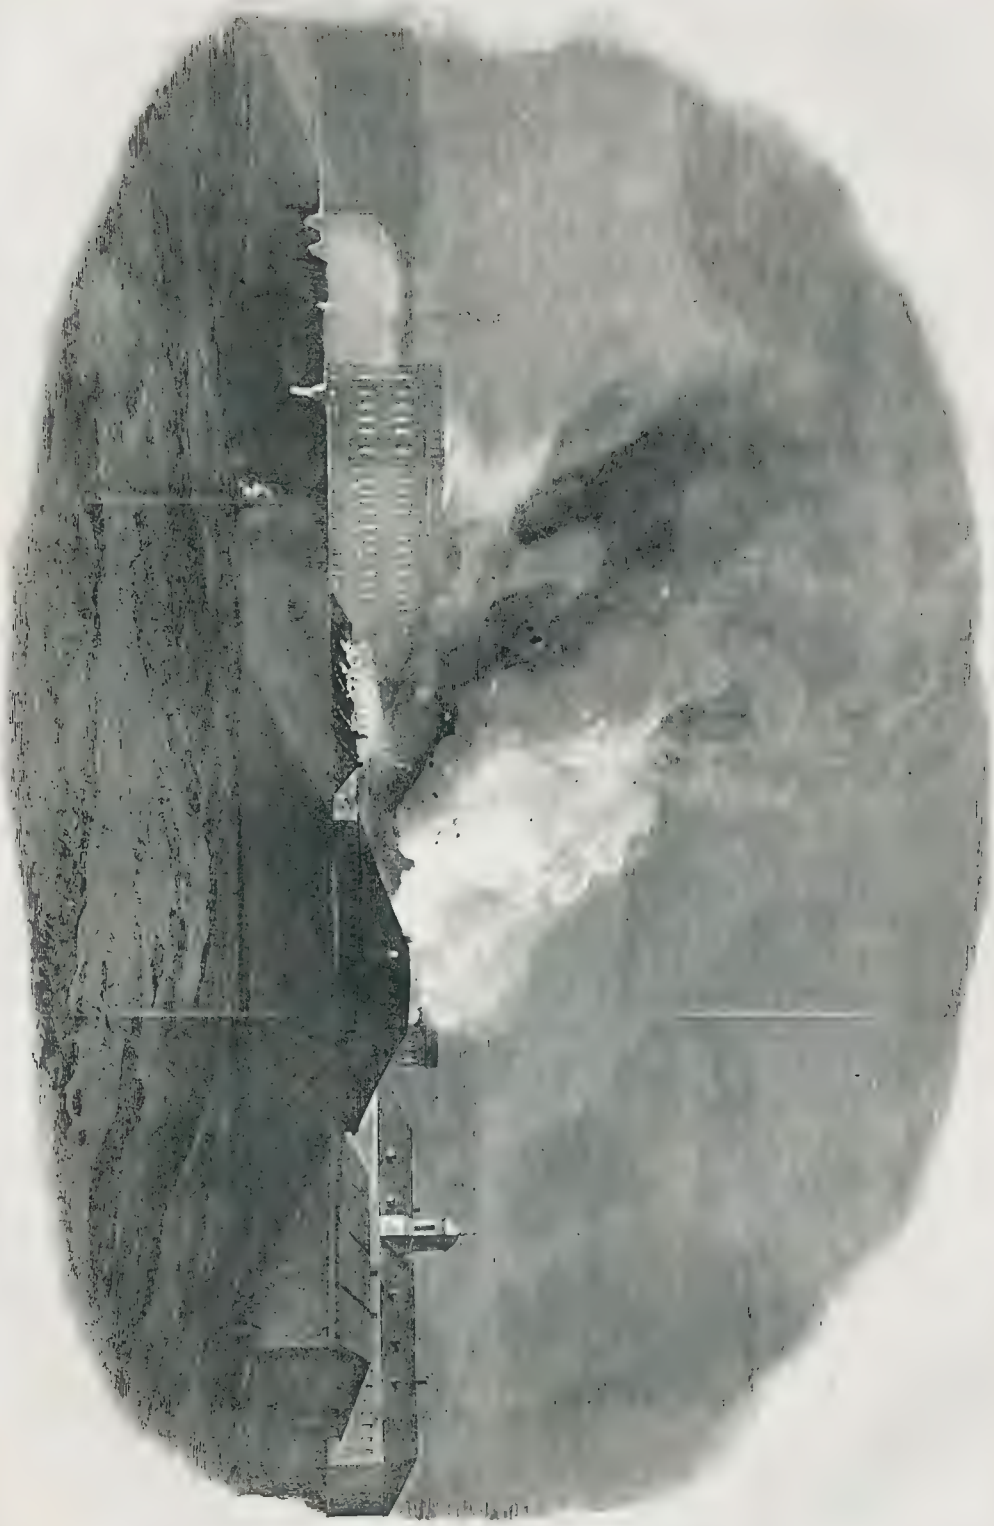
The Prince's very able command throughout the protracted siege of Sebastopol has been recorded, from time to time, in our Journal. His present position, must demand all the energies and strategic resources of this experienced commander. "If," says the *Globe* of Tuesday, "Gortschakoff leaves the north side of Sebastopol and retreats on Simpheropol, he can scarcely hope to cross the Belbec and the Alma without risking a battle; and it is probably on the wisdom of an operation of this nature that the grand council of war was held the other day in the presence of the Emperor. But supposing, again, that the Russian General, succeeds in reaching Simpheropol with the wreck of an army, the Allies will yet cut off his communications with Perekop by the advanced troops which we know have pushed on from Eupatoria. Then, again, our position at Kinburn paralyses the connecting gut of the peninsula, and will certainly prevent the Russians from advancing to secure the beleaguered army corps of the Crimea. Then, again, the winter is rapidly approaching, and the steppes of the Crimea will become nothing but a huge graveyard for any troops which may attempt to cross them. On the whole, then, we must conclude that the Allies are in a highly favourable position, and the enemy in a very deplorable one. Meanwhile, what is Russia doing? The Militia of the vast empire is brought up to the scene of action to fill the gaps of war and disease in the disheartened Russian army. The Russian Generals of the Crimea proclaim to the Muscovite legions that "they will not retreat whilst an enemy is on Russian ground." The north forts of Sebastopol discharge their shot and shell, new works are thrown up, and convoys are seen leaving Prince Gortschakoff's present position! Probably, then, it has been decided within the last few days that the army cannot hold its ground, and when the last long line of carts are winding their way in the stillness of night through the gloomy gorges of the Belbec, the Crimea will be shaken with another State suicide as the northern forts are blown up, and scatter the ground with the fragments of barbarian ambition.

PRINCE GORTSCHAKOFF, COMMANDER-IN-CHIEF OF THE RUSSIAN ARMY IN THE CRIMEA.

As regards the statement that the Imperial Guard is about to join Prince Gortschakoff's army, a recent letter from Warsaw says:—"Great astonishment has been expressed in our military circles that hitherto none of the regiments of the Guards have taken an active part in the war in the Crimea; but at length the moment appears to have arrived for them to have an opportunity of measuring their arms with the enemy. The Division of the Cuirassiers of the Imperial Guard, hitherto quartered here and in other parts of Poland, have put themselves in motion, and are gone to the south. They are to be replaced by the Brigade of Lancers belonging to the Light Cavalry Second Division, under General Mielnikoff, now in cantonments in the government of Lublin. In the entire kingdom of Poland there are now only four regiments of regular cavalry of the above-named division; and in the neighbouring province of Lithuania is quartered a similar division of the reserve cavalry corps, under Lieutenant-General Grünwald, with its head-quarters at Slonim. The division of Guards that has left us has taken the direction of Kiew, and it is unknown whether on its arrival there it will form a part of the army of the centre, or be sent on without delay to the seat of war. These are the first regiments of Guards that have marched to the south; consequently the statement that has appeared in certain newspapers of two regiments of the cavalry of the Guard having been already employed in the Crimea is devoid of truth. Although the Russians have not hitherto had any Cuirassiers at the theatre of war, it is considered here not improbable that the destination of these Cuirassiers of the Guards is to oppose the French Cuirassiers. The Russian cavalry now in the Crimea is more than double the number of that of the Allied army."

In personal appearance the Prince has a tall, commanding figure—thin, but strong. His head and the upper part of his body incline forwards, but this appears to be more from the effect of custom than old age, for though sixty-three years of age he is hale and healthy. His eyes, which in his stooping position frequently shoot over his spectacles, have a firm and scrutinising look; his voice is deep and not sonorous; and his whole appearance impresses one with that decision and energy which peculiarly belong to a good military commander.

SEBASTOPOL AFTER THE SIEGE (*From a Soldiers' Letter in the Times*).—"The stupendous docks I cannot describe. I never saw anything, the work of men's hands, that can bear the slightest comparison. There are six capable of receiving the largest of the colossal ships that float, and they are as neat as they are large and mighty. The man who planned these was a Englishman—a Mr. Upton, a road surveyor and a delaiter. The Emperor rewarded him with the rank of Lieutenant-Colonel; and I was told by a Russ—an English prisoner at the Monastery of St. George—that the Emperor always shook him by the hand warmly whenever he visited Sebastopol. These works and buildings are held by the English, and we have shafts sunk all round the docks to blow them to destruction whenever instructions arrive to that effect from home. The guns and ammunition that have fallen into English hands are almost incalculable. Around the docks there are not less than 3000 guns, a vast number of which are of the largest calibre; and of shot there are piles of tens of thousands. The masts of the shipping slanting upwards above the waters in all directions suggest a train of strangely speculative ideas. The two Imperial forts (Nicholas and Constantine), now enemies, frown antagonistically at each other, and the cross fire from these over the harbour causes a reverberation that strikes with a mournful cadence upon the ear. Let this pass, that I may say a word or two upon the defences of the town. The scientific principles displayed in them surpass all that ever has been done before at sieges, and totally eclipse our best engineering tactics. I hesitate not to say—and I mean it with no malice or disparagement—that were the Russian officers to see our works they would laugh at them. The Russian works were apparently formed to meet any and every conceivable exigency. Their batteries were their trenches and parallels, and these parallels and trenches were their one line of batteries, forming mountain ranges which had mountains for their base. These were not altogether natural advantages, but they applied such principles of art as were best suited to whatever advantage nature offered. Our principles differed *in toto*. Could our trenches be faced about we should then be something near the principles upon which the Russian works were constructed. A person walking from the front can walk nicely into our works by reason of the earth being thrown to the front, making it a simple incline or small counterscarp. The Russians knew better; they made the perpendicular towards the enemy, revetting it with gabionsin order to do it effectually. Behind they had all kinds of shelter for the men and gunners, quite independent of, but contiguous to, the battery, round, square, and triangular—some open, but most of them bomb-proof. Behind also lay a large tract of ground, worked up to be a grand auxiliary to their operations. Tunnel-formed pits to receive our shell were numerous. Deep square pits were sunk immediately behind the batteries and men in hundreds as they scaled the ramparts—here a hill, there a hole—a ladder placed here, steppes formed there. Sharp-pointed uprights of gabions and broken bayonets stared you in the face as you looked down these pits and hollows. Disabled guns were not consigned to their graves as ours were, but the breech of them lowered in a hole behind the batteries with the fore part resting on wood, thus giving them an elevation of about forty-five degrees. These they fired with an overcharge by a train, and these we now discover sent those numerous messengers to the distance of the camps. But in front of the batteries of which I am writing they had another, a little lower down the hill, and to make this of immense strength the earth was raised from between the two lines of batteries, both independent of each other, but of mutual assistance if required—a broad, deep ditch, of twenty feet wide, in some places fifty, and as many in depth, from the crest of the second parapet. All these were covered with an abattis of large branches of trees, with tops outwards, and a *chevaux-de-frize*."



THE SIEGE OF SEBASTOPOL. DESTRUCTION OF THE SOUTHERN PART OF THE LARGE BARRACKS. (SEE P. 537.)

POLITICAL ECONOMY IN FRANCE.

THE first Napoleon had a profound contempt for the teachers of political economy, declaring that their science, rigidly reduced into practice, would pulverise an empire of granite. The nephew appears to have inherited the prejudices of the uncle, for he is constantly interposing Imperial authority between producers and consumers, and regulating the prices of commodities by his mere will and pleasure. It must be admitted that his position is exceptional. Owing his throne to universal suffrage, both policy and gratitude impel him to secure the support and affection of the working classes, who have not only raised him to supreme power by their votes, but given the strongest proofs of confidence in his dynasty and government by the alacrity with which they have subscribed to two considerable loans. It is, however, certain that the first object of a wise ruler is to render the people self sustaining, and teach them to become Independent of external aid. When a State provision is made for the necessitous, it should be of a settled character, in the spirit of the English Poor-law—which, properly viewed, is not a charity, but a right. Under our system the really indigent have the first legal claim to the products of the soil—a claim prior to that of the recipient of rent or tithe. This aid is not conceded, but demanded—and so demanded that it cannot be refused. The Institutions of France, unluckily, do not recognise a similar provision, which is some excuse for the line of conduct now pursued by the Emperor, as explained in the circular addressed by the Minister of the Interior to the Prefects. From this document we shall make some extracts.

It states that, as soon as the deficiency of the harvest was ascertained, the Emperor began to prepare remedial measures. "By his orders the prohibition to export wheat, maize, potatoes, and chestnuts was renewed, and none of those productions of our soil can at this moment be taken away from the consumption of the country. Distillation from corn was forbidden; the corn produced from our Algeria is exclusively secured to our own use." Every possible favour is granted to vessels importing provisions; the charges for conveying corn on railways is reduced; every combination of speculators and jobbers to effect any fraudulent rise in the country markets is to be severely punished. The Imperial attention is next directed to wages. Where the scale is not in proportion to the present dearness of food, the Prefects are commanded to bring about the organisation of a relief-fund, out of which the scale of wages is to be raised. Work is to be found by the Government functionaries for those who cannot obtain it from private employers. For these two objects a credit of 10,000,000 francs has been taken. The Prefects are strictly enjoined vigilantly to watch the proceedings of the Municipal Councils who are to superintend the distribution of this fund, and to take note of their administration. They are to take the initiative in bread tickets, economical bakehouses, and food societies, and make urgent appeals to individual charity. Finally, should bread riots occur, it is to be impressed on the people that agitation will not add a grain of corn to the supply, but aggravate distress by shaking public confidence.

In the present state of France, and considering the peculiar position of the Emperor, who has to consolidate a recently-acquired throne, every precaution against internal disturbance is justifiable; but it is only under highly exceptional circumstances that the Imperial policy can be defended. We are willing to believe that Louis Napoleon is maturing, if he has not long since matured, a constitutional system of Government, which he will proclaim in due season; for we do not believe that a statesman of his sagacity can contemplate the permanency of arbitrary power. An interval of repose is no doubt necessary to effect a complete pacification of the various discordant parties who desire either a restoration of the Bourbons or a Republic, but it is irrational to suppose that the press is for ever to remain under restraint, or the tribune permanently voiceless. We are hopeful that free political institutions will ere long flourish among our high-minded neighbours, and that the throne of Napoleon will be securely guarded by patriotism. But we expect, moreover, that the principles of commercial liberty will be recognised, for they will cement firmly the alliance between France and England. The Emperor knows our system and its safety. While his people can starve; nor are our people receiving parochial relief reduced to a subsistence on chestnuts which, we are told by the *Echo de la Dordogne*, form an important portion of the food of the population of that district during six months of the year. We are not driven to the clumsy expedient of making up wages out of Government credit, or directing our High Sheriffs or Lord-Lieutenants, to find work for our operatives. True it is that one gigantic evil still exists amongst us—periodically deranging trade, closing factories, arresting the arm of labour, and bringing the steam-engine to repose; we refer to our monetary system, which has made gold the master, instead of being the servant, of industry.

The restrictive system of France in matters of commerce is clearly traceable to erroneous views of the nature of a market, and France is the less excusable in this respect, since it was a French economist—the justly-celebrated M. Say—who first threw a clear and steady light on the subject. We quote from his letters to Malthus:—

> As each of us can only purchase the productions of others with his own productions—as the value we can buy is equal to the value we can produce—the more men can produce the more they will purchase. If certain goods remain unsold, it is because other goods are not produced; and it is production alone which opens markets to produce. I have advanced that, whenever there is a glut—a superabundance—of several sorts of merchandise, it is because other articles are not produced in sufficient quantities to be exchanged for the former: and if those who produce the latter could provide more of them, or of other goods, the former would then find the vent which they required; in short, that the superabundance of goods of one description arises from the deficiency of goods of another description.

The obvious inference from this reasoning is that the markets are most beneficial both to producers and consumers where the greatest variety of commodities is collected, so that the proportions of supply and demand may be in the closest ratio of equality; and, of course, this is most readily effected when perfectly free interchange is permitted. The present ruler of France repudiates such freedom, substitutes his own will for the will of the public, and narrows a market which, were his interference removed, would from year to year expand into ampler dimensions. But, while it is desirable that Louis Napoleon should abandon the errors on which restrictive commerce is founded, it must be confessed that some of our influential statesmen are constantly committing an error almost as pernicious when they accuse our merchants of over-trading and our manufacturers of over-production. These fallacies ought to have died out after M. Say's theory of markets had been promulgated, for that theory demonstrates that one-half of the goods of a country universally forms the market for the other half. It is, however, possible that the balance between supply and demand, in reference to a *single commodity*, may be disturbed; but this can never happen in reference to commodities in general, as Mr. James Mill, agreeing with M. Say, has shown. "The quantity of any commodity," says Mr. Mill, "may easily be carried beyond its due proportion; but by that very circumstance it is implied that some other commodity is not supplied in sufficient proportion. What, indeed, is meant by a commodity's exceeding the market? Is it not that there is a portion of it for which there is nothing that can be had in exchange? But of those other things, then, the proportion is too small. A part of the means of production which had been applied to the preparation of this superabundant commodity should have been applied to the preparation of those other commodities, till the balance between them had been established. Whenever this balance is properly preserved, there can be no superfluity of commodities—none for which a market will not be ready."

This reasoning is perfectly sound in the abstract, and subverts the doctrine of over-trading and over-production; and the conclusions to which it leads would be realised in practice if all commodities were exchanged by barter, and all taxes, rents, tithes, rates, and other public and private obligations, were paid in kind; but both the reasoning and the practice are falsified when the legal tender of a country consists of metallic money fixed in price. It is curious that the keen intellect of Mr. Mill overlooked this intrusive element, or rather its mode of action; for, though he distinctly notices it, he does not apply any corrective. "*When money*," he observes, "*is laid out of the question*, is it not in reality the different commodities of the country—that is to say, the different articles of the annual produce—which are annually exchanged against one another? Whether these commodities are in great quantities or in small—that is to say, whether the country is rich or poor—will not one-half of them always balance the other half? And is it not the Barter of one-half of them with the other which constitutes the annual purchases and sales of the country?"

This brings us to the paramount question of legal tender in relation to the fallacy of over-production. None object to production, but to some assumed excess implied in the preposition "over." But "over" is a term of relation; to what then is it related? Certainly not to natural demand measured in the desires of mankind to consume the good things of life; for that would assume that the great body of the people had more food and clothing and better lodging than they required; but such superfluities have never been known to exist. The term "over," then, can only be referred to mercantile demand. But the measure of mercantile demand consists in the amount of monetary instruments in which the equivalency of exchanges is expressed, when barter ceases; the fallacy we are combating, therefore, confounds a real *under*-production of legal tender with an apparent *over*-production of commodities. The money which buys the goods, and the goods which buy the money, are not in due proportion to each other. When the money is deficient, the goods must be sold for less than they cost, or not sold at all; when the goods are deficient, a great deal of money must be given for them, and many must go without, as is the case with corn during a famine. This chronic disease in trade frequently manifests itself. When the harvest is scarce, man must submit with resignation, for he has no command over the seasons; but when legal tender is scarce, the distress that ensues is remediable by man, because it is created by man.

While, then, we blame the political economy of France, which restricts and regulates markets, we are equally disposed to censure our own political economy, which restricts and regulates the amount of legal tender. Both nations would act wisely were they to open their ports to each other, and establish a system of legal tender, each for itself, deriving a convention value from the authority of the State, and circulating within each country—not without. There would then be gold enough for both, and to spare. Paris would disturb neither the Bank of England nor the Bank of Amsterdam. Were such a system universal among civilised communities, each country would have as secure and as permanent a possession of its legal tender as it has of its railways, canals, and rivers. Industry would be continuously employed, and Government would not have to find employment for the working classes. In an infinitely higher degree than the restless passions of men is bullionism the cause of discontent, disorder, and revolution.

NOOKS AND CORNERS OF OLD ENGLAND.

HOBSON'S CONDUIT, CAMBRIDGE

THE Corporation of Cambridge having recently enlarged their market-place, and entered into a contract for the building of a new Conduit, in the centre thereof, in lieu of the one at present existing under the above name, we engrave a view of the latter, an interesting specimen of the architecture of the seventeenth century. This Conduit was built in 1614 by Thomas Hobson, the carrier, who left by will £10 for further beautifying it, with an estate the proceeds of which have since been applied to its maintenance. The water supplied by this Conduit is brought from near Shelford, and runs in streamlets down the principal streets of Cambridge, adding much to the salubrity and cleanliness of the town

Hobson, besides being the originator of the Conduit, gave rise to the celebrated proverb, "Hobson's choice—that or none," from the independent manner in which he obliged customers to hire his horses, each in turn

HOBSON'S CONDUIT, CAMBRIDGE.

Hobson died on the 1st January, 1630, having, as we are informed by Milton, "sickened in the time of his vacancy; being forbid to go to London by reason of the plague."

The following is Milton's epitaph on this benefactor of Cambridge:—

> Here lies old Hobson; Death hath broke his girt,
> And here, alas! hath laid him in the dirt;
> Or else the ways being foul, twenty to one,
> He's here stuck in a slough, and overthrown
> 'Twas such a shifter, that, if truth were known,
> Death was half glad when he had got him down:
> For he had any time this ten years full,
> Dodged with him betwixt Cambridge and the Bull.
> And surely Death could never have prevailed,
> Had not his weekly course of carriage failed;
> But lately finding him so long at home,
> And thinking, now his journey's end was come,
> And that he had ta'en up his latest inn
> In the kind office of a chamberlin,
> Showed him his room where he must lodge that night
> Pulled off his boots, and took away the light:
> If any ask for him, it shall be said,
> Hobson has supped, and newly gone to bed.

We are glad to learn that the old Conduit will not be lost to the lovers of archæology, but is to be set up in some other part of Cambridge, to keep in memory one of her benefactors.

OPENING OF THE COMMERCIAL TRAVELLERS' SCHOOL, PINNER.

THIS elegant structure, which has just been finished, close to the Pinner Station of the North-Western Railway, as a home and school for the orphan children of commercial travellers, was formally opened on Saturday last, with an imposing ceremonial, under the presidency of his Royal Highness Prince Albert. The fineness of the weather, and the interest felt by the commercial body generally in the success of the institution, attracted an immense concourse of visitors, and the whole of the ceremonial was attended with complete success. The building, which is a handsome structure in the Elizabethan style, stands at an easy distance from the station, from which it is seen to great advantage, and, what is better, is in the centre of its own freehold—a piece of land of twenty-five acres having been obtained, on very advantageous terms, from the North-Western Company. The school will comfortably accommodate 200 children, with the requisite staff, consisting of a head master and mistress, a second ditto ditto, matron, servants, &c. It has been about two years in building, and the ascertained cost is somewhere about £12,000, three-fourths of which have been paid off, and a considerable portion of the remainder obtained through the success of last Saturday's festival.

The company commenced arriving in large detachments by the morning trains, and at half past twelve a special *convoi* started from the North-Western Station, with the chairman, honorary staff, the board, and an immense party of the friends of the institution. His Royal Highness Prince Albert arrived at one o'clock, in a carriage-and-four, from Windsor, accompanied by Gen. Grey and Col. Seymour, and the opening ceremonial commenced immediately after. In the large school-room, which had been handsomely and appropriately decorated for the occasion, a dais covered with crimson carpeting had been raised at the further end, furnished with a chair of state; and here the Prince received the address of the committee of management. A military band was stationed in the gallery, together with the children of the institution; and through their united exertions under the able direction of Mr. Frank Mori, the day's music was provided. The upper section of the room was railed off for the special accommodation of the ladies and children provided with purses towards the building fund, and the comfortable way in which it was filled afforded a pleasing omen of the day's success.

The appearance of his Royal Highness was the signal for loud and general cheering; and immediately after him came the managers of the school in the following order:—

Members of the Board, two and two.
Secretaries
Vice-Chairman.
Chairman.
Trustees
Treasurer.
Vice-Presidents.
The Clergy
The Sheriffs
The Right Hon. the LORD MAYOR.

THE Prince and Lord Mayor, attended by the board, having taken their places, the band struck up the National Anthem, the children sang the Hundredth Psalm, and the Chairman of the Board proceeded to read the following address:—

"We, the President, Treasurer, and other officers of the Commercial Travellers' Schools for Orphan and Necessitous Children, desire to approach your Royal Highness with feelings of unfeigned respect. As the consort of our beloved Sovereign, we tender you the homage of our sincere affection and esteem; and, as the parent of all Otho is pre-eminently," pure, and of good report," we hail your presence amongst us with sincere joy, and would express our heartfelt gratitude that your Royal Highness has been pleased to confer the honour and advantage of your countenance on the interesting occasion

It may not be displeasing to your Royal Highness to hear a few brief particulars respecting the institution with which, by your gracious act of this day, your Royal Highness is so kindly identified

Under the appellation of Commercial Travellers, there is in this country a large and important class of persons, whose business it is, constantly to travel for commercial purposes, and by whose exertions the internal commerce of this country is principally sustained. It was deemed fitting that an asylum should be established for the destitute orphan children of this large body of individuals, so peculiarly exposed, by the nature of their calling, to accident and danger. Deeply impressed with this feeling, a few energetic commercial men commenced this society in 1845. Before they appealed for assistance, either to principals or to the public, they manifested the earnestness and sincerity of their convictions by raising amongst themselves, and in their own body, £2000 towards the prosecution of the object they had in view, and the work thus commenced has, with the Divine blessing, steadily progressed and prospered.

In 1847 a large mansion was rented at Wanstead, into which twenty children were at first received. The number was gradually augmented, until at last it was found that the charity was fast outgrowing the dimensions of the premises in which it was located; and, after many expedients and much deliberation, it was resolved that the site on which this building now stands should be purchased, and an edifice expressly designed for the charity erected thereon. With great labour and anxiety, involving an outlay of upwards of £20,000, towards which between £5000 and £6000 have yet to be raised, the structural building has been completed. To the cultivated taste of your Royal Highness the edifice may present many architectural imperfections and defects, but the consideration that it has been erected to succour and educate the helpless will doubtless give it a charm in the estimation of your Royal Highness which a greater architectural display might fail to excite

Between two and three hundred young persons, from seven to fifteen years of age, have been or are now being carefully trained by this charity for a useful and honourable career in after-life, who, but for this institution, might have been growing up in neglect and indolence, contracting vicious habits, and maturing in immorality. The board of management refer with [illegible] to the [illegible] exemplary conduct of a [illegible] of these [illegible] children, since the location of the establishment at Wanstead, to the energy and purity of the principles they have expressed, in the strongest terms, their regret at the removal of the institution.

It is true that this establishment, from its very nature, can never be distinguished in the higher branches of education and learning; still it is hoped that, in all those qualities which constitute moral excellence, the scholars of this institution may vie in honourable rivalry with the noblest in the land and such of the scholars may never, like a [illegible] of sons of learned and titled parents, be numbered among the [illegible] of their race and time, they will, under the counsels of their Sovereign, at all produce, it is hoped, a succession of those hardy sons of commerce, equally essential to the existence of a commercial nation, and who, by their loyalty to the Monarch, their reverence for the laws, and their industry and integrity, shall contribute to the stability of the throne, and the material welfare of the empire

May your Royal Highness ever have occasion to look back with satisfaction on the part you have condescended to take in the proceedings of this day May you long live to exercise your beneficent influence as the patron of every institution which has for its object the real welfare of human woe, and as the promoter of every work calculated to advance the welfare of the people

May your august consort, our beloved Queen, long be spared to hold her virtuous and benign sway over this mighty empire; and may the present circumstances of the times, as well as the future events of her reign, be overruled by an all-wise and all-merciful Providence, to her Majesty's personal welfare, and to the permanent security and prosperity of her dominions.

To this address, to which his Royal Highness had been [illegible] with the utmost attention, the Prince was pleased to return the following reply,

Mr. Chairman and Gentlemen—Accept my best thanks for your address, and for the very gratifying expression of your loyalty and affectionate attachment to the Queen and her family. I have [illegible] by my presence here on this occasion, to [illegible] by the Queen [illegible] by myself, in everything affecting the welfare and happiness of any class of her subjects. I do not sincerely do I congratulate you on the success which has hitherto attended the spirited and praiseworthy exertions to secure an asylum for the orphan children of members of your body. Nor can I doubt that the kind sympathy and solicitude of those who participate, from the increased means of ascertaining education which have now been provided a corresponding amount of benefit, will be realised

At the conclusion of this reply, which was loudly cheered, the Rev. Dr. Vaughan, head-master of Harrow, offered an appropriate prayer, and the morning ceremonial finished with "Partant pour la Syrie," sung by the children in the French language, and with wonderful precision and effect. His Royal Highness on retiring was again loudly cheered, and was escorted to the board-room, where an elegant collation had been prepared for his refreshment. The decorations of this chamber, which were at once floral, national, and emblematical, were the subject of general commenda-

tion. Having partaken of refreshment, his Royal Highness went over the Home and minutely examined the whole of its internal arrangements, of which he expressed his entire approbation and satisfaction. The departure of his Royal Highness and suite took place immediately after.

THE DINNER.

At half-past three o'clock the whole of the company adjourned to the hall of school, in which an abundant cold collation had been prepared by Messrs. Bathe and Co., of the London Tavern Orders had been given to provide for 380 at that early hour, but the unexpected lineness of the morning, a sudden rush of applicants for tickets took place on the last day, so that at the eleventh hour 500, instead of 380, had to be provided for. The purpetic larder of the London Tavern proved, however, equal to the occasion, and, like Professor Anderson's magic bottle, poured forth an inexhaustible supply of creature comforts for all comers. A principal table ran along the room under the windows, at right angles to which were about ten others, and all were gally ornamented with geraniums and evergreens—a decoration that seemed peculiarly to harmonise with the antique oak framework of the room. Some confusion arose at first in consequence of the unexpected influx of company, but gradually every one found his or her place, and the important business of mastication commenced. The chair was taken by the Right Hon the Lord Mayor, who, although suffering from severe indisposition, was determined not to disappoint the Commercial Travellers—a punctuality that was all the more gratifying as it was not emulated by the Sheriffs, who had given reason to expect that they would be present to support their official chief. On his right sat Mr. G. Moore, the treasurer of the institution, and Mrs. Moore; Rev. Dr. Vaughan, Head-Master of Harrow School; Dr. Bridgewater Sams, J. P. Foster, Esq., Mr. and Mrs. Crampton, Sir. and Mrs. Green. On the left of the Chairman were Rev. Dr. Mortimer, the Lord Mayor's Chaplain; Captain Bulsh, North Western Railway; Messrs. Herbert Ingram, B. W. Horne, J. Brown, Thomas Jackson, Robert Clarke, Robinson Ridley, George Scoldale, F. Roberts, J. Aders, T. Blake, D. Blythe, J. D. Carter, J. R. Cuffley and Mrs. Cuffley, W. Holt, F. Lysaght, W. Macculloch, J. Rolls, W. Skeltin, F. Wood (Rugby), C. Woollarton, — Philipps, F. Adams, F. Brown, — Saul, &c. &c.

On the removal of the cloth the Chairman gave in succession "The Queen" and "Prince Albert and the rest of the Royal Family," making special mention of the munificence of the Prince in presenting a donation of 100 guineas to the institution), and "The Army and Navy."

His Lordship then rose and called for a bumper toast, "Prosperity to the Commercial Travellers' Schools." He said he trusted that the handsome building which they had that day seen solemnly inaugurated in the presence of loyalty, and with the sanction of the presence of a distinguished member of which body had favoured them with an appropriate present would prove the fostering home to many future distinguished members of the commercial body (Hear," and cheers). He had heard with admiration the eloquent address which had been so impressively read by the Chairman of the Board; but there was one point in it to which he must respectfully take exception. The address said that the object of the establishment, from its very nature, can never be distinguished in the higher branches of education and learning." Now, he for one was not prepared to place limits to the future intellectual success of the orphan children of commercial travellers; as who was to say what germs of talent and genius might not be hidden in so numerous an assemblage? They would receive fostering care and careful culture; and they were natives of a country in which the highest pinnacles of success were open to the humblest who might have energy and talent to climb them (Loud cheers). This was an age of progress, and no application could be too ambitious for our carefully trained rising generation ("Hear," and cheers). The Prince had that day intimated to him that it was the custom in Germany for the youthful members of all trades in travel for several years before they settled in life; and that to that circumstance might be attributed the superior intelligence and mental activity of their handicraftsmen. He (the Lord Mayor) was inclined to conclude that the pursuits of the commercial travellers had a tendency to sharpen the intellectual powers, and that in such a community the youthful members would be found worthy of the most careful mental culture? (Hear, hear.) He found in the address that the building in which they were then assembled was capable of accommodating 200 children, who would be preserved for a useful and honourable career; and we, but for the institution, would be left to poverty, neglect, and the ever-open temptations of immorality and vice (Hear, hear). Such an institution spoke for itself; and the prompt and liberal manner in which the purses had been contributed that day showed that little incentive was wanted to the charity of the commercial community. He should not detain them further than by proposing "Prosperity to the Commercial Travellers' Schools," with three times three! The toast was received with the loudest demonstrations of applause

The Rev. D. Moore next rose to propose the health of the Right Hon the Lord Mayor. He had been requested to submit for their approval a toast which he felt sure would meet with their heartiest concurrence. The principle which now received the most general consideration was, "The right man in the right place" (Hear, hear); and who could be fitter president than a gentleman who carried institution than the chief magistrate of the first commercial city in the world (Cheers)—the Commercial Travellers' Schools," with three times three! The toast was received with the loudest demonstrations of applause

The Rev. D. Moore next rose to propose the health of the Right Hon the Lord Mayor. He had been requested to submit for their approval a toast which he felt sure would meet with their heartiest concurrence. The principle which now received the most general consideration was, "The right man in the right place" (Hear, hear); and who could be fitter president than a gentleman who carried institution than the chief magistrate of the first commercial city in the world (Cheers)—the [illegible] man, the Right Hon, the Lord Mayor, as "The right man in the right place" (Loud cheers)

The Lord Mayor returned thanks, and proceeded to give the health of Mr. G. Moore, the zealous and indefatigable treasurer of the institution. (The company here rose and cheered for some minutes. He said that the toast he had to propose would, he trusted, command silence, for it was indicated respect (Hear, hear). When he gave them the name of George Moore he gave the name of a man whose zeal and enterprise, whose straightforward dealings, had secured him fortune, commercial eminence, and "troops of friends;" and whose active benevolence had mainly contributed to the success of the Commercial Travellers' Schools (Loud cheers). When they saw what zeal, energy, and administrative talent he had exhibited as treasurer to their institution, what might he not have been in one of public departments—the army, for instance? (A voice, "Commander-in-Chief!" Cheers and laughter.) He was on that occasion their Commander-in-Chief, and no one less potent could had drawn (Cheers and laughter) from his house, suffering as he was from influenza (Cheers). Having thus rendered "suit and service," he would complete his duty by giving them the health of their worthy treasurer, George Moore—God bless him! (Loud and protracted cheering.) This toast having been duly honoured, his Lordship apologised for his premature departure on the score of indisposition, and vacated the chair, to which

Mr. Moore was called by acclamation, and proceeded to return thanks for the toast. He said he was deeply sensible as well of the flattering terms in which the Lord Mayor had proposed his health, as of the very gratifying manner in which it had been received by the company. His heart overflowed with gratitude; and, as Treasurer of the Commercial Travellers' School, he high depend upon it, they were kind and liberal supporters. He trusted that he had now said enough on the personal topic, and would at once proceed to make a few remarks on the business which had brought them all there that day (Hear). It was in the year 1845, at Christmas, that he was first called upon to preside over the Commercial Travellers, two hundred in number, and, if a melancholy feeling crossed him on the present auspicious occasion, it arose from the consciousness that since then many of the originators of the institution, and who had worked most efficiently for its success, had gone to their long home (Hear, hear). In June, 1848, the institution had so far progressed that twenty children were elected, and at once taken care of in a rented house at Wanstead. Since then great exertions and heavy sacrifices had been made, but still there was much work to be done. They had completed the building in which they were assembled, and its existence was a great fact (Hear, hear)—which would endure long after they, and even their children, had been forgotten (Hear, hear). It was true that many money had been spent in its construction than had been calculated on; but how, then, to use a commercial phrase, they "took stock," they found that their expenditure had been more than [illegible] commercially. Everything in the shape of extravagance had been avoided, and he thought that the more they examined the building the more convinced would they be of its suitability for the purpose intended. It was a noble site which would remain long after they were gone, and be a monument of their zeal and exertions in a noble cause (Loud cheers). Some of his auditory might complain that the expense of construction had been greater than was originally intended; but he asked any lady or gentleman if, when building for ever, and to a building completed for the original estimate? ("Hear," and a laugh). He could not conduct the business, but he had never been able to get a building finished [illegible] original estimate. They had expected that the building would cost £[illegible] they had entered into their [illegible] is very high, and the [illegible] obtained their land, ha[illegible] capital investment for which the [illegible] his friend Captain Bulsh (Cheers). The difficulty then, under which they laboured was to provide for the £1000, and very much would depend upon their liberality on that occasion. There was one encouraging feature in the finance, and that was, that if the building was completed [illegible] then sell in smooth water. They had a large income from their funded property, £15,385, the interest of which was £460 a year, and the annual subscriptions made up the remainder of the £1000. Some gentlemen might [illegible] he could say, without being accused of unmanly [illegible] tions, that, the building once paid for, there would be no difficulty whatever. They all knew how satisfactory it was to be connected with a healthy concern, and how disgreeable was anything like insolvency, and he could assure them that, if they only opened their hearts and completed the building fund, there would be no cause for uneasiness on that score (Hear). They had at present in the school 140 children, and in December would elect as many as they had funds for, there being now no excuse on the score of want of room. Eighty children had left the institution, a number which might appear small; but then it should be recollected that they maintained and educated them from the age of seven to fifteen years, so that for the first seven years there were no discharges. Now, however, the case was different, and the good of the institution would be felt, as the discharges would bear a fair proportion to the admissions; and he was happy to add that the orphans of their institution were much sought after for situations in the City ("Hear," and cheers). This was a point of vital importance, for of what use were good education and care in childhood if the pupils were afterwds thrown on the wide world of London unprovided for? (Hear). That would not be the case with their orphans, for he believed there was not one of them who would not find some kind-hearted man to get him a situation (Cheers). He now begged permission to allude to a subject which he considered gave him some anxiety. He had as many applications, that he must beg of mothers who had relatives in prosperity to endeavour to enrest their sympathy for their children, so that the resources of the school might be exclusively devoted to those who were most destitute. He trusted that these observations would go forth, and be taken in good part, as his only object was that the school should prove as beneficial to the commercial community as possible (Hear, hear). It had been often said, and he must confess he had said it himself at the outset, that it was almost impossible to get commercial men to combine for any definite purpose, so strong and so great were their jealousies; but he was happy to say that in the case of the Commercial Travellers' School such a compliment was not borne out. Commercial men had combined to support the institution, although employed in something there were also travellers who had worked as earnestly and as successfully as could be expected (Hear, hear). He might name names, but that was not the place, for there were commercial men whom he hoped would meet with their reward, if not in this world, in the next (Cheers). But the deficiency was the matter in hand that evening, and, without being tedious, he had only to say that if he could say names announce the sum they required it would be a most fortunate circumstance for the school. He would be the last man to ask any one to give more than he could afford; but of this he was [illegible] to all those who could contribute the commercial men of [illegible] Up to [illegible] five guineas [illegible] received that day; and he could say that the [illegible] there was any lady or gentleman present who had been [illegible] before the Prince, they might come up then, and their donations would be thankfully received (Laughter). To commercial men themselves he would give one parting admonition, one word and [illegible] voice, and that was, to take care that, by holding back from the society, they did not before long come to be looked upon as the black sheep of "the road." He hoped they would take his advice, and not let such an epithet apply to them (Hear, hear). There were a few principals also who had not subscribed, but he hoped that ere long they would; it was their duty, as they as well as the travellers were interested in the prosperity of the school. He had lately been to Manchester, being one of a deputation of half-a-dozen, headed by Mr. Cuffley, and the company would be glad to hear that Manchester had nobly done its duty. He had also met with support in Bristol, and was promised efficient aid in Birmingham; and he must add that Yorkshire had come forward most handsomely. He would remind his Birmingham friends that, although the Russian and the French might have taken a good many of our sovereigns, trade never was in a more healthy state, and commerce had nothing to fear (Hear, hear). To the ladies he would say that the more regulations offered them wonderful privileges, as they could now become life governors for five guineas; and even the children who had given purses of £2 10s. might, by making that sum five guineas, secure the same privilege. He should think little of their judgment or zeal if they did not come in, now that they could do so at half-price. He congratulated himself on the largeness of the company, the most numerous he had ever seen assembled on a similar occasion. He could only express his hope that they were all comfortable, and he could inform them that there were half as many more accommodated in other rooms. Everything was in excellent hands, and there was not much danger of a famine when the commissariat of the London Tavern was called into requisition (Loud cheers). One gratifying fact he had to mention before he sat down, and that was that their arrangements had been minutely inspected and highly approved of by Prince Albert, who had kindly said that from their plans he would take a hint for the management of Wellington College (Cheers). He had first felt a delicacy in intruding himself on his Royal Highness, [illegible] who had apply his Royal Highness said, in a most condescending manner, "You have my heart, good wishes and support," and at once consented to become the patron of the institution (Loud cheers)

A list of subscriptions was then read, including:—His Royal Highness Prince Albert, £100; Messrs. Coutts, Moore, Crampton, and Co., Bow-churchyard, £105; William Nicholson and Co., Brunswick, £105; Messrs. Dent, Alcroft, and Co., [illegible] £21; Thomas Jackson, Esq., raised by contributions, £60; Robert Carvill Ellis, Esq., £62 10s.; Herbert Ingram, Esq., ILLUSTRATED LONDON NEWS, £21; — Callow, Esq., £21; Walter Parker, builder, £21; John Crowdon, Esq., £21; the Right Hon. the Lord Mayor, £10 10s., &c.; amounting, in all, to nearly £2[illegible]

The next toast was, "The Bishop and Clergy of the Diocese," eloquently proposed by the Rev. Dr. Mortimer, the Rev. Dr. Vaughan returned appropriate thanks; in the course of which he expressed the hearty interest he felt, as a schoolmaster himself, in the prosperity of so valuable an institution. [illegible] Institution and the Commercial Travellers' [illegible] Mr. [illegible] the [illegible] and [illegible] the [illegible] to the school, by [illegible] [illegible] [illegible]

FOX-HUNTING.—"WHOO-WHOOP!—TALLY-HO!"

master's horse, they learned their destination, and then away they trotted again, fifty yards ahead of us. The field that met us was small, but aristocratic. A parson-like looking keen eyed gentleman, of about forty or thereabouts, in a black coat and white cord breeches, turned out to be Colonel (now General) Eyre, of the Cape and Crimea, according to rumour the successor of General Simpson. The first covers tried were among the clays, but although we viewed a fox almost immediately, in a hill-side hazel copse, the scent was so bad that the hounds could make nothing of it. After a couple of hours' perseverng but very unsatisfactory work—the sun having grown quite hot—it was determined to try the forest covers. On our way we passed between oaks huge enough in bole and branching arms to have sprung from acorns planted by Maid Marian.

At Lawn Tower (seat of the Duke of Newcastle) we had better fortune. The frost had not reached the ground covered with dry leaves. A whimper—an answering tongue—an encouraging cheer from the Master—a crash—another cheer and blast of the horn (so essential in woodland hunting)—set our hearts beating and horses moving. The scent improved every moment. Jack, the first Whip, viewed our fox across a ride, and at him we went pell mell, until the woods rang again. After making two or three rounds of the plantations, he made for an open gorse-covered moorland, where galloping began in earnest. From the moorland we swept over a series of inclosures to a dank meadow, where a row of great alder-trees gave warning of a brook, which we had no sooner crossed than the hounds threw up their heads. After a short check they settled to him again, and carried on with slow hunting pace into Thoresby-park (Earl Manvers'), over turf as springy as a race-course, and through a most wonderful avenue of gigantic hollies. In crossing this park scent failing a little in one of the plantations—I was amazed at the steadiness of the hounds. Hares, rabbits, pheasants, deer, sprang up on each side, until the wood seemed alive; but not a hound stirred or lifted his head from his proper work. From Thoresby we ran into Clumber-park, getting every moment on better terms; but just as we came up to the Dairy we missed him as suddenly as if he had gone to ground. After trying every likely place for a beaten fox in the outbuilding, Captain Williams began his cast in a wood of perhaps a hundred acres, with plenty of room to ride between the trees. And here I saw the difference between a real forest country and open counties with isolated gorse covers and little thin belts of plantation. The hounds in a forest, not being able to see the huntsman, require hollas and blasts of the horn to encourage them; every now and then the young hounds passed, afraid of being lost; and the field could not venture to wait in rides out of sight or hearing of the hounds, but were obliged to keep their eyes and ears open, as well as close to the hounds, which once lost they might never see again. As lifting a pack to view-hollas is almost impossible in this country, the hounds are taught and obliged to depend on themselves. Now, sitting on your horse on a cold day outside a big plantation while the huntsman and hounds are working a fox inside with a cold scent is very dull work; but riding in an open forest, with plenty of room to gallop between the trees, while the great woods ring again with the cry of the hounds and the cheers of the huntsman, is quite a different thing. After an awful pause a fox was seen sitting in one of the rides, with his fore paw up, attentively listening, and settled by some impatient sportsman to be our fox—I am afraid I was one of the guilty ones. Then followed a wild "Tally-ho—tally-ho! Hark holla! hark holla! Too-too too!" Crack crack! Amid which the hounds came dashing from all sides, impetuously lashing their sterns, and gathering into a pied cloud of impatient fury around and before the Master. A chorus of hounds and horn and huntsman's holla made the old oaks ring again; and for a period that might have been five minutes or forty for I could not count the time we raced through and round and round the great trees in a tumult of excitement. It was not the place to ride a bolter, a bull necked one, or a blind one; for, going at such a pace among trees, everything depended on the horse's temper and mouth and the rider's hands. At length the pack made the forest too hot to hold Master Reynard, and we came out to the open country, over a succession of newly rallied paddocks, where a continuous rap-rap-rapping, on all sides, like a policeman's rattle in a lady's hand, and an occasional load crack, told of some horses not quite perfect at timber. The paddocks led us into cultivated country. I was almost hesitating whether to turn or follow the hounds over a field of wheat most beautifully drilled, when my neighbour—taking the bridge in his stride—cried, "Come along; it's the Duke of Portland's own farm;" and, as I followed, "He won't mind riding over his wheat!" So, forward was the word, over turnips and grass—the fencing not to be despised, and the pace above average. And now the scent improved: the hounds settled to it. Crossing a new turf bank, we leaped on to an open moor—the ancient "Forest," but without a tree—in time to see the fox topping a distant undulation, and the pack, all together, racing down a green turf ride, with the scrub breast high; and over this turf the Master, on his famous brown mare, and those who were fortunate enough to be mounted on thoroughbreds, galloped at best pace, and then had enough to do to keep on terms with the hounds. And so we swept along, mad with pleasure, until a turn brought us within sight of the emerald-green watermeadows of Welbeck; and there, turning sharp round just at the end of a big wood, the hounds ran into him close to the mouth of an open drain thus making a good finish to an excellent day's sport, in which I had ridden at a gallop through all the finest scenery of the Dukeries, as though Reynard had been intent on doing the honours of the county to a stranger.

Our return was through the oldest part of Sherwood Forest by moonlight, trampling through fern that in summer (I was told) would hide a mounted horseman. We stopped in one of the glades, and the Master sounded his horn again and again, to call a lost lame hound. I almost expected to see Robin Hood and Friar Tuck and their merry men burst with bows and bills from the surrounding thickets. In a two hours' ride we saw game of every kind, from deer to mallards and herons, and plenty of Highland bullocks, but not a living soul except an old woodcutter with his donkey, and we never travelled more than a quarter of a mile on a made road. By the time we reached the kennels it was dark. The Master's horn sounding to give notice to the feeder waked up the cry of the hounds left at home. A quarter of an hour was sufficient to feed the hungry pack—a duty which Captain Williams invariably performs himself.

And so ended my first day in the Forest. The sport was said to be above the usual average. I shall always remember it with pleasure. A bad day in the Forest, with a scent, is better than the best day of monotonous stag-hunting from a cart, every sportsman who has the opportunity should pay a visit to the Dukeries, where he will find hunting, if not racing, in perfection. Still, Captain Williams's admirable kennel management, skill and success in the field, perfect horsemanship, and invariable courtesy, deserve a better country than this rough triangle, squeezed in between three great hunts, like the Quorn, the Belvoir, and the Burton.

"GONE-AWAWOOY

THE ZOOLOGICAL SOCIETY'S MENAGERIE, REGENT'S-PARK.

THE Society has recently made an interesting addition to its collection in a pair of Semipalmated Geese, from Australia (*Anseranas Melanoleuca*) the Swan-Geese of the colonists. They are stated to be only found in the northernmost parts and are the only birds of the kind which have been received in this country. They were sent from Port Arthur. Mr. Gould, in his valuable work on the "Birds of Australia," vol. viii., thus describes this rare bird:—

When New South Wales was first colonised, this fine species was very abundant on the Hawkesbury; it is, however, no longer [illegible] of that river, or of any of the streams within the [illegible]y; affording another instance that the progress of civilisation invariably leads to the gradual extirpation of the more conspicuous of the natural productions of the countries over which it extends its sway; it is still however abundant in such parts of the Port Phillip district as are unlocated by the settler, and as we progress northwards gradually becomes more numerous, until we reach the rivers and lagoons which empty themselves into Torres' Strait; here it occurs in such countless multitudes that it forms one of the chief articles of the food of the aborigines, and was of the utmost value to those intrepid explorers, Dr. Leichardt and party, during their adventurous journey from Moreton Bay to Port Essington, as will be seen in numerous passages in his interesting account of the expedition. So dense are the flocks that occur in the northern parts of the country, that the natives are enabled to procure numbers of them by spearing; and, says Dr. Leichardt, "it seemed that they only spear them when flying, and always crouch down when they see a flight of them approaching; the geese, however, know their enemies so well that they immediately turn upon seeing a native rise and put his spear into the throwing-stick. Some of my companions asserted that they had seen them hit their object at the almost incredible distance of 200 yards"

AUSTRALIAN GEESE, IN THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S PARK.

THE DUBLIN AND WICKLOW RAILWAY.—TUNNEL AT KILLINEY HILL.

OPENING OF THE DUBLIN AND WICKLOW RAILWAY.

On Thursday (last week) the portion of this line of railway between Bray and Wicklow was opened by the Viceroy and a brilliant company. The works had been inspected upon Monday by Colonel Wynne, and a communication addressed by him to the board of directors expressed his perfect satisfaction with the line, and the measures taken to ensure its stability and the safety of the traffic.

The excursion train, which left the Harcourt road station at half-past eleven o'clock, was freighted with numerous company, consisting of the directors, principal shareholders, and a select circle to whom invitations had been issued, amongst whom were his Excellency the Lord Lieutenant, Lady Dover, the Marchioness of Kildare, Mr and Lady F. Howard, and a large circle of fashionables. The party received numerous addresses along the line, among whom were the Earl of Meath, Sir George and Lady Hodson, Mr. Shaw, Mr. Killen, &c.

The special train reached Bray in half an hour precisely, and, after a stay of twelve minutes, set upon its journey round the Head, which at first was, doubtless, one of considerable anxiety to many of its inmates. Those who had not previously visited the spot had been taught to look upon this portion of the line as a bluff, rocky promontory, in which each step was fraught with greater peril than the last; whilst those who had an opportunity of seeing the works from the road leading round Bray Head at a higher level, even within a comparatively recent period, were still more impressed with the difficulties and dangers of the route, which seemed hardly tempting to a sure-footed pedestrian. Viewed from the permanent way, however, the aspect is very different; and although a novice would find it hard to banish from his mind the idea that a rock from above was momentarily to drop and crush the party, or sweep them into the depths far below, the line presents every appearance of solidity and strength, and masonry has been employed with a view to additional security in the places at which the most fearful precipices occur.

The train was stopped at each of the points of superior interest, and the excursionists were afforded the fullest opportunity of examining and admiring the details of this stupendous undertaking. The first of these was at a point known as the Ram Scalp opposite Bramstone tunnel, at which point it has been found necessary to construct a wooden bridge 300 feet in length, at 75 feet perpendicular altitude, supported on buttresses of masonry. The viaduct at this point had been made up nearly to the required level, and in one night it was swept away and carried out by the waves, which are still coloured by the soil to a considerable distance. Measures have, however, been taken which it is believed will prevent the recurrence of a similar circumstance. The next tunnel was that of the Brandy Hole, so called from its having, in former days, been the resort of smugglers; and, after running through numerous passes cleft in the solid rock by the iron hand of science, a third tunnel is arrived at, one-eighth of a mile in length, cut through a portion of the mountain known as the Cable Rock. The effect of the several cuttings through the mass of stone is singular in the extreme. At each end of the passage the sea is visible; and in one case the three tunnels are distinctly seen on before, whilst a solid wall lies between the train and the sea, and overhead on the other hand, in one unbroken sheep, towers the bulk of [illegible] alarming from its massive grandeur. Emerging from [illegible] passages and gigantic walls, one might [illegible] a chasm, that the difficulties of the [illegible] ought to [illegible]; but at no point were the skill and patience of all connected with the undertaking more severely tested. Owing to numerous springs and the extremely soft and slippery nature of the [illegible] of several hundred feet at a time were constantly taking place, and the impediment was only overcome at length by the formation of watercourses to carry off the moisture. An uninterrupted and perfectly level run for nearly five miles along the Murrough—celebrated for its wild-goose shooting—then ensues; the only remarkable feature in which portion of the line is the one particular spot, where the accumulated water of the level ground forces its way through the sand and gravel, which, in the summer, is again washed up into a barrier by the advancing tides, to be again driven

DUBLIN AND BELFAST RAILWAY.—VIADUCT ACROSS THE BOYNE, NEAR DROGHEDA.

out in the winter by the rush of water from the neighbouring hills. From this circumstance the place has obtained the name of "The Breeches." A large drain, canal-shaped, has been made by the company, with the consent of Lord Fitzwilliam, along this portion of the country, running parallel with their own line. The only other localities of interest passed by the line before arriving at the terminus are the lake and the well-known Wicklow race-course, from a point near which, under the original plan, the railway was to have branched off to Wexford. On arriving at the terminus a guard of honour, consisting of about sixty of the Militia, under the command of Capt. Tottenham, Mr. Townsend, C.E., and Mr. Mundy, S.I., were drawn up to receive his Excellency, whilst the National Anthem was performed by the band of the Wicklow Militia. A mounted escort of constabulary attended his Excellency to the town hall, the intermediate streets being crowded with the inhabitants, by whom the Viceregal cortège was received most enthusiastically. Two triumphal arches formed not the least conspicuous feature amongst the numerous displays expressive of loyalty and general rejoicing visible in every direction. His Excellency was received at the Town hall by Mr. Tottenham, who had been deputed to present a congratulatory address on the part of the inhabitants of Wicklow and the county. Mr. Tottenham read the address; to which his Excellency returned the following reply:—

Gentlemen,—I know not how sufficiently to thank you for the terms of an address so gratifying to me in every point of view.

Though you refer with kind recollections to the period of my former official connexion with Ireland, yet this is the first opportunity which I have enjoyed of visiting the town of Wicklow, and it is at least a great satisfaction to me that my earliest personal acquaintance with the place and its inhabitants should coincide with the completion of an undertaking which I trust is destined to serve as a date to them of largely-increasing prosperity. It is my earnest wish that the blue breadth of waters which bounds your borders may not only form the beauteous setting to your emerald fields, but may wat the useful and abundant tributes of commerce to your improved harbour and enlarged quays, and that the storied wealth of your romantic country may not only delight the eye and refine the taste of the traveler and artist, but also the happy abodes of a peaceful, industrious, and virtuous population.

His Excellency, with the Viceregal party, then proceeded to Ballycurry, the residence of Mr. Tottenham, where it had been previously arranged they were to partake of luncheon; but on their arrival they found a kind invitation to a déjeûner given by the directors in honour of the occasion. In the interval which elapsed the excursionists spread themselves in different directions to see as much of the country as time and the very unfavourable condition of the weather would admit of; and shortly after half past two o'clock they assembled at the déjeûner, which was laid out in an extensive building in the vicinity of the station house, intended originally for the double purpose of a savings-bank and school house. The proceedings went off most agreeably.

With the view of affording his Excellency an opportunity of seeing the entire of the coast line, the directors judiciously ordered that the return route should be by Dalkey and Kingstown. The line abounds in its entire length with glimpses of the most exquisite scenery, and the sites for the intermediate stations have been so admirably selected as to afford tourists the utmost facilities for visiting each place of note in this highly-picturesque quarter. The Dalkey hill station in particular affords a ready approach to the well-known demesne of Killiney, close to which may now be observed the foundation of a church, the site for which has been given gratuitously by the liberal proprietor. Kingstown was reached by the excursionists at six o'clock; and the special train which was in waiting conveyed the delighted party to Dublin in less than ten minutes.

THE DUBLIN AND BELFAST JUNCTION RAILWAY.

THE noble viaduct engraved upon the preceding page is one of the finest works upon the above important line of railway. It crosses the Boyne at the large and thriving seaport of Drogheda, about four miles west of the Irish Sea, and by railway twenty-nine miles north of Dublin. This is a point of considerable interest to the tourist, who here has to take leave of the beautiful scenery of Dublin and the county, so long formerly strongly fortified, and some remains of the walls exist: it has two churches, an elegant Roman Catholic cathedral, numerous public buildings, and the suburban villas upon the banks, with the bustle of the harbour, render this a very picturesque locality.

THE BRIDE OF CHERSON. A CRIMEAN HEROINE.—The following little story deserves a more general circulation than it is likely to have obtained in the perilous columns of our London journals. Count [illegible] lately stood the republican city of Cherson, famous for its freedom, its commerce, and its wealth. In the days of the Empress Eugene, the young Gyon, daughter of the President of Cherson, was married to Prince Asander, one of the neighbouring King of Bosperus. To guard the liberties of the republic against treach[illegible] and the Princess Asander, who was a Catholic, and have no intercourse with Bosperus. About two years after the marriage, the President being dead and his wealth having descended to his daughter and her husband, it happened that a favourite wedding-guest of Gyon had come to visit her at [illegible] and she was conducted to pass a quiet hour or so [illegible] in a room over some granaries attached to the palace. While pursuing her employment of spinning in this recess a portion of the apparatus fell on the floor, and got entangled in a corner, so that it could not be extricated without removing a tile of the pavement. The removal of the tile enabled her to see into the granaries below, and there she saw that, instead of bales and sacks, a number of Bosperian soldiers were secreted. She immediately sent to Gyon, who hastened to her, expecting to be greeted with pardon and congratulations for [illegible] time, the young heroine's attention was directed to the formidable contents of the chamber below Gyon immediately communicated with some of the chiefs of Cherson, and it was ascertained that her treacherous husband, surreptitiously brought over these foreign soldiers disguised in trading-vessels, and that they were kept in concealment until a sufficient force was collected, when they were to be employed in overpowering Cherson, destroying its liberties, and annexing it to the kingdom of Bosperus. Her decision was immediately made. The unsuspecting traitor Asander, with his Chersonese associates, having retired to bed early one [illegible] and the whole palace, containing Asander, with his [illegible] his soldiers, and the whole palace, contained [illegible] Gyon, [illegible] Bosperian soldiers, [illegible] Asander, [illegible] and [illegible] and [illegible] and

MR. MACAULAY AND HIS EDITOR.*

Although Mr. Macaulay, with his growing love of study and retirement, has to a great extent abandoned the dazzling attributes of statesmanship for the humbler pursuits of philosophy, and the exciting efforts of oratory for the calmer labours of authorship, still the part which he acted in the political struggles of a very momentous and critical period cannot be forgotten by the world; those brilliant elocutionary displays with which he from time to time, electrified the House upon almost every question of domestic policy—he did not often meddle with purely foreign affairs—will never be permitted to fade entirely from the page of history, or be denied the share of influence which they must naturally and justly exercise upon the colour and progress of events. But it will not be merely as illustrating his conduct as a statesman and member of Parliament that these effusions will continue to be read with interest, but as collateral indications of his views and habits of thought as an historian. In this latter sense we gladly welcome a volume of Speeches by the right hon. gentleman, which appears in the interval between the publication of the first and second portions of his "History of England since the Time of James II.;" conceiving that we shall be in a position better to appreciate his strictures upon the public men of a by-gone age, from having refreshed our acquaintance with his own conduct as a public man.

Whilst, however, accepting this volume with thanks and pleasurable anticipations, we are sorry to gather that its production has not been a matter of free choice on the part of the author, but that it has been forced upon him by the conduct of others conduct most reprehensible in itself. We quote from the Preface, to explain it, the passage which explains the author's personal feeling on the subject:—

It was most reluctantly (he writes) that I determined to suspend during the last autumn a work which as the business and the pleasure of my life, in order to prepare these speeches for publication; and it is most reluctantly that I now give them to the world. Even if I had estimated their critical merit much more highly than I do, I should not willingly have revised, in the quiet times in which we are so happy as to live, the memory of those fierce contentions in which too many years of my public life were passed.

These observations are highly creditable to the heart of the writer, and indicate a serious and reflective habit of mind, a deep conscientious feeling, which we, unfortunately, do not often meet with in public men. Nevertheless, from what we have observed already, it will be gathered that, however we admire his sentiments, we do not concur with Mr. Macaulay in his views regarding the suppression of his speeches; we do not even participate in the melancholy rebuke of the vanity of the "fierce contentions" of party implied in the words "in which *too many years* of my public life were passed." Public life, so long as public men differ in opinion, must necessarily be a field of contention, often "fierce contention;" and it should serve as a wholesome restraint upon the disputants, when in danger of being betrayed into excess by the heat of contest, to recollect that the responsibility for their conduct will attach to them long after they have ceased to act in public affairs—that they will that they do, though repented never so earnestly in their life-time, will live after them to spea yet unborn—entailing consequences of bitterness and regret. Mr. Macaulay, however, has perhaps less occasion for apprehension upon this score than any of his compeers of equal rank in public affairs. Throughout a pretty active career, from his first able speeches in support of Parliamentary Reform delivered nearly a quarter of a century ago, down to his eloquent and feeling review of public affairs and public men in his address to his constituents at Edinburgh in 1852, we believe him to have been a man of strong convictions; to have undertaken no cause which he did not sincerely believe to be a just one; and to have pressed no cause beyond what he conceived to be its legitimate purpose, nor by other than legitimate means. Above all, powerful as he was in sarcasm and invective, we do not recollect any occasion in which he indulged in them to excess, or simply with views of personal triumph. And if we be right in these ideas of Mr. Macaulay's past career and public character, how impressively do avowals of misgiving upon the score of supposed excess come from his pen;—how graceful the apology to the memory of a great name, de[illegible] from the lists, contained in the following passage:—

[illegible]ns which, when society was convulsed by political dissension, and when the foundations of Government were shaking, were heard by an excited audience with sympathy and applause, may, now that the passions of all parties have subsided, be thought intemperate and acrimonious. It was especially painful to me to find, on looking back through the vista of my own recollection, and to the recollection of others, the keen encounters which took place between the late Sir Robert Peel and myself. Some parts of the conduct of that eminent man I must always think deserving of serious blame. But, on a calm review of his long and chequered public life, I acknowledge with sincere pleasure, that his faults were much more than redeemed by great virtues, great sacrifices, and great services. My political hostility to him was never on the smallest degree tainted by personal ill-will. And, after his fall from power a cordial reconciliation took place between us: I admired the wisdom, the moderation, the disinterested patriotism, which he invariably showed during the last and best years of his life; I lamented his untimely death, as both a private and a public calamity; and I regretted that the last sharp words which had sometimes been exchanged between us might be forgotten.

Having now done justice to the motives with which Mr. Macaulay would have been disposed to suppress and consign to oblivion the oratorical effusions which he illustrated and distinguished his career as a statesman, we proceed to the graver matter of his complaint of the circumstances under which he found himself compelled to abandon his wishes, to forego his intention, and for a time to interrupt his devotion to a work which was at once "the business and the pleasure" of his life, in order to produce the volume before us. Mr. Macaulay thus states the case, and we are prepared to go into it in some detail, because we conceive it to be one upon which it behoves the republic of letters, for its own credit, and for its own interests, to express a very distinct and emphatic opinion. Mr. Macaulay states —

Unhappily an act for which the law affords no redress, but which I have no hesitation in pronouncing to be a gross injury to me and a gross fraud to the public, has compelled me to do what I should never have done willingly. A bookseller, named Vizetelly, who seems to aspire to that sort of distinction which Curll enjoyed a hundred and twenty years ago, thought fit, without asking my consent, without even giving me any notice, to announce an edition of my Speeches, and was not ashamed to tell the world in his advertisement that he published them by special license. When the book appeared, I found that it contained fifty-six speeches, said to have been delivered by me in the House of Commons. Of these speeches a few were reprinted from reports which I had corrected for the "Mirror of Parliament" or the Parliamentary Debates, and were therefore, with the exception of some errors of the pen and the press, correctly given. The rest bear scarcely the faintest resemblance to the speeches which I really made. The substance of what I said is perpetually misrepresented. The connection of the arguments is altogether lost. Extravagant blunders are put into my mouth in almost every page. An editor who was not grossly ignorant would have perceived that no person to whom the House of Commons would listen could possibly have been guilty of such blunders. An editor who had the smallest regard for truth, or for the fame of the person whose speeches he had undertaken to publish, would have had recourse to the various sources of information which were readily accessible, and, by collating them, would have produced a book which would at least have contained no absolute nonsense. But I have unfortunately had an editor whose only object was to make a few pounds, and who was willing to sacrifice to that object my reputation and his own. He took the very worst report extant, compared it with no other report, removed no blemish however vicious or however ludicrous, gave to the world some hundreds of pages utterly contemptible both in matter and manner, and prefixed my name to them.

The offence charged against Mr. Vizetelly is twofold—stealing "a good name," and then pelting it in the process of conversion. First he floats a book upon the public under the false pretence that it is produced "by special license" of a certain author of repute; and then he makes such egregious nonsense of the materials which without leave or license he has so appropriated, that the author is compelled, very unwillingly, to compile and publish another book, which he never intended publishing, merely to counteract the injurious effects of so much absurdity issued in his name. The remedy so adopted is perhaps the best that was open to him; but still it only partially meets the evil, which nothing but the suppression of the spurious production would effectually eradicate. Mr. Macaulay's volume of Speeches is published at a fair remunerative price, according to the ordinary tariff of the day; the Vizetelly rubbish, proving unsaleable at the low charge originally demanded for it, will naturally go through every stage of depreciation, falling thus into the hands of cheap buyers, who will never see or hear of the antidote prescribed for the poison contained in it; until, at last, even on travelled trunks or round our household butter, the unblushing lie, the damaging absurdity, will be perpetuated in an age when Vizetelly's name, and whereabouts, and calling, are utterly forgotten.

Mr. Macaulay says, "I could fill a volume with instances of the injustice with which I have been treated,"—meaning editorially—by the descendant of Curll. He confines himself, however, to one speech out of fifty-six published in the spurious work referred to, that on the Dissenters' Chapels Bill, and to only a few pages in that one speech. We willingly lend our columns to give additional publicity to the exposure of one or two of these blunders, by way of example.

Vizetelly makes Mr. Macaulay say that "the principle of our statutes of Limitation was to be found in the legislation of the Mexicans and Peruvians!" whereas Mr. Macaulay observes, "that is a matter about which, as I knew nothing, I certainly said nothing." Vizetelly makes Mr. Macaulay say "Such folly could have been uttered only by a person profoundly ignorant of the history of human opinion." Surely the very sort was ever uttered by me."

Vizetelly makes Mr. Macaulay say, "that the Great Charter recognises the principle of Limitation"; "a thing," says Mr. Macaulay, "which everybody who has read the Great Charter knows not to be the case."

Vizetelly ——

"But I will not weary my readers by proceeding further," says Mr. Macaulay, throwing aside the worthless brochure propounded in his name, "these samples will probably be thought sufficient. Sufficient they certainly are, in all conscience, for readers of ordinary capacity, and sufficient perhaps, also, as a *quietus* for "the bookseller named Vizetelly." For those who relish such fare, however, there is a plentiful stock behind. The samples, Mr. Macaulay tells us, "all lie within a compass of seven or eight pages;"—what must there be in Vizetelly's two volumes of seven or eight hundred pages? Mr. Macaulay goes on:—

It will be observed that all the faults which I have pointed out are grave faults of substance. Slighter faults of substance are numerous. As to faults of syntax and of style, hardly one sentence in a hundred is free from them

And then in a spirit of honest indignation he winds up his case:—

I cannot permit myself to be exhibited in this ridiculous and degrading manner for the profit of an unprincipled man. I therefore unwillingly and in mere self-defence give this volume to the public.

So far as concerns the case between the parties, we opine that the "bookseller named Vizetelly" might be safely left in the hands of the indignant orator, and to the full enjoyment of the bitter denunciation which his "pious bookselling fraud" and innocent editorial dulness have brought down upon him. Of course this particular speculation, in which he embarked, to the disgust and detriment alike of Mr. Macaulay and of the public, has proved a failure, entailing a money loss which may possibly make him more cautious—perhaps deprive him of the means of like defiance for the future. But this is not enough: the reform to the notorious Curll—Curll the literary scavenger, the Robert Maucire of publishers, the brain-sucker, and plunderer of the world of letters; and with the suggestion of an institution for the "prevention of distinction," which Curll by so many ignoble courses identified as his own, implies a charge too general and too serious to be lightly passed over—a charge which it imperatively behoves every one having any interest in the world of letters and art, any sympathy for its characters, any solicitude for the *status* of artists and literary men, emphatically to denounce and repudiate. Unhappily the frauds practised by unscrupulous hucksters in the world of letters and art—frauds perpetrated equally at the expense of producers and consumers, are numerous and of every shade of device; but the object, the principle of action with all is the same to trade under false pretences; to profit by another's industry and good fortune;—men without brains, material, or reputation, trafficking upon the brain-materials, and reputations of their neighbours. Does a title or an artist's name stand high, so as to command a marketable value for any product upon which it may be impressed? It is unscrupulously, and upon the most shallow and impudent pretence, used as the means to a parcel of mere rubbish, to pass off a spurious shade of device; but the object, the principle of action with all is the same to trade under false pretences; to profit by another's industry and good fortune;—men without brains, material, or reputation, trafficking upon the brain-materials, and reputations of their neighbours. Does a title or an artist's name stand high, so as to command a marketable value for any product upon which it may be impressed? It is unscrupulously, and upon the most shallow and impudent pretence, used as the means to a parcel of mere rubbish, to pass off a spurious shade of device—book or a picture make "a hit," and become the talk of the world? The materials are seized upon and disguised—turned inside out, perhaps—and then put forth as his own by some habitual purveyor in other people's goods. Does a new play, or a literary composition, or an invention of any kind prove eminently successful? The unscrupulous Curll again steps in, appropriates the idea, and, under a slightly-altered title, supported by a system of specious imitative advertisements, entraps the unwary public into a spurious establishment upon the strength of his neighbour's legitimate renown. Whenever a man is favoured by the gales of fortune in a remarkable degree, these industrious marauders—industrious only with the spoil of others—are sure to prowl in the way of the happy success, stretch forth their miserable arms to catch some stray breath of wind out of his sails, and, whilst so stealing along under protection of his shadow, and by the mere impulse of his motion, they will presume to talk of "competition," and to dilate upon the blessings of Free-trade. Free-trade! freedom where there should be bonds! "Sic vos non vobis!" sang the poet of old; "Sic vos non vobis!" cry these intellectual highwaymen, by whom every man's property in the natural gift of brains, in vested industry, and in reputation, is held to be fair game. It behoves those who have anything to gain or anything to lose in the intellectual struggle of their age to beware of such gentry;—when they see them at their dirty work let them call the "Police!" and then, buttoning up their pockets, pass by on the other side

To return to the volume before us. We consider the important addition to our historical literature; and to us none the less welcome for the accidental and reprehensible circumstances which led to its production.

DEATH OF THE PRINCE OF TAHITI.—The *Messager* of Tahiti announces that Prince Arnaue, eldest son of Queen Pomaré, died in the night of the 12th May. The inhabitants on the following days paid visits of condolence to the Queen; the women had their hair cut off, and the men their heads shaved, and all brought presents of all sorts of food. After filling off before the Queen, they formed themselves into a circle round her house, and Apo, the orator of the Raatiras of Arimahia, cried, "Salutation to Pomaré, Queen of Tahiti, salutation in the name of the true God. We come here, we judges, we love, and half-raatiras of Arimia, to salute you and weep with you on the death of your son." Tairapu, the Queen's orator, replied—"Chiefs, communals, and raatiras of districts—Pomaré is happy to see you, thanks you for this mark of interest, and invites you to enter this house, and weep over the body of her son." The crowd then entered the house, and wept aloud. The funeral of the deceased took place on the 23rd May, with much pomp. The French authorities and the English and United States Consuls attended the ceremony.

RENEWAL OF NEGOTIATIONS.—Notwithstanding all the mystery with which the matter is endeavoured to be shrouded at Berlin, it is beyond doubt that since the fall of Sebastopol secret negotiations have been going on between the Court of Prussia and that of St. Petersburg, in reference to those eventualities which the continually-growing success of the Allies will not permit to be lightly treated, as heretofore. I must do the Cabinet of Berlin the justice to say that it has taken the opportunity of pressing Russia to accept the Four Points of Guarantee before the Western Powers enlarge their demands, which they have the right to do, and which right they have formally reserved. If we may judge by some expressions of satisfaction that have escaped the statesmen who have been directing these secret negotiations on the part of Prussia, the Emperor Alexander II. has not shown himself so deaf to the counsels of a wise and prudent modification of the refusal of those officious organs of Muscovite diplomacy would have it believed. On the contrary, it appears that the Empress Maria Alexandrowna, who had at all times exercised a legitimate and salutary influence on the mind of her august consort, is now working powerfully to open to the young Czar the path to an honourable arrangement with the Western Powers. The personal position of Count Nesselrode, whose approaching retirement was lately erroneously announced, was never more firm than at the present moment, thanks to the powerful protection afforded to the Arch-Chancellor by the Empress. The journey of the Emperor to the south was undertaken at the inspiration of his consort, that he might judge with his own eyes of the disorganised state of his army and of the impossibility of carrying on such a ruinous contest much longer. Thence, too, it is that General Berkendorff and Count de Stackelberg have been ordered to repair to Prince Gortschakoff's head quarters, and report whether that General can hope to maintain his position in the Crimea during the winter. If not the Emperor Alexander is prepared to take a decisive step towards peace.—*Vienna Correspondent of the Constitutionnel.*

COUNTRY NEWS.

THE ROEBUCK TESTIMONIAL.—The following letter, with an accompanying cheque for £10, has been received by the Mayor of Sheffield from his Grace the Duke of Wellington:—"Sir,—I have had pleasure to inclose a cheque for £10, as my contribution to the Roebuck testimonial, understanding that the testimonial is 'in recognition of Mr. Roebuck's great national services, and in commemoration of his worth as a liberal, patriotic, and disinterested statesman;' and that subscribers to the testimonial are not understood to subscribe to the former part of the Mayor's resolution—I have the honour to be, Sir, your obedient, humble servant, WELLINGTON." —London, Oct. 24, 1855.

REPRESENTATION OF WELLS. Mr. Serjeant Kinglake on Saturday issued his address to the electors, in which he says:—"I feel that at this important crisis there is one subject on which there ought to be an explicit understanding between a candidate and those whose suffrages he solicits. I allude to the present war. That war is a just and righteous one. It is a mighty struggle between the principle of aggressive despotism and the principle of free, humane, and enlightened civilisation. I trust as it has commenced in justice so it will be carried on with vigour and untiring energy, and that no compromising policy will be allowed to interrupt its progress until a result be obtained which shall ensure a durable, satisfactory, and honourable peace, and justify the vast sacrifices which have been made in this great cause by the Allied nations of Europe."

THE IRISH INVASION.—The report set afloat of a Fillbustering expedition to Ireland has afforded matter for some idle talk during the last couple of days. No one, of course, believes in the thing; but any Irish-American desperadoes who could by any possibility be mixed up with such a wild scheme will not be flattered by what they will read in the Irish papers of the welcome they would receive from their friends on the side of the Atlantic. The Roman Catholic *Weekly Telegraph* tells them that the police would be amply sufficient to repel their attempt. The *Evening Post* speaks of the undertaking as too desperate and ridiculous even for Bedlam; and the old O'Connellite and Catholic organ, the *Freeman's Journal*, thus refers to it:—"We cannot believe that any rational men would countenance an enterprise so foolish in conception and fatal in result."

EMIGRATION STATISTICS.—The total number of emigrants leaving Liverpool for all foreign ports in the current month will fall short, by one half, that of October in last year. Up to the present time the departures for the United States have been 5273, and to Australia 1490—making a total of 6763 during the same month in 1854 the number was 14,571, and even that was a decrease of 6609 on the corresponding months of previous years

HEIRS WANTED.—A commission of inquiry has been sitting for some days at Navan to try whether the late John Wilson, of Rose Hill, county of Meath, has left any legitimate heirs, the question involving the escheating to the Crown, in default of heirs, of a considerable portion of property amounting to £100,000 in the Funds and other securities, and about £6000 a year in landed estate

NOVEL SYSTEM OF CHURCH EXTENSION.—About seventeen miles below Gainsborough, on the right bank of the Trent, stands the pretty secluded village of Burringham. The parish is without a church, and for some time past efforts have been made to raise funds to erect one. Some of the recent proceedings for the above purpose are so extraordinary—so unsuited to the occasion and object—that it almost appears [illegible] in us to ask public belief in a statement of them; yet the [illegible] are, nevertheless, facts. We transfer to our columns the following extraordinary announcement, which has been circulated in Burringham during the past week:—"For the benefit of Burringham Church.—To be raffled for, at half past three o'clock, a pure bred Skye terrier dog, direct from the Island; twenty shares, at 5s. each. Also, a pure bred terrier puppy, four months old, same breed; twelve shares, at 5s. each. Tickets to be had of the door keeper, or at Mrs. Gedney's stall."—*Gainsborough News.*

EXPULSION OF THE JERSEY REFUGEES. It is stated that the whole of the thirty-four refugees who signed the recent declaration have been ordered to leave Jersey this week, by direction of the British Government. Amongst the expelled are Victor Hugo and his sons.

THE NORWICH MUSICAL FESTIVAL. At a meeting of the committee and guarantees the mayor, who was in the chair, called upon Mr. Harrison to read the report of the committee of management, from which it appeared that the gross receipts of the late musical festival amounted to £4344 14s. 6d., the gross expenses and liabilities, £4347 14s. 7d.; leaving a deficiency of £103 0s. 8d. A comparison of the gross receipts and expenses of the two preceding festivals, held in 1848 and 1839, respectively, showed the former compared with 1848, a decrease of receipts amounting to £1021 19s., and a decrease of expenses amounting to £250 16s.; as compared with 1839, a decrease of receipts amounting to £779 5s. 5d., and a decrease of expenses amounting to £156 3s. 6d.

THE WEIGHT OF BREAD. In compliance with a vote of the Town Council, the Mayor of Exeter has issued handbills, calling the attention of the public, "especially the poor," to the 4th and 5th sec. of the 4th and 5th William IV., c. 37, under which any purchaser of bread is entitled to have the same weighed by the seller at the time and place of purchase. The two clauses quoted enact respectively that all loaves exposed by vendors of bread shall self their bread by weight, under a penalty of not exceeding 40s.; and that all bakers and venders of bread, as aforesaid, shall furnish conveniences for weighing, in the presence of the purchaser, any bread by him purchased, under the same penalty of not more than £5. The bill concludes by stating that "as it has been ascertained that the poor are defrauded to a considerable extent [illegible] complaints have received [illegible] bread [illegible] [illegible] [illegible]

SIEGE OF SEBASTOPOL.—RETREAT OF THE RUSSIANS FROM

SOUTH TO THE NORTH SIDE.—DRAWN BY GUSTAVE DORÉ.—(SEE NEXT PAGE.)

THE RETREAT OF THE RUSSIANS.—DESTRUCTION OF THE BARRACKS.

THE ship-carpenters who framed and put together that massive bridge across the harbour of Sebastopol, over which Prince Gortschakoff withdrew the Russian army so successfully, must have done their work exceedingly well, to make it for the passage of so mighty a host without any serious accident. The spectacle must have been one of the grandest and most impressive that ever was witnessed, especially during the night, when the route of the gloomy procession was lighted up by the glare from the burning forts and houses of the ruined city. One may easily conceive what the feelings of the officers and generals of the retreating army were as they looked back upon the burning ruins, and reflected on the failure of all their sanguine expectations.

The destruction of the barracks, which our Artist has represented in another Sketch, took place on the 30th of September. This pile had escaped the general conflagration at the time of the Russians deserting Sebastopol. Although greatly injured by shot, there was an immense amount of timber contained in the building, which was of the most solid construction. About three p.m., when at least forty or fifty persons were engaged about the building in removing wood, two or three long on the roof of the building, in the act of getting some of the sheet-iron plates with which it is covered, some drunken sailors who were rambling about were observed to enter, and one of these, it is asserted, set fire to some loose powder by the lighted match of his pipe.

The spread with wonderful rapidity, and at four o'clock the whole of the immense pile of building, from one end to another, was enveloped in flames. The absence of windows, and the free currents of air in consequence, in all directions, and the circumstance of part of the roof having been stripped, favoured the progress of the conflagration. The timber was old and dry. It was only two days before that permission had been granted for the final destruction of the building, with a view to procuring planks, flooring, and roofing for the construction of huts and cooking-places in the Camp; and orders were then given that the upper part only of the building in the first instance should be pulled to pieces, so that the demolition might be gradual and conducted with safety. While the fire was fiercest, the flames rose high above the building and showed through every space in the walls, but much of its grandeur as a spectacle was lost by its occurring in the daytime. At night, when the fire had in some degree subsided, it had the appearance from a distance of one of the huge factories seen during night in some of the manufacturing districts of England when lighted within by gas.

LETTER FROM THE CAMP AT SEBASTOPOL.

(From a Correspondent.)

John Bull pays for all. Road-making is now the order of the day in the Crimea. From Balaclava to the Camp 10,000 to 20,000 men of all nations are busy at work; but the roads made by the Sardinians are much better than either ours or the French. They have a foundation of trunks of trees and faggots; and, when finished, are as white and hard as our English carriage drives. I must say I don't much like to see our own soldier's from the Camp working at navvies' work, breaking stones, and carrying them on stretchers. But it is their usual duty, and they do not grumble as much as might have been expected. They have to do it, and say for their labour. Thousands of great brawny Irish lads do employed. Their duty is to pick up stones from the hillside, and they have a basket about the size of a lady's reticule, and they crawl about at a snail's pace, picking up the stones one at a time, as if they were hot cockles, and then, walking to the general heap, deposit them there. They are inveterately lazy and idle. A sergeant, who wields a pretty heavy cane, stands near them to keep them to their work, but if his back is turned for a moment they instantly squat on their haunches, and begin to smoke the chibouk. Many of them carry hookahs with them when they go to work. I was much amused the other day with a scene close to my tent. A sergeant belonging to the 30th observed one of these fellows skulking behind some old gabions, blowing his eternal tobacco. "Hy dere! hy dere!" (Go on! go on!) shouted the sergeant. "No, no, Johnny!" was the reply—"me sick!" "Sick be——!" cried the sergeant, and up went the cane. "Ah, Jasus! Johnny, Johnny! no hoo! no hoo! me no sick!" Down came the cane, and up sprang the Turk, bowling at the top of his voice, "No, no, Johnny! me no sick!" "Hy dere then!" shouted the sergeant; and the Turk very leisurely began to work. After picking up a few stones he paused, and with the greatest gravity, asked the big taskmaster, said, "Yees, much bono, Johnny!" These execrable wretches are paid 3s. a day, with full rations, as much as they can eat. The work they do is worth about as many plasters. In a few months I get more disgusted than ever I have seen in their lives before, and go back to Stamboul to spend it, and then the work stands still. Why John Bull should pay these Turks I cannot understand. Is the Sultan to pay nothing towards the expenses of defending his own territory? Surely his own Commissariat, Land Transport, and Road-making he might carry on without digging into our pockets. By-the-bye, alluding to this subject, I may mention another matter. Some weeks ago, being on board ship in the Black Sea, we went into a small port to take in coals. At Kosloy, a village on the Asiatic side, the Sultan has large coal-mines. He lets these mines to, I think, an Englishman, who pays him 17s. per ton a-high price. Now you will scarcely believe that every Sultan has to pay the Sultan 10l. 10s. per ton *in addition* to the price of the coal. And the coal is to be consumed in fighting the Sultan's battles! However, I don't think that the Sultan is so much to blame as our own Government. Or can it be that France and England do not wish to call upon him to pay just *at present*? A reckoning, I suppose, will come at a future period; and the French say openly that the "sick man" has a very beautiful country, and it will be a pity ever to leave it.

RUMOURS AT VIENNA.—The *Cologne Gazette* contains the following letter addressed to it from Vienna by one of its correspondents. The *Nord*, in alluding to the same topic, does not, indeed, guarantee the authenticity of its contents:—"During the last few weeks there has been, through a diplomatic channel, an exchange of opinions between the Courts of Vienna and Paris, respecting the interpretation of the fresh demands that have to be made to Russia, and which demands the Allied Powers consider to be the legitimate consequences of the late military results. It appears that up to the present moment the Allies of Austria have not succeeded in coming to an understanding on this delicate point, and the reasons of this non-success I now proceed to give you. The Western Powers intend detaching the whole of the Crimea from the rest of Russia, because in their eyes this is the only effectual mode—first, of indemnifying themselves for the expenses of the war; and, second, of rendering impossible for ever the realisation of the plans entertained by Catherine the Great and her successors, since the Northern Power would thus be prevented from developing her navy so as to menace the equilibrium of Europe. In principle, Austria appears, it is true, to be not disinclined to adopt such an arrangement, she nevertheless considers it out of her power to adhere to it in an effective manner, until the Allies shall first of all, by compelling the Russians to retire, have secured *de facto* the Taurian peninsula, and definitively established a form of government in the country. They attach here great importance to this last-named point, since it is evident that unity of opinion in this instance is imperiously commanded by the prospect of those great advantages that must ultimately accrue to the Allies, deems bounded by the Black Sea, with respect to their European commerce. M. de Bourqueney, who on this head is intimately acquainted with the intentions of the Austrian Cabinet, communicated them during his stay at Paris to his sovereign, and it is already known here, that he has received instructions from him to bring to a satisfactory conclusion the deliberations that may possibly have to be entered into upon the subject with the Cabinet of Vienna."

THE RUSSIAN MILITIA.—The following is an account of what force the militia of the empire has already furnished. By the first ukase of the 11th February, the levy was ordered in eighteen governments of the North, the total of which amounted to 612,000 men. The levy of 23 men on each of every 1,000 furnished nearly 200 battalions of 1000 men each, or 200,000 in all. The three of the 9th August ordered the levy in eleven other governments, having a population of 15 millions, and produced 140,000. Lastly the levy has been extended to the governments of Orenburg and Samara, which furnish 56,000 men, so that the total number of the militia levied up to this time amounts to 800,000 men.—*Gazette*.

THE TURKISH CONTINGENT.—The entire of the Turkish Contingent, which was encamped near Buyukdere, has at length, with the exception of a portion of the cavalry, sailed for Kertch. The contingent is ultimately to number 30,000. Two batteries of British artillery, 2000 Arabs and 2000 English regular soldiers, together with 3000 men of a Polish cavalry corps, are to be incorporated with the contingent. The artillery, the Anglo-French 4000 men, and the 3000 Poles are intended to enforce order, in case of necessity, amongst the Mussulman troops. General Beatson has gone to England, and the command of the Bashi-bozouks has been given to Brigadier General Smith, second in command of the contingent cavalry under Major-General Shirley. It is now finally determined that General Shirley, with the whole of the cavalry under his orders, shall proceed with the rest of the contingent to the Straits of Yenikalé. The town of Yenikalé will be the head-quarters of the force under General Vivian. Sir John Stewart, Bart., Aide-de-Camp to General Vivian, is detained at Pera by illness.—*Letter from Constantinople, Oct.* 18.

WAR OBITUARY.

(Continued from page 447.)

ATTREE (Frederick Sumes). Captain and Adjutant 31st Foot—who, as already stated, was the youngest son of Dr William Attree, and fell at the assault of the Redan on the 8th Sept., was nephew of Thomas Attree Esq., of Queen's Park, Brighton. Captain Attree entered the Army as 2nd 28th Sept., 1840, and was made Adjutant of his regiment the 26th March, 1853.

BECK (Charles Henry), Lieutenant 23rd Foot, died on board the transport-ship *Robert Lowe*, in consequence of five wounds received during the assault of the Redan the 8th Sept. He was the second son of S. Adams Beck, Esq., of Cheam, Surrey, and grand-nephew of Mr. Serjeant Adams.

BURTON (James Gubbins Archer), late Captain 6th Dragoon Guards, Major in the Turkish Contingent, and Assistant Quartermaster-General to the Cavalry Division of that force, died on the 4th October, 1855, at Constantinople, after a brief but severe illness. He was the second son of the late Lancelot Archer Burton, Esq., of Woodlands, Emsworth, Hants, High Sheriff of that county in 1847.

DEANE (R. Greville), an Ensign in the 30th Regiment of Light Infantry, was, as already stated, the youngest son of the Rev. George Deane, of Bighton Rectory, Hants. Ensign Deane was educated at Winchester College, and in the Military Institute of M. Massenbach at Boulogne. Although Mr Deane's years were few (he was but nineteen), he was animated by so ardent a spirit, and was so remarkable for the manly accompaniments requisite to success in a military career, that his future was full of promise. When at Luxembourg—a fortified place so marked, and perhaps more important than, Sebastopol—he was heard often to discuss the comparative difficulties of an assault upon such fortresses, and to prophesy for himself the very fate which has befallen him in glorious death. *Ad Energi*, in an essay upon Sebastopol. What makes these facts more impressive is, that at M. Massingh's Institute Deane had for fellow-pupil the late Lieutenant E. Grimshaw Woodford, of the 2nd Rifle Brigade, son of Colonel Woodford, a young man of Deane's own age, who was killed gloriously (on June 18th) in the trenches before the stronghold of the Czar. Ensign Deane fell at the Redan on the 8th September, and the noble young hero's death may be well concluded with the following [illegible] of an officer to the gallant Ensign's bereaved father:—

"Colonel, Sebastopol.—I know not how to comfort you, except to describe how heroically your son fell on the parapet of the Redan. The Colonel was on the parapet, waving his sword and calling on the men to come on, your son rushed up the parapet, cheering on the men, when he fell dead with a bullet in his fore-head. Every one says he did his duty nobly, and died like a hero. Poor fellow! He was a fine fellow; and I have often remarked that if he lived he would distinguish himself. I saw him lying dead an instant. It is impossible for me to describe the beautiful serene expression of his countenance—a calm and happy smile on his mouth. I have seen several die, but never saw a more perfect and beautiful expression. I shot as was the same [illegible] with the regiment, he died regretted by all, and I hear but one account of his heroic death. It has been God's will to take your son to himself. I have known him but a short time, but never knew him say anything unbecoming a gentleman and Christian way. He was most kind and generous in his demeanour; and he has died as an Englishman should die, bravely cheering on his men.

DRUMMOND (the Hon. Robert), Lieutenant and Captain of the Coldstream Guards; died at Spithead, on the 1st of October, 1855, on board the *Indiana*, soon after she had cast anchor, from the effects of injuries received in the trenches before Sebastopol, on the night of the 24th August. This gallant officer got his death-wound whilst pushing his sentries in the advanced trenches. A rifle-ball passed through his chest and back, broke two of his ribs, and severely hurt the lungs in its passage. Most of his party were at the time made prisoners, he escaped being taken by drawing back after he was shot, and throwing himself over the parapet. Capt. Drummond sailed with the first expedition to the Crimea, and served with his regiment the [illegible] campaign, never having been absent from his duty. He was the second son of Thomas Robert, tenth Earl of Kinnoull, by his wife, Louisa, daughter of the late Admiral Sir Charles Rowley, Bart., G.C.B., and was born on the 24th July, 1811. He took the name of Drummond on succeeding to a property which he obtained his majority. He entered the Coldstream Guards as an Ensign and Lieutenant on the 17th August, 1832, and obtained his Lieutenancy and Captaincy on the 5th October, 1854. Capt. Drummond's wound was at first considered mortal, yet the surgical treatment was so successful that great hopes of a recovery were entertained. He was moved from the Crimea, on his way home, as speedily as possible: but as he neared his native shore his strength rapidly failed, and he died [illegible] was [illegible] in sight of England; his friends, who were waiting his arrival as a convalescent, gathered weeping round a corpse. His remains have been removed to Scotland and laid in the burial-place of his family. The grief which is felt at the close of Capt Drummond's career is not confined to his family. As the plague-stricken camp at Varna, and during the terrible winter passed in the trenches before Sebastopol, he did his duty with much zeal and spirit; and among those trying scenes the gentleness which had endeared him to friends at home won the regard and admiration of his new companions in arms, whose letters are full of hearty praises of his character, both as an officer and a man, and particularly mention his charitable care of his men, and their wives and widows, and his unostentatious piety, which, as a Christian, became the more conspicuous in the fashion of many a death-bed. Capt Drummond has gallantly given to his country the sacrifice of a young and hopeful life.

FITZROY (A. C. Lennox), Captain R.A.—The following are further particulars relating to him:—Captain Augustus Charles Lennox Fitzroy, Royal Artillery, nephew of the Duke of Richmond, was, on the day of the assault (8th September), in command of a battery, almost every gun of which during the day he actually laid himself, and with the most signal effect. He escaped during the bombardment, but, in going between their embrasures at the end of day's duty, and returning to their encampment, he received a severe wound by a rifle-ball in his back, close to the spine, which produced instantaneous paralysis of all below the wound. He was removed to his tent, and continued to exist till 12.45 a.m. on the 11th Sept., when he ceased to breathe. He was buried by the side of Sir Robert Newman, near to the grave of Sir George Cathcart and General Strangways. Captain the Hon. H. Keppel, R.N., in a letter to Sir Charles Fitzroy (Captain Fitzroy's father), makes honourable mention of the gallantry and coolness displayed by his son during the bombardment, in both of which, Captain Keppel states, no man in the British army could surpass him. Captain Fitzroy, having for some years been employed on the Staff in Australia, had missed the opportunity of employment in active service in the Crimea; and, on his return to England, he found that the company of Artillery to which he properly belonged was stationed in Ceylon, but his ardour for seeing service being great, he used every effort in his power to obtain exchange to a company serving before Sebastopol. He succeeded, but with no little difficulty. The gallantry of Captain Fitzroy and two other Captains in the Artillery, during an attack on the 17th of August, was so conspicuous as to induce Lieutenant-Colonel Barker, C.B., commanding the left Attack, to report the names of these three officers in terms of commendation to Lieutenant-Colonel St. George, commanding the siege-train, who failed not to make a special report of the same to Lieutenant-Colonel Dupins, commanding Royal Artillery in the Crimea.

GOUGH (Thomas Bunbury), Lieut.-Colonel 33rd Regiment, was wounded at the storming of the Redan on the 8th of September, and died on the 18th of the same month. Lieut.-Col. Gough entered the 33rd in the year 1827, and thus served twenty-eight years with that distinguished corps. He was very severely wounded through the body at the battle of the Alma, and though he never recovered from the effects of that wound, and of a protracted residence in Lospital, he returned to the Crimea. His loss is deeply felt by him, and, though borne down by illness and the sick list, he rose from his bed to head his old regiment at the storming of the Redan, during which he was three times severely wounded. Lieut.-Col. Gough was son of the Dean of Derry and nephew of Lord Gough, and leaves many friends and relatives to mourn for him.

KNIGHT (Charles Ernest), Lieut. 77th Foot, died, aged 19, on the 2nd ult., of fever, at the Camp before Sebastopol. He was the third surviving son of Edward Knight, Esq., of Chawton House, Hants, the representative of an old and highly-respectable Hampshire family. Lieut. Knight was grand-nephew of the venerable and distinguished Vice-Admiral Sir Francis William Austen, K.C.B., and of the late Miss Jane Austen, the celebrated author of "Pride and Prejudice," and other standard and excellent novels.

MACGREGOR (Miss Jemima Caroline), Matron of the 97th Regiment, who fell at the assault of the Redan, the 8th September, the fourth son of, as already stated. Major-General Sir Duncan MacGregor, K.C.B., Inspector-General of Constabulary, Drumcondra Castle, county Dublin, was, from his earliest childhood, devotedly attached to his military profession, of which he bade fair to have become a bright ornament, having, during his short career, made almost unprecedented progress. He was gazetted to the 97th Foot as Ensign in December, 1853; Lieutenant, August, 1854; and appointed to the Adjutancy of that regiment (Virgin Islands), at the early age of twenty-one (in his twentieth year). He was beloved and respected by all who knew him.

MARSHALL (John Barry), Captain 4th Light Dragoons, died, aged twenty-five, the 20th September, 1855, of Crimean fever, at the Monastery of St. George, Balaclava Heights. He was the second son of the late William Skinner Marshall, Esq., of 4, Hyde-park-square, and Pushwood Hall, Stowmarket, Suffolk. Captain Marshall is deeply regretted by a large circle of friends, and by his brother officers.

OSBORNE (John R., R.N.), Lieut. of H.M.S. *Pembroke*, was son of Sir W. Gore Ouseley, formerly British Minister in Brazil and the River Plate. This promising young officer, who was only in his twenty-first year, was landed from the *Pembroke* on account of the extreme weakness to which he was reduced by illness, brought on by exposure during the bombardment of Sveaborg; and although his father, who had been summoned by telegraph, procured the best medical aid, which for some days gave hopes of recovery, the disease, when he landed, had advanced too far to be overcome. His funeral took place at Kiel, on the 9th ult., in the presence of his father, the British and French Consuls, the captain and officers of the Danish war-steamer *Heela*, and some English residents. There was no English men-of-war in the harbour of Kiel at the time. The usual funeral honours were paid by the Danish naval authorities.

TAYLOR (Alfred), Senior Lieutenant of the 41st Foot, who fell at the battle of Inkerman, was the sixth son of the late Smith Taylor, Esq., of Corballis, county Meath. He entered the Army in 1852, and remained on Home duty in Ireland until March, 1854, when he joined head-quarters at Malta. In a letter relative to the lamented loss of Lieutenant Taylor, addressed to his brother, Robert Taylor, Esq., of Corballis, from the Camp before Sebastopol, on the 31st November, 1854, by Major Gowan, of the 41st, the gallant Major says:—"I take the opportunity of expressing to you the deep regret with which I and the rest of your poor brother's regimental companions deplore his death. Though but a short time with the head-quarters of the 41st, he had won the sincere regard of all. His serious disposition and more than usually thoughtful turn of mind had acquired for him the respect of the older officers, and esteem of all. He had very much regretted not being present at the Alma, and gave us every reason to suppose he as little feared as he gloried in it; and I am inclined to believe he had need to do so." Another officer of the 41st, Lieut. Armar Graham Lowry, thus writes to Mr. Robert Taylor:—"My dear friend, you ought not to mention about giving me trouble. Willingly, my dear fellow, will I do anything to assist any of the relatives of poor Taylor. I can get no little thing (Lieut. Taylor's sword and pistol were lost on the field of battle), I will send it home by some opportunity. Your gallant brother's death. I have the mournful pleasure of telling you, must have been immediate, as he was shot through the heart. He expired, and was not hit in the body. His death came in an instant. I have the further gratification of telling you that your brother is often mentioned as a brave and good officer."

VAUGHAN (Herbert Millingchamp), Captain 90th Foot, who, as already stated, died on Sept. 11, of the wounds which he so gloriously received at the storming of the Redan, was twenty-six years of age. He was educated at Eton, and entered the Army in January, 1847. He was the son of Lieut.-Colonel Herbert Vaughan, of Llandyfeisant, Carmarthenshire, late commanding the 23rd Welsh regiment, and of Sarah, only child of the late Ven. Archdeacon Millingchamp.

WELSFORD (Augustus Frederick), Major of the 97th. The following are additional particulars relating to this gallant and lamented officer. His father, Colonel Welsford, was formerly of the 60th Rifles. He himself was born at Halifax, Nova Scotia. He was educated at King's College, Windsor, N.S.; and in the year 1852 obtained his first commission as Ensign in the 97th Regiment. He was warmly attached to his profession, and was eager for active employment. Immediately before his service in the Crimea he was with his regiment at Athens at the time that the cholera raged so fearfully. Thence he was moved to the trenches before Sebastopol, was honourably mentioned in the despatches for his conduct in that trying warfare, and fell among the first before the Redan on the bloody 8th of September. The Major was a general favourite, and his loss is sincerely deplored in his native place. For three years ending in 1852 his regiment was stationed at Halifax, and he made [illegible] himself to a very numerous circle of friends immediately on the mournful news of his death being received at Halifax, a subscription was opened, for the purpose of erecting to him a public monument, and there are few in that city who do not feel as if they had lost something more than an acquaintance.

WILLIAMS (S. T.), Captain of the Scots Greys, died on the 23rd November, 1854, at Constantinople, where he had been conveyed in the hope of being restored to health. The gallant soldier—the eldest son of R. B. Williams, of Biscot-park, Farringdon, Berks, and Westbourne-terrace, Hyde-park gardens—was in the prime of his age, one half of which he had passed in her Majesty's service. He was on the Staff of the Earls of Beaubrough, Clarendon, and St. Germans, successively Lords-Lieutenant of Ireland, and resigned his appointment at the Irish Court on purpose to go out to the East. The letter from Major Nasmyth conveying the intelligence of Captain Williams's death to his family states:—"The origin of his illness was low fever, the result of exposure, privation, and fatigue, perpetually to the hour of his death, at which time he, as I believe, safely, after gallantly leading the second squadron of his far-famed regiment on the memorable 25th of October. The best medical advice was afforded him; but, alas! without avail, and your really good and gallant son has been taken from us, amidst the most heartfelt sorrow of all who had the happiness of knowing him; for I may confidently assure you that a more honourable, brave, kind-hearted, and popular officer never existed in her Majesty's service." When leaving the Camp for medical advice, Captain Williams was severely attacked by fever and dysentery, and when the letter announcing his death was received by his family, Captain Williams was safely on board the *Caradoc*, to embark, scarcely recognised him, so greatly was he altered by his illness. The Prince, with the kind feeling which ever distinguishes him, hearing of the sufferer's arrival, conveyed to an hotel at Pera, where all possible care and attention were bestowed upon him, and it was for some time hoped that he would be enabled soon to rejoin his gallant comrades. This expectation was destined never to be realised. Touching his death the *Morning Herald* contains the following:—

On the 24th November Captain Williams's remains were conveyed to their interment to Scutari, where he now lies side by side with many of his late companions in arms. As many of his friends as were able joined the melancholy cortège, among whom were the Hon. and Rev. S. G. Osborne, Captain Clifton (Aide-de-Camp to the Duke of Cambridge), Mr. Grattan (formerly of the same regiment), Mr. Lane (Paymaster of the *Himalaya*), Colonel Hutton (24th Regt.), and many others of the *Himalaya*, who paid their last tribute of respect to one whom to know was to esteem and love. As the body passed the *Himalaya*, in which ship the deceased went out to the East, her colours were hoisted half-mast. Captain Kellock, one of his warmest friends, was too ill to accompany his remains.

Lord Carendon's letter to Mr. Williams, on the death of his lamented son, is a gratifying memorial:—

"I had recently (writes Lord Clarendon) inquired for your gallant son since he went to the East, and had the satisfaction of hearing that his courage in the field and his devoted zeal for his profession were spoken of in the highest terms. I have since learned that if he would have consented to leave the Camp sooner his valuable life might possibly have been spared. He was so long one of our family in Ireland that we all of us remember him with affection; and my children, as well as Lady Charendon herself, feel we have lost a friend.

WITHAM (Charles Throckmorton), Lieutenant Royal Marines, eldest son of the late Sir Charles Witham, R.N., of Higham, Suffolk, and descended from the Withams of Cliffe, in Yorkshire, died, aged 20, in camp at Balaclava, of typhus fever, caught in the discharge of his duties. That he was beloved, respected, and lamented by his brother officers, the following extract of a letter received from the Colonel of the regiment to his mother fully proves:—"I was very weak myself at that time from a disease that generally prevailed, but my respect for your son's memory was so great that, although with much difficulty, I reached the place (Cape of Inkerman) and had the satisfaction of showing this last testimony of my esteem."

(To be continued.)

A PLEASANT CONTRAST.—This camp, recently the nearest to the briskest part of the siege, and into which the Russian projectiles not unfrequently plunged, is now tranquil and laborious as some new settlement in Australian bush or Canadian backwoods. Peaceful tai has succeeded the din of war. Except the cannonade from the north side, at times rather loud, not a sound is heard that indicates the vicinity of a foe. The Russians, as if to vent their rage at their recent overthrow, continue to pound away at intervals at the ruins of the town they have been forced to abandon. They do little harm to us, and might as well save their ammunition, which they often condescend to expend even on a single soldier whom they see wandering among the broken walls or across the plain. Yesterday our old friend Bilboquet, long silent, opened his mouth, and sent a couple of shot either at the works by Yrakine Bridge, or on something in the meadow in the valley before he is muzzled. Today the Russian guns are nearly mute, and the stillness contrasts strangely with the uproar we were so long accustomed to. The silence would be quite a terror did not the tap of the hammer replace it in some degree the crack of the rifle, and the rumble of carts the roar of the cannon. The English army, being convinced that it is to winter in the present camp, has set hopes of home which to almost the sole consolation for the many privations that must be endured, even under the most favourable circumstances, by the dwellers in a camp. It is now pleasant to contrast the sufferings of last winter—the cold, exposure, famine, and want of clothing then endured—with the prospect of plenty and almost of comfort during that which approaches, and to observe the activity that prevails to make the most of the ample means supplied.—*Letter from Sebastopol, Oct.* 13.

AN Imperial firman has been granted by the Sultan for the purpose of legalising Constantinople with gas. The concession has been given to an English gentleman of influence, long a resident in that city.

NAVAL AND MILITARY INTELLIGENCE.

THE Queen has authorised the following regiments to bear upon their regimental colours the names of the engagements in which they distinguished themselves in the Crimea. In the cavalry the words "Alma," "Balaclava," "Inkerman," and "Sebastopol," are to be borne by the 4th Light Dragoons, 8th Hussars, 11th Hussars, 13th Light Dragoons, and 17th Lancers. "Balaclava" and "Sebastopol" by the 5th and 6th Dragoon Guards, 1st, 2nd, and 6th Dragoons; and "Sebastopol" alone by the 1st and 6th Dragoon Guards, 10th Hussars, and 12th Lancers. In the infantry the words "Alma," "Inkerman," and "Sebastopol," are to be borne on the colours of the 3rd Battalion Grenadier Guards, 1st Battalion Coldstream Guards, and 1st Battalion Scots Fusilier Guards; 1st Battalion 1st Royal Regiment, 4th Regiment, 7th Fusiliers, 19th, 20th, 21st, 23rd, 28th, 30th, 33rd, 38th, 41st, 44th, 47th, 49th, 50th, 55th, 63rd, 68th, 77th, 88th, 95th, and 1st and 2nd Battalions of the Rifle Brigade. The words "Alma," "Balaclava," and "Sebastopol," are to be borne by the 93rd Highlanders, and "Alma" and "Sebastopol" by the 42nd and 79th Highlanders. The 57th are to have "Inkerman" and "Sebastopol;" the following infantry regiments are to have the word "Sebastopol" alone:—2nd Battalion Royals, 3rd Buffs, 9th, 13th, 14th, 17th, 18th, 31st, 34th, 39th, 40th, 48th, 56th, 62nd, 71st, 72nd, 82nd, 83rd, 90th, and 97th.

THE ANGLO-ITALIAN LEGION. The *Piemonte of* Turin, of the 23rd, states that General Percy has resigned the command of the Anglo Italian Legion, and that his resignation has been accepted by the British Government. Colonel Read, late Secretary to General Sir Charles Napier, is to succeed him in the command. Major Burnaby, whose intelligence and activity as Assistant Quartermaster-General have been of such signal advantage in raising men for the Legion, will, it is supposed, retain his important functions.

The *Pacific* has brought a large supply of indiarubber clothing for the British army in the Crimea.

THE Admiralty authorities have ordered several large mortar-vessels to be built at Rye on the same plan as those constructed there last spring.

TWELVE English militia regiments are to go to Ireland. The 2nd Royal Cheshire have intimation that they are on the number

A FEW days since 163 men of the Dorsetshire Militia volunteered into regiments of the Line, the same corps having already contributed thirty volunteers. The number of men who volunteered this week into the Line from the ranks of the Kerry Militia was 370, among whom were five sergeants

THE shipbuilding-yards of Liverpool, since the termination of the seven years' war, have been restricted to the construction of vessels of commerce, if we except the troop-ships *Resolute* and *Assistance*, built this year by Mr. Laird, for the Admiralty. More warlike preparations are now perceptible in the Liverpool and Birkenhead building-yards that gentleman, in the shape of six or seven wood gun-boats, of massive appearance, and which are evidently intended for the defence of the river. They are being rapidly proceeded with, and will, no doubt, be completed by March.

MEASURES which have recently been taken to isolate the approaches to Dublin Castle, and render that building more defensible in an engineering point of view than it has been, are thus described in *Saunders' News Letter*:—"The barracks will be shut out from Stephen street by the removal of the houses on the north side; and the walls and offices of the Ordnance Board, leading to the Lower gate, are now in process of removal. In Little Ship-street a new guard-house will be made, and garden of heavy calibre placed in the pleasure-ground. In all these approaches, and the necessity for such a work, in a military point of view, was pointed out several years ago by the Duke of Cambridge, as commander of the forces. It is now felt that a great mistake was made in disposing of the well known George's-street barracks, but means will be adopted to enlarge the defences on that side of the castle. It is also necessary to admit that the projected arrangements are in no way suggested by the present state of the country, which, happily, has never been more peaceable or tranquil."

THE hired steam-transport *Indiana*, with troops for the Crimea, sailed from Plymouth on Saturday last.

The *Ariel*, 9, screw steam-sloop, arrived at Spithead late on Sunday night, and, orders awaiting her to proceed on to Plymouth, she sailed for that port on Sunday before any communication could be had with her from the shore. She is from the West India station. The ships with the *Meander*, and the other ships, English and French, of the White Sea squadron, and has arrived home first.

The *Montreal Chronicle*, of the 12th October, states that the Commissariat advertises for a vessel to convey six thousand barrels of cartridges from Quebec to England. The large consumption of ammunition in the present war not only exhausts all that the mills can make, but will cause the larger part of the contracts for provincial supplies also to be called out of their slumbers into actual service.

THE position of war has enabled a British seaman to evince his gratitude for valuable service of many years standing. In 1848 Mr. Burney, R.N., jumped overboard and saved the life of a man of the crew who had fallen from the gangway of the bulk *Ocean*, of Sheerness. From that period Mr. Burney never met nor heard of the man rescued until a few days since, when he received a letter full of grateful expressions, and begging acceptance of a number of very ancient and curious swan-skins from the museum of Asteria by this gallant and truehearted sailor when that place fell to the Allies.

THE *Cork Constitution* states that Mr. Fagan, M.P., has received a letter from Mr. Labouchere, the Under-Secretary, stating that, in conformity with the prayer of the petition addressed to the Lord-Lieutenant and citizens of Cork to the Lord-Lieutenant, the Admiralty had decided that, so far as the service would admit, a portion of the British fleet would winter in Cork harbour.

THE officers of the Royal Cork City Artillery having applied to the Lord Lieutenant to obtain increased pay, equal to that of the officers of the Royal Artillery, his Excellency, considering that the subject had probably been already under consideration in reference to the Militia Artillery in England, has in reply stated that he had caused inquiries to be made at the War-office, and had been informed that there was no intention of assimilating the rates of pay, as the question was not taken into consideration by the Government when they determined upon the recent augmentation, and the existing rates were then determined upon. As at present advised, therefore, his Excellency saw no grounds for departing from the system which prevailed in England.

THE *Orinoco* steam-transport embarked the following detachments of troops at Portsmouth Dockyard, on Monday, for the Crimea:—Two officers and 50 men of the 1st Royal Regiment of Foot; 3 officers and 80 men of the 3rd; 2 officers and 50 men of the 4th, 3 officers and 104 men of the 7th; 1 officer and 63 men of the 13th; 70 men of the 30th; 3 officers and 138 men of the 33rd; 4 officers and 61 men of the 38th; 2 officers and 50 men of the 44th; 3 officers and 70 men of the 46th; 2 officers and 54 men of the 48th; 2 officers and 53 men of the 77th; 90 men of the 88th; 2 officers and 60 men of the 95th; total, 15 sergeants, 12 drummers, and 1015 rank and file.

IT is said that an additional clasp is to be given to both officers and men for the reduction of Sebastopol, and that the precise terms will be made public in a few days.

WITHIN the last few days ninety bakers have been sent from London for Scutari, Balaclava, and the adjacent head-quarters of the British forces in the East, so that our brave troops are likely to be well furnished with excellent bread during the approaching winter. The men were sent by the overland route to Marseilles, there to embark for the Crimea.

SEVERAL non-commissioned officers have left Hythe for Dublin, Mullingar, and Templemore, for the purpose of instructing the recruits at those stations in the use of the Minie rifle.

THE troops gale of Friday severely tested the buildings on Shorncliffe erected for the troops. The contractor had some fear for the church (which is in an exposed situation), but it stood the gale well, as did also the huts. An iron schoolroom, in the course of erection, fell down; but, with the exception of some gutters which were blown off, no damage was done to the Camp.

IN consequence of the crowded state of the military prison at Fort Clarence, Rochester, it has been found utterly impossible to make room for any more prisoners in that large establishment; and Captain Manners the Governor, has been compelled to give notice to the authorities that he has not room for any others.

AMERICAN PREPARATIONS FOR PIRACY.—No doubt our squadron on the North American Station has lately received reinforcement, but the American people can hardly be ignorant of the real causes which have dictated this step. If they justly claim that the laws of neutrality be respected, they cannot deny us a similar right. If unauthorised recruiting be suppressed, there is nothing unreasonable in asking that unauthorised privateering should be prevented. The Americans, like ourselves, must be aware that in their ports at this moment large vessels are in various stages of preparation, equipped openly for the service of Russia, and to inter-opt and annoy our trade. We say nothing of the wild but long-threatened projects for the invasion of Ireland, the open discussion of which hardly a mail fails to report.—*Globe*.

MR. Easton, surgeon in the Navy, who was taken prisoner at Hango, arrived in Edinburgh, of which he is a native, on Thursday.

The *Républicain* of Neufchâtel announces that during the night of the 19th a fresh shock of earthquake was felt at that place.

CHESS.

TO CORRESPONDENTS.

J. K., Manchester. Your notification respecting the Annual Meeting of the Manchester Club reached us too late for insertion last week.

C. B., Oxford and Cambridge Club.—The mate is much too obvious, and the position therefore very stale.

SPRIGGIE. If a piece giving check to the King may be taken by any adverse piece of which it is a pin, it is not a pin. You may have two, three, or more pieces on the board at once.

PAWN. If black play with ordinary judgment in the position submitted his opponent can have no possible chance.

G. B. F., Louth.—We shall be glad to see the variations, and can promise them every attention.

LEWIS Bath.—I. You are quite mistaken in supposing that Problem No. 593 admits of two solutions. 2. When you receive the Chess-Player's Magazine for January, you will find a Problem published some time before, you must write *still earlier*. It is impossible, with hundreds of communications to attend to on the day of going to press, that we can refer back in some cases not perhaps more than a few hours to examine a chess position.

THOS. Cheltenham.—The "Chess Players' Handbook," published by Bohn, of Covent-garden, price 5s.

J. T. W., Kingston. There is a very good Chess-club at Richmond. For particulars apply to Mr. Harris, chemist, Richmond.

L. B. D.—Your Variation shall be examined.

T. S. See notice to Correspondents and others in our last.

H. T.—It is not that the Chess Enigmas are more difficult than the Problems on diagrams that fewer solutions are sent, but probably because it is easier to set up the men from the latter. You do wisely in trying both. The Enigmas are quite as instructive as the others, and among those who gain their experience themselves of a great deal of amusement, and a great deal of instruction.

W. B., Lewes.—Your notes and discussion of all the Provincial Chess-clubs between Manchester, which is owing not so much to there being more amateurs in the vicinity as to the Club possessing a *spirited and indefatigable Secretary*. Without an official possessing these indispensable qualifications, no Chess-club long survives in health and vigour, whatever resources any one may have to energise.

SOLUTIONS OF PROBLEM No. 611, by F. R. of Norwich, M. P., Nero, Medina, P. W. B., are correct.

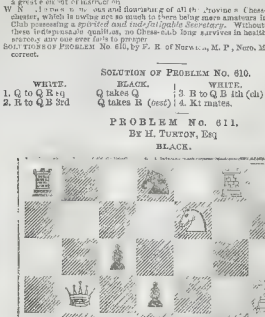
SOLUTION OF PROBLEM No. 610.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to Q B sq	Q takes Q	3 B to Q B 4th (ch)	Q takes B
2. R to Q B 3rd	Q takes R (*best*)	4. Kt mates.	

PROBLEM No. 611.

BY H. TORTON, Esq.

BLACK.



WHITE.

White, playing first, mates in four moves.

CHESS IN SCOTLAND

The two following Games were played in Edinburgh some time back between HERR LÖWENTHAL and the Rev. T. GORDON (Glasgow).

(*Sicilian Opening.*)

WHITE (Herr L.)	BLACK (Gemma.)	WHITE (Herr L.)	BLACK (Gemma.)
1. P to K 4th	P to Q B 4th	17. P to Kt 4th	K Kt to R 5th
2. K Kt to K B 3rd	P to K 3rd	18. K Kt takes Kt	Kt takes Kt
3. Q Kt to Q B 3rd	Q Kt to Q B 3rd	19. Kt to K Kt 3rd	P to Q Kt 4th(*d*)
4. K B to Q Kt 5th	Q Kt to K 2nd	20. P to K B 4th	Q to Q B 3rd (*e*)
5. P to K 5th (*a*)	Q Kt to K Kt 3rd	21. R to K B 2nd	K R to Q sq
6. P takes P	P to Q R 3rd	22. Q to K 3rd	Q B to Q Kt 2nd
7. K B to K 2nd	Q to Q B 2nd	23. K to B 2nd	K takes R (*f*)
8. Q B to K 3rd	P to Q 4th (*b*)	24. B takes R	R to Q sq
9. P to K 6th (*a* pass it)	B takes P	25. Kt to Q 2nd	B takes R (ch)
10. Q Kt to K 4th.	P takes P	26. Q takes R	B to Q 3rd
11. B takes P	B to K B sq (*c*)	27. Kt to K B 5th	Kt to K Kt 3rd (*g*)
12. Castles	K Kt to K B 3rd	28. B to K 3rd	P to K 4th
13. Q B to Q B 3rd	K Kt to K B 4th	29. P to K B 3rd	Kt to K B 5th
14. Q to Q 2nd	P to K B 3rd	30. Q to K B 2nd	Q to K R 6th
15. Q R to Q sq	K Kt to K 2nd	31. Kt takes Kt	P takes Kt (ch)
16. P to K R 3rd	Castles	32. K to K 5th	B to K Kt 7th
		And White resigns.	

(*a*) The opening is very well played on the part of White, and for so long is decidedly in his favour.

(*b*) P to K B 3rd would perhaps have been better play.

(*c*) This move does not appear to be very much to the advantage of Gemma's game. That either being obliged to retreat thus, he should have fed his men, and keep forward an advantageous position on the defensive, is highly creditable to the skill and perseverance of Herr Löwenthal, who, throughout, proves a most formidable opponent.

(*d*) It is true, we think, Gemma's game is improved his play. Instead of taking the Rook, he had attacked the Queen with his King's Bishop's pawn of a more piece (which, of course, is the case at each point appears inevitable. We may be mistaken in this supposition; but if so, the interesting nature of the Variation which follows will, perhaps, excuse the error. Let us suppose, then

24.	B to Q B 4th

(This appears to be his best move. If he play R to Q 4th, Black replies with Q to Q Kt 3rd, &c.)

24	R takes B
25. R takes R	P to K 4th
26. P takes P	P takes P
27. Q takes P	

(White may give check with his Q instead of taking the P at move 27, but it will avail him nothing

27.	R to K sq
28. Q to K B 4th	R to K 3rd

White can now play his Q R to Q 8th, by which Black wins the piece, as we said. Should he try to avoid the 4th, by moving Kt to K B 5th, it will cost him the game at once. Ex. gr.—

29. Kt to K B 5th	Q to K R 8th (ch)	35. Kt to R 4th	B to K 2nd 4th
30. K to K 2nd	Kt takes Kt (ch)	36. Kt to R 5th	R takes P (ch),
31. P takes Kt	Q to K R 8th (ch)	37. Q takes R	P to K Kt 3 d (ch), and wins.

(*e*) Solomon observes that this is good, but P to K 4th would have been more elegant, and more immediately decisive. We agree with him.

(*f*) Instead of taking the Rook, he had moved his King's Bishop's pawn to K Kt 3rd, which would have been more elegant, and more immediately decisive. We agree with him.

BETWEEN THE SAME PLAYERS.

(*Irregular Opening.*)

WHITE (Gemma.)	BLACK (Herr L.)	WHITE (Gemma.)	BLACK (Herr L.)
1. P to Q B 4th	P to K 4th	17. Q B to K sq	P takes K B P
2. Q Kt to Q B 3rd	P to K B 4th	18. K B takes P	P to Q 4th
3. P to K 3rd	B to Q Kt 5th	19. Kt to Q 5th	Kt takes Kt
4. P to Q R 3rd	B takes Kt	20. P takes Kt	P to K Kt 5th
5. Q P takes B	P to Q B 4th	21. K R to K Kt 3rd	P to Q B 5th (*c*)
6. P to Q 4th	P to K 5th	22. P to K R 3rd (*c*)	K to K sq
7. K Kt to K R 3rd	K Kt to K B 3rd	23. P takes P	Kt to K 2nd
8. K Kt to K B 4th	Castles	24. P to K Kt 5th	Kt takes Q P
9. K B to K 2nd	Q Kt to Q B 3rd	25. B to K B 2nd	P to K B 5th
10. Castles	P to Q 3rd	26. P takes P	Kt takes K B P
11. P to K B 3rd	P to Q Kt 3rd	27. B to K B 3rd	P to Q 4th
12. Q to Q B 2nd	Q Kt to K 2nd	28. B to K Kt 4th	B takes B
13. B to Q Kt 2nd (*a*)	Q to Q B 2nd	29. R takes B	R to K 7th
14. Q R to Q sq	B to Q 2nd	30. R to Q 2nd (*d*)	K to K R 6th (ch)
15. B to Q B sq	Q R to K sq	31. P takes Kt	K R takes R
16. B to Q 2nd	Q Kt to Q B sq	32. R takes R	Q mates

(*a*) Curious remarks, one should rather have played the Bishop to Q 2nd. The move made by Gemma is bad.

(*b*) Had he attempted to win the Rook by playing P to K R 4th, White would have taken that Kt P with his Bishop, threatening to sacrifice the Rook next move, and then to draw by perpetual check.

(*c*) The only good move left.

(*d*) It would perhaps have been better to play as follows —

30. R takes Kt	R takes Q
31. R takes R (ch)	K to Kt 2nd

32. R to K B 3rd, &c., &c.

CHESS ENIGMAS.

No. 954.—By C. W., of Sunbury

White: K at K B sq, R at Q B 4th, B at K Kt 6th, Kts at K 6th and Q R 6th, Ps at K B 4th and K 3rd

Black: K at Q 4th, Q at Q R 5th, Rs at K sq and Q B 8th, Kts at K Kt 8th and Q R sq; Ps at K R 7th, K 2nd and 3rd, Q 5th, and Q R 4th.

White to play, and mate in five moves.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Duke of Somerset will have an audience of her Majesty at the first Court at Windsor, and will deliver up to the Queen the insignia of the order worn by his late father

General Canrobert is about to proceed to Stockholm, to deliver to King Oscar the Grand Cordon of the Legion of Honour.

The Duke of Newcastle is daily expected home from the Continent. His Grace has extended his travels into the heart of Caucasia.

The King of Sardinia will, according to present arrangements, arrive in Paris by the middle of the month. In all probability he will be present, on the 15th, at the closing of the Universal Exhibition.

In the probable event of Lord Westmoreland resigning his office of Minister at Vienna, Sir Hamilton Seymour will succeed him as the representative of Great Britain at that Court.

The Duke and Duchess of Brabant left Paris on Saturday last for Brussels, his Imperial Highness Prince Napoleon accompanying them to the station.

Lord Brougham has left town for Paris on his way to his seat at Cannes, where the noble and learned Lord purposes to reside until the assembling of Parliament

The Sultan has promoted the Bey of Tunis to the rank of Mouchir (field Marshal), with the customary present of a sword of honour.

The Order of the Seraphins, the insignia of which King Oscar has just sent to the Emperor Napoleon, is the oldest and the most distinguished of the orders of Swedish Knighthood. Instituted in 1236 by King Magnus Ladislus, it was restored in 1748 by King Frederick I.

The Duchess of Buccleuch has been admitted into the Roman Catholic Church by Dr. Manning.

Prince Metternich was expected to arrive at Vienna on Saturday (this day); intending, as is his wont, to spend the winter in the capital.

Lieut.-General Sir H. Bentinck, K.C.B., is shortly expected in England, on leave of absence from the Crimea, on urgent private affairs.

The Marseilles papers of the 26th ult. announce the arrival there of General Sir Henry Pottinger, Colonel Wrottesley, and Mr. F. Thesiger.

Cardinal Wiseman was received on Monday by the French Emperor at St. Cloud.

At Paris a new medal has been struck. On the face is a profile of the Emperor's bust, with the legend "Napoleon III., Empereur." On the reverse is the following inscription:—"Capture of Kinburn by the Allied Fleets of France and England, on the 17th of Oct."

Lord John Russell has consented to deliver a lecture at Exeter-hall, on the evening of Tuesday, November 13, on the subject of "The obstacles which have impeded most substantial progress."

The new Russian Envoy to the Germanic Diet, Baron Brunnow, has presented his letters of credence to the Austrian Envoy, Baron de Prokesch Osten, who is President of the Diet

Mr. Gladstone is this month to lecture in Chester, on the same subject as that which recently engaged the attention of his hearers at Hawarden.

M. Von der Pfordten, Prime Minister of the King of Bavaria, has arrived in Paris, to visit the Exhibition.

The vacant Commissionership of Charities has been conferred upon Mr. Reddam, M.P. for Newcastle.

The burial-vault in which the body of Rubens lies, in the Church of St. Jacques, at Antwerp, was opened last week, and a few personages of the medium were admitted to view the monument erected over the remains of the celebrated painter.

Mr. T. F. Meagher, now residing at New York, lectured lately in the Broadway Tabernacle, before an audience of 1500 people, on the "Life and Character of John Philpot Curran."

A biographical sketch of Lord Palmerston in the *Banbury Guardian* says that his Lordship is a descendant of Leofric, Earl of Mercia, and husband of the famous Lady Godiva.

A letter from Rome announces the arrival in that city of Count Stackelberg, attaché to the Russian Legation, and of M. Saburoff, one of the Czar's aides-de-camp, with despatches.

The report is again received that the Secretary to the Treasury (Mr. James Wilson), the proprietor of the *Economist*, has been made Chairman of the Inland Revenue Board. £2500 a year is the salary attached to the office.

Young Prince Gortschakoff, son of the Russian Commander-in-Chief in the Crimea, and who, having been for some time past attached to the Russian Legation at Vienna, repaired to St. Petersburg towards the end of last month, will shortly be appointed to the same situation to the Russian legation at Berlin.

There are now two Irish seats, those of Armagh borough and Meath, vacant by the death of the late representatives; and a third, that of New Ross, virtually vacant by the departure of Mr. Duffy.

The Queen of Spain has conferred the Ribbon of the Order of Noble Ladies of Maria Louisa on the Marquise de Turgot, French Ambassadress, and on Mrs. Otway, wife to the secretary of the English Legation, on the occasion of the baptism of her son and heir.

It is said that Mr. Macaulay will retire from the representation of Edinburgh at the last dissolution of Parliament, and that Lord Meadowbank will succeed him.

A. J. L. Beresford Hope, Esq., has given fifty guineas towards the erection of the new Wesleyan schools in Maidstone.

Meyerbeer is expected at Vienna on the 10th inst. He is to direct in person the rehearsals of the "Etoile du Nord," which will be performed for the first time at Vienna on the fete-day of her Majesty the Empress.

A meeting is about to be held in Liverpool to consider the propriety of erecting a monument to the memory of the late Archbishop Brooks

The *Recamontase Gazette* announces that Silvio Pellico's correspondence will shortly be published, and invites all those who are in possession of letters of that eminent writer, and wish them to appear in the collection, to send them to M. G. Stefani, at Turin

Mr. Francis Johnson, professor of Sanscrit, Telugee, and Bengalee, at the East India College, has been permitted to retire from that appointment.

The first Russian translation of Schiller's complete poems, edited by MM. Gerbel and Michailov, has recently been published at Moscow.

Madame Lind Goldschmidt (in reply to an application addressed to her by Mrs. S. C. Hall) has expressed an intention to visit London, for the special purpose of giving a concert in aid of the proposed "Nightingale Fund."

Mademoiselle Taglioni has just arrived at Vienna from Berlin, for the purpose of performing a limited number of nights at the Carnthner-gate Theatre.

The *Journal de Francfort* states that a political journal in the Polish language is about to be published at Vienna

In consequence of the high prices of provisions, the Minister of War in France has made an additional charge to the estimates of his department for the coming year.

The Council of the Horticultural Society have arrived at the conclusion that for the future garden exhibitions will not be advisable.

The Paris Exhibition Palace now opens at ten o'clock, and closes at half-past four.

An Athenæum is to be erected at Warminster, at the cost of £1300

The New York papers state that, in spite of the recent failure, the Newfoundland submarine telegraph will be laid down next summer.

The new Mechanics' Institution at Manchester, which is to cost £22,000, will be completed in Midsummer, 1856.

The total number of Italian theatres amounts to 117, of which 93 are in Italy, and the remaining 22 are scattered over the globe. By far the greatest number of these theatres are exclusively dedicated to operatic performances.

A sum of 500 guineas has been subscribed for a statue of the Duke of Wellington, to be erected on the new esplanade at Lowestoft.

According to accounts received from different points of France, the autumn sowing has been effected under the most favourable conditions.

Accounts from Northern Wisconsin state that tremendous inundations have taken place, and that thousands of tons of hay and large quantities of grain have been swept away.

The commanding officers of the regiments of the garrison of Paris take a certain number of their men every day in turn to view the Palace of Industry and the Exhibition of the Fine Arts.

A number of persons are at present occupied in the neighbourhood of Sens (Yonne) in collecting thistle-heads for a paper-manufacturer, who uses them as a substitute for rags. The paper made from them is said to be of superior quality, and to present a saving of forty per cent.

ENGLISH SONGS AND MELODIES.

Poetry by Charles Mackay.

Air, "Push about the Jorum."

Symphonies and Accompaniments by Sir H. R. Bishop.

Cheerfully.

f

I.

Of old a 'spade' was called a 'spade'
By simples and by sages;
A 'workman' did his honest 'work,'
And 'servants' earn'd their 'wages!'
A 'man' was title of respect,
Whenever virtue named it;
There was but one of higher worth,
And lovely 'woman' claim'd it:
But now we masquerade with words—
The truth a great offence is—
And desecrate our English tongue
By pride and false pretences.

II.

We shame the language of our sires,
We talk so mild and meekly,—
We've 'operatives' for working-men,
And draw our 'salaries' weekly.
Our 'lady' takes the place of 'wife,'
That word so true and hearty;
And every 'man's' a 'gentleman,'
Unless we call him 'party.'
The 'shopman' hates the name of 'shop,'
And, by perversion later,
The man who digs a railway trench
Is call'd a 'navigator.'

III.

Oh, give us back our honest speech!
It had a soul of beauty;
And let us do our daily 'work,'
And think it pleasant duty.
Let's earn our 'wages' as of yore—
The word can never harm us;
Let's love our 'sweethearts' and our 'wives,'
And own that 'women' charm us.
So shall our actions, like our words,
Be void of affectation,
And 'spade' be 'spade,' and 'man' be 'man,
Throughout the British nation.

"Push about the Jorum."—I have reason to believe that this tune had its origin in the north of England. The words beginning, "Push about the Jorum," were adapted to the air when it was introduced into the burletta of *The Golden Pippin*, 1773. At that time it became highly popular, and since then has frequently been brought into public notice, either as a dance or song-tune.—H. R. B.

Memorabilia,

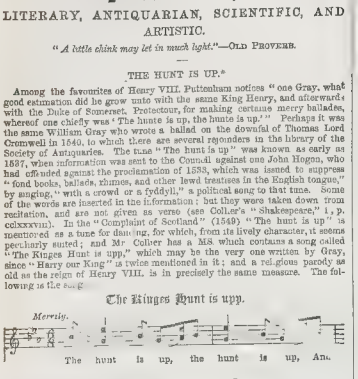
LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

"A little chink may let in much light."—OLD PROVERB.

THE HUNT IS UP.*

Among the favourites of Henry VIII. Puttenham notices "one Gray, what good estimation did he grow unto with the same King Henry, and afterward with the Duke of Somerset. Protestour, for making certaine merry balladas, whereof one chiefly was 'The hunte is up, the hunte is up.'" Perhaps it was the same William Gray who wrote a ballad on the downfall of Thomas Lord Cromwell in 1540, to which there are several rejoinders in the library of the Society of Antiquaries. The tune "The hunt is up" was known as early as 1537, when information was sent to the Council against one John Hogen, who had offended against the proclamation of 1538, which was issued to suppress "fond books, ballads, rhimes, and other lewd treatises in the English tongue," by singing, "with a crowd or a fyddyll," a political song to that tune. Some of the words are inserted in the information; but they were taken down from recitation, and are not given as verse (see Collier's "Shakespeare," i., p. cclxxxviii). In the "Complaint of Scotland" (1549) "The hunt is up" is mentioned as a tune for dancing, for which, from its lively character, it seems peculiarly suited; and Mr. Collier has a MS. which contains a song called "The Kinges Hunt is upp," which may be the very one written by Gray, since "Harry our King" is twice mentioned in it; and a religious parody as old as the reign of Henry VIII. is in precisely the same measure. The following is the song:—

The Kinges Hunt is upp.



The east is bright with morning light, And darkness it is fled, And the merle horne wakes up the morne To leave his idle bed.	The woddes rejoyce at the mery noise Of hey tantum tee ree'
Beholde the skyes with golden dyes Are glowing all around, The grasse is greene, and so are the treene, All laughing at the sound.	The sunne is glad to see us clad All in our lustie greene, And smiles in the skye as he meeth bye, To see and to be seene.
The horse snort to be at the sport, The dogges are running free,	Awake, all men! I say agen, Be merry as you maye, For Harry our Kinge is gone hunting, To bring his deere to baye.

The tune is taken from "Musick's delight on the Cithren," edition of 1666, which contains many very old and popular tunes, such as "Trip, and go," and "Light o' Love" (both mentioned by Shakspeare). Any song intended to arouse in the morning—even a love-song—was formerly called a "hunt's-up." Shakspeare so employs it in "Romeo and Juliet," act iii., sc. 5, and the name was of course derived from a tune or song employed by early hunters. Again, in "Wit's Bedlam," 1617

> "Matrus, last morne, at's mistress' window plaid
> An hunt's-up on his lute," &c.

The following song, which is also taken from Mr. Collier's manuscript, is of the character of a love-song:—

THE NEW HUNT'S-UP

The hunt is up, the hunt is up, Awake, my lady free The sun hath risen from out his prison, Beneath the glistering sea.	The stars are fled to the ocean bed, And it is now broad day.
The hunt is up, the hunt is up, Awake, my lady bright! The morning lark is high, to mark The coming of day-light	The hunt is up, the hunt is up, Awake, my lady sheen! The hills look out, and the woods about Are drest in lovely green.
The hunt is up, the hunt is up, Awake, my lady fair The lovie bird sheep, but now asleep. Browse in the morning air	The hunt is up, the hunt is up, Awake, my lady dear' A morn in spring is the sweetest thing Cometh in all the year
The hunt is up, the hunt is up, Awake, my lady free! I come to thy bower, at the last lov'd hour, To greet you with my song.	The hunt is up, the hunt is up, Awake, my lady sweet My own true love to greet.

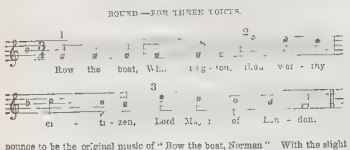
* For the account of this beautiful ballad, and for the arrangement of the air we are indebted to a revised and much-improved edition, now preparing for the press, of Mr. W. Chappell's highly-interesting work called "National English Airs."

ROW THE BOAT, NORMAN.—Pelyan, in the second volume of his "Curiosities" (ed. 1666, fol. 467), alludes to "a roundell or songe," made by the watermen in praise of Sir John Norman, Mayor of London, in the thirty-second year of Henry VI., who instead of riding to Westminster, like his predecessors, "was rowed thyther by water." All that the chronicler gives of the song, are the well-known lines—

> Rowe the bote, Norman,
> Rowe to thy lemman;

But it is much to be wished that the remainder of the ancient roundel could be recovered: although, perhaps, at this distance of time, it is hardly to be expected. I flatter myself, however, that I have found the *original* music to which it was sung. In the second edition of John Hilton's "Catch that catch can," 1658, "Row the boat, Norman," occurs in the index, with an asterisk denoting it to have been added to that edition; but, upon referring to the page indicated, it does not appear. In the collection of the same work (with additions by John Playford), printed 1673, at p. 11, we have the following round, which, although it gives to different words, may, I think, safely pronounce to be the original music of "Row the boat, Norman." With the slight alteration of taking two notes, instead of three, in the second bar, and by repeating the second line of words, to the last two bars, "Row the boat, Norman," would accord exactly with the music here given.—EDWARD F. RIMBAULT.

ROUND.—FOR THREE VOICES.



QUERIES.

NEW EDITIONS OF SHAKESPEARE.—A few months back I read an announcement of a projected edition of Shakspeare, by the Rev. A. Dyce, and saw a prospectus of an.ther edition by Mr Singer. Can you inform me whether either or both of these undertakings are likely to be carried out—and if so, when?—R. DANE.

[Mr. Singer's edition we understand has been completed some time, and will in all probability appear during the winter. That of Mr. Dyce is said to be so far advanced that its publication may be looked for early in the spring.]

THE LIBRARY OF FRANCIS DOUCE.—I have heard that part of this collection went to the Bodleian, and part to the British Museum. Can you inform me how it was divided?—A Country Curate, Scarborough.

[Mr. Douce bequeathed his magnificent library of printed books, his illuminated MSS., and all his other books and MSS. (except some particulars mentioned), and his collection of coins and medals, to the Bodleian Library. His note-books, and some MSS. excepted from the bequest to Oxford, are deposited in the British Museum, and are not to be inspected until the 1st of January, 1900.

I BEG to ask where the following passage occurs:—

> Those married lights which from the towers of heaven look forth.

I shall be obliged, also, if you or your readers will give me any instances of the expression:—

> Save me *from to die.*

Used in the sense of "*Save me from death.*"—J. S. BARRAUD.

ANALYTICS OF ARISTOTLE.—I want an English translation of the Prior and Posterior Analytics of Aristotle. Can you refer me to one, sold separately from the other works of the Father of Logic?—RINGLEY.

FELTON, THE ASSASSIN OF THE DUKE OF BUCKINGHAM.—In Ellis's Collection of Original Letters (1824), I see it mentioned that the paper which was found in Felton's hat, and by which he was identified as the murderer of the Duke of Buckingham, was in the possession of Mr. Upcott. Upon Mr. Upcott's death his collection of MSS. was dispersed. Can any of your multifarious readers tell me into whose hands the document fell, or who possesses it at the present time? W. YATES, Portsmouth.

SPIDERS.—In Ghent I saw the "Hôpital and Abbaye de la Byloque." The open roof, a masterpiece of woodwork, is of oak; and the tradition is that never did a spider weave its web on any of its beams. Can you tell me whether another instance is to be found, and how the absence of the *Arachnidæ* is accounted for?—ARACHNE, Coventry.

[The same is related of the grand roof of Westminster Hall; and the causes to which the fact, if supposed to exist, was attributed in olden times are more amusing than satisfactory:—"*Leges esse telas aranearum vel quas juruices sunt aranea, vel quas muscas capiunt et vespas dewittant.*"]

CHILD-BED SUPERSTITIONS.—I am one who, in the words of Bacon, "hath given hostages to fortune" in the shape of wife and children. My last pledge, a boy (of course "a perfect model and the very image," &c.), made his interesting début on the great stage about a month ago. Returning home rather unexpectedly this morning, I was amazed to find our "pretty page" staggering under the weight of a gigantic pair of steps, three times his own length, which, in his frantic efforts to turn an impossible corner at the first landing, had got so firmly wedged as to defy the united exertions of "buttons," the three female helps, and the venerable "monthly" herself. Upon inquiry into the cause of this extraordinary scene, I was told the steps were "for missis to go up;" and, by dint of cross-questioning, it at length oozed out that my friend the "monthly" (*nutrix mercenaria*)—as arrant a Mother Gamp, I suspect, as ever mixed candle or drank gin—made a point of insisting that ladies under her care, when they first left their chamber after confinement, should always, upon peril of I could not learn what to mother and child, "go up-stairs, before going down." And as my Tusculum happens to have no floor above the one my wife is in, that simple-minded lady had been persuaded or frightened into letting the old idiot send out and borrow of our great neighbour at the great house, the great pair of steps up which, to expiate some silly superstition, she would certainly have been marched but for my timely arrival. From the way in which my remonstrances were received by all parties, I have no doubt some other contrivance to obviate going down stairs before ascending was hit upon after I left the house, and that the superstition is much more general than I believed. Perhaps if you will find space for my note, or the substance of it, in your pleasant column of "Memorabilia" some reader may enlighten me as to the origin of so strange a custom!—BENEDICT, Lewisham.

CAN any one explain the cause of the peculiar warmth always prevailing in the Cathedral of St. Peter's at Rome? The adjoining rooms of the Vatican are open to visitors on certain afternoons, and it is a constant practice in the winter for parties who have been chilled by a ramble among the masterpieces of art collected there afterwards to warm themselves by walking a few turns up and down St. Peter's. Every one who has passed a season at Rome must have observed this, and must also have experienced, in his own person, the grateful contrast between the secular and the sacred atmosphere. The candles burning around the shrine in the edifice have been ascribed as a cause, but this is too absurd to deserve notice. Another cause has been suggested in the size of the building and the thickness of the walls. But this seems equally inadequate—otherwise, the same phenomenon would exist elsewhere, under similar circumstances, which is not the case. In the Cathedral at Canterbury, a glass screen, in flagrant contrast with the character and age of the building, has been erected between the choir and the Martyr's crown. It is said that the purpose of this erection is to protect the officials and the congregation from cold. It is an old saying that "no one catches cold by going to church," and a shrewd Catholic might contend that a peculiar temperature has been miraculously conferred on the great Basilica of orthodoxy in order to render the saying applicable.—JAMES FREEMAN, Birmingham.

ANSWERS TO QUERIES.

CHATEAU-NEUF DE RANDON.—Froissart gives a circumstantial account of Du Guesclin's death, which took place on the very day the fortress surrendered, but as he speaks of its being garrisoned only by "several English and Gascons, who had come from the country of Limousin, where there were plenty of fortresses," it is probable the besieged had among them no leader of any note.—*See Froissart*, ch. xlviii., vol. I.

DAN SHAKSPEARE. This query is worn threadbare. *Dan* was used as we now say *Mr.* It is derived from *Dominus*, which, in the monkish ages, was usually written *Domnus*, and subsequently abbreviated by the French into *Dom*, by the Spaniards *Don*, and by the English *Dan*. So Spenser says of Chaucer—

> O, Dan Geoffry, in whose gentle spright
> The pure well-head of poetry did dwell.

And Shakspeare himself has "Dan Cupid."

THE MAJESTY OF THE PEOPLE.—See "Poetry of the Anti-Jacobin," with Explanatory Notes by Charles Edmonds. Second Edition, with six Etchings after James Gillray. London, 1855: 8vo. (Willis), pp. 98-100, and p. 117, note 4. Maclean's Edition of "Gilray's Works," plates, Vol I., Fol 138. Text, p. 157.

A CURIOSITY IN ART.—I have in my possession two small half-length portraits of the old Eckhout of Amsterdam, painted by his son; one of them represents him with diseased eyes, and a bottle of eye-water is standing upon a rock shelf by his side. Pilkington says that this portrait astonished Rembrandt when he went to see it; and he has recorded his approbation of it by sketching his own bust upon a scroll on the right of the portrait. The other portrait represents him without a hat, and "blind all over," as Hazlitt would have said if he had seen it.—J. CLARKE, Easton.

THE CAPTURED RUSSIAN GUNS AT PORTSMOUTH.

WE are beginning to accumulate trophies of war. Almost every vessel that now arrives from the Crimea bears, in addition to its freight of sick and wounded soldiers, some relic to adorn our naval arsenal at Portsmouth. Not that we have lacked a steady supply of muskets, swords, pistols, helmets, belts, buckles, ay, and bullets too—gathered by private individuals from the bloody fields of Alma, Inkerman, Balaclava, and Tchernaya in the Crimea, and Bomarsund in the Baltic, we have had plenty of them; but now we have a novel gleaming from a different quarter—the Sea of Azoff.

The visitor to Portsmouth can now see upon the Gun wharf the fruits of the expedition under the gallant but lamented Captain Lyons, consisting of two 68-pounders, seven 56 ditto, ten 36 ditto, six 9 ditto two 6 ditto, besides other pieces that are not so easily described; as we have a fortress gun, mounted upon its Russian frame of timber, captured at Bomarsund, and brought to England by the *Penelope*, Captain Caffin. This Russian gun is the only one in England perfect in all its details—the gun at the Crystal Palace being mounted upon a bed made in England, and the two guns at Woolwich have no bed at all. The Bomarsund cannon, shown in our Engraving, when put on board the *Penelope*, had thirty rounds of ammunition, sponges, rammers, wads, buckets for holding red-hot shot, portfire, slow match; in brief, it was perfect in all particulars relating to a Russian battery. The form of the gun is different from those in the English service, the breech terminating in a cone, it being a chambered gun; it is, however, very well made. The bed or framework upon which this fortress gun is mounted is of a very simple construction, rather too slight for severe work, and, from the nature of the wood of which it is made, would in all probability splinter and fly to pieces if struck with a shot. It is, however, very well adapted to bear the strain or shock of a recoil, and can be readily put together or taken to pieces. The wheels are of iron, and are much larger than those in use in fort guns in this country. We question, however, if the same steadiness and accuracy of fire could be maintained by a gun mounted after the Russian fashion as can be obtained by those in our own service. This was the gun, we believe, that fired upon the *Penelope* steam-frigate when she accidentally grounded within its range; and, singularly enough, this frigate had her revenge, for it was her crew that removed it from the fort at Bomarsund, and brought it away in triumph to this country. Such is its weight, however, that while removing it from the upper tier of the tower it fell through the flooring upon the tier below—a proof of the shattered condition to which the Russian fort had been reduced by the fire of the Allied fleets.

The gun captured by the gallant 33rd Regiment at the battle of the Alma is a Russian field-piece. The carriage can be adapted to suit guns of different calibres from a 24 to a 14 pounder. The gun at present mounted upon it corresponds as near as may be to a 14-pounder of the British service. The carriage bears evidence of the battle field, for the Russian gunners, previous to abandoning it, endeavoured to sever the axletree of one of the hind wheels, but the brave 33rd was too quick upon them, and they were put to flight before they could accomplish their object. The gun is brass, very well made, and the carriage is painted, like all the Russian gun carriages we have seen, of a light green.

Our object, however, is not so much to enumerate the number of the trophies captured in the war as to profit by them; and a gun carriage, taken at Kertch, differs so much in design and construction from any in use in our own service as to tempt us to make a few remarks upon it. Our Engraving represents a profile view of the carriage mounted with an English gun. The singularity of this carriage consists in its adapting itself to almost any size gun, and also in being available in a fortress, or of being limbered up and used in the field. But to comprehend how this can be managed it is necessary to investigate each member of the carriage in detail.

The wheels, it will be observed, like the carriage, are made of iron. They are 34 inches broad at the tire, and 80 inches in diameter, and are of great strength and solidity, notwithstanding the apparent lightness of their structure. In the tire there are eight holes, each about 2 inches in diameter, drilled at equal and convenient distances for the introduction of a rod or lever to facilitate the movements of the piece, or to assist in extricating the gun if jammed or clogged in soft ground. By this contrivance a man with a lever inserted in the fore-part of the wheel, and another at the rear, would be able to exert great power, and render valuable assistance in addition to the ordinary means of moving heavy guns in difficult situations.

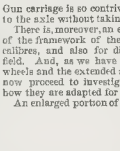

DIAGRAM OF WHEEL.

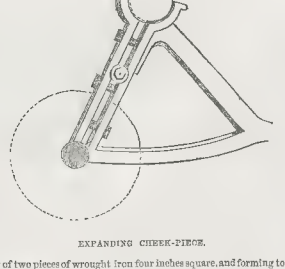
The axle of this carriage is 13 inches in circumference, and presents a novel and perhaps useful hint to our artillerists. From the accompanying diagram it will be seen that it extends several inches beyond the breadth of the frame of the carriage, for the purpose of fixing on a larger pair of wheels. That this is the case is apparent from its construction, there being an extra linchpin hole at that distance, which admits of another wheel to rotate upon that portion of the axle between the two holes.

It is obvious that occasions may arise when a lofter pair of wheels might be eminently useful, and the construction of this Russian Gun carriage is so contrived that a larger pair of wheels can be adjusted to the axle without taking off the smaller ones.

There is, moreover, an evident design in the formation of the other parts of the framework of the carriage to adapt itself to guns of different calibres, and also for different operations, either as fort guns or in the field. And, as we have shown that it is highly probable that the large wheels and the extended axle are contrivances for this purpose, we will now proceed to investigate the other parts of the framework, and see how they are adapted for similar uses.

An enlarged portion of the framework of the carriage is here shown, consisting of two pieces of wrought iron four inches square, and forming together an elevating cheek-piece for the reception of the trunnion of the gun. It is obvious that if these plates are screwed close together, the arm for the trunnion of the gun becomes more contracted; and by reversing the operation it becomes of course more extended, and is capable of being adjusted to receive large and small pieces of ordnance. The movable plates are strongly bound to the axle by clamps of wrought iron, and fastened in the usual way with nuts, bolts, and screws.



EXPANDING CHEEK-PIECE.

In addition to the above, it is necessary to observe also, that the elevating screw at the rear of the piece is fixed to a movable box, which slides up and down between the sides of the frame of the carriage, and can be readily adjusted so as to correspond with the length of almost any gun. This contrivance is very simple, and is also fixed to the frame by a nut and screw.

The annexed Drawing exhibits a view of the trail of the carriage. It differs from that in use in our service in almost every particular; and although it may be difficult to explain the uses of the roller, unless it be to ease the recoil of the gun, yet it is evident that it possesses advantages over carriages used in fortresses, from which a few practical hints may be gathered, and confirms the idea that the carriage can be limbered up and used in the open field if required.

THE TRAIL.

The framework of the carriage, taken altogether, presents a remarkably light appearance, particularly when contrasted with the heavy, lumbering, wooden carriages in use in our land artillery, and which cannot be adapted for any other purpose. The Russian carriage is, however, very strong, the iron being four inches square, as well as being most scientifically adjusted to bear the strain of a recoil. It is also, from its diminished size, less likely to be injured by shot—an advantage not to be forgotten.

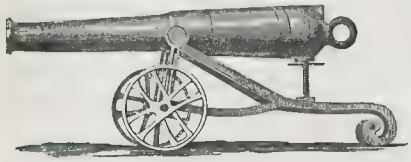
(Continued from page 543.)

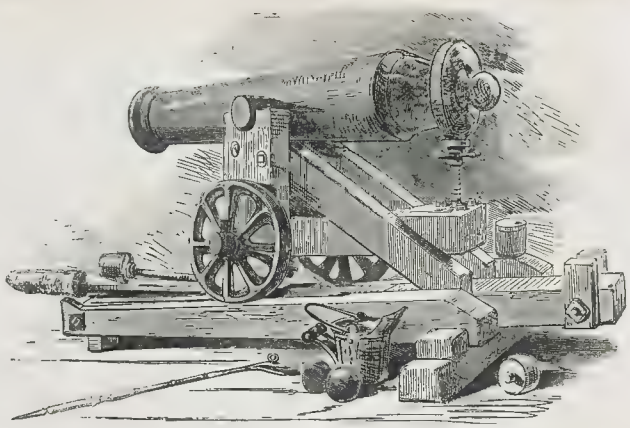
The few brief remarks we have made upon this subject would be incomplete without alluding to the surprise that has been expressed on more than one occasion at the rapid manner in which the Russians have been enabled to remove their guns out of danger, after the battles in which they have been defeated by the Allies; and also, to allude to the fact that while the artilleries of England and France have been able to bring only nine and twelve pounders into the field, the Russians have brought much heavier metal to bear upon them. May not one of these admirably-contrived carriages, with its lofty wheels, and great power of leverage, furnish a solution to the riddle, and also suggest by what means the enemy has been able to post very heavy guns in difficult positions that baffled our gallant allies as well as ourselves, to account by what means they were conveyed there?

The gun mounted upon the carriage taken at Kertch is not a Russian gun, although captured from the Russians. It is an English piece, as its form indicates; moreover, it has the initials of an eminent English firm upon its trunnions. But this gun is remarkable as one of the trophies taken from the Russian Admiral's flag-ship in the Sea of Azoff by the lamented Captain Lyons—that gallant officer having caused to be painted on its breech the following words soon after its capture:—"H.M.S. *Miranda*, Gun taken from the Russian Flag ship, Sea of Azov." It is now mounted upon a Russian gun-carriage, and forms a conspicuous object on the Gun-wharf at our chief naval arsenal.

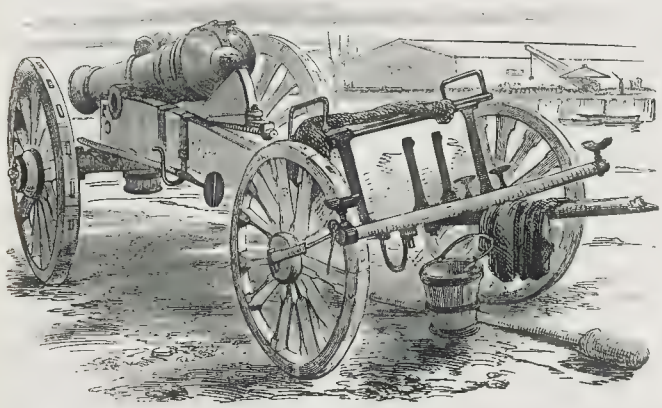


NOVEL GUN-CARRIAGE CAPTURED AT KERTCH, MOUNTED WITH AN ENGLISH-MADE GUN, TAKEN FROM THE RUSSIAN ADMIRAL'S FLAG-SHIP BY CAPTAIN LYONS.

Taken altogether, the Russian guns upon the wharf at Portsmouth are a very interesting sight, we look upon them as so many fangs drawn from the bloody jaws of the ferocious bear we are fighting with. Perhaps, however, the Gun-wharf ought not to be the fixed resting-place of these trophies of our prowess, screened as they are from public view by being shut up in a dock; and. They ought to be exposed to the open eye of the world, and in Portsmouth there is ample room for such display upon the Esplanade, which is open to Spithead, where our ships ride at anchor, and also in full view of Southsea Common, where the garrison troops are drilled, and perform their regimental manœuvres. The sight of these guns would serve to animate the zeal of both services; moreover, such a display is desired by the authorities of the borough, who appear to be quite anxious, that the great naval arsenal of the kingdom should have something to show its visitors of the struggle now taking place between civilisation and barbarism.



FORTRESS GUN FROM BOMARSUND.



RUSSIAN FIELD GUN CAPTURED AT THE BATTLE OF THE ALMA.

DESTRUCTION OF A CHINESE PIRATE.

(*From a Correspondent.*)

On the morning of the 4th of July last H.M.S. *Racehorse*, Commander Edward K. Barnard, on her passage from Amoy to Foo-chow, when standing towards Lamyit Island, with a view of falling in with the pirate fleet she had engaged so successfully a few days previously (having recaptured an English vessel and released a Chinese vessel in their hands, destroyed two of theirs, and taken and destroyed upwards of a hundred of the pirates), observed a piratical vessel under the land, and chased her. Perceiving her from joining seventeen of her comrades, which we subsequently observed at anchor in such shallow water that we could not approach near enough to attack them, we followed her into Pinghai Bay, where we anchored. Immediately the boats were sent in chase. The gig and two cutters got away first, followed her round the bay, pulling and sailing. Shortly afterwards the pinnace shoved off and steered a course to intercept her. After a spirited chase of about an hour, the pirate firing occasionally, the gig laid her bow in to board, when a shower of spears and stinkpots was thrown into her; the latter caused her magazine to explode, blowing two marines out of the boat, and obliging the rest of the crew to jump overboard. Shortly afterwards, the pinnace, by dint of yawing, was enabled to bring her 12-pound howitzer to bear; and, making exceedingly good practice, obliged the pirate to run on shore.

Out of a crew of about sixty, forty were destroyed—the remainder escaped among the rocks.

The crew of the *Racehorse* having burnt the pirate, the boats returned. In the gig there were four dangerously wounded (two since dead), two seriously, and one slightly.

PURSUIT OF A CHINESE PIRATE BY THE BOATS OF H.M.S. "RACEHORSE," IN PINGHAI BAY.

London: Printed and Published at the Offices, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE 198, Strand, aforesaid.—SATURDAY, NOVEMBER 3, 1855.

THE ILLUSTRATED LONDON NEWS

No. 769.—VOL. XXVII.] SATURDAY, NOVEMBER 10, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

WHY NOT DISSOLVE PARLIAMENT?

RUMOURS have lately been prevalent that it is the intention of the Government to dissolve Parliament. We are not aware whether the rumours are entitled to credit; but we think we are justified in stating that, whether well or ill founded, they give expression to a strong popular feeling; and that, if the Government were so advised, and would issue an appeal to the country, demanding its aid in the vigorous prosecution of the war, a Parliament would be returned of which the composition would embolden and inspire the friends of justice and freedom in every part of Europe, and strike more terror into the councils of Russia than the raising by the Allies of another army of 100,000 men, and the dispatch of another fleet to the Baltic or to the Euxine.

Why should not the Government take this step? The management of the war, under the auspices of Lord Palmerston, betokens the man of heart as well as the man of genius; the man for whom no detail is too small, and no effort too gigantic. Yet it can scarcely be asserted that the great bulk of our public men are inspired with his high sentiments; or that there is not a compact body of men in the House of Commons whose personal ambition is larger than their patriotism, or who ignore patriotism altogether and sympathise with the enemies of their country. The present Parliament is so constituted so evenly trimmed between the great contending parties in the State—that this knot of factious and fractious men, increased as it is from time to time by blunderers and pedants, who make mistakes and cannot forgive their country for finding them out, may at any time have it in its power, by a temporary manœuvre, or vote upon a secondary question, to overthrow the present Administration. Any one who has eyes to see and ears to hear cannot but be aware of the efforts made by these men to carry out their objects, which are as shortsighted and suicidal as they are mean and paltry. The peace or which they clamour is peace by submission to a rapacious and aggressive foe—peace by betrayal of the interests of Europe—peace for the sake of the corn trade with Odessa—peace for the sake of ewer taxes—peace for the sake of the till—peace at any price consistent with the existence of the nation. Nay, we doubt whether national existence would be too heavy a price to pay in the estimation of men who cannot see that honour and justice are the bulwarks of great States, and that no nation can long retain its independence when its leading men are governed by no higher principles and motives than those of the shop, and do not consider slavery and degradation to be evils and calamities far more deplorable than the worst horror with which war can afflict us.

A bad impression is created throughout Europe by the efforts of these pugnacious disputants, and by the uncertain breath of our Parliamentary system. When a man who is known to have been once powerful in this country, to have been the High Priest of public opinion, to have led one of the greatest and most successful agitations for the redress of a social wrong that was ever known among a free people, indites a letter to state that "in his conscience" he believes the present war "to be more unnecessary, rash, and aimless, than any in our history, and which, for the visionary objects avowed by its advocates, has had no parallel since the Crusades," the Emperor of Russia may well take heart, and discover a ray of hope amid the darkness that surrounds him. The balance of his mind, swayed to peace by continued reverses and humiliations, and the growing misery of his people, will sway to the other side, if he can persuade himself that Mr. Cobden, the chosen representative of one of the largest and most intelligent constituencies of England, represents, in the sentence we have quoted, the opinions of those who sent him to Parliament, or of any considerable section of the British people. If he reflect at the same time that one of the members for the great and renowned

KINBURN THE 5 IT BATTERY.—OTCHAKOFF IN THE DISTANCE.—SKETCHED BY J. A. FROWE. (SEE PAGE 551.)

city of London, the chosen delegate of the metropolis of the world, is of opinion that his country rejected fair proposals of peace in April last, and must consequently have been in the wrong ever since; if he add to this melancholy, but to him cheering, fact, the consolation that the member for the University of Oxford—that great seat of learning, renowned throughout Christendom—sympathises with Holy Russia, and talks of her "paramount destiny" to conquer all her foes, and be the supreme Power of Europe; and if, moreover, he remembers that Manchester—the great hive of manufactures—one of the busiest, most prosperous, and most intelligent cities in the civilised world—has two members who think Russia to be right and their own country hopelessly wrong, and Turkey a State predoomed to perish and not worth defending, he may be excused for falling into the error of hoping that, by some turn of the political wheel, these men may come into power, and wield for a short space the destinies of Britain. He knows enough of the British Parliament to be aware that in that short space he might accomplish, by the aid of his English friends, what he could not accomplish by the strategy or the valour of Prince Gortschakoff or the Grand Duke Constantine; and that, if nothing is to be gained from the might of his own right arm, everything may be expected from the paralysation of the arm of his opponents.

Is it not time to show the world, once for all, that the British people are swayed by nobler motives?—that they repudiate the men who would tarnish their honour, impair their independence, and lower them in the rank of nations? Is it not time to show that there is not, will not, and cannot be, any mistake about the objects of the war, and that the nation is prepared for any amount of sacrifice or exertion to carry them out? To use Mr. Cobden's own words, "there is nothing for it but an appeal to the manhood of England." If Lord Palmerston will but speak the word—if he will but say, or cause his Sovereign to say, in short, pithy, unmistakable terms, that which every true Briton feels—that which animates the soldier in the camp and the sailor in the ship—and in that sense ask the constituency of the empire to return him a Parliament, there will come to him before Christmas a response that will strengthen the hands of England and those of its allies, and carry discouragement and discomfiture into the ranks of the enemy. On all great questions a direct appeal to the people is the safety of this country—as, indeed, of any other. The present occasion is one of them. If it were judged advisable to ask the constituencies, as Lord Derby did, whether they approved of Free-trade as a principle of social policy, it is advisable for stronger reasons to ask them whether they approve of the principle of the war, and whether they are prepared to carry it on, *coute qui coute*, until they conquer and secure an honourable and a permanent peace? To expect that all the friends of Russia would be thereby excluded from the next Parliament, and that none but true patriots and men of common sense would be returned to it, would be to expect too much; but, judging from the strength and unanimity of the popular feeling, it is probable that three out of four, or even nine out of ten, of the impracticable peacemongers would appeal in vain to the constituencies.

There is not a soldier in the army, or a sailor in the fleet, who would not think it worth a month's pay to hear that Mr. Cobden, Mr. Bright, Mr. Gladstone, and all other members of Parliament who sympathise with Russia, were consigned to private life and political extinction. If Lord Palmerston will give our brave defenders and allies this gratification, he will prove himself wise as well as bold. The country not only wants new and young blood in the army, but new blood in the House of Commons. The old hands are all but used up, and the Cobdens and Gladstones are as antiquated in their way as our new Field Marshals or well-meaning General Simpson. The existing Parliament represents the effete quarrel of Free-trade against Protection. The nation requires at the present time a Parliament that shall represent the more vigorous and important quarrel of national independence against encroaching barbarism. The nation wants "manhood." In this respect Mr. Cobden is quite right—it wants "manhood," not simply at the cannon's mouth, but in the council chamber. Of what use would manhood be in the field if we had a Ministry of Cobdens and Gladstones to direct it?

QUERY: A HERO OR A FELON?—Did you notice in General Orders, a few days ago, an entry of the finding of a court-martial on the trial of a boy eighteen years old, a bugler in the 5th Dragoons, who had attempted to shoot his sergeant? The circumstances were peculiar. Military law declares the lad to be a felon, romance will claim for him the title of a hero. At the famous charge at Balaclava the boy's father, a private in the same regiment, was engaged. Whether the father displayed the pluck of a soldier or not I cannot tell; but one thing is certain—that he was left dead on the field. Report says that for some time previously a disagreeable personal dispute had existed between the private and the sergeant-major. This may be true or not; but there is no doubt that after the battle, when the dragoon was dead, the sergeant spoke slightingly of him, and said that he was "no man." The sergeant himself was wounded, and after being some time in hospital returned to his duty. The young bugler sought the first opportunity of meeting him with a brace of loaded pistols. "You said my father was 'no man,'" gasped the boy, clenching his teeth. "I have been waiting for you many a day. Take your choice of a pistol; for, by the living God, my father's son or you must die!"—and he thrust a pistol into the sergeant's hand. The sergeant attempted to seize him. "Stand off! Fair play! Keep your distance!" shouted the youth. "Now, sergeant—ready! By ——, if you don't fire, I will!"—and he snapped the trigger. The pistol hung fire, and the offender was instantly seized by the sergeant. A court-martial has condemned him to be transported for life. The sentence was read out on parade, with the addition that the Court had taken a most merciful view of the case in not condemning him to die. No doubt the finding of the Court was correct. Military discipline must be maintained; and the boy had challenged his superior officer. But is it not possible now to remit a term of his punishment, or rather to grant him a free pardon? Did Wellington, Anglesey, Londonderry, or the host of noble officers who "went out" in the palmy days of duelling, ever draw a trigger under greater provocation? Did Card. ——, under whose command the boy's father fought—never handle a duelling pistol? "A man's a man." And the heart may be as large under a bugler's shell-jacket as beneath a Field-Marshal's epaulets and lace trimmings.—W. C., *Letter from the Camp.*

A FANATICAL ASSASSINATION.—A miserable calamity has occurred in the Madras Presidency. Mr. Conolly, Collector in Malabar, one of the most able and amiable members of the service, and who had just been appointed Provincial Member of Council, has been assassinated in his own house, by a band of fanatic Mopals. This race is of Arab descent, they number about 50,000, and under the impulse of religious zeal have been accustomed for years past to burst forth and slaughter and destroy whoever they could meet with, the destruction of the infidel forming the most certain means of securing them a place in Paradise. On the present occasion they selected a single victim; and, as the people of their own race voluntarily offered rewards for the detection of the murderers, some mystery hangs around the whole affair, divested as it is of the usual characteristics of Mopal violence. Troops having been immediately summoned out, the whole of the assassins, five in number, were overtaken and destroyed.—*Bombay Times, Oct. 7.*

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

WE are at the conclusion, or *à peu près*, of the Palais d'Industrie. On the 31st ultimo took place the sitting of the Imperial Commission charged to discuss the question of the prolongation of the Exhibition. The general opinion has long been that such a step was not merely difficult but impossible; but the Emperor having issued a formal order that the affair should be minutely examined into, and the pros and cons properly studied before coming to a conclusion, the order was obeyed; and, the result of the investigations being submitted to the Emperor, he accorded the authority to commence the work of demolition—for so indeed it may be termed. Their Imperial Majesties on that day visited the Palace in detail. Two hours were spent in the examination, and hardly were the doors closed after their departure when the order was issued to the workmen waiting on the spot to begin the removal of all the contents of the Transept. The labour continued through the night, railway being established the whole length of the Nave; the transport of the larger objects was effected with wonderful ease and celerity; and in the morning this part of the building was no longer recognisable. The galleries as yet remain untouched, and the public are admitted as before to visit them. In this portion of the building no productions seem to have had so immense a sale as the muslin embroideries. There is hardly a single object, from collars of a few francs to handkerchiefs of £40 or £50, and even higher, that is not marked "*vendu*." Some of the nations—among others the Egyptians—have refused to sell anything whatsoever. The Tunisian bitrines are objects of great interest to the female part of the community, as they contain a variety of rich stuffs, and more especially the beautiful white bournouses that form such exquisite draperies to cover an opera or soirée toilet: these are selling at sixty francs; and are, as may be supposed, in great request. On the 1st instant their Majesties paid their farewell visit to the Building, and traversed the whole of the galleries, particularly examining the English, Belgian, Swiss, and Lyonese departments. Nearly all the expedition was performed by the Empress on foot; and, after a short rest in her boudoir, her Majesty bade farewell to the building, and returned to St. Cloud. The Princess Mathilde has since visited the Belgian compartment, where she has made various purchases.

An idea, started some time since, of removing the Bourse to the Palais d'Industrie, gains considerable ground, the present building being of a space much too limited fully to answer the purposes required. It is said that various petitions are likely to be addressed to the Government on the subject. In reply to the question—What, then, is to be done with the Bourse? it is suggested that it becomes the emplacement of the Grand Opéra, and that the building which that now occupies shall be pulled down, and by the sale of the large and immensely-valuable space of ground it occupies the Government may be enabled to do more than cover the expenses of the removal.

It is expected that the winter will be most prolific in official fêtes, the Emperor having intimated that the handsome salaries accorded to the high dignitaries of Court and State have been given with a view to such a result. The example has already been set by M. de Morny, who opened his *salons* at the Présidence du Corps Législatif for an artistic soirée: at this were present nearly all the principal artists and men of letters, foreign as well as native, now in Paris. The concert named to take place on the 16th, the day following the distribution of the recompenses at the Exhibition, is but the first of a series of them, taking place on as many consecutive days. At this will preside Hector Berlioz, with 1250 performers. The concert of the 25th will be a third repetition of the first. On the 20th and 22nd the same artists will perform fragments of the "Desert" and "Christophe Colomb," under the direction of Félicien David. The Orpheonists and the foreign and departmental Choral Societies, forming a collection of nearly 3000 voices, will be heard on the Sundays, and on the other days military bands and theatrical orchestras will perform, presided over by Sax, Berlioz, Félicien David, &c. During all this time the decorations prepared for the fête of the 15th will remain untouched. The tickets for the first concert will be three francs; those for the others, one or two. The Prince Napoleon, in announcing the method adopted for the distribution of invitations for the 15th, declares that, in order to prevent jealousies or personal dissatisfaction, he begs to decline himself according any billets; and states that no applications for such will be answered.

The winter is setting in with more severity than usual in point of cold, and a little snow has fallen. On the whole, however, the weather is tolerably fine, and it is to be hoped we may later be spared the intense rigours that the two preceding winters have brought us, after a commencement much milder than that of the present one.

We may be permitted to cite among the revolutions effected in the domain of elegance and luxury that introduced by M. Alexandre in the manufacture of furs. This graceful and coquettish appendage to feminine toilet has, under his hand, been transformed from a mere toy to an elaborate and valuable work of Art. In order to carry out his idea on the subject, M. Alexandre has called in the aid of such artists as Horace Vernet, Diaz, Celestin Nanteuil, Eugène Lami, Hamon, Belort, Fleury-Bouchardy, &c., &c., to paint the parchments, while the sticks are carved and decorated by the best workers in the art that can be found. These furs are divided into four categories: in the first, the pictures are the original works of the artists before named, and no duplicates exist of them; the mountings are of the most exquisite workmanship, and are enriched with jewels; the price of them amounts to as much as 10,000 francs In the second class, the paintings are by less celebrated artists, and are sometimes original, sometimes copies of the works of masters. The prices vary from 1000 to 5000 francs. The third class consists of copies of the two first, which cost from 3 to 500 francs; and the fourth are such as are intended for general sale and exportation—their price varies from 30 to 80 francs.

On Tuesday a report was current in Paris that the Emperor had been wounded in the shoulder by a ball from another would be assassin.

At the theatres the "Barbière" has a considerable success at the Italiens, though the universal opinion is that Mario has greatly lost, and is merely a *souvenir* of his former self. At the Odéon, "La Raisin," by M. Roger de Beauvoir, draws large and admiring audiences.

No less than forty-four butchers were last week brought before the police tribunal for offences against the new regulations.

THE SANTHAL INSURRECTION.—STATE OF INDIA.—The insurrection is dying out, and from the great difficulty of getting at the worst of the criminals, the enormous slaughter that must follow the punishment of the whole of those engaged, and the measureless amount of folly as well as fanaticism manifested throughout, Government seems anxious to deal as lightly as possible with the insurgents. Disturbances at present seem quieted in Oude, the malcontents not yet being quite prepared to hurry on the impending annexation. All is tranquil throughout British Burmah, Le Embassy has reached Ava, and the King has appointed the new moon as the most auspicious period for their reception. The disturbances in the Malee Kanda, mentioned in our last, turned out as we expected, a mere local squabble of very small account. As an guess can be formed in India how large a conflagration a small spark may kindle, Major Wallace acted wisely in summoning from Baroda a force sufficient to crush any amount of insubordination. The Artillery marched fifty miles in forty-eight consecutive hours—a warning for the future of how quickly the means of suppressing revolt can be brought to bear on the spot.—*Bombay Times, Oct. 3.*

A company has been formed at Milan for establishing steam navigation on the Lake of Lugano.

During last week, in consequence of the number of vessels requiring assistance, the Deal boatmen earned between £3000 and £4000, nearly the whole of which has been al. ady paid them.

THE WAR IN THE CRIMEA.

The news from the Camp is without interest. The apprehension of a Russian attack, which was strong enough to stop the embarkation of troops for Eupatoria, seems to have completely ceased for the ti ne being, but the troops still turn out for parade before sunrise. As a great part, principally of the English army, has to go out every day for fatigue parties, this is the only parade they ever have. The Russians continue to fire from the north side without doing our troops any serious injury. Our batteries, which do not keep up a very continuous fire, have set fire to a vast Russian magazine. The English, French, and Sardinians, are taking precautions for the winter, and the men work at their hutting with the greatest ardour. Official reports published in St Petersburg affirm that the Crimea is supplied with provisions for the Russian army for eight months.

The *Constitutionnel*, on the authority of a correspondent at Odessa, publishes part of an order of the day of Prince Gortschakoff, in which he tells the army that the Emperor has invested him with full powers to cease or continue the defence of the Russian position in the Crimea, according to circumstances. The Commander-in-Chief adds:—

We will never voluntarily abandon this country, where St. Vladimir received the water of grace after his conversion to Christianity. But there are contingencies that sometimes render the firmest resolutions impracticable, and the greatest sacrifices useless. The Emperor has designed to leave me sole judge of the moment when we ought to change our line of defence, if it should be the will of God we should do it. It is for us to prove that we know how to justify the boundless confidence of the Czar, who has armed in our country, to provide for the defence of the country and the wants of his army.

The order is dated from the heights of Mackenzie, October 15.

The latest Russian reports from the Crimea state that the army, after being reinforced by 22,000 fresh troops from Perekop, under General Fraunon, was about to assume the offensive, and was making preparations for a vigorous attack on Eupatoria

By a despatch from Prince Gortschakoff, of the 2nd instant, we learn that General d'Allonville, after his return to Eupatoria on the 29th, with the mixed *corps d'armée* of the allies, remained there two days, and on the 1st instant again left Eupatoria. The Prince says that the enemy halted for the night at Karaguri and Saki, from which it would appear that General d'Allonville is advancing by another road than that which would lead him to the Russian intrenched camp at Tchobatar. Karaguri lies about nine miles to the north of that place.

In a telegraphic despatch from St. Petersburg the return of the Allied corps d'armée to Eupatoria, on the 29th ult., is ascribed to the apprehension of the enemy that it would be attacked on its flank.

From Yenikale we learn that the new Contingent has occupied the intrenchments, and that 8000 Turks, under Hadshi-Pacha, have been placed at its disposition. Generals Cunninghame, Holmes, Evans, and Gunthorpe were at the same point. The French troops occupy Fort St. Paul, to the south of Kertch. A few reconnaissances have been made in the plain, but there was no engagement.

THE NEW RUSSIAN LEVY.

The new levy of 10 men in every 1000 inhabitants is to include the Jews, and is the eighth since the beginning of last year. The first was ordered by the Imperial ukase of the 10th Feb., 1854, and the proportion fixed on was 9 recruits in 1000 souls, whilst it had effect in the whole of the Russian empire in Europe. In the course of the same year fresh levies were ordered by the ukases of the 7th of September and the 19th of December, to the extent of 10 men in 1000 souls both in the eastern and western provinces. The first act of this description in the present year was the famous manifesto of the Czar of the 10th of February, ordering the embodiment and formation of the militia in 18 provinces to the extent of 28 recruits in 1000 souls; and three months later appeared the Imperial ukase of the 6th of May, ordering a fresh levy of 12 men in every 1000 inhabitants for the western half of the empire (Russia in Europe). These were followed in quick succession by the three ukases of the 31st of May, 12th of August, and 7th of October, embodying the militia in the rest of the provinces of the empire and ordering a levy of 10 men in 1000 souls.

From the 10th of February, 1854, down to the present time, the Czar has consequently raised no less than fifty-two men in every thousand inhabitants in the whole of the empire, and twelve more in the western half; and now comes a fresh conscription of ten men in one thousand souls—making altogether about seventy men in two hundred and fifty, or more than twenty-five per cent of the male population; for we may assume that one-half of every thousand inhabitants are females, and of the remaining five hundred one-half are children and old men. Notwithstanding the colossal nature of these draughts on his subjects in less than two years, we see that the Russians are just barely able to make head against the allied forces of the enemy; and the question very naturally presents itself to every reflecting mind—"If the loss of life is so great during the first two years of the war, and if the population experiences a similar drain during the continuance of hostilities how long will it be before the population of Russia is reduced to nothing but women and children?" It is a common rule-of-three sum that any schoolboy can easily calculate

A letter from St. Petersburg in the *Hamburg News* says:—"The new recruitment has thrown the country into great terror. It is doubted if 400,000 men capable of service can be found. The towns and districts furnishing the recruits will be obliged to provide them with fur cloaks, which is a heavy burden, owing to the present high price of furs."

AMERICA.

The steam-ship *Canada*, which sailed from Boston on the 24th ult., arrived at Liverpool on Sunday last.

It is reported in the diplomatic circles at Washington that the British Minister asserts that the recent attempts to convict him of a breach of the neutrality laws was the result of a conspiracy, got up by foreigners, to embroil both Governments, and that, when required, he is in a position to prove the same. Mr F. Crampton further intimates that, should he be recalled, no successor will be appointed by his Government.

The barque *Maury* was seized at New York, suspected as a Russian privateer, but was, with the sanction of the British Minister, discharged from the custody of the States Marshal

Late news from Texas announces that the trouble with the Mexicans and Indians along the Rio Grande continued, and there were rumours that large numbers of them had crossed to the Texas side of the river. The citizens of San Antonio had resolved to raise one thousand men for immediate service against the marauders.

ANOTHER THREATENED INVASION OF CUBA.

Accounts from Cuba to the 1st ult. received in Madrid represent that new fears of an invasion of Filibusteros had been excited, and that General de la Concha had made preparations for resisting it. He had also decided that the steamers of the Cunard line, on or arriving from the United States should be taken down. A mutual assurance company for the slaves had been established with permission of the Governor.

THE YOUNG KING OF PORTUGAL.—It is related that Dom Pedro recently called for a list of all the prisoners in the realm, but received only a statement of such names as the authorities deemed deserving of notice. Hereupon, the tale goes, the King returned the paper, and demanded a complete one, saying he considered himself the best judge of such criminals as were worth his notice, and did not wish to overlook the meanest of them. Another tale says that the administrador of a petty district having died, his son, a young man of twenty-five, petitioned the King, and was promised the place. His Majesty, however, mentioning the matter to the authority, was told that the son's acquaintance was too young, and that there was a fitter man for his post. "How so?" the King is said to have replied; "I am much younger, and am yet thought capable of governing Portugal. Let the appointment be confirmed." There is yet another of these anecdotes. It is stated that during the late Regency the business of the Cabinet was sometimes gone through with the accompaniment of cigars, the Regent himself occasionally smoking. We are told that since that time before Dom Pedro, and apologetic explanations made to him. The King is reported to have given no reply, but merely to have turned his back, and afterwards to have issued orders that the practice should be prohibited. It is evident the King acts advisedly: he consults the army, and in public always appears in uniform. He has surrounded himself with men of years and sagacity—for example, General Laureiro, Da Costa, the Marquises de Sampaoia, and others of a similar character; he never signs a paper till he has read and understood its purport, and hopes are entertained that he will gradually remove that mass of corruption which clings so close around the heart of Portugal, and pervades every branch of the Administration.—*Letter from Lisbon, Oct. 14.*

SAD STATE OF AFFAIRS IN NICARAGUA.—Late advices from San Francisco give a deplorable account of the disturbed state of Nicaragua, and the insecurity of property in that territory, consequent upon intestine dissensions and the Lynch-like proceedings of Walker and his followers. All the mules belonging to the Transit Company had been driven off, and passengers by that route had to walk from Virgin Bay to the Peuche, the heat and fatigue of which journey, with the too free use of fruit and spirits to assuage their thirst, had resulted in cholera, and the death of above 200 passengers in a trip from San Juan del Sud to San Francisco. This state of things naturally tends to increase the traffic on the Panama Railway, which, being entirely within the territory of New Granada, is not liable to such disagreeable interferences and aggressions.

SUGAR AND WHEAT.

THERE is quite a commotion in the land on account of the high price of sugar and wheat, which also keeps continually rising. In the early part o fthe year the average price of sugar was about 30s. per cwt., without duty; last week it was 32s. 1d.; and on Tuesday rose fully 5s. more. The retail price, which follows the wholesale price, at Mincing-lane, is at least 2d. per lb., or 50 per cent. more than it was a few months ago. So wheat, the average price of which in the London market last week was 83s. 6d. per quarter—or 2os. 9d. above the general average at this time last year—rose again in Mark-lane on Monday 2s. per quarter; and on Wednesday the market was firm, indicating rather a further rise next Monday than a fall. When such a rise in price takes place it generally happens that the consumers believe themselves to be the victims of some kind of conspiracy on the part of tradesmen; and there are never wanting persons to encourage the belief who ought to know better. It is certain that the holders of these articles, or the grocers and the bakers, always endeavour to sell them for as much money as possible, and it is not unnatural that the consumers, whose wants seem to place them at the mercy of the dealers, should be suspicious and mistrustful. We cannot censure very severely the injustice or violence of which the consumers from the conviction of their helplessness are sometimes guilty; but their best protection against an excessive charge, as we have already explained, is the competition of the dealers themselves; and we must now, for the general information, advert to the unavoidable circumstances which caused this rise in price, and exempt the dealers from blame, though they appear to profit by it. In fact, their advantage is always found in low prices, as their gains increase with the amount of their sales, and their sales increase in proportion as prices are low.

In the first week of the year the total stock of British plantation sugar in the port of London was 33,989 tons, against 30,615 tons in the corresponding week of 1854. Last week the stock was reduced to 29,150 tons against 43,819 tons in 1854. Thus there is a decline in the stock since the beginning of the year of 3839 tons; and, compared with the same period of last year a decline of 14,669 tons. In foreign sugar the decline has been still greater; the stock at the beginning of the year was 35,971 tons, and last week 11,861 tons. The decline of the latter, much of which is exported, is an indication that consumption has increased abroad faster than the supply; the decline in the former is a proof that the people of London have consumed since the beginning of the year nearly 10,000 tons of sugar more than they have received. On the approach of winter the arrivals are usually short and uncertain, and hence a short stock now creates alarm, lest in a little time there should be no stock at all. The average weekly consumption of the metropolis of British plantation sugar is about 5000 tons, so that at present there is not in London enough for six weeks' consumption of an article in hourly use, which comes to us from the West and the East Indies, from Brazils, Manilla, and China. The deficiency of the supply in relation to the usual demand is the cause of the dearness of sugar, and the continual decline of the stock is the cause of the continual rise in the price.

The Londoners, however, are not the only part of the people whose consumption has exceeded the supply. In the whole empire a similar excess is noticed. The total imports of unrefined sugar the growth of our own colonies and of foreign countries in the nine months of this year, ended Sept. 30, was 4,584,064 cwts. against 7,016,378 cwts. in the nine months of 1854; whereas the consumption has been 5,885,514 cwts. in the same period of 1855, and 5,554, 314 cwts. in 1854. In 1854 the consumption fell short of the imports by 1,462,064 cwts.; in 1855 the consumption has exceeded the imports by 301 469 cwts. That the present rise in price is precisely commensurate to the falling off in the supply in relation to the consumption cannot be asserted, because variations in price are always influenced by cities of commodities; but all experience is in favour of leaving the price at all times to be settled by the free bigging of the market, which, in the long run, establishes and maintains a fair and a just price for all.

The figures we have just quoted show that the consumption of Great Britain in 1855 has fallen a little below the consumption of 1854; but proportionably nearly the same in foreign-grown and British Colonial sugar. As all the latter comes to this country, we are at once convinced that the growing sugar supplies the whole world in 1855 is less than the crop which supplied it in 1854. Throughout 1854 and through all the early part of 1855 the price of sugar was comparatively low, and there was, consequently, no inducement to increase the imports or extend the cultivation. Louisiana, accordingly, to quote one well-known example of decline, 99 sugar-houses were put down in 1853-4, and 44 in 1854-5, and the cultivation of cotton substituted for that of sugar, because the latter did not pay. The crop of Louisiana was, in consequence, 102,688 hogsheads less in 1854-5 than in 1853-4. Although no sugar from Louisiana comes hither, so intimate are now the commercial relations of all countries, that this decline in the production of sugar in the States made it necessary to import greater quantities from the Brazils and from Cuba; and thus left so much less of the produce of these countries for consumption in Europe.

In this period, however, the consumption in Europe has increased The manufacture of beet-root sugar has, in consequence of the low price, fallen off in the last two years, while the grape-disease has induced men to use foreign sweets for distillation. Both these sugar and molasses have been imported into France to be converted into brandy. In 1855, then, the consumption of sugar in Europe has increased, and the supply has fallen off; hence sugar, like wheat, has risen very much in price, and continues to rise. Wheat the people cannot dispense with—bread is the staff of life—and as bread gets dearer, and other things get dearer also, bread is cannot get meat, and the consumption in bread consequently frequently increases with rising prices. To a certain extent the people can dispense with sugar. Though it is the nutritious ingredient which renders tea and coffee not merely stimulant but nourishing, and though it is sad to think that the millions whose days and nights of toil are cheered by the "cup which inebriates not," and of whom it is almost the only enjoyment, should be deprived of one atom of innocent indulgence, yet will the rise in the price of sugar carry it beyond the reach of many, and, by reducing the consumption, ere long lead to a reduction in the price. For a great and a permanent reduction, however, we cannot look till the present large demand and high price have had their usual effect of stimulating the sugar growers to plant more canes and make more sugar.

The prospect of a considerable and permanent reduction in the price o wheat is less favourable. In the sugar countries there is generally a considerable waste, which the present high price will check; and every grain of sugar that can be collected will be sent to Europe. The supply will be increased, while the consumption will be diminished. But, though wheat is the growth of almost every country, it is rarely or never wasted or profusely used; and there is in no country of the world at present a great stock to supply our wants. The most sanguine of our writers and speculators admit that we shall require nearly 2,000,000 quarters to feed us till the next harvest.

Prussia, Belgium, France—almost all the Continent, except Spain—now import corn, though in other years they exported either wheat o rflour. Russia by the war, Egypt and Italy by dearer, are excluded from our sources of supply. For the large surplus of the United States, France, England, the islands and countries of the Western World which the United States habitually fed, are all competitors, and their competition will keep up the price. The great fact which now stares us in the face is, that in consequence of the impulse which the gold discoveries have given to trade and enterprise of almost every description throughout Europe, and throughout the United States, an impulse which agriculture is always the last to feel, the production of food has not kept pace with the demand for it. Mr. Malthus and others, indeed, have supposed that a normal condition of mankind is always to be deficient in the means of subsistence; and it is at least certain, in the present condition of society, when farmers grow corn rather to sell than to use, or to feed others rather than themselves, that the wants of others must make themselves manifest in a rise of price before the farmers can have any motives for extending their cultivation and increasing the supply of food. Although our harvest was excellent last year, and in this year not deficient, there is no doubt whatever, from the rapid increase of our trade in 1853 and 4, that the number of persons to be fed has increased, and the increased number, having more to give for food, have consumed more. Trade has increased very much in Germany, France, Turkey, in the east of Europe, and in the United States, as well as in England; and, as long as the price of wheat remained at 30s. or 40s. per quarter, agriculturists had no motive for increasing the supply. Consumption has now, therefore, overtaken or surpassed production, the supply of food is short, and the price is, consequently, very high. To find an average price of wheat equal to the average price of 1854 (72s. 8d.), and the average price of the present year (73s. 9d.), so far as it has gone, we must go back to the year 1819. Nor is there, as far as we can see, any part of the world where a large and cheap supply of corn can be obtained; and we fear that high prices will rule through the ensuing winter, and make it one of much suffering to the most needy of our population. With Free-trade, however, we now have agriculture stimulated by these high prices to do its best in all parts of the world, and create an abundance for the ever-increasing population.

THE PARIS UNIVERSAL EXHIBITION.

(From our Special Correspondent.)

On the first of the present month the Nave of the Palace of Industry was closed. Its brilliant lines are destroyed: it is now a confused scene of packing-cases, carpenters, custom-house officers, and excited exhibitors. Some spasmodic efforts were made, chiefly by French exhibitors, to retard this work of demolition, and to persuade the Emperor to make the distribution of prizes in the rooms of the Louvre, and on the 2nd of December. But it appears the petitions were in vain. The prizes are to be distributed on the 15th inst., and in the Nave of the Palace of Industry—if possible. The hammers are certainly very busy; but then the work to be accomplished is gigantic. The entire Nave is to be covered with seats, affording room to all the exhibitors! Then there are the public bodies; the uncles and cousins of public functionaries; and all the people who manage, by dexterous manœuvres, to edge their way into every building where a State ceremony is going forward. There will probably be twenty thousand persons present when the Emperor gives the first gold medal to M. Horace Vernet, as the chief of the living painters of all nations. But of the ceremony I shall have much to tell your readers on a future occasion. For the present I will confine myself to the interesting points of gossip circulating about the courts and passages of the Exhibition buildings. In the first place, great discontent prevails, by anticipation, among the British exhibitors; it being the general belief that few prize medals will fall into English hands. It is said that the authorities have got out of the difficulty presented by the mediocrity of a large proportion of the English contributions by awarding gold medals to various Committees. Thus, I believe the Manchester Committee, the Sheffield Committee, if not all the Local Committees, will have a gold medal each. One or two individual exhibitors may have an equal honour—Minton and Co., and Copeland, for instance; but beyond, England will have few honours to exhibit. Such is the general belief. I need not refer in detail to the causes of this anticipated failure. Every distribution of rewards has the old effect—producing a group of ungrateful people, and a hundred groups of malcontents.

The Exhibition jury appear to have examined the samples of cheap printing sent from the great establishment of Marne and Co. of Tours, with great attention. On this subject Mr. Charles Knight (one of the jurymen) has communicated his opinions to the Royal Commissioners; and these gentlemen have included the show in their list of remarkable objects. Mr Knight gives some interesting details:—

"The specimens of Marne and Co., of Tours, and the details of their establishment which they have addressed to the members of the jury, suggest some important considerations with regard to the attainment of an extreme point of cheapness in the manufacture of books. I use the word 'manufacture' advisedly; for we have no example in Great Britain of a large factory in which, with the exception of the paper, all the processes connected with printing and binding, including the arts of the designer and engraver, are carried through, for the production of about eight hundred different volumes, varying from the small Prayer-Book, bound, for 25 centimes, to the folio Local History, splendidly illustrated, for 100 francs.

"In the London Exhibition of 1851 Marne and Co. received a prize medal 'for the extreme cheapness and great variety of books printed, bound, and published by them.' An examination of their catalogue not only shows the 'great variety' of their publications, but points out, in the very nature of their works, that the 'extreme cheapness' is attained by the continued production of large impressions, for a constant and universal demand. The nearest parallel case in England is that of the production of Bibles, Testaments, and Prayer-Books, by the Universities, and the King's printer. But cheap as these privileged English books are, they can scarcely compare with the 'Liturgies' and 'Offices' produced by Messrs. Marne, especially those which are luxuriously bound. The 'Missale Romanum,' in folio, beautifully printed, is sold, unbound, for 11 francs; the most exquisite binding, in morocco, fully gilt, adds only 5 francs to the price. The 'Paroissien Romain,' 32mo, a very nicely-printed volume of 636 pages, solidly bound in black sheep, marbled edges, costs 80 centimes (8d.); the same in calf, gilt edges, 1 franc 20 cents (1s); and in morocco, 1 franc 70 cents (1s. 6d.) The demand for 'Livres d'Offices' and 'Livres de Piété' is, of course, constant and universal: and of these Messrs. Marne have fifty-one different works and editions. Of greater portion of the books belong to history and geography, others are standard works of fiction. In the 'Bibliothèque de la Jeunesse Chrétienne' we may take as a specimen a translation of 'Robinson Crusoe,' in 12mo, with twenty four admirable woodcuts, each the size of the page, two volumes at seventy-five cents each. We have nothing so beautifully printed at such a price. We must notice, however, that the figures we have given represent the wholesale cost.

"Without knowing the rate of wages at Tours, we must be satisfied to conclude that a great deal of this extreme cheapness is produced by the use of the most improved mechanical processes, and by the most perfect division of labour. It appears that twenty cylindrical printing-machines are employed, producing 15,000 volumes a day, of ten sheets, or 150,000 sheets. This is about the English rate of 1000 an hour. A volume bound in morocco is stated to pass through eighty hands. The number of workpeople employed in this factory amounts to twelve hundred; and we may assume that a large proportion are women and children; for it is stated that 'the workshops, surrounded with gardens, are kept in winter at an equal temperature, combine all the elements of salubrity, and offer to the numerous children who therein work, without fatigue, a more healthful shelter than the maternal home.

Men may quarrel in bread, but not in loaves. but no room for fault finding is to be left in the ceremony of the medal distribution. It is to be conducted on a magnificent scale—no less than 1000 musical performers, under Auber, being engaged for the occasion. Already special journeys are organised for the great day; and it is probable that, during the closing week, Paris will be almost as full as during the Queen's visit.

Whether the Palace of Industry open next year or not under Government auspices, it appears pretty certain that it will reopen as an Exhibition of Industry. It appears that the contracts and leases of doors during this summer has been carried away every evening to the Master of Finance; and that it has not much more than sufficed to repay the Government interest to the Company for the construction of the Annexes. The present state of the case, then, is this:—The Government has paid its building expenses; and the Company have no dividend, or something woefully small, considering the price at which the shares have been sold.

The splendid breakfast service which the firm of Froment Meurice is making for the Emperor, and which they exhibited in their own stall, is not yet finished. This is a misfortune, as it would probably have added another strong attraction to the Nave, which is now changing its aspect hourly in the tasteful hands of French workmen.

THE ISTHMUS OF SUEZ.—The International Scientific Commission, appointed to examine the project relative to the cutting of the Isthmus of Suez, assembled on the 30th ult. at Paris The members were to sail from Marseilles for Egypt, where they have arrived to place themselves at the disposal of the Commission. The gentlemen who are to definitively form the European Commission of the Suez Canal project are:—For Germany, M. Lentze, privy councillor and chief engineer of the hydraulic establishments of Prussia; for Austria and the Lombardo-Venetian Kingdom, M. de Negrelli, privy councillor and director of public works; for Italy, M. Paleocapa, minister of public works at Turin; for Holland, M. Conrad, engineer-in-chief of the Water-Staat; for England, France, and the other States, Mr. Rendel, engineer of maritime works; Mr. M'Lean, a gentleman of equal reputation in England in the department of hydraulics; Captain Barry Hewet, of the British East Indian Navy, who for twenty-seven years has made a series of hydrographic observations in the Red Sea and the Indian Ocean; M. Renaud, inspector-general of public works in France; and M. Lieussou, engineer, of the navy.

THE DEARTH OF SOLDIERS.

THE leading members of the Peace party, after doing all in their power to prevent the vigorous prosecution of the war, have all at once become deeply concerned on account of the weakness of the English army, and take every opportunity of calling attention to the difficulty which the recruiting agents find in persuading men to leave their ordinary occupations and enlist. First of all Mr. Bright took up the question a few weeks ago, urging strongly the adoption of the French system of conscription; and now we have Mr. Cobden writing at great length on the same topic, with a view to show that, if Ministers mean to persevere in the war, they must adopt other measures to obtain soldiers than they have yet attempted. After asserting, without a shadow of proof, that, even "if the whole of the Crimea were in our hands to-morrow, we should still be at the beginning of the struggle," the honourable member for the West Riding goes on to say that, in fighting with Russians on their own territory, we must not be content with "thoughtless boys" to fill the ranks of our Crimean army. "There is nothing for it," he says, "but an appeal to the manhood of England." How that "appeal" is to be made he does not attempt to explain; but we are left to infer that, unless the people of England respond to it in a prompt and enthusiastic manner, Mr. Cobden will conclude that they are not in favour of the war, and that it has been merely "a war of diplomatists and newspapers."

Now, considering that Messrs. Bright and Cobden are not only the representatives of the most shrewd, business constituencies in England, but that they have both had a thoroughly practical business training, it is strange that neither of those two political economists should have pointed out the real cause of the present dearth of soldiers. That they must be aware of it we can hardly doubt, although they may deem it best for their own purposes to say nothing on the subject. Had the question been with regard to the supply of factory operatives, Mr. Bright would at once have said that the only way to obtain abundance of hands would be to offer an advance of wages. Why, then, should Government not adopt the same means of obtaining recruits for the Army; instead of resorting to a conscription, as Messrs. Bright and Cobden recommend, is the hope of thereby making the war unpopular? Everybody knows that the condition of the labouring classes has improved greatly during the last few years. Anxious as Mr. Bright is to make out a case of commercial and manufacturing distress, he cannot help admitting that the consumption of tea and sugar, and other articles of food, continues at a very comfortable figure, showing clearly that the people generally are well employed. What with the enormous increase of emigration since 1847, the very great increase in our export trade since the reform of the Customs tariff, the passing of the Ten Hours Bill, and other salutary measures, the position of the working-man is now greatly superior to what it was during the last war. So far as regards the community this is certainly a great gain, but not without some drawback. One inevitable result of the improved state of the labour market is the difficulty which the recruiting agent finds in obtaining men. If you ask him why he fails, he will tell you that he is not enabled to bid high enough. In plain English, the rate of wages which we offer to the men whom we ask to fight "the battle of civilisation" is shamefully low, and, if we are not greatly mistaken, Messrs. Bright and Cobden would be among the foremost in opposing any advance in the pay of the common soldier.

This, however, is the practical turn which the question started by these two leaders of the Peace movement must take. All parties admit that there is a very great difficulty in obtaining "a supply of effectives" to fill the vacant ranks of the army." Mr. Bright, who told his constituents last spring that "he would be no party to the concentrating public indignation on the mismanagement of the war," who has always predicted that the war would be a failure, and who, in fact, is bound by his principles to do all he can to make war under any shape, or for any purpose, unpopular, may advise Ministers to resort to the French system; but it is easy to guess what his object is. Mr. Cobden may try to show, from the unwillingness of men to exchange 9s. or 10s. a week for 1s. a day, that the war must be unpopular; but he cannot prevent his constituents from asking whether this is all the aid he can give towards the settlement of the quarrel with Russia? In spite of all the caution he has displayed in the discussion of his recent letter on the dearth of soldiers, the men of the West Riding can hardly fail to perceive that his main object is to do all he can to disgust the people of England with the present war; while he, at the same time, carefully abstains from any discussion of the alleged grounds of complaint against Russia, or of the arguments in defence of the policy pursued by the Allies. Like the speech he made to his constituents last winter—and like everything else he and Mr. Bright have done for the last two years—his letter can only be viewed as a most valuable contribution to the cause of Russia, and, with that object, it will, no doubt, be translated, and circulated in all the organs of despotism, from *Le Nord* to the *Invalide Russe*.

THE FIFTH OF NOVEMBER.—Monday being the anniversary of the Gunpowder Plot, and also of the victory at Inkerman, was observed as a close holiday at most of the public offices. The Royal standard floated from the summits of the Government offices, the Tower, and the Royal parish churches of St. Martin-in-the-Fields; St. Margaret's and St. John's, Westminster; and St. Mary Abbott's, Kensington. The Household Brigade and the garrison of the Tower were minutely inspected, and attended Divine service at the military chapels in Wellington Barracks and the Tower; and the Guards, for the duties of the day, were trooped previously to mounting their respective guards. The City of London Militia was inspected in the Artillery-ground, Finsbury, and attended Divine service at St. Paul's Church, Bunhill-row. The 5th of November, which was one of the Red-letter days of the Merchant Company, was observed with unusual festivities by the members of that corps, who fired a *feu de joie*, the band being in attendance, and playing several favourite airs. The river and the quays presented a most animated appearance, the shipping being dressed with the flags of all nations, excepting the Russian, from their trucks to the water's edge. The boys of the metropolis, encouraged by the license of the weather, indulged themselves in carrying about the streets a somewhat larger number of Guys than have been visible of late years—the year of the celebrated Papal aggression excepted. Many of these were of gigantic dimensions, and intended as effigies of the Autocrat. An effigy of the King of Prussia created much amusement, that Monarch being represented as in a semi-oblivious state. Some of the vans bore the inscriptions "Alma," "Inkerman," "Balaclava," "Sebastopol," and each was accompanied by a brass band. This annual commemoration is dying out, and nearly the whole of the metropolitan clergy refrain from using the State service specially appointed in the Prayer-Book. The boys about town and in the suburbs collected as much money as they could, for the purpose of bonfires at night, but the receipts appear to have been small. At Peckham a number of the more enthusiastic householders subscribed about £20 for the purchase of fireworks, and to defray the necessary expenses of a grand demonstration on the anniversary of Guy Fawkes and the memorable battle of Inkerman. As the intended grand doings had been made known by handbills, extensively circulated, there were assembled on Peckham-rye on Monday evening no fewer than from 25,000 to 30,000 persons, the greater number being roughs, costermongers, and thieves, collected from all parts of the metropolis. At about seven o'clock the evening a procession was formed, consisting of three or four carriages, drawn by four grey horses in each, with a band of music, and at least two hundred persons carrying lighted torches. This cavalcade was headed by men on chargers, in military uniforms, to represent Lord Raglan, Marshal Pelissier, and the Turkish and Sardinian Generals, and in the centre a full-sized "dummy" effigy of the Emperor of Russia. At the top of the rye a large bonfire was set fire to, and a display of fireworks took place, during which the effigy of the Emperor of Russia was set fire to and burnt amidst loud cheering.

A RARE MEDAL.—There has been lately found at Calw (Wurtemburg) a gold medal commemorative of the taking of Jerusalem in the year 70 after the birth of Christ. This medal, which is about the size of a 5-franc piece, bears the effigy of Vespasian, with this inscription: "Vespasianus Imp. Aug" Beneath the effigy are two letters, S C. On the reverse is a palm tree, with two figures, one seated and the other standing, and the motto, "Judea capta." A similar medal, but not in gold, was discovered two years ago at Lisbon.

According to the Vienna journals, it is in contemplation to have a Universal Exhibition in that city in 1859. It is even said that the plan of the building has already received the approbation of the Emperor Francis Joseph.

LANDING ARTILLERY ON THE SPIT, KINBURN.—SKETCHED BY J. A. CROWE. (SEE PAGE 554)

BOMBARDMENT OF KINBURN, OCTOBER 17.—SKETCHED BY J. A. CROWE.—(SEE PAGE 554.)

BOMBARDMENT OF KINBURN.—VILLAGE ON FIRE.—SKETCHED BY AN OFFICER OF THE EXPEDITION. (SEE PAGE 554.)

CALENDAR FOR THE WEEK.

SUNDAY, Nov. 11.—23rd Sunday after Trinity.
MONDAY, 12.—Cambridge Term divides
TUESDAY, 13.—St. Brtius. Curran died, 1817.
WEDNESDAY, 14.—Destructive Storm in the Black Sea, 1854.
THURSDAY, 15.—Westminster Bridge completed, 1760.
FRIDAY, 16.—Rubens born, 1577.
SATURDAY, 17.—Accession of Queen Elizabeth, 1558.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING NOVEMBER 17, 1855.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday

LIST OF ENGRAVINGS
IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

SKETCHES FROM KINBURN (by our Special Artist):
The Spit Battery at Kinburn—Otchakoff in the Distance (sketched by J. A. Crowe) ... ... *page* 545
Landing Artillery on the Spit, Kinburn (sketched by J. A. Crowe) ... 548
Bombardment of Kinburn—Village on Fire (sketched by an Officer of the Expedition... 549
Bombardment of Kinburn, Oct. 17 (sketched by J. A. Crowe) ... 549
Landing of the Allies on the Beach at Kinburn (sketched by J. A. Crowe) 553
Bombardment of Kinburn, One o'Clock p.m., Oct. 18 (sketched by J. A. Crowe) 552-553
Plan of the Attack on Kinburn 554
Portrait of General Bazaine, Commander of the French Troops at the Mouth of the Dnieper (from a sketch by Sir George Hayter) 552
Mr. Fenton's Photographic Van (from the Crimean Exhibition) 557
Indian Cotton—The Webs of Dacca: Washing the Muslins—Steaming—Arranging Displaced Threads—Reeling—Folding—Packing 556
Manufacture of Indian Tissue: Wiredrawing—Wiredrawing Apparatus—Wiredrawer's Bench—Flattening the Wire—Winding the Wire ... 556
Portrait of Madame. Gasmer 557
The Yacht *Mariel*, R.H.Y.S., 210 Tons, and her Tender *New Quarterly*, 150 Tons 557
Portrait of the Right Hon. David Salomons, Lord Mayor (from a Photograph by Messrs. Beard) 560
New Office of the Duchy of Cornwall, Buckingham Gate 560
The Paris Universal Exhibition:
Candelabrum (by Minto and Co.) presented to Queen Victoria by the Empress of the French 561
French Glass Manufactures in the Nave Stall 561
White Marble Toilet-table, by Professor Giovanni Idola 561
Parian Group—"Cain and Abel," by A. Carrier 561
Paintings on a Greek Tomb lately found near Pæstum 564
The New Opium Clipper, *Wild Dayrell* 564
Almshouse and School Buildings, at Fulham 564
House of the Anglo-French Commission, at Sebastopol 565
Portrait of Mr. A. W. Johnson, Secretary to the Anglo-French Commission 565
Defeat of the Russians by the Turks, at Kars (Two-page Engraving) ... 568-569
Sketches in Nepaul:
Temple of Khrishna Jee 572
Narain Birbu, and Hindoo Temple 572
Temple of Sru Khrishna 573
Gossain Khan—The Highest Peak 573
Wells Cathedral—The Choir, with the Recent Restorations 576

WE continually receive complaints respecting charges made by the Post-office for the ILLUSTRATED LONDON NEWS. We particularly recommend purchasers of our Journal for post to procure the papers impressed with the old red newspaper stamp. The ILLUSTRATED LONDON NEWS weighs too much to pass through the post with a single Queen's head. The impressed red stamp frees the Paper and Supplement, without extra cost, for fifteen days after date of publication.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 10, 1855.

CRIME has its caprices, and often shifts its field. At the present time it would seem that such a change has taken place, and that we are to look for our more mischievous criminals in a class not usually expected to supply them. The educated, the elevated, the respectable, are among the latest contributions to our gaols; and it is not uncharitable to believe, from other symptoms, that these may not be the last whom the law will remove from a sphere where its avenging presence is, generally speaking, exceptional.

Were certain recent occurrences to be regarded as mere accidents in the social system, as isolated cases, like strange and fantastic outrages, it would not be rational to seek to deduce from them any moral of an extended character. But it is because we believe that these are but the offspring of an unhappy influence which is gaining ground here, as in America, and which, unless successfully opposed, will bear but too fruitful a crop of such results, that it becomes worth while to ask whether those who condemn the criminal, and rejoice in his being cut down, as a worthless tree that cumbereth the ground, are quite aware of the nature of the soil that nourished the roots.

We are no *laudatores temporis acti*, but are honestly convinced that in many most material respects the present age has advantages, and the present generation has merits, which no former one possessed. We have made, and are making, progress; and it is, mainly, in a right direction. True principles of government, of public economy, of the relations of nations, of the duties of class to class, are being more widely diffused than ever before, and are being acted up to with a certain sincerity and loyalty. It is not so safe to aver that corresponding progress and enlightenment has taken place in our domestic system, in the relations of private life, in the economies of home, and in commercial intercourse. The teaching that has imposed self-command and inculcated self-knowledge upon states and nations has not made its way into families; and, while classes have learned their duties towards each other, their constituents have not been taught to ascertain and to retain their true position among themselves. Hence life, which might be but honourable labour, is converted into feverish struggle.

When shall that grand truth be taught to society which this very war was undertaken to teach a half-civilised empire?—That to aggrandise oneself, to outstrip and to outwit others, to add possession to possession, to pretend to wealth and power which one neither has nor has a right to, is a violation of all morality. England has sent 60,000 men to preach that lesson to the Russians in the South. Who will preach it at home? It is the practice of a contrary doctrine that fills our homes with care-worn, anxious men, our *Gazettes* with bankrupts, and our best prison cells with "respectable" tenants. We are all in the struggle, and he is held the best and luckiest man who clutches most—and next to him the man is most applauded who has made others believe that he has clutched most. With such high and noble objects before us, what wonder that an occasional struggler breaks the bounds, and swindles without due regard to law?

It is in the fact that "these things are so" that we find the key to the system of shams organised among us. Hence sham credit, hence "appearances kept up," hence the carriage, supported at the cost of privation, that the daughter may marry from it into another, perhaps maintained as hardly. Hence come the great brood of iniquities proclaimed by the Laureate with much truthfulness, but without an ascription of them to their right source. Houses built to last but a few years, and yet in those to cost twice their price in reparations, are run up for "genteel" people; and they are fitted with showy furniture, that falls to pieces with the fashions of the season that produced it. The husband who could pleasantly earn his five hundred a year, and in a modest and comfortable home could enjoy it, must "grind out his strong heart at the miserable wheel" to raise his income to a thousand, that he may make a respectable figure, while his wife, who would gladly lead the quiet, joyous life of a real home, keeps her best room for visitors, and gives formal dinner parties to people from whom she exacts similar hollow hospitality. Then in trade come the innumerable sins generated by the same struggle: the adulterating, the false balances, the quack advertisements, the lying, the puffing, and the competition—all children of the same desire to be foremost or to seem so. The same principle pervades the whole system, from the fraudulent banker, with his pineries and his forcing-houses, and his shudder as he wakes in the night and thinks—what?—if he should *not* be able to get that money—down to the wretched grocer who steals downstairs slip-shod to perform adulterations which even he is ashamed to do before his apprentice and shopman. Do not let us abuse one another—let us try to help one another out of the thraldom of this accursed system.

The moralist, especially he who deduces his morals from Revelation, will tell us that this is human nature. In a sense, this is true; but what is nature? That which we have to correct and regulate by the teaching of reason the religious moralist need not be told how high this definition will lead us. Well, then, grant that we have human nature to deal with, and we shall be inclined to do so with humanity and indulgence. We will not strike down one another for yielding to the impulse that sets all running and struggling; let us try to resist it ourselves, and to encourage others to do the same. Let us try to abstain from "keeping up appearances," and let us show others not only that we know how they keep them up, but that we do not value them for it, and shall love and honour them much more for giving up the dangerous farce.

Never was there a better time than the present for abandoning "appearances." We are in a great war—the taxes are very heavy, and will, of necessity, be much heavier. Everything is dear, especially the necessaries of life, and most things will be dearer. We all know that there is a great drag upon everybody: let us be honest and avow it, and not over-weight ourselves while extra weight is behind us. Now is the time for a rational wholesale onslaught on conventional appearances. Down with the carriage kept for show; out from the costly house which you cannot afford; stop the stuck-up dinner parties, and cease to squander away money on over-dressing. No one stirs; no one will make a sacrifice he is dying to make, for fear somebody else will not. No one dares set the example. A dozen or twenty friends meeting, speaking frankly, and agreeing that in their circle the thing shall be done, is out of the question. Are we all such cowards and fools? Then—on with the infernal struggle, and room, there, in the prison, for many more "respectable" criminals!

THE inveterate disease that afflicts and disgraces the Irish peasantry is not yet rooted out. The atrocious murder of Miss Hinds, for the offence—heinous in the eyes of the Milesian *Vehmgericht*—of expecting that those who make contracts to pay rent shall be held to their fulfilment, and the still more recent attempt to assassinate Mr. Ramsbotham for a similar infringement of the same bloodthirsty code, prove the old evil to be deep-seated as ever. It was thought, not unreasonably, that the dawn of prosperity in Ireland, consequent upon the introduction of a stringent Poor-law and a solvent landed proprietary, and the simultaneous expatriation, as extensive as it was voluntary, of the too numerous population, had consigned these agrarian crimes to the domain of history. But the hope has proved illusory. It is still dangerous to hold land in some parts of Ireland; even more dangerous to attempt any improvement; and most dangerous of all to ask for the rent that is legally and morally due. The people have got a wrong notion into their heads. They seem to imagine that land in Ireland is like land in the backwoods of a newly-discovered country, to be at the mercy and the service of the squatter; and that rent is an abomination and an injustice. Who shall teach the Irish peasant the wickedness and folly of this monstrous doctrine? We might expect that the priests educated at the expense of the Irish people would perform this necessary duty. It is not to interfere with or in any way to influence their religious faith that Parliament votes the grant for the support of Maynooth, but to aid in making good citizens and sensible men of the neophytes of the priesthood. As ministers of religion, these priests, who are almost exclusively drawn from the ranks of the peasantry, denounce from the pulpit the crime of murder. If they receive at the confessional the secrets of the assassin, they are bound, by civic as well as religious duty, to withhold the consolations of their high calling from those who think they rub off the guilt of murder by the simple fact of making a priest their confidant.

In a merely civic point of view these men receive sufficient education to teach them that the peasantry, in making a code of laws for themselves, and executing their own sentences on the unfortunate persons who offend them, pursue a system which renders impossible the improvement of the popular condition, and consigns Ireland to a state of hopeless misery. If the priests will not take the matter in hand; if they will not use the influence which they possess over the minds of the peasantry to eradicate this plague-spot; and if, by their silence, when a denunciation from the altar of all murderers and abettors of murder would aid the Government in the detection of guilt, they prove in what direction their sympathies tend, the Government will be excused by all right-thinking men if it discovers some means by which the priesthood may be made to suffer for their connivance in the system, which they, and they only, are sufficiently powerful to destroy by the persuasions of reason and the teachings of religion. The severe measures of coercion which the Government will be bound to adopt must be extended to whole districts, so that not only the murderers, but those who know the murderers' names, and resolutely refuse to disclose them, may be made to suffer, whether they be lay or clerical, gentle or simple, male or female. To punish the harbourer and comforter of the assassin as severely as the assassin himself is one mode of dealing with the difficulty created by this mischievous perversion of Irish sentiment. To quarter troops on the districts where such crimes occur, and keep them there at the expense of the inhabitants until the criminals are brought to justice, is another mode of dealing with the evil. But, above all, the inculcation of the social doctrine that such lawless proceedings are not merely crimes, but mistakes, which can end in nothing but the impoverishment and ruin of the country, is the mode that should be adopted to bring the Irish peasantry to a more reasonable frame of mind. Religious teaching is not sufficient. The Italian brigand who waylays and murders the traveller is not unfrequently a very devout man, as far as confession, the counting of his beads, and genuflexions at the shrine of his patron saint are concerned; and the ruffians who murdered Miss Hinds, in all probability, think they have "done God good service," and performed an act of pious sacrifice, in ridding the earth of that unfortunate lady. But the priests of religion ought to take a wider view of their duty to God and man, and earnestly and patiently strive to uproot a fanaticism that disgraces the faith with which it is associated. That the Roman Catholic priests in Ireland do not, as a body, endeavour to civilise the people in this respect is one of the unhappy peculiarities of that country. The most repugnant of all crimes to Englishmen is the crime of deliberate assassination. When such a crime is committed on the British side of St. George's Channel, men, women, and children—the universal population aid the officers of justice in tracking the criminal. Until that become the feeling and the practice of the Irish peasantry, it is impossible that the country can prosper, or that the curse of God and man should cease to hang over it.

THE COURT.

The hospitalities of the Court have been continued during the week just closed, the guests of her Majesty including, among others, the Premier, Sir Benjamin Hall, Sir Charles Eastlake, and several of the distinguished officers who took part in the late operations before Sebastopol.

The Queen and Prince, the Prince of Wales, the Princess Royal, Prince Alfred, Princess Alice, and the Duchess of Kent, the ladies and gentlemen of the Court, and the domestic household, attended Divine service on Sunday morning in the private chapel of the Castle. The Hon. and Very Rev. the Dean of Windsor read the prayers and preached the sermon.

Lord Raglan had an audience of the Queen on Monday, to deliver the insignia of the Grand Cross of the Bath worn by his father.

His Royal Highness Prince Albert came to London on Tuesday, and presided at a meeting of the Council of the Duchy of Cornwall.

THEATRICALS AT WINDSOR CASTLE

The Queen has commanded that theatrical performances shall be resumed in Windsor Castle this season, the first performance to take place on the 22nd inst. Hitherto the performances have taken place in the Rubens Room. St. George's Hall is now being fitted up for the purpose, its noble dimensions being better adapted for the convenience of the Court, and at the same time affording greater space for scenic effect. A large quantity of new scenery is being prepared by Mr Grieve, who has been intrusted with the whole arrangement of this department. The stage, which will occupy about one-third of the hall, is situated at the western end, leading into the Guard Chamber, thus leaving the throne end for the accommodation of her Majesty and the distinguished guests who may be honoured with invitations.

The Duchess of Inverness has been suffering from slight indisposition during the past fortnight, at Kensington Palace.

The Duchess of San Arpino (Lady Burgherch) was safely delivered of a daughter, at the Palazzo San Teodoro, at Naples, on Tuesday last.

The Marquis and Marchioness of Londonderry are entertaining a distinguished party at Mount Stewart, near Newtownards. The circle was to assemble on Monday to meet his Excellency the Earl of Carlisle.

The Bishop of London is better. No further bulletins will be issued, unless a relapse should occur.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS. *Rectories:* The Rev. W. R. Roberts to Pantegnic, Monmouthshire; Rev. A. R. Ludlow to Littleton-upon-Severn, Gloucestershire. *Vicarages:* The Rev Carter Hall to Hollingbourne, near Maidstone; Rev. W. Findley to Wellington, near Burton-on-Trent; Rev. W. Stoddart to Arksey, Yorkshire; Rev. H. Meeres to Haddenham, near Aylesbury; Rev. H. P. Gurney to Uffington, Berkshire, Rev W. S. Turnbull to Penistone, near Huddersfield. *Incumbencies:* The Rev. J. Chippendall to Worsley, near Ashbourne; Rev. J. Newnham to Mountsorrell, Leicestershire; Rev. C. Holland to Eastville and Medville, near Boston; Rev. T. Turner to Norton, Gloucestershire.

THE Rev. Dr. Whewell, Master of Trinity College, Cambridge, was on Monday elected Vice-Chancellor of that University for the year ensuing.

THE Head Mastership of Chelmsford Grammar-school has been conferred upon the Rev. C. W. Arnold, M.A., of Trinity College, Cambridge, Master of Congleton School.

A TESTIMONIAL of respect has been presented to the Rev. Thos. Waldman from the inhabitants of Meldrum, Aberdeenshire.

LORD MAYOR'S SHOW IN OLDEN TIME. In former days the Lord Mayor's pageant was a characteristic affair, the various designs typifying commerce, industry, and the vast resources of the metropolis. Several Mayors were taken by professional actors, the parts having been written by Peele, Webster, and other early dramatists. For some years the City had a regular poet laureate, and afterwards a person was usually engaged from year to year to compose those pageants who had no share in the establishment. In the reign of Charles the First, when the Lord Mayor and Aldermen had the uncontrolled government of the City, and when the civic court was composed of the mercantile aristocracy of the City, much extravagance was committed, of which the following are recorded instances:—On one Lord Mayor's Day the conduits in the streets played wine, and Sir Allen Apsley gave Prince Charles a present of £500; the Queen a gold basin and ewer, worth £750: and the King a diamond which cost £4000. So great were the revenues reduced through these extravagances, that, in order to pay for the above gifts, after having advanced £1000, the aldermen arranged to liquidate the remainder of the debt by instalments of £1000 per annum until the whole was paid. The cost of the procession on Lord Mayor's Day is regulated, of course, by the extent to which it is carried. Last year and the year before the expense was about £500 each year, the extra amount being paid by the Lord Mayors taken by professional actors, the parts having been written by Peele, Webster, and other early dramatists. For some years the City had a regular poet laureate, and afterwards a person was usually engaged from year to year to compose those pageants who had no share in the establishment. In the reign of Charles the First, when the Lord Mayor and Aldermen had the uncontrolled government of the City, and when the civic court was composed of the mercantile aristocracy of the City, much extravagance was committed, of which the following are recorded instances:—On one Lord Mayor's Day the conduits in the streets played wine, and Sir Allen Apsley gave Prince Charles a present of £500; the Queen a gold basin and ewer, worth £750: and the King a diamond which cost £4000. So great were the revenues reduced through these extravagances, that, in order to pay for the above gifts, after having advanced £1000, the aldermen arranged to liquidate the remainder of the debt by instalments of £1000 per annum until the whole was paid. The cost of the procession on Lord Mayor's Day is regulated, of course, by the extent to which it is carried. Last year and the year before the expense was about £500 each year, the extra amount being paid by the Lord Mayor and the Aldermen

NOTES OF THE WEEK.

No nobleman or gentleman will condescend to accept the charge of her Majesty's Colonies—that is to say, no nobleman or gentleman in the exclusive circles in which alone usage will permit the Premier to walk, Diogenes fashion, looking for an honest Secretary who knows a little geography. No doubt, outside those circles, such a man might be found; but not more certain is a wizard of being torn to pieces by the fiend he has raised, if he steps out of the charmed ground, than a regularly-educated and traditional statesman of being martyred by his class if he takes his colleagues from elsewhere than among the notables. Lord Palmerston was bent on doing his best, both for his country and his party, and he offered the Colonies to Lord Stanley, who would have managed them, at all events, on an honest and enlightened system, and whose acceptance of office would also have been a loss to the Opposition. His Lordship had, however, to consult his noble father. The story goes, that on arriving suddenly at Knowsley he found the Earl at billiards with some friends, and Lord Derby—he is always ready for fun—immediately invented all sorts of curious reasons why his heir *must* have come down. When these were disposed of, and Lord Stanley had announced that Lord Palmerston had offered him the Colonies, the Earl said gravely, "Well, you know there are three reasons which you must give him for refusing. First, that you could not render him much service; secondly, that you don't agree with him as to the war; and, thirdly, that your taking office would bring no accession of strength to his ranks." Much applause rewarded the Earl's excellent memory for the three reasons why, in February last, Lord Palmerston refused to join *him*. However one of these reasons seems to have been adopted, and Lord Stanley is stated to have declined office because he does not approve of the further prosecution of the war. It is by no means unimportant that people should understand this—the Coalition was, of course, out of the question; but, if the Conservative party goes in for peace, they may miraculously find themselves in the same lobby with Mr Gladstone and Mr. Bright.

There have been rumours of an intended dissolution of Parliament; and it was even said that Monday's Cabinet Council sat to consider its advisability. This report was but a *canard;* but there is a pretty general understanding that Lord Palmerston will take no very distant opportunity of ascertaining the exact sentiments of the constituency upon the peace or war question, and it is said that the present House may be made an Easter offering to an excited nation. Many a seat will be emptied of its present tenant when that time comes. Were the trial to be made now, Manchester, Oxford, and the West Riding would change their men. The war has seated Sir Charles Napier, who will walk the course for Southwark. The local candidate, whose boast was that he knew what Southwark wanted, is ousted for the sake of the man who knows what England wants. He retires with a very spleenful address, conceived in the spirit of an insulted "porochial;" but Southwark takes the man who, as the other sailor said, "fought for all the parishes." Mr. Cobden's peace-letter, in which he comforts Russia, assuring her that she is not really hurt by the Allies, and recommends us to lay down our arms, does not seem to have produced much effect down Bankside and the demesnes that immediately lie.

The Park ruffianism ought to be put down with a very strong hand and a very stout bludgeon in it, unless the firemen, pumping the dirtiest of dirty water on the mob, should be deemed more efficient for the purpose. A demonstration against an oppressive law was a constitutional act; and even an ill considered movement, caused by misunderstanding of the reason of the price of provisions, was properly met with forbearance; but the scoundrels who now assemble for riot and outrage, who expel decent people from the Park, insult strangers, and destroy property, ought to be consigned to the teaching of the police bâton. One of the magistrates justly told the officers that they were behaving with far too much forbearance, and should the mob again assemble, the best *mot d'ordre* for the police force will be that given by the Irishman to his English friend whom he had got into a row at Donnybrook—"take your stick, and wherever you see a head—hit it." A writer in the *Times* suggests that a press-gang should be sent in upon these rascals, to sweep them all away into her Majesty's ships and regiments; and the only objection to this is a grave one—it would be an insult to either gallant service to recruit it with men selected only because they were ruffians. Something has been hinted of the police revenging themselves, by permitting these outrages, for the censure passed upon them for their violent behaviour to the Sunday Trade opponents; but we are unwilling to believe that any one in the responsible position which gives him command of the force could be guilty of such childish and indiscriminate conduct. The police are our servants; and it is not because a servant has been reproved for insulting a respectable visitor that he is to open the street-door to every blackguard. We trust that next Sunday will put the finishing *coup*—the *coup de bâton*—to the Park nuisance

"Respectable" offenders continue to appear. Scarcely are Paul and Company in gaol than a Scottish magistrate in high office, and who had preserved an admirable character up to old age, is transported for a revolting offence which it is rational to believe the result of a disordered intellect. A London clergyman, with an academic title, is charged with making false entries in his register of burials for the sake of obtaining additional fees, and, though it is premature to judge the case, it presents some very suspicious features. A very painful suicide by a German gentleman, at Brighton, scarcely comes within the above category; but it is a very remarkable affair. A youth, the unfortunate gentleman's son, is found dead in his bed, and the father springs out of window. There is doubt about the case, but none that the Coroner who presided at the inquiry displayed less wisdom than is usually manifested even by officials of his class, and the verdict is a most unsatisfactory one.

The *Globe* newspaper (whose accurate information on military subjects ought to be cordially recognised) states that the numbers of our army in the Crimea are now about 56,000, of all arms; and that in the spring there is no reasonable doubt that it will be increased to 70,000. It is satisfactory to see that attention is being called to the present system of billeting, which is found to work not only most injuriously to the land lord of the tavern into which the raw soldier is thrust, but most demoralisingly upon the lad himself. The fruits of such training may be seen in the drunkenness of which the Crimean correspondents send home such deplorable accounts. Surely, while we are trying to elevate and improve the soldier, and while we boast his superiority to the drunken serf who is opposed to him, we are bound to screen him from these pestilent influences. The subject will, we trust, be taken into early consideration by the Government.

While alluding to the army, let mention be made of an excellent institution for providing, not charity, but employment for those who are discharged from either service with a good character. It is called the Army and Navy Pensioners' Employment Society, and for convenience will be spoken of in the last three words. The Pensioners' Employment Society is best described by its own prospectus, which states that it is supported by public contributions, and by the nobility, gentry, railway and other companies, bankers, shipowners, merchants, agriculturists, manufacturers, and employers generally, who, when they have vacancies in their establishments, call upon the society, with descriptions of the kind of person they wish to employ, whether as schoolmasters, drillmasters, grooms, helpers, gardeners, porters, messengers, gamekeepers, watchmen, door or other office keepers, whose duties may be adequately performed by men who, though unfit for military or naval service, are perfectly, and in certain cases peculiarly, qualified for many of the ordinary avocations of labour. The society keeps on its books the names of men discharged with good character from her Majesty's service, specifying their condition as to age, wounds, and health, the kind of employment for which they may be considered physically capable, their age, their late position in the Army, Navy, or Marines, and their occupation before entering her Majesty's service, with a copy of testimonials of conduct, sobriety, and general character, whilst bearing arms and since their discharge. The object of the Pensioners' Employment Society needs only to be known to be approved, and a goodly list of subscribers has been already obtained. We shall be glad if this mention of the scheme bring additional subscriptions to Messrs. Coutts's or Messrs. Masterman's.

If Prince Gortschakoff display the skill at escaping manifested by some of the soldiers late under Russian command, but more lately prisoners in England, Codrington and Pelissier will have no ordinary trouble in trapping the bear. Fresh escapes are recorded this week at Lewes, and the men remain uncaptured—a curious thing, unless we imagine that a certain compassionate feeling induces those with whom they take refuge not to give them up. It is, perhaps, not a matter of any particular consequence whether a score or so of captives get away; but the French, who have a knack of holding fast what they get, laugh good-naturedly at John Bull, who cannot even keep his prisoners.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS
TAKEN DURING THE WEEK ENDING THURSDAY, NOV. 8.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°	°			Inches.
Nov. 2	29.685	45·5	29·4	36·6	— 2·5	92	S.W. & W.	0.30
„ 3	29.680	44·1	34·8	39·5	— 5.4	91	N. & N.E.	0.55
„ 4	29.965	49·5	33·8	41·9	— 4·7	91	N.	0.00
„ 5	30.188	49·7	29·8	39·5	— 6·9	93	S.W.	0.01
„ 6	30.111	58·7	31·2	46·0	+ 0·8	89	S.W.	0.01

Note. The sign — denotes below the average and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer increased from 29.68 inches at the beginning of the week to 29.70 inches by the 2nd; decreased to 29.63 inches by the 3rd; and increased to 30.18 by the 5th; and decreased to 29.87 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29.85 inches.

The mean temperature of the week was 42·0°—being 2·8° below the average.

The range of temperature during the week was 29·8°, being the difference between the lowest reading of the thermometer, 29·4°, on the 2nd, and the highest, 58·7°, on the 6th.

The mean daily range of temperature during the week was 15·4°. The greatest was 27·5°, on the 6th; and the least, 8·4°, on the 8th.

Rain fell during the week to the depth of one inch.

The weather during the week was very changeable.

Lewisham, November 9, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—Last week the births of 671 boys and 675 girls, in all 1346 children, were registered within the metropolitan districts. In the ten corresponding weeks of the ten preceding years the number were 727 boys and 713 girls, in all 1440, showing a deficiency in the number of births for this week of 94. The deaths during the week were 919; the mortality being still below its average rate, and 193 less than the corrected average of the previous years: of these 461 were males, and 468 females. From zymotic diseases 227 persons died, of which 14 were by small-pox, 70 by scarlatina, 22 by hooping-cough, and 49 by typhus. The deaths from diarrhœa, 24, are much below the average number. To violence, cold, privations, and intemperance 54 deaths are referred, being 27 above the average.

SOCIETY OF ARTS.—The opening meeting of the 102nd session of the Society of Arts is fixed for Wednesday, the 21st inst. On this occasion the Rev. Dr. Booth, Chairman of Council, will deliver an introductory address, and the medals awarded in the last session will be presented. The papers to be read and discussed at the successive meetings prior to the Christmas recess are—Mr. P. L. Simmonds, "On the Gums and Resins of Commerce;" Mr. G. N. Hooper, "On the Construction of Private Carriages in England and in the Carriage Department of the Paris Exhibition;" Mr. J. Bailey Denton, "On the Progress and Statistics of the Under-drainage of Land in Great Britain;" and Mr. J. K. Blackwell, "The Present Position of the Iron Industry of Great Britain, with Reference to that of other Countries."

PUBLIC LIBRARIES AND MUSEUMS.—A very large public meeting was held on Monday, in the Egyptian-hall, Mansion-house—the Lord Mayor in the chair—to determine whether the Public Libraries Act shall be applied to the City. The meeting was addressed by the Lord Mayor, Mr. Ewart, M.P., Colonel Sykes, and other gentlemen in favour of a motion to apply the Act to the city of London. Mr. Deputy Peacock, Mr. Yite, M.P., and Mr. Alderman Sidney spoke in favour of an adverse amendment, which was carried by a large majority.

THE OMNIBUSES.—We hear that the public are likely to be deprived for the present, at least, of the advantages anticipated from the transfer of the metropolitan omnibuses to a company of Frenchmen. When the negotiations were nearly at a conclusion, it turned out that the Paris company had been proceeding on the supposition that no more plates or licenses would be issued by the authorities, and as the vendors could not give any guarantee on a matter which did not rest with them or the authorities in this country, but on the wants of the public, the matter is to proceed no farther. The arrangement may take effect at a different price, or in some other form; but as it now stands we hear that there are to be no new carriages and no alteration of fares.—*Morning Herald.*

MESSRS. STRAHAN, PAUL, AND BATES.—There is no foundation for the statement which has been going the round of the papers that Strahan, Paul, and Bates, the bankers, were about to be sent to Gibraltar to suffer their sentence at the Criminal Court. Gibraltar is not by any means an easy station, but may be reckoned perhaps one of the most genial and hard-working, as well as being by far the most unhealthy. The convicts are now in Newgate. They will, in the first instance, suffer the usual period of separate confinement, which is, we believe, a year. After that they will probably be transported to a penal settlement for the remainder of their sentence; but no decision will be come to until after the customary probation of separate confinement.

GENERAL RISE IN THE PRICES OF PROVISIONS, &c.—On Tuesday morning the bakers, grocers, oilmen, &c., throughout the metropolis advanced the prices of provisions and other household requisites to a considerable extent. In sugar the prices were raised fully a penny in the lb.: raw sugar of ordinary quality, which two months since could be obtained for 4d. per lb., cannot now be purchased for less than 6d.; the prices of refined sugar have been advanced in proportion. The price of bread, of the second quality, rose to 10d., and in some instances to 10½d., for 4 lb.: good household, to 9d. and 9½d. for the same quantity; country bread (unweighed) to 8½d. and 9d. per loaf: the best bread sells at 11½d. and 1s. per 4 lb. This advance is attributed to the rise in the price of wheat at Monday's markets. An advance of one halfpenny per lb. has been made in the price of store and mould candles; and it is expected that soap will increase in value. Bacon and pork have advanced in price; prime pieces of the first-class article cannot be obtained for less than 11d. per lb.; and pork (Berwick) realises 9d. per lb. The retail coal-dealers have advanced the price of every description of fuel. Coals of the best quality range from 1s. 6d. to 1s. 9d. per cwt.; seconds, 1s. 3d.; inland coal, from 1s. 3d. to 1s. 4d.; and small ditto, 1s. 1d. per cwt.; and gas coke, 9d. to 7d. per bushel; charcoal, and chump and kindling wood, have also been advanced in prices.

ON Monday night a meeting, rather private in its character, was held in Turner's Dancing Rooms, Nelson-square, at which some of the more influential supporters of Sir C. Napier were present. The meeting occupied but a very short time, the sudden and unexpected retirement of Mr. Scovell from the contest having left the field clear to Sir Charles, whose position in reference to the borough was the theme of hearty rejoicing on the part of his friends.

ACCIDENT TO THE ARCHDUKE OF AUSTRIA.—The Archduke Maximilian, Chief of the Naval Department, was driving this morning in Trieste, when the horses took fright and ran away. The Archduke jumped out of the carriage, and, falling on his head, injured the skull. His Imperial Highness is in danger, and the Emperor, his brother, has just left this city for Trieste.—*Telegraphic Report, Mon. T.*

ANOTHER OUTRAGE IN IRELAND. The *Ballinasloe Star* of Saturday, under date of Moate, Friday night, states that whilst Mr. Hamsbottom, land agent, and Mr Beacham, his assistant, were taking possession of land in the King's County, three miles from Ballinasloe, Mr. Beacham was shot through the neck with a ball, and several slugs lodged in his face and breast. It was doubtful whether he could live through Friday night.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE forty members of the Royal Academy have met in full senate; and, according to ancient custom, employed the first Monday in November in filling up any vacancies that may have occurred in the class of Associates. Rumour reports that there was a large attendance, and that the Kensingtonians came down in full body to vote for their own man. The result more than confirms the rumour. There were two vacancies, and Mr. John Callcott Horsley, a painter, and Mr. George Gilbert Scott, the celebrated architect, were elected Associates from what we believe to have been as large a list of candidates as the Academy has had to choose from for very many years. The selection is in every respect excellent. Mr. Horsley is clever, and though he has not yet fulfilled the promise of his boyhood—perhaps too much to be expected from him—he has been gradually and importantly improving in his art. Of Mr. Gilbert Scott it is not too much to say that he is the best Gothic architect of our day. In re-erecting churches he does not copy with servility. He understands what Gothic architecture is, and has invention of his own. He is, perhaps, too much addicted to restoration, as we have had occasion to remark with respect to the much-talked-about restoration of the Royal monuments in Westminster Abbey. The Academy wanted a good Gothic architect, and they have made a wise selection in Mr. Scott.

At the same meeting the question of the rank of engravers in the Royal Academy was again mooted, and Mr. Lumb Stocks, a line engraver, who had submitted to the unworthy condition previously required of engravers, was elected an Associate Engraver "of the new class." This question of the rank of engravers should not remain any longer in this still uncertain state. The Royal Academicians have tardily admitted the high merits of of the best engravers, but they have not as yet admitted them to the full rank they are entitled to. They have still the little "stools" at which Strange, Sharp, and Raimbach (time-honoured names) were wont to laugh, and at which Barnet, Pye, Goodall, Robinson, and Doo (their worthy successors) very properly laugh, and will not sit down upon. As for the selection of Mr. Stocks, the Royal Academicians could not, under the circumstances, have done better. They have passed over it is true, Mr. Robert Graves and Mr. Willmore, both line engravers of merit; but the public will justify their preference.

Sir Charles Eastlake has returned from his first Continental tour as Keeper of the National Gallery, and has, it is said, effected certain purchases at Florence that will materially contribute to make our Gallery a *history* of Art. To secure masterpieces is all but impossible; much, however, may be done, and at comparatively small cost, to illustrate the progress and condition of the several schools of Art, and this, we believe, is what Sir Charles is endeavouring to do.

It is not, we believe, very generally known that the widow of the late Sir William Molesworth was once on the stage. In the year 1827 she played *Lucy Bertram* in "Guy Mannering" at Drury Lane, and was deemed a "hit." Her London career on the stage did not, however, exceed a month.

Messrs. Sotheby and Wilkinson have given us a taste of their approaching auctions, and from their list we may collect a fair notion of what the season is likely to afford in the shape of curious books, rare prints, and still rarer manuscripts. The principal attractions seem to be the first portion of Mr. Halliwell's Shakspeare Collections (collections made with great great judgment and at great cost for that portion of his edition of Shakspeare which is already published), and the late Colonel Durrant's collection of the Works of Hollar and Faithorne—by far the finest known to exist in private hands. Colonel Durrant bequeathed this very remarkable collection to Mr. Frank Graves, who is understood to have made some important additions to the bequest.

Mr. John Payne Collier has been and is still reading lectures at Maidenhead upon our early dramatic poetry. There is, as some of our readers will doubtless be glad to learn, an excellent Mechanics' Institute at Maidenhead, to which all the gentry in the neighbourhood subscribe; and Mr. Collier, who has been for some years resident in "lettered leisure" at Maidenhead, very kindly consented to tell his neighbours the result of a life of labour on the history of our early dramatic poetry and stage.

The reception of Mr. Collier's name reminds us of a pleasant rumour that we are soon to see under his editorial care an edition of Michael Drayton's works. Drayton is almost the only Elizabethan poet whose works have escaped republication in our time. We are glad to think that he has been reserved for an editor in every way competent to do him justice.

Sir Edward Bulwer Lytton has become a writer in the *Quarterly Review*. The article on Pitt and Fox, we suspect is by him. What cannot time effect? Lockhart studiously abstained from noticing Bulwer in the *Quarterly*, and Lockhart was Lord of the *Quarterly* from the infancy of Bulwer's reputation till last year—a period of nearly thirty years. Now Lockhart is no more, and Bulwer is no longer a Whig. The neglected author appears as a writer in that very periodical which so injuriously abstained from rendering him the literary justice his genius has long entitled him to receive.

The first volume (just published) of Mr. Thackeray's "Miscellanies" opens with a collection of his ballads, favourites of former years, now brought together for the first time to become permanently interesting. There are some of Mr. Thackeray's ballads that are worthy of Mat Prior, Lady Mary Wortley, and Sir Charles Hanbury Williams.

Architects were pleased with Mr. Digby Wyatt's lecture, on Saturday last, at the Crystal Palace, on the works of Giotto and the labours of the Arundel Society. Mr. Wyatt is thoroughly master of his subject; and, though the day was piercingly cold, he contrived to warm his readers by his honest enthusiasm, his knowledge, and his taste. The tracings from the Arena Chapel would, with the introduction of a little colour, be still more valuable. The whole "getting-up" of this Giotto Gallery is most praiseworthy.

TWO LECTURES ON THE WAR WITH RUSSIA were recently delivered at the Beaumont Institution, Mile End, by Rev. T. J. Rowsell, Incumbent of St. Peter's, Stepney, to very large and attentive audiences. The lecturer entered into a history of the motives and principles involved in the present war; and, from a review of past history, and the facts of the last seventy years, he showed that the spirit and policy of Russia were incessantly aggressive—that on every side of the empire she had, by means of diplomacy, tyranny, and cunning, stretched onward her boundaries towards Western Europe. He instanced, in indignant and passionate language, the partition of Poland, the occupation of Swedish territory, and the very threatening advance of Russia towards Vienna, Berlin, Constantinople, and India. The lecture occupied on each occasion more than two hours in delivery, and was listened to with great attention, and often interrupted by applause.

NEWSPAPERS FOR THE CRIMEA.—Complaints are still rife among the officers of this army concerning the great irregularity with which they receive the newspapers sent to them from England and elsewhere. I impute no blame to any one, nor pretend to point out where the fault lies, but the evil exists, and is great and glaring. Making every allowance for irregularity on the part of senders, for the possible negligence or dishonesty of servants, and newsmen's boys, there still remain abundant instances in which newspapers have positively been sent, and as positively have never been received. I hear daily grumbling on this account, proceeding from persons who receive letters from their friends, informing them that by the same post papers are dispatched to the address, which never arrive. In short, complaint is general, and I am convinced well founded, and that a great number of papers, duly posted in England, do not come to hand in the Crimea—at least, not to the hands of the persons for whom they are destined. The ratio of loss is various; some persons get on an average two out of three of their papers, others one out of two, others scarcely any: and I know cases in which officers are writing to England to discontinue their subscription to newspapers because they never get them at all. The grievance is a vexatious one. We are now on the verge of winter. Days grow short, evenings long; the rains are doubtless at hand, and parades and out-of-door exercise and occupation are hardly to be thought of when the ground becomes a morass. One of the greatest pleasures of a man out here is the receipt of newspapers from England; and so you would say could you behold how the fortunates who receive them are beset. It is a cruel privation and disappointment when, by mismanagement in some quarter or other, they do not arrive. The matter ought to be seen to by all concerned.—*Letter from the Camp.*

THE BOMBARDMENT AN

GENERAL BAZAINE, COMMANDER OF THE FRENCH TROOPS AT THE MOUTH OF THE DNIEPER.—FROM A SKETCH BY SIR GEORGE HAYTER.

GENERAL BAZAINE.

General Bazaine, who commands that portion of the French army now operating at the mouth of the Dnieper, may be cited as presenting one of the most brilliant examples of the achievement of military distinction in the present day.

Born in 1811, of a family known in the annals of military and civil engineering, Achille Bazaine, after passing through the preparatory studies for the Ecole Polytechnique, enlisted in 1831 as a private soldier. He thus, at an early age, acquired, by passing successively through the subordinate ranks, a practical knowledge of the duties and resources of his profession. In 1832 he joined that African army from whose ranks have sprung so many heroes. After having within four years obtained a lieutenancy and the Cross of the Legion of Honour, he joined the French Auxiliary Division in Spain, and took a share in those campaigns in Catalonia which raised so highly the renown of the French Foreign Legion. This corps, composed of volunteers of all nations, cannot be employed in France, and is officered exclusively by Frenchmen. Among such discordant elements our young officer reaped new laurels, and succeeded in securing not only esteem, but affection.

On his return to Algeria in 1839, with the rank of Captain, he took part in the expeditions to Miliauah, Tlemcen, Morocco, and Sahara. During some years he conducted the *Affaires Arabes* of the Subdivision of Tlemcen. While filling this political situation we find him mentioned as

LANDING O

BOMBARDMENT OF KINBURN BY THE ALLIES, ONE O'C

CAPTURE OF KINBURN.

ALLIES ON THE BEACH AT KINBURN.—SKETCHED BY J. A. CROWE.—(SEE PAGE 554.)

M, OCTOBER 16.—SKETCHED BY J. A. CROWE.—(SEE NEXT PAGE.)

instrumental in the surrender of Abd-el-Kader, and in the subsequent pacification of Algeria.

In 1844 he became Major, in 1848 Lieutenant-Colonel, and in 1850 Colonel of the First Regiment of the Foreign Legion, in which, exactly twenty years previously, he had acted as a subaltern. He was occupied with the administration of Sidi-Bel-Abbès when his regiment was selected for the expedition to the East. The two regiments of the "Legion Etrangère" were constituted into a brigade, the command of which was confided to him; and General Bazaine reached the Camp before Sebastopol on that memorable day, in October, 1854, when the Allies opened fire against the devoted city.

Recent despatches sufficiently prove the active part which he has taken in the labours and the combats of the siege: his name is more than once to be found honourably mentioned in the official despatches; and the intrepid manner in which he conducted a portion of the French left attack at the final assault was alluded to in the highest terms. On the retreat of the Russians, General Bazaine was entrusted by Marshal Pelissier with the government of the town of Sebastopol; the Karabelnaia and that portion which was allotted to the British forces being confided to Col. (now General) Windham. On the 22nd of September he was promoted to the rank of General of Division, and on the 7th of October he left Kamiesch for Kinburn at the head of an expeditionary corps. This important position, with 1420 prisoners and 174 pieces of the Artillery, fell on the 17th October, before the attack of the Allied forces, and General Bazaine forwarded to the Marshal, with his account of this exploit, the standard emblazoned with the arms of Russia which had waved over the walls of the conquered stronghold.

The energetic manner with which this operation was carried out may be accepted as an earnest of the talents of the young General who took so prominent a share in it, and who appears destined to perform an important part in the history of this eventful war.

General Bazaine is only forty-four years of age, and is therefore one of the youngest Generals of Division in the French army. At the age of twenty-seven he was already invested with the Orders of the Legion of Honour, of St Ferdinand, of Charles III., and of Isabella of Spain. The accompanying portrait is taken from a Sketch by Sir George Hayter.

THE CAPTURE OF KINBURN.—OPERATIONS ON THE DNIEPER.

In our last publication we gave a very complete and graphic account of the Expedition to Kinburn by our Artist and Special Correspondent. In our present number we have given Engravings of the Sketches which accompanied those letters. The subjects of the various Sketches are—Landing Artillery at Kinburn Spit, October 15; the Spit Battery Otchakoff in the distance; the Allied Troops landing, October 16; Bombardment of Kinburn, October 16; Ditto, October 17; Kinburn Fort on Fire.

The following letter from a private correspondent gives some interesting details relating to the capture of the Russian stronghold:—

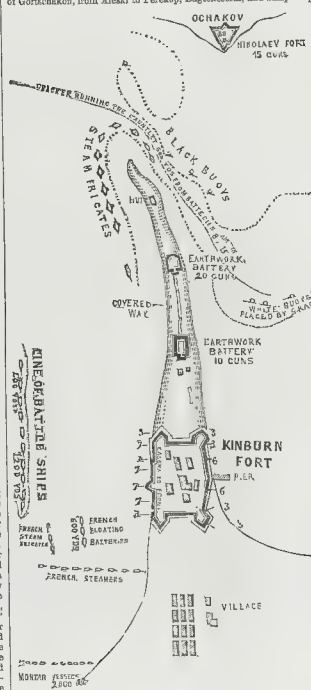
At eight a.m. on Monday, the 15th, the forts opened a heavy fire on gunboats and steamers. Five or six round shot fell close to the *Spitfire*—some shells burst in the air, which caused her to move further out. 8.30. The troops landing, and the English mess-pots planted on the soil of Russia. 9. The Highlanders taking ground and sending out skirmishers. There stood the General and his dog; the latter soon found congenial pastime, and was seen pointing at a quail. The weather was fine, with a pleasant breeze blowing from the southward. No surf on the beach, which is hard sand; a few yards from the water's edge it rises into low irregular hillocks, covered with coarse wiry grass and fishers' huts. The lines still lying quietly at anchor four or five miles from the fort. We were all in earnest expectation of a move, as the Admiral declared his intention of going in to win at nine o'clock; but he did not. 9.30. The first French gun-boat approached full of *les Indigènes*, with their rich blue uniforms, Zouaves, and infantry; several others soon followed, and the tricolor waved over a fisher's hut. Four French sailors were chasing a large pig. They plied him vigorously with their boathooks, but piggy blew them and dodged them for a long time on land; at length, hard pressed, he dashed into the water and was captured by the boats. Then came the *Triton*, radiant with Marines, and the merry visage of "Our Own Correspondent," and towing *Terrible*'s paddle-box boats full of troops. *Banshee* brought up her string of boats in tow. The *Lynx* came also, with the *Royal Albert*'s boats and more Marines; while the *Miuna* and *Brenda*, the *Danube*, the *Arrow*, the *Beagle*, and *Wrangler* were pouring forth their red-coated burdens. The *Supply*, the *Cheruy*, the *Industry*, and others, were landing the horses and carts of the Land Transport Corps, together with the tents and baggage required by the troops. The forts fired briskly on the steamers. At 11.15 the Russians signalled to Otchakoff, hoisting a red pendant, a blue with yellow cross, and a white flag with a red border. They ceased firing. At 2.15 the fort opened a brisk fire on the mortar-boats, which had been towed into their position by the *Snake* gun-boat. They were ready to reply in a few minutes. Having got their range they poured shells upon the fort, which fired away till dark. The Russians had set fire to the parts of the village and haystacks which lay nearest to them; but a good portion was preserved by the French, who landed on the Spit between the spot where the English troops were and the fort. During the night they pushed their advances within 1200 yards of the walls.

On Tuesday, 16th, a strong breeze from south-west brought up a heavy sea: the surf was high upon the beach. The steamers' paddle-box boats and flats were trying to land provisions from the transports, but most of them were spoiled; the baggage was wet, the boats were swamped, and things looked rather uncomfortable. Some prisoners were taken; they reported the garrison to be 1200, and that 20,000 Russians were advancing to their relief from Perekop and Kherson.

Wednesday, 17th. The anniversary of the grand naval attack on Sebastopol was fine enough to permit the combined fleets to attack. The wind was blowing from off shore, and the swell had subsided. This was indispensable, because many of the line-of-battle-ships were drawing 26 feet water, and they were to anchor and attack with only two or three feet water under their keels This was a ticklish job, in a narrow difficult channel, hitherto almost unknown to us. Well, at eight a.m. the sand-batteries opened at a steamer and gunboat which forced their way inside the spit. The French floating batteries were crowding up, preparing to go in, and at 9.30 they opened a tremendous fire at 600 yards, from twelve large guns on each broadside. At ten the mortar boats opened fire, three French gun-boats were working along from the southward, by the shore, where the troops had been landed. The boats of the *Fretwell*, *Lynx*, &c., &c., had been towed close in their own paddle box boats and flats which had been swamped in the surf, and were half buried in the sand. At 10.15 these steamers weighed and proceeded to the flag ship. At this moment fifteen gun boats were bearing away over the mortar boats and batteries. Some heavily-armed French steamers and the *Odin* were firing. Shells were bursting over the fort, which was firing very rapidly. The Russian gunners could be seen, standing up boldly on the rampart, sponge and rammer in hand, loading and firing away as if they were at exercise. When one was knocked over, another jumped to his place. Three of them were enough to work each gun: one to work the elevating-screw and let the gun slip down the incline to run it out; one to lay and fire (the recoil sent it in again); one man to sponge, &c. This accounts for their killed being so few.

11.30. Signal made to *Valorous* to weigh immediately; also to *Sidon*, *Curagoa*, and *Gladiator* to follow; *cerebrand* to go in at once, engaging batteries at both sides. The two earth-and sand batteries on the spit were spitting away merrily out of their ugly mouths. It was not a pleasant thing to look at their square black embrasures, looking like five or six old black tobacco-stained teeth stuck in a fury's upper gum, and to see they were only waiting to get you in a favourable position to open fire upon you at 500 yards. The *Curagoa* went in at them in a business-like way; the *Dauntless* very cautiously and circumspectly indeed—remarkably careful; but the *Terrible* hammered them so hard as almost to bury them in a heap of stony sand. She did her work admirably, and early shut them up. It was a brilliant sight to see the *Sidon*, *Firebrand*, and *Spitfire* in to 500 yards, engaging north shore; then run down to within 500 yards of the sand battery, engaging that; and then float into the calm waters at the Dnieper's mouth, where few British ships have floated before. Noon. The liners going in to work. The barracks in the fort burning fiercely, especially around where the Russian colours were hoisted. Their guns firing rapidly still. 12.30. The line-of-battle ships opened at once, the *Hannibal* alone bestowing her attentions at a most respectful distance upon the sand-batteries. Her brave Admiral Stewart had gone into *Valorous*. But this was not peril enough, so he hoisted his pretty white ensign on a small steam gun-boat, the little *Pilot Fish*, in front of all, and there he led in his little squadron like a gallant dashing fellow as he is. 2.30. A flag of truce was hoisted, and the whole Russian garrison marched out under arms. The gunners from the sand forts marched in, bearing on stretchers their wounded; one died; they buried him, stretcher and all, in the sand, stuck up a rude cross at his head, and marched doggedly on. The Allied troops marched into the fort, the union of Red Ensign and Tricolor was seen on high. The General and officers of the Russian battalion were made to pile their arms outside the fort. The muskets were new, and in first-rate condition. They walked on, bearing the banners and ornaments of their church, and were placed under a French guard at the head-quarters, about three miles south of the town. They formed one complete battalion, two Colonels, 4 Majors, 4 Captains, and about 1200 men. Their loss is said to be about 100 killed and wounded, very few being killed. The English lost two men by the bursting of 68-pounder guns of the *Arrow* gun-boat, one or two wounded. The French lost about 27, chiefly in their floating batteries, which acted admirably, and endured still better. One is said to have had sixty-seven cannon shot strike her without doing any important damage.

18th, 6 a.m. The Russians blew up the forts at Otchakoff, two stupendous explosions rent the air, and shook our steamers—the second presenting that peculiar appearance which the *Times* calls "the velvetty fatty black edges." Thousands of shells exploded at the same time. Their Russians have thus abandoned their position on the north shore, which cost them a long siege and 40,000 men. Alexander may lay down any number of 130-gun steamers, but how many of them can he get out of the Bug and Dnieper? This blow menaces Nicolaieff and Kherson, and gives us a *point d'appui* to work the rear of Gortschakoff, from Alcaki to Perekop, Bagtcheserai, and Simpheropol.



PLAN OF THE ATTACK ON KINBURN.

From the *Invalide Russe* we learn that on the evening of the 27th ult. the Allies embarked near Kinburn their field artillery and horses on board some of their transport-ships. Next morning, at daybreak, the ships were still in the roads, and they appeared to be preparing to put to sea, but a dense fog, which lasted from eight o'clock in the morning till the evening, prevented any observations during the day. Before this fog came on, it was remarked that the number of steamers, gun-boats, &c., at anchor in the embouchure of the Bug had considerably decreased. Only five steamers and four gun-boats remained in the mouth of the Bug. The fleet in the Bay of Otchakoff consisted of sixty-four vessels. The Allies were fortifying their position at Kinburn.

From other sources we learn that British steamers of light draught have reconnoitred Nicolaieff. Numerous ships, finished and unfinished, are in the river and sheds. The place is strongly protected by recently-erected works.

The blockade of Odessa is efficiently continued, and the utmost fear prevails there, as the return of the fleet is supposed to be a certainty. A private letter from that city, of the 22nd ult., says:—"Since Kinburn has fallen into the power of the Allies the communications kept up between Nicolaieff, Otchakoff, and Odessa by means of clippers have entirely ceased."

The head-quarters of General Lüders, Commander-in-Chief of the Army of the South, which is 50,000 strong, are removed from Odessa to Nicolaieff. If the *Augsburg Gazette* be as well informed on Russian subjects as it is well disposed to Russian interests, the Czar has not been able to provide for the defence of Nicolaieff and Kherson without withdrawing a portion of his army from the Crimea. The *Gazette* states that the 1st brigade of the Fourteenth Division of Reserve, a corps that took part in the defence of Sebastopol, has marched to Nicolaieff; and artillery had also been detached from Prince Gortschakoff's army, with the same destination.

The *Oesterreichische Zeitung* states that Totleben is working wonders at Nicolaieff. Below Spasska, where the Bug is 60 fathoms or fathoms broad, the new gun-boats, which will be manned by the remainder of the crews of the former Black Sea fleet, are to be stationed. The two banks of the river will be defended by forts and redoubts. The inhabitants of Nicolaieff were informed that, in case of attack on the city, it was not beyond the bounds of probability, they might, if they pleased, retire into the interior. Three fourths of the people have emigrated, and things are not better at Kherson. It is related that all the batteries at Odessa are to be disarmed, and the guns sent to Nicolaieff.

Admiral Berck, Governor of Nicolaieff and Admiral-in-Chief of the Black Sea Fleet and Ports, is dismissed. Vice-Admiral Mettin is appointed in his stead, with the additional command of the flotilla in the Danube.

It was rumoured at Vienna, on Wednesday, that the bombardment of Nicolaieff had begun on the 29th ult., and continued during the whole of the 30th, but the report was not credited.

The accompanying Plan of the Spit of Kinburn, and the arrangement of the Allied fleet in front of the fort, will enable our readers to understand the following account of a daring feat performed there on the night previous to the bombardment:—

October 17th.—Captain Spratt having planned the attack, it was also arranged that the Rear-Admiral, Sir H. Stewart, should, if possible, force the narrow passage, and get into Kherson Bay, so as to flank the batteries; in consequence of which, I was appointed to have four of the gun boats under my charge, and take them in at night-time, and endeavour to buoy the channel I pushed on—stopped into the deep and narrow channel—passed the batteries without being seen, and anchored inside of Kherson Bay—alone. At five a.m in the morning all the gun-boats pushed in, and wondered how I got in. I directed them to proceed eastward, for one mile, and anchor; when it became daylight I was doubtful of my own buoys, and, seeing that the French had made a mess of their work, I proposed to the gallant commander of the *Cracker* to run the gauntlet, so as to get out and offer to bring the Admiral in. Accordingly the little gun-boat, at full speed, flew through the narrow channel, and passing the batteries at 700 or 800 yards—the whole fleet were witnesses—to see the little thing dash on; and the batteries commenced their fire of shot and shell, fortunately missing us every time. We arrived safe to the Admiral: he was exceedingly pleased, and wrote to the Commander-in-Chief, who made the signal to *Cracker*, "We all admire your performances."

The Prussian Government has adopted the project for constructing a standing bridge over the Rhine, between Coblentz and Ehrenbreitstein. Operations will commence early next spring.

MODERN POETIC GENIUS.*

Poeta nascitur non fit—or, rather, Poetry is of Nature, not of Art; pervading all creation from all time—a subtle essence, imparting life and beauty to every object in turn, and peopling even space with fancies all its own. 'Tis for the poet to seize the light and spirit of poetry to realise in a form for palpable presentment each evanescent suggestion, each transient rainbow-hue of this ever-active agency; and as the essence of Poetry consists in the grand, the beautiful, and the passionate, the poet's measure should show the grace and smoothness which belong to power and fullness; and his language should be a sort of word-music.

Who shall set bounds to the range of poetry;—who shall limit man's appreciation of it, or restrict his invention and fancy in the development of its inspirations? He who shall count up the sands of eternity and set a girdle round space. But it is one thing to define all that is or may be, and another to point out what should not be; it is one thing to formulate all the legitimate methods of poetic success, and another to prescribe some of the conditions necessary to it. By common consent of mankind in all ages, some of these conditions of poetic success have been defined, comprising more essentially grace and dignity of expression, in rhythmical order, varying with the subject, and according to the genius of the language. It is in the province of all to adapt these unwritten laws to his own particular case; and the highest proof of genius may be shown in appropriate selection of language and of rhythm, and in modifications of the latter to a peculiar subject; but genius will not be safe in running in diametrical opposition to that which has been established by general consent for ages.

We offer the above remarks by way of introduction to our brief notice of a few new volumes of poems, including one by a highly-esteemed bard of the New World, because we have observed of late a too great disposition, amongst the poets of the rising generation, to set our old habits and rules at nought, and to seek for altogether new principles of poetic beauty—as if, forsooth, they were now creating poetry for the first time, instead of merely echoing its inspirations, which have been resounding through the hearts and ears of man ever since the world came out of chaos. With these ambitious projectors a grand or beautiful idea in simple, easy garb, is not the object of pursuit, but to put their idea, whatever it be, into as ill-fitting, tawdry, slatternly a dress as it is possible for the most *outré* imagination to conceive; and every time they invent a dress as unlike as possible all poetic dress that has gone before, they consider that they have been eminently successful, and forthwith sally forth, complacently, to air it in the sight of man, in the Bond-street of their Parnassus.

Have we not, for instance, a Poet Laureate who, having exhausted every variety of poetic antidote, has in his last composition actually descended to the veriest dead-level of prose-run-mad; and has he not, unfortunately, many thoughtless imitators, as inferior to himself as was the waiting maid who went mad in white muslin at the heels of her Princess mistress, mad in white satin? Then, on the other hand, have we not Mr. Philip J. Bailey, author erst of "Festus," and later of the "Mystic, and other Poems," who, adhering rigidly to the pentameter metre, with words of strange import thrown uncomfortably together, as fragment flags upon a macadamized road, for want of utter attention to the sense, writes incomprehensibly ever, *en gr.*

> The soul of every animal from the ox,
> Thunder begotten, to the solar wolf
> As he re-rose from Hades—God of Death,
> Thenceforward to man hallowed to destroy
> The spirit of all ill; and scarab, type
> Of the great world-artificer: from the lord
> Of golden flocks, lambs-feeder, to the goat
> Sacred to Sion in all rites, he, in turn,
> Bespake, and each to him the awful word
> Passed, that made ope the immortal courts of life.

And have we not now Mr. Longfellow, one of the founders of a school of poets in the New World, perverting a fair genius to the trick of mannerism, and crumpling up noble thoughts upon a verbal fret-work in which every variety of disagreeable and unseemly contortion is exhausted? To confine ourselves for the present to the last-named author, let the reader consider his unsuccessful attempt at hexameters in his otherwise meritorious poem of "Evangeline," and the octo-syllabic blank lines of the "Song of Hiawatha" now before us, afterwards comparing the unhappy verbal structure of these productions with the graceful beauty of some of the numerous minor poems by the same writer. Take, for instance, the beautiful ballad of "The Curfew," published nine years ago, which we quote as an example of quiet, wholesome, poetic expression:—

I.

Solemnly, mournfully,
Dealing its dole,
The Curfew Bell
Is beginning to toll.

Cover the embers
And put out the light;
Toil comes with the morning,
And rest with the night.

Dark grow the windows,
And quenched is the fire;
Sound fades into silence,
All footsteps retire.

No voice in the chamber,
No sound in the hall!
Sleep and oblivion
Reign over all!

II.

The book is completed,
And closed, like the day;
And the hand that has written it
Lays it away.

Dim grow its fancies;
Forgotten they lie;
Like coals on the ashes,
They darken and die.

Song sinks into silence,
The story is told,
The windows are darkened,
The hearthstone is cold.

Darker and darker
The black shadows fall;
Sleep and oblivion
Reign over all!

Take three simple, flowing, truthful lines, with the charming reality they conjure up, and compare them with the following passage from the "Song of Hiawatha":—

> Cried the fierce Kabibonokka,
> "Who is this that dares to brave me!
> Dares to stay in my dominions
> When the Wawa has departed,
> When the wild-geese has gone southward,
> And the heron, the Shuh-shuh-gah,
> Long ago departed southward!
> I will go into his wigwam,
> I will put his smouldering fire out"

Or with this:—

> With the heavy blow bewildered,
> Rose the Great Bear of the mountains;
> But his knees beneath him trembled,
> And he whimpered like a woman,
> As he reeled and staggered forward,
> As he sat upon his haunches;
> But the mighty Mudjekeewis,
> Standing fearlessly before him,
> Taunted him in loud derision,
> Spake disdainfully in this wise:—
> "Hark you, Bear, you are a coward,
> And no Brave, as you pretended;
> Else you would not cry and whimper
> Like a miserable woman!
> Bear! you know our tribes are hostile,
> Long have been at war together;
> Now you find that we are strongest,

You go sneaking in the forest,
You go hiding in the mountains!
Had you conquered me in battle
Not a groan would I have uttered;
But you, Bear! sit here and whimper,
And disgrace your tribe by crying,
Like a wretched Shingebyss,
Like a cowardly old woman!"

Then again he raised his war-club,
Smote again the Mishe-Mokwa
In the middle of his forehead,
Broke his skull, as ice is broken,
When one goes to fish in Winter.
Thus was slain the Mishe-Mokwa,
He the Great Bear of the mountains,
He the terror of the nations.

Or this:—

> On the next day of his fasting
> By the river's brink he wandered,
> Through the Muskoday, the meadow,
> Saw the wild rice, Mahnomonee,
> Saw the blueberry, Meenahga,
> And the strawberry, Odahmin,
> And the gooseberry, Shahbouin,
> And the grape-vine, the Bemahgut,
> Trailing o'er the alder-branches, &c.

Or this:—

> Thus the fields shall be more fruitful,
> And the passing of your footsteps

* "The Song of Hiawatha." By H. W. Longfellow. New York and London.—"Maud, a Poem." By Alfred Tennyson, Poet Laureate. Moxon.—"The Mystic, and other Poems." By P. J. Bailey. Chapman and Hall.

Draw a magic circle round them,
So that neither blight nor mildew,
Neither burrowing worm nor insect,
Shall pass o'er the magic circle;
Not the dragon-fly, Kwo-ne-she,
Nor the spider, Subbekashe,
Nor the grasshopper, Pau-puk-keenas,
Nor the mighty caterpillar,
Way-muk-kwana, with the bear-skin,
King of all the caterpillars!

Why this is the very marrowbones-a nd-cleaver measure, the song of the mill-clapper. We don't know how it may suit the regular Yankee drawl, but in our little experience the eyes get bloodshot, and the jaws ache and tremble in the very attempt to r ead it. It will be seen that the poet, as if his bed were not hard and ricketty enough, makes it still more uncomfortable, by stuffing it with outlandish Indian words, the import of which, when they are not paraphrased in the text—which, by the way, they generally are, leaving us to wonder why they are used at all—is revealed in a Vocabulary obligingly appended to the volume. Thus, then, the affrighted sense falls upon such lines as the following:—

"Minne-wawa," said the pine trees,
"Mudway-aushkа," said the water.

We find, on applying for elucidation of the mystery propounded, that "minne-wawa" is "a pleasant sound, as of the wind in trees," and that "mudway-aushka" is the "sound of waves on the shore." And when a young lady exclaims—

Ah, showain nemeshin Nosa!

we find that she is putting forth an invitation to her father to have pity upon her;—"Nosa" meaning "papa" in the language of the Ojibways; whence perhaps "Nosey," so applicable to Mr. Robson's version of that well-known parental model in Shakspeare's "Merchant of Venice."

Is it not a sad thing to see fine poetic gifts (which Mr. Longfellow possesses) perverted, and a grand subject (which there undoubtedly is in the foundation of the "Song of Hiawatha") rendered ridiculous by such conceits in the fashion and expression? We have said that the subject of this production is a good one; it is indeed good enough to be entitled to much better treatment. What much richer, or more suggestive, theme could a poet of the New World have than that of the Indian Edda—a personage of miraculous birth, who, according to the traditions of North American tribes, was sent amongst them to clear their rivers, forests, and fishing-grounds, and to teach them the arts of peace? Why a whole creation was opened up in it, crowded with incidents surpassingly unique and grand; and yet see what has been done through an error of judgment!

Our poets must learn to distrust the impulse of genius, and court the dictates of common sense, if they would become teachers and improvers of enlightened humanity.

OBITUARY OF EMINENT PERSONS.

THE VENERABLE GEORGE HODSON, ARCHDEACON OF STAFFORD.

THE Rev. George Hodson, M.A., late Archdeacon of Stafford, Canon Residentiary of Lichfield, and Vicar of St. Mary's, in that city, was the youngest son of — Hodson, Esq., of Carlisle. At the usual age he entered at Trinity College, Cambridge, where he greatly distinguished himself, graduating in 1810 as seventh wrangler, and obtaining in the same year the second gold medal. Upon taking his degree he was elected a Fellow of Magdalen, of which College he subsequently became tutor. After his marriage he was associated for a short time with his friend, the Rev. James Heneman, in the discharge of clerical duties at Clifton, where he came under the notice of Bishop Ryder (then Bishop of Gloucester), who appointed him his examining chaplain. For several years he held the Incumbency of Christ Church, Birmingham, his ministry being most acceptable and successful; and in 1828 he succeeded, in succession, Vicar of Polwell, Canon of Lichfield, and Archdeacon of Stafford. In 1851, for the more enlarged and efficient discharge of his clerical duties, he exchanged, at a pecuniary sacrifice, the Vicarage of Colwich for that of St. Mary's, Lichfield, rendered vacant by the death of the Rev. J. Lonsdale. This was the scene of his final labours. Having just concluded a visitation of his large archdeaconry, having gone from house to house through the whole of his important parish, having addressed his people for the last time (as if with unconscious presentiment) from the solemn words of St. Paul, "I have fought a good fight; I have finished my course; I have kept the faith;" he left England with his two youngest daughters for a short period of relaxation in Northern Italy and the Tyrol. Here, at Riva, on the Lago di Gorda, he was seized with malignant cholera, and in eight hours, on Sunday, August 12th, he died at the age of sixty-eight years. His body was interred in the Riva Catholic Cemetery.

CHARLES HENRY EVANS, ESQ., OF PLASGWYN AND HENBLAS, CO. ANGLESEY.

THE death of this gentleman occurred on the 1st inst., in the 61st year of his age. Mr. Evans was the representative of the Morgans and Lloyds of Henblas, and derived descent in the female line from Robert Morgan, D.D., Bishop of Bangor, whose wife, Anne Lloyd, was daughter and heiress of the Rev Wm. Lloyd, of Henblas. Mr. Evans was son and heir of the late Hugh Evans, Esq., of Trefeilir and Henblas, High Sheriff of Anglesea in 1811, and grandson of Charles Evans, Esq., of Trefeilir, High Sheriff in 1762, the son and heir of William Evans, Esq., of Trefeilir, by Margaret, his wife, sister and heir of Henry Morgan, Esq., of Henblas. By Henrietta, his wife, daughter of the Very Rev. John Warburton, Dean of Bangor, Mr. Evans leaves issue two sons and one daughter.

THOMAS BRANDRAM, ESQ.

MR. BRANDRAM died on the 1st ult., at his residence, Lee-grove, Kent, in the seventy-eighth year of his age, unmarried. He was the heir of Samuel Brandram, Esq.; and for nearly fifty years the head of the old-established firm of Brandram, Brothers, and Co., of Size-lane, London. He resided in Kent, and was an active magistrate of that county.

ROBERT CHARLES TUDWAY, ESQ., M.P.

THIS gentleman was the eldest son of the late John Paine Tudway, Esq. (who was M.P. for Wells from 1815 to 1830, and whose uncle sat from 1761 to 1815), by his wife, Fanny Gould, daughter of Lucas Pulsford, Esq., of Wells. He was born at Wells the 4th of July, 1806, and married, the 3rd of March, 1846, Mara Catherine, eldest daughter of William James, Esq., M.P., of Leigh-court, Somerset. Mr. R. C. Tudway was educated at Harrow, and at Christ Church, Oxford; he was a Deputy Lieutenant and a Magistrate for Somersetshire, and served the office of High Sheriff of that county in 1842. He was first returned to Parliament for Wells in July, 1852, as a supporter of Lord Derby. Mr. Tudway died at his residence, Wells, on the 20th inst. He has had no issue, and, therefore, the representation of the old and highly-respectable family of which he was the head devolves on his next brother, Henry Gould Tudway, Esq.

WILLS AND CHARITABLE BEQUESTS.—Sir Charles Chad, Bart., of Thursford, Norfolk, has bequeathed to the Society for Promoting Christian Knowledge, the Society for the Suppression of Cruelty to Animals, the Norwich Hospital, and the Lynn Hospital, £100 to each; to the parishes of Thursford and Gateseud £50 each, and Tatterford £20, for the poor of such parishes.—Miss Alice Cramlington, of Bevlin, has left to her executors £1000, to be given to such charities as they may think proper objects; and £100 to the poor of Warkington.—Robert Stirling, Esq., of Leek, has bequeathed £300 to the British and Foreign Bible Society; 300 guineas to the Wesleyan Methodist Missionary Society, London; £300 to the Edinburgh Association in aid of the Moravian Missions; £300 in aid of the Fund for the Support of Ministers of the Free Church; £300 to the New College; £200 in aid of the schemes under the authority of the General Assembly; £200 to the Building Fund; £200 in aid of the sustentation of ministers; £400 to assist in the education of young men for the ministry of the Free Presbyterian Church, at the New College in Edinburgh; and to the Royal Infirmary of Edinburgh, the Stafford General Infirmary, and the Society for the Relief of Aged Indigent Sick of Edinburgh, £50 each.—The will of W. H. Bodley, M.D., of Hove, was proved under £35,000; that of John Thompson, of the Burington Tavern, £50,000.

Spanish papers announce that one-half of the vintage of Xeres de la Frontera, one of the principal places of the sherry district, is entirely lost this year.

During a storm at Cadiz a few days ago the lightning struck a powder-magazine in the island of San Fernando, and caused an explosion which did damage to the amount of 1,000,000 reals (£10,000).

MUSIC.

JULLIEN'S PROMENADE CONCERTS.

THESE most popular entertainments began on Monday evening in Covent-garden Theatre. M. Jullien announces that they can continue for five weeks only from that time, the theatre being let at Christmas for dramatic performances. He has fitted up the house for his concerts according to his usual plan, and with more than his usual magnificence. The decorations are gay and tasteful; and the great centre chandelier depending from the ceiling, now surrounded by a circle of lesser luminaries, diffuses a blaze of light through every corner of the building. A new dress-circle of open boxes, in front of the grand tier, greatly enlarges the accommodation of the house, and adds to the brilliant aspect of the scene. The musical arrangements are on a still greater scale than formerly. The orchestra is increased in numerical strength, and includes the most distinguished instrumentalists in London. In its construction there is what we consider a decided improvement. In the usual formation of our orchestras, whatever may be their total strength—whether fifty, or a hundred and fifty—the difference lies entirely in the stringed instruments, the strength of "wind" being always the same—two flutes, two oboes, two clarinets, &c. M. Jullien has seen the evident faultiness of this arrangement, and has established a better balance between the two departments of the orchestra. While increasing the strength of the stringed band, he has made a corresponding increase in the wind instruments, by doubling the flutes, oboes, clarinets, and bassoons. The brazen instruments he has left as before, feeling that they are always powerful enough, however large the orchestra may be. The propriety of this innovation was fully justified by its effect. The volume of tone proceeding from the above doubled instruments was delightfully rich and full, without ever exceeding the due measure of strength. M. Jullien generally confines himself to one vocalist, whom he engages for the whole series. This season he has selected Mdme. Gassier, and he could not have made a happier choice. She has in a single season made herself one of the greatest favourites of the public, and most deservedly; for she has shown herself a singer of the very highest order. To a voice of singular clearness, flexibility, and compass, she adds almost unrivalled powers of execution, together with grace, delicacy, and feeling. While youth, beauty, and an engaging manner fill up the measure of her attractions.

M. Jullien has announced a variety of novelties; and, among others, a grand descriptive quadrille called "The Exhibition of Sebastopol," but Monday night's concert was almost wholly made up of well known and favourite pieces. In the classical style there were—Weber's Overture to "Euryanthe," the Funeral March from Beethoven's "Sinfonia Eroica," the first movement of Mendelssohn's Symphony in A minor, and a selection from "Don Giovanni." In the lighter and more popular style there were several new and brilliant waltzes, &c., by Jullien himself; and, above all, his famous "British Army Quadrille"—an astounding musical mimicry of war, which has been his *pièce de resistance* for several seasons. Madame Gassier sang the beautiful air, "O luce di quest' anima," from "Linda di Chamouni;" the final rondo in the "Somnambula;" and her favourite waltz, with which she has so often delighted the public. Her reception, we need scarcely add, was enthusiastic, and everything she sang was loudly encored.

There was an immense audience. The boxes were full of fashionable company, and the vast promenade was crowded to overflowing. M. Jullien on entering the orchestra was received with "honour due," and nothing could be more satisfactory than the manner in which the first part of the concert went off. The most classical portions of the selection were listened to with attention, and applauded with warmth. But the latter part of the evening did not pass so agreeably. The promenade gradually became more and more densely and uncomfortably crowded—a circumstance which always produces disturbance; while it was evident that numbers of the new comers were more bent upon a "lark" than disposed to listen quietly to music. They began to amuse themselves with shouting, whistling, calling for "The Rat-catcher's Daughter," and other elegant street ditties, pushing[one another about, and exchanging disticuffs. The police carried off several of the principal rioters, who were brought up to Bow-street and fined next morning. Any serious mischief was thus prevented; but this discreditable conduct marred the pleasure which might here been received from the latter portion of the concert. Even after M. Jullien (who seemed much annoyed) and all the band had left the orchestra, the promenade continued to be full of a noisy mob, who kept bawling for a quarter of an hour before they thought proper to go away. Such behaviour was indeed unexpected and surprising, being quite unlike the quiet and orderly bearing of the multitudes who have filled M. Jullien's promenades for years past; and we trust it will not be continued.

THE THEATRES.

ADELPHI.—"The White Horse of the Peppers" was revived on Thursday week, for the purpose of Mr. Hudson's representing the part originally performed by Mr. Power, that of the Irish gentleman, as symbolised in the character of *General Pepper*. Mr. Hudson is perfectly *au fait* in the performance, and as the bogtrotter (a disguise assumed for the scene) was especially humorous. He sang also the comic song of "I'm a ranting, roaring blade," with decided effect. We are half-afraid that Mr. Paul Bedford's Dutch *Major* is a positive caricature; but the audience were evidently pleased with its extravagance. Miss Wyndham, as *Agatha*, was amusing; and the new actress, Miss Kate Kelly, as *Phebe Palm*, proved that she was likely to be an important acquisition to the company. Altogether, there was much broad fun elicited. The drama was succeeded by Peake's farce of "The Hundred Pound Note"—a piece thoroughly English, and not to be deteriorated by any critical comparison with the sentimental vaudevilles derived from French sources, however neatly constructed or cunningly conceived. An air of stern fact and solid nationality distinguishes this celebrated farce. On its first production, in 1827, it was strongly cast; the names of Jones, Blanchard, Bartley, Power, Keeley, Mrs. Davenport, Madame Vestris, and Mrs. Faucit, illustrating the playbill of the day. Nevertheless, on the first night it was received towards the conclusion with disapprobation; the objectionable matter was removed, and the second night it went well, and afterwards ran successfully to the end of the season. Nothing is perhaps more fallacious than the result of first nights; and the critic who is guided by it incurs the danger of giving an erroneous verdict. We have frequently brought it round by the simple process of defer judgment until the third performance of a new production; but in these fast days delay would, we fear, not be tolerated, even though justice might be secured. Mr. Keeley benefited most by the ultimate triumph of the present farce, and his picture as *Billy Black*, the boots of the inn and propounder of conundrums, might be seen in company with the *Bavarian Brown Girl* (another of the characters now performed by Mrs. Keeley) in every picture-shop window, and on every plaster-seller's counter. Mr. Keeley still retains the humour of his character, but the humour itself has grown old, if not obsolete. Mr. Hudson, as *O'Shaughlinessy*, was as fresh as ever. The Milesian servant is still intelligible.

The manager of this favourite theatre has found the revival of "Open Sesame" sufficiently encouraging to reproduce another of the Lyceum burlesques. "Valentine and Orson" was, perhaps, next to "Open Sesame," the most popular of the extravaganzas produced during the management of Mr. Keeley, and the success on Thursday night was confirmatory of its popularity. The principal weight of the piece devolves of course upon Mr. and Mrs. Keeley, and most admirably did they discharge their responsibility. Mr. F. Bedford was a very good representative of *King Pepin*, who would have been more so had he been better acquainted with "what is set down for him." *Eglantine* was allotted to Miss Wyndham, a most painstaking and improving actress. Her costume was very tasteful, and she danced and played with much grace and spirit. The other characters were adequately represented, and the piece seemed to give immense satisfaction to a full house.

DRURY LANE.—The management of this theatre shows tact in varying the contents of the bill, by occasional performances giving scope for the comic talent of its company. "The Critic" was performed on Saturday, and Mr. Charles Mathews allowed to revel in the wit of Sheridan, and that not in one character only, but in two of the author's subtlest creations—*Sir Fretful Plagiary* and *Puff*. In his rapid change of character, and the completeness of the assumption, Mr. C. Mathews rivals the most expert of polyphonists. Two new pieces have also been produced. The first is a farce in one act, called "Twenty Minutes with a Tiger," the animal so called being a biped East Indian, *Mr. Chilt Chutnee* (Mr. Younge), a retired nabob, of ferocious temperament. His daughter has a protean kind of lover in one *Mr. Beeswing* (Mr. C. Mathews), who, to tame the irascible father, assumes to be—first, a commercial traveller; and, next, the landlord of the house in which *Chutnee* resides as the tenant, and accomplishes his task in the stipulated twenty minutes. On his victim declaring that his daughter shall never wed as long as he lives, his tormentor rejoins, "Then you must be killed, old gentleman," and proceeds to a mortal encounter, in which, however, the latter gets worsted. *Beeswing* ultimately escapes from the fishpond into which he had been thrown, and, with the aid of the daughter's pleading, carries his point with the worried parent, who consents to their union. The effect of the piece is entirely dependent on Mr. C. Mathews' animal spirits; but, as in these he abounds, the success of the piece was never for a moment disputable. What are improbabilities to an actor who affords no time for reflection? The last new piece, which was produced on Wednesday, is entitled "An Impudent Puppy," and affords, of course, another opportunity for Mr. C Mathews' characteristic aptitude. It is taken from the French vaudeville entitled "Monsieur qui suit les Femmes."

MARYLEBONE.—Mr. Knowles' pleasing play of "The Wife" was revived on Tuesday, the heroine being supported by Miss Edith Heraud. We may now mention that this lady will, on next Wednesday, take her benefit, when it is announced that she will perform the part of *Juliet* in Shakspeare's great love tragedy; and also that of *Juliana*, in Tobin's clever comedy of "The Honeymoon." Both of these characters she will support for the first time in London. In the provinces she has most successfully appeared in both at various times; and it will be remembered that it was in *Juliet*, on the Richmond stage, that, only a few years ago, she made the remarkable debût which at the time attracted so much critical attention. In the benefit now proposed Miss Heraud makes her first appeal of the kind to public support; and we trust that she will meet with proper encouragement.

THE CRYSTAL PALACE—THE ARUNDEL SOCIETY'S EXHIBITION.—The Directors of the Crystal Palace having volunteered to place at the disposal of the Arundel Society one of their numerous uncupied courts for the exhibition of their drawings, tracings, casts, &c., the offer was readily accepted, and on last Saturday this addition to the Art-collections of the Sydenham Palace was opened to the public. The collection illustrating some of the most interesting periods of Christian Art includes drawings after Giotto, Fra Angelico da Fiesola, and Domenico Ghirlandaio; casts from some of the Elgin marbles; and copies, in fictile ivory, of some of the most beautiful ivory carvings. The inauguration of this collection, inconsiderable in quantity, though of value in point of real interest, was considered of sufficient importance to induce the Directors to invite Mr. Digby Wyatt to deliver a lecture on the genius and works of Giotto, and to issue special cards of invitation to the lovers and patrons of Art. The day, however, was inauspicious: the weather cold and lowering—the atmosphere of the Crystal Palace was that of an ice house rather than of a conservatory the valuable exotics drooping and withering under its chilly influence, the surrounding downs were covered with a dank mist, against which the grand water-work display struck coldly and cheerlessly; and in spite of all the combined attractions of the day, a very small number of visitors attended; some six hundred only, in the course of the day. Under these circumstances the lecture upon the dawn of art in sunny Italy, and the warm gushing genius which so speedily brought art to its climax of greatness, was an uphill task, and manfully, in spite of a slight hoarseness, did Mr D. Wyatt struggle with it. We are happy to add that he had a very attentive audience who followed him in his detailed account of the celebrated frescoes in the Arena Chapel at Padua, illustrated by outline sketches suspended from the walls, with an amount of interest indicative of a growing taste for the civilising arts.

ROYAL POLYTECHNIC INSTITUTION.—Mr. G. Godwin, F.R.S., will deliver, on Monday next, at this Institution, a lecture on the Building, Lighting, Heating, and Ventilating "The Homes of the Thousands."

BREAK-DOWN OF A BRIDGE, AND GREAT LOSS OF LIFE.—A most melancholy and fatal accident occurred on Saturday morning last. The middle portion of the Balgnatta-bridge, of the safety of which fears have long been entertained, came down with a violent crash, killing and wounding upwards of 100 people. The cause assigned for this accident is the passing over it, at one time, of a heavy iron roller, drawn by twelve oxen, for levelling the road, and a great number of conveyances and carts laden with merchandise and passer gers. There were four or five native carts in the canal full of people, who were buried under the ruins; three palkees, with their freights of ladies and gentlemen, and two hackeries, full of Hindoo females, who were passing over the bridge, shared the same fate. No correct estimate can yet be formed regarding the loss of life, which must be heavy. Cows and horses, as well as human beings, have been killed and seriously injured.—*Bengal Hurkaru, Sept.* 17.

INDIAN COTTON AND THE WEBS OF DACCA.

IN No. 766 of the ILLUSTRATED LONDON NEWS (for 20th October last), we gave an account of the preparation and weaving of, perhaps, the most remarkable production of Indian industry, the celebrated muslins of Dacca. We now proceed to describe the bleaching, dressing, and packing; premising that we shall be largely indebted (as we were in our former article) to the descriptive account of the Cotton Manufacture of Dacca, by Mr. Taylor, a work that has furnished the data for nearly all that has been written upon this subject

The water used in washing cloths at Naraindeah, is taken from wells on the bleaching-ground. In the rainy season, when the rivers are high and full, it percolates through the intervening fine strata of sand, and rises in the wells to within four or five feet from the surface of the ground; but in the dry season, when the former are low, it sinks to a depth of about eighteen feet, and is frequently thick and muddy, and unfit for washing. Cloths are first steeped in large semicircular earthen vessels (*nandas*), answering the purpose of tubs in this country, and are then beaten in their wet state upon a board, the surface of which is generally cut into transverse parallel furrows. Fine muslins, however, are not subjected to this rough process, but are merely steeped in water. All sorts of cloths, of whatever texture they may be, are next immersed for some hours in an alkaline ley, composed of soap* and *sajee matee* (impure carbonate of soda). They are then spread over the grass and occasionally sprinkled with water, and when half dried are removed to the boiling-house in order to be steamed. The boiler used for this purpose is an earthen vessel, having a very wide mouth, and of a size capable of containing about eight or ten gallons of water. It is placed over a small excavation in the ground, and built up with clay, so as to form a broad flat surface around its neck, having at one part a slanting opening or passage leading to the excavation below. A hollow bamboo, or reed, filled with a coarse cotton yarn, or cocoa-nut shell, serves as a tube through which the water is poured into the vessel. The cloths are twisted into the form of loose bundles, and placed upon the broad clay platform, on a level with the neck of the boiler. They are arranged in circular layers, one above the other, around the bamboo tube, which is kept in an upright position by means of transverse supporters projecting from it, the whole forming a conical pile that rises to a height of five or six feet above the boiler. The fire is kindled in the excavation below, and as the ebullition of the water propels the steam rises through the wide mouth of the vessel, and diffuses itself through the mass of cloths above, swelling by its high temperature the threads of the latter, and allowing the alkali still adhering to them to penetrate more completely into their fibres, and seize on the colouring matter of the cotton. The operation of steaming is commenced in the evening, and continued all night till the following morning. The cloths are then removed from the boiler, steeped in alkaline ley, and spread over the grass as on the preceding day, and occasionally sprinkled. These alternate processes of *bucking* and *crofting*, as they are technically called, during the day, and of steaming at night, are repeated for ten or twelve days until the cloths are perfectly bleached. After the last steaming, they are steeped in clear filtered water, instead of that used in the pre portion generally of one large lime to each piece of cloth. Lime-juice has long been used in bleaching in all parts of India.

The best season for bleaching is from July to November. At this time the water is clear and pure, and gales or gusts of wind carrying dust seldom occur to interfere with the drying of the cloths on the grass. Fine thin fabrics exposed to a strong sun at this season of the year are dried in three-quarters of an hour; cloths of a medium texture, in an hour and a half; and stout fabrics, in three hours.

The bleachers are all Hindoos of the caste *dhobee* (washermen). The more wealthy individuals of the class are generally either the proprietors or the renters of the bleach-grounds, and employ a considerable number of washermen, chiefly from the neighbouring villages, during the bleaching season. The boilers are erected under thatched sheds on the bleaching field, and there are commonly five or six of them under one roof. Spreading the cloths over the grass or upon bamboo rails was formerly done by a set of workmen called *cootdars*, whose business it was also to keep the bleaching ground clean, and free of weeds, prickly grass, and whatever tended to injure the cloths. The cost of bleaching depends upon the number of times the cloths are steamed. Including the expenses of dressing them, it varies from 30 to 160 rupees (£3 to £16) per 100 pieces.

The cloths having been bleached are dressed by workmen, who practise the several arts included under the head of bleaching as distinct trades.

* Soap appears to have been introduced into India by the Mahometans, who are still the principal, if not the sole, manufacturers of it in Bengal. The Hindoos formerly used, as they still do, a lixivium formed from the ashes of different plants, particularly the plantain tree, in washing clothes. The Indian name of soap—*saboon*—is an Arabic word, and appears to be the origin of *tinn*, which, according to Dr. Clarke, is the name given to soap in the Crimea; and of *saxum*, which the same writer also states is applied to it at Genoa.

WASHING.

STEAMING.

Nurdeeahs arrange the threads of cloths that happen to be displaced during bleaching. They work in the manner shown in the Engraving. The cloth wound upon a roller (*nurd*) is placed between two posts on the

ARRANGING THE DISPLACED THREADS.

bleaching-ground, and is unrolled and carefully examined. The damaged portion of it is then stretched out, and, being wetted with water, an instrument like a comb, formed of the spines of the nagphune plant (*Cactus*

BEETLING THE MUSLINS.

ndicus), is drawn lightly along the surface of the displaced threads, in order to bring them into their proper places.

Rafu-gars are darners, who repair cloths that have been damaged

FOLDING.

during bleaching. They join broken threads, remove knots from threads, &c.

Dogh-dhobees are washermen, who remove spots and stains from

PACKING.

muslins. They use the juice of the amrcola plant (*Oxalis corniculata*), which is described as yielding an acid like that of sorrel, to take out iron marks; and a composition of ghee, lime, and mineral alkali to efface stains and discolorations such as are produced by decayed leaves and the plants called neelbundee and cuchu.

Koondegurs are workmen who beetle cloths. Muslins are beaten with smooth chunk shells (*Voluta gyrola*, Lin.); and cloths of a stout texture with a mallet upon a block of tamarind-wood, rice-water being sprinkled over them during the operation.

Istreewallahs iron cloths. The very fine plain and flowered assortments of fabrics are ironed between sheets of paper. This work is done only by Mahometans, and appears to have been introduced into India by them.

The cloths are folded by the *nurdeeahs*, and then piled up and formed into bales which are compressed by workmen called *bustahunds*. This is done by placing them between flat boards tied together by strong ropes and tightly twisting the latter with pieces of stick. The ancient mode of packing fine muslins was to inclose them in the hollow joints of bamboo, one of which, forming a tube about 18 inches in length and 1 inch in diameter, was sufficiently large to contain a piece of muslin 22 English yards long and broad. The cylindrical cases of this kind in which the *mulmul khas* muslins were sent to Delhi were lacquered and gilded, and, when brought into Dacca from the Government weaving establishments at the *aurungs*, were paraded in great state (as was the case with all articles intended as offerings to the Emperor) through the streets of the town to the residence of the Nawaub, prior to their dispatch to Court. This mode of presenting muslins to persons of distinction is somewhat similar to that mentioned by Tavernier, who states that Mahomed Ali Beg, on returning to Persia from India, where he had been an Ambassador, presented to the King a cocoanut-shell, about the size of an ostrich egg, studded with pearls; and that, on opening it, it was found to contain a turban of Indian muslin, sixty cubits long.

The water found in the neighbourhood of Dacca is said to possess properties which give peculiar whiteness to the cloths washed in it. This water is found between Narsindeah and Tezgong, a distance of about four miles; and here are to be found the principal bleaching-grounds. Formerly the French had extensive bleaching establishments at Tezgong, but the place is now to a great extent overrun with jungle.

The Cotton Manufacture of Dacca was formerly of considerable value, but its decline may be dated from 1793, about six years after the introduction of mule-twist into England; and since the commencement of the present century its decay has been more rapid. The wonderful mechanical inventions of Great Britain now applied to the manufacture of cotton have by their cheapness of production rendered competition by hand labour impossible; and, since 1817, the products of Bengal have been virtually excluded from the market. Nevertheless, the Dacca manufacturers continue to produce some exquisite specimens of textile fabrics; and Dr. Ure says (Ure's "Cotton Manufactures of Great Britain," vol. i., page 54):—"Yarn continues to be spun and muslins manufactured in Dacca to which European ingenuity can afford no parallel; such, indeed, as has led a competent judge to say it is beyond his conception how this yarn, greatly finer than the highest number made in England, can be spun by distaff, or woven afterwards by *any* machinery."

INDIAN TISSUE.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

CAMP, AHMEDNUGGER.

SIR,—As I understand that some fabrics of gold and silver tissue, made at the city of Pactun, in his Highness the Nizam's dominions, have been sent to England, perhaps it may not be uninteresting to some of your readers to know how they are manufactured. Being on duty in the neighbourhood, I took the opportunity of minutely examining the whole process, and can, therefore, vouch for the correctness of the following account.—

The city of Pactun, situated on the river Godavery, is famed for its manufactures in gold and silver tissue—viz., jungrees, or turbans; dooputtas, or long shawls; and sarees, or women's robes. The best of these are sent to the Courts of Gwalior, Baroda, and Hyderabad; the long shawls which are thrown over the shoulders by the native Princes on state occasions sometimes cost as much as 3000 rs. each. The woof is composed of very fine cotton thread, generally scarlet or green, the warp of silk of a similar colour; the shawls are made sometimes in long stripes, alternate scarlet and gold, each stripe about an inch in width; the ends are cloth of gold, nearly a yard in depth; the whole shawl is surrounded by a rich border of flowers or birds, in variegated silks, woven on a gold ground. Some of the sarees are made of thick shot-silk, in narrow stripes, finished in a similar manner; others, of the same texture as the dooputtas, are flowered, spotted, or striped with gold, and are about nine yards in length; they present a most gorgeous appearance, being in texture like fine gauze or the muslin of ladies' dresses. Some which I saw made to order for his Highness the Guicowar's Court were valued at 225 rs., or about £23 10s. each. The gold thread used in these articles is thus made:—A rod of silver weighing twenty-two rupees, after having been roughened with a file, is covered with a leaf of the best gold weighing one rupee. The method by which the leaf is made to adhere to the silver is very simple. The rod having been wetted, the leaf of gold is pressed upon it with the fingers, and then rubbed smartly on the thigh; the small portion of the gold which overlaps is then cut off; the edges of the gold leaf where they meet are purposely made thinner than the rest, that when they overlap each other the thickness may be uniform. The bar is heated in a pan of charcoal till it becomes red-hot; it is then hammered and rubbed with a piece of wood, after which it is ready for being drawn into wire; the silver-gilt rod at this time is about the thickness of a man's thumb, and about six or eight inches in length. In the wiredrawer's house there is a small pit (Figure 1), about two feet and a half in depth, containing a rude horizontal cylinder of wood, which turns on pivots at both ends. In this cylinder are inserted four handspikes to one of these is attached a chain by a ring; at the other end also is a ring, through which is passed a strong pair of pincers (Figure 2). One end of the bar having been forced through a steel plate, the pincers are attached to it, and, as the cylinder is turned, the strain on the chain causes the jaws of the pincers to grip the bar firmly: the hold is increased by placing a small piece of mica between its jaws and the rod, and the friction is lessened by rubbing the bar with wax. The cylinder is turned by both hands and feet, and the wire as it lengthens winds upon it. Having been passed through three different holes in the plate, it is coiled up and reheated, and this process is repeated till it is the size of common whipcord. It now passes into other hands. The workmen by whom the wire is drawn out sit at a small bench (Figure 3). On this bench are two wheels

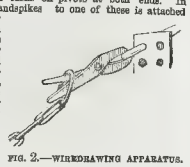


FIG. 2.—WIREDRAWING APPARATUS.

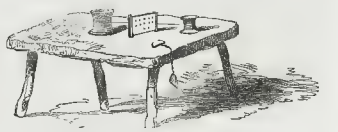

FIG. 3.—WIREDRAWER'S BENCH.

and, the wire being wound on the smaller, one end of it is passed through a hole in a steel plate, something like those used for making screws, and is then fastened to the larger, which, being worked by the hand, winds the wire off the smaller. When all is wound off, the end is rubbed fine between two small pieces of porcelain (shown in the figure), one piece hanging from the bench by a small chain; it is then passed through a smaller hole in the plate, and wound from the larger on to the smaller reel; both reels being kept in motion by the hand. This operation is continued till the wire is as fine as the finest hair. This hair-like thread has next to be flattened, which is done by beating it on a highly-polished steel anvil, with as highly a polished hammer (Figure 4). Eight or ten threads being wound on small reels

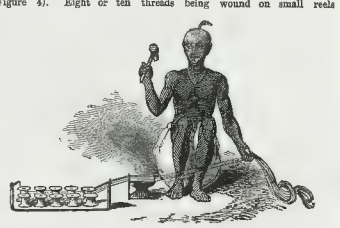

FIG. 4.—FLATTENING THE WIRE.

fastened in two rows on a board; their ends are passed through very fine holes, pierced in a piece of thick fish-skin, attached to the anvil with bees-wax. By this means the gold threads are brought separately on the anvil, and are at the same time flattened with one stroke, the workman drawing them slowly with his left hand. The wire as it now is would be too fine and brittle to work into the fabrics in which it is used; it is therefore wound upon orange-coloured silk in the following manner. The silk thread is wound round two spindles (Figure 5), and, being passed through a glass

FIG. 5.—WINDING THE WIRE.

ring attached to the ceiling of the room, both are brought to an equal height from the ground. They are then set in rapid motion in opposite directions by being rubbed sharply along the thigh, and the velocity with which they spin round is perfectly astonishing. As they turn, the gilt wire, which is quite flat, is wound on the thread the art being to wind it on so evenly that the silk may not appear. That which strikes the spectator most is the extreme simplicity—even rudeness—of the implements used, and the beauty of the articles manufactured. Very probably no improvements have been made since the manufacture was first commenced. The greater portion of the inhabitants of Pactun are engaged in the different branches of these manufactures. B. B.

FIG. 1.—WIREDRAWING.

MR. FENTON'S PHOTOGRAPHIC VAN.—FROM THE CRIMEAN EXHIBITION.

MR. FENTON'S CRIMEAN PHOTOGRAPHS.

THE unexampled interest as well as the extraordinary merit of the exhibition of photographs taken by Mr. Fenton in the Crimea amply justify our recurrence to the subject, especially as this week we have the pleasure of presenting the reader with an Engraving in which the ingenious contrivance by which this Artist was enabled to execute his works is depicted by his own hand. The necessity which every photographer will understand of having a perfectly-darkened room, a locality not likely to be found on the field of battle or before the beleaguered wall of Sebastopol, induced the eminent firm to whose spirited enterprise Mr. Fenton's expedition is due to have such a place constructed in a portable, or rather transportable, form; and here it is. This is the studio of battle, the room whence have emanated the three or four hundred engravings which will be preserved as records of the dreadful Crimean struggle, long after the traces of war's iron hoof have been effaced by time. The historian of the war in future years will be seen bending over these memorials, and comparing them with the *literæ scriptæ* of the correspondents of the journals, in order that, before setting himself to deck out his epigrammatic paragraph, or to roll his sonorous period, he may be well "up" in the features of the country and the bearing of those who fought on its soil.

A photographer will examine these works with the doubled pleasure afforded by appreciation, not only of their beauty, but of the difficulty in the way of their execution. The uninstructed will miss this part of the gratification; for, as Mr. Salton, the celebrated Jersey photographer, observes in his masterly introduction to the new positive process, people are in the habit of believing "photographic work to be a simple and mechanical process, easily learnt, and involving no risk or uncertainty whatever." A brief apprenticeship, however, would change the opinion of such persons; and for the sake of these remarkable works by Mr. Fenton one could wish that all visitors to the Gallery had undergone some slight previous tuition. However, the admiration which they excite in the spectator is of a more honest and valuable kind than the conventional delight which it is the fashion to express for works which people are told they should admire; conviction of the merit of these photographs is at once carried to the mind of the most careless observer, while the most patient investigator finds his examination rewarded with every additional scrutiny in which he indulges.

A series of additions to the original collection have recently been made; and, for convenient reference, we may mention that they will be found under a double number in the catalogue, and marked with a star. Among them are some portraits of great interest, including two most admirable ones of Sir John Burgoyne, which are not only capitally executed, but excellent likenesses of the gallant old engineer whose skilful eye found out the key to the defence of Sebastopol, and who does not seem, as yet, to have had his own merits noted by as discriminating an eye at home. The new Commander-in-Chief, Sir William Codrington, is also here. He looks older than he is; but the keen glance just seen under the rim of the cap, and the firmly-compressed lips, betoken, so far as appearance may, "the right man." We may also mention 128* as an engraving which is remarkably good as well as interesting. It represents the "Sanitary Commission;" and further on is a single likeness of one of its members, Mr. Rawlinson, an extraordinarily fortunate work. A very bold one of General Bosquet, with extended arm, giving orders to his Staff, and a capital portrait of Lieutenant O'Reilly, to whose ready pencil we all owe so much, are also among the additions. Two new Zouaves deserve particular mention—one seated in great comfort on the cloak of a Russian officer, and though not unmindful of creature comforts, as the vessels beside him indicate, is also bent on his duty, and is cocking his formidable weapon, with a keen glance at some outlying Russian; the other in a pose of less animation, but equal merit.

The exhibition was, however, so rich that these additions, welcome as they are, were not needed to increase its attractions, and it would be a pleasant task, had we space for the result, to go through the catalogue again, and record a note of admiration of many of Mr. Fenton's works. But the public has speedily discovered the merit of the display, as the public has a habit of doing (despite the allegations of disappointed blunderers) whenever anything really good is offered to it; and the brilliant attendance of the best class of visitors at this exhibition is already rewarding the enterprise of its promoters, and will continue to do so for many a day and night to come. We are reminded that we should add that the photographs are now on view in the evening, and that the judiciously-managed lighting brings out their beauties with remarkable effect.

MADAME GASSIER.

THIS accomplished lady is a Spaniard. Her maiden name is CRUZ. She was born in Madrid, and is, we understand, five or six and twenty years

MADAME GASSIER.

of age. In early youth she appeared with distinction in her native country, both in the capital and the provinces. She afterwards went to Italy, having married M. Gassier, of Marseilles, an *élève* of the Conservatoire of Paris, who has risen to an eminent position as a singer and actor. After singing for some time at several of the principal Italian theatres, Mdme. Gassier made her first appearance at the Paris Italian Opera in 1854, when that house was under the management of Signor

THE YACHT "MERIEL," R.H.Y.S., 210 TONS, AND HER TENDER "NEW QUARTERLY," 150 TONS.—(SEE NEXT PAGE)

Regani. She appeared in the "Barbiere di Siviglia" and "Linda di Chamouni," with great applause; but her progress was impeded for the time by the immense success of the "Trovatore," which "ran" during the greatest part of that season.

In May last Madame Gassier appeared at Drury Lane, being engaged for the Italian operas performed under the direction of Mr. Jarrett. Her success was immense—indeed, she was the great support of that establishment. Her husband was also engaged, and had a fair share of the public favour. The principal pieces in which Madame Gassier appeared at Drury Lane were the "Barbiere," the "Sonnambula," and "Don Pasquale."

At the close of Drury Lane, Madame Gassier went on one of the provincial tours undertaken during the autumn season by the enterprising house of Cramer and Beale. Along with her were Grisi, Mario, Ducasse, and other artists, forming a strong operatic company, whose performances wherever they went were attended with the most brilliant success.

The accompanying illustration has been engraved from a portrait lately published by M. Jullien.

MR. HANS BUSK'S NEW STEAM-YACHT "MERIEL" AND HER TENDER "NEW QUARTERLY."

An interesting experiment took place in the Thames, on Wednesday last, in the launch and trial of steam-yacht and tender, the property of Mr. Hans Busk (a gentleman who has given much attention to improvements in naval architecture) by Scott Russell and Co., the eminent engineers, of Mill-wall, Poplar.

These gentlemen have constructed, from Mr. Busk's own designs, two vessels—a yacht and her tender. Both are precisely of the same beam, the same draught of water, and each is impelled by engines of 60 horse power, with boilers, &c., of the same capacity. The yacht is 166 feet long and 16 feet beam, 215 tons burden, and has a long, sharp, hollow entry, whereas her tender has a round, full, bluff bow, and is only 105 feet in length, 120 tons burden, but the same width of beam as the yacht. Mr. Busk's intention in making the experiment is, that the result of the difference in the performances of the two vessels will give valuable data for enabling the Government to determine the best lines for gun-boats, dispatch-boats, and other vessels intended for manœuvring in shallow water, as well as for many other purposes, the draught of these vessels being little over two feet.

The yacht—a perfect model of naval beauty, and fitted internally in the most elegant and costly manner—was launched, with steam up, at half past twelve o'clock, amid the cheers of a large concourse of people, and almost the next minute was steaming down the river, in company with her tender, which had been launched and tried on the previous Saturday. On arriving at the measured mile in the Long Reach, the merits of the vessels were severely tested, the yacht's speed at times averaging nearly twelve knots, and that of her tender nine knots and a half, per hour; and this under most unfavourable circumstances: it was blowing hard; and the engines, as might be expected, being but just got to work, went rather stiffly. The experiments will be continued in a day or two under more favourable circumstances, and the results given to the public

Our Engraving is from an original drawing forwarded us by the designer himself, Mr. Busk.

NATIONAL SPORTS.

The last regular "trysting-place" this season of the Genii of the Ring will be at Shrewsbury next week. Under Mr. Frail's charge, this meeting has attained as much eminence as can be expected for a November one, and its lessee has wisely made a "sandwich" of it by slipping a steeplechase-day in on Wednesday, between the pair of flat-racing ones. Ludlow takes up the cue on Friday with a very fair card, and with it the races in England end, leaving the fag-end honours for Aberystwith.

The Goodwood prospects for next year, judging from their entries, are not very great; but the Cesarewitch 1000 guineas and 1000 guineas for thirty-five and thirty-five entries respectively; and a new A. F. handicap, entitled the Burwell Stakes, with 500 sovereigns added, is proposed for the second Tuesday of the Craven. King Tom will be at Mentmore this next season, as all hopes of re-uniting his family and his stable once more are gone, and Birdcatcher, for whom there was no 7000-guinea purchaser at York August, leaves Easby Abbey and will stand with his brother patriarch, Melbourne, at Cawston paddocks next season. Poor Tasker, one of the most and best of the old jockey-generation, was buried last week—an early victim to injuries which he received on riding Rose for the first steeplechase of the season. Although he was able to ride Black Swan for the hurdle race next day, he soon began to sink from the effects of the broken rib piercing the lung, and died in less than twelve days. His great era of luck was in the Ireland season, when he carried everything before him for Mr. Moseley on Hourt and the Trout. Doncaster has also sustained a severe loss by the death of George Coleman, a distinguished member of the betting party in the Corporation, after a very brief illness, on the morning of Sunday last. He had a fall on the previous Tuesday, of which he made but little account, being wonderfully active for a man of upwards of seventy, and even took his favourite walk as usual to the end of the Champagne Course and back next day. His actual illness did not commence till six p.m. on Saturday, and he died before nine the next morning. He never bet a half-penny, and knew nothing of horses; but he had an unresting enthusiasm to show sport at the Doncaster meetings, and, after a weary fight with his brother councillors, he succeeded in bringing about, between 1849-55, quite a new state of things. The opponents of p.p. betting, headed by Earls Zetland and Glasgow, have announced their intention of mooting the subject next year in London, in the hope of getting a "fuller house" of Jockey Club members to vote on it.

Beyond the Princess and some half-dozen Clumber spaniels, there are no sales of any great interest at Tattersall's next Monday. Mr. Padwick's sale was a very dull affair indeed, who was said to have cost him 2000 guineas, and has won nothing since, was a very fine model of an Annandale hunter sire; but he was rather queer on his legs, and only 860 guineas were bid for him. Virago, who looked remarkably well and "grown down," was put in by Mr. Henry Hill at 500 guineas; but the crowd was very listless, and after some slow 50-guinea biddings, which had a very slight air of reality about them, she was, we understand, bought in for 1000 guineas, and will, perhaps, do something good yet over a short distance. Overreach fetched 160 guineas; but the high-born Cavalier, a remarkably bloody-looking horse, and the premier yearling of 1855, did not elicit a bid. He ran a good second to Ridsman at York, and won 47100 to boot; but then, in spite of his duties and forfeits, he was no very dear 520 guinea purchase after all; but ringbone and spavin seemed to have told their tale. The young country squires nibbled cautiously by half-guineas at the handsome two year-old Bridegroom, and one of them got him for 21 guineas.

There is every indication of a hard season, as the woodcock-shooting has already been remarkably fine. Among other rarities, we also hear of a splendid black cock which has been bagged, and found to weigh 4lb. 8 oz., and to measure 32 inches from the bill to the tip of the tail. A black swan, which is supposed to have been driven by a long succession of storms from the Pacific, has been captured on the Devonshire coast, poor in flesh and sadly exhausted by long flight. The Longleat ponds have also produced a carp or "water-fox," weighing 21½ lb., and measuring 2 ft. 7 inches. This conjunction of titles reminds us of the cause of the veteran Will Long's retirement from the Badminton Hunt, which we mentioned last week. It seems that his son Nimrod Long forgot himself when the Duke blamed him for unnecessary severity to a hound, and was, therefore, sent home then and there, and dismissed next day, and that this "little difficulty" caused his father's retirement, not, however, without the settlement of a handsome pension on him for his long services. The Duke now hunts his own hounds, and having good sport of it.

Apropos of hunting. We note with pleasure, for the benefit of other companies who reap no small profit from the "scarlets," that the Brighton directors have forwarded a £25 note as their subscription to the Southdown Hounds.

The most interesting course of the season so far has been that in the second tie of the Druid Cup, between Jael (the ultimate winner) and Judge. The latter showed the most speed, as usual, but was drawn, after the brilliant working of Jael had caused Mr. McGeorge to give it an undecided course. Coursing meetings are now coming "fast and furious." Ashdown Champion begins on Monday, and lasts for the greater part of the week; Coquetdale and Swaffham are fixed for Tuesday; Cardington Club for Tuesday, Wednesday, and Thursday, Spiddal Union, Bawn Hill (Roscommon), and Chatsworth (Open), for Wednesday and Thursday; Caledonian St. Leger (Club) for Thursday, &c.; Brampton for Thursday; and Appleby for Thursday and Friday.

Bath and Brantz row their match on Monday from Greenwich to the Tunnel Pier; Cambridge commences her four-oared races for this term on the same day; and Wednesday, Thursday, and Friday are devoted by the Oxonians to their pair-oared race.

The members of the old nobility of Prussia still refuse to take their seats in the First Chamber on the opening of the approaching session, unless the Government shall consent to restore the privileges (exemption from taxation and military service, &c.) of which they were deprived in 1848.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The pacific tone of the advices from America this week, in reference to our dispute with the United States on the enlistment question has had the effect of producing a firmer feeling in the Consol market. The amount of business doing in national securities, however, arising, in some measure, from the unusually small supply of stock, has been very moderate. The last return of the Bank of England which shows a slight increase in the supply of gold has given much satisfaction, and it is stated that the position of the Bank of France is improving. As the Directors of the East India Company have lowered the rate at which bills will in future be drawn upon some of the Presidencies, and as efforts are being made in China by the officials themselves to assimilate the value of the Chinese dollar to that country with those of equal weight and fineness, we may look to a considerable decrease in the shipments of silver to India and China; consequently, less gold will be sent abroad to purchase silver for the Chinese market.

We have no alteration to notice in the general rates of discount. The supply of money has become more abundant, and we understand that some large sums have been lent to the Stock Exchange at 4½ per cent. Evidently, a lower rate of money is expected, as some of the discount houses have refused to take money on "call." In Paris, matters generally are improving. At Hamburgh the rate of discount is now 6 per cent. In Belgium it remains at 2½; in Frankfort, 3½; and in Holland, 4 per cent. At St. Petersburg the exchange has declined to 35d., or to a point at which gold may be profitably shipped.

Bar silver has realised 5s. 2½d. per ounce, being a further decline of ¼d. Dollars have realised full prices; but the demand has continued limited. The shipments by the last steamer to India and China amounted to £195,365—£30,761 being in gold, and £164,605 in silver. The amount is considerably less than the sums forwarded for several months past. The imports have been only 755,000 dollars in gold from New York; but we believe that the whole amount is on French account.

On Monday, Consols were steady, and prices were rather higher—the Three per Cents being quoted at 89¾. The Reduced were 87¾; and the New Three per Cents, 88¾. Business was done at 89¾. Long Annuities, 1860, were 3 7-16; Ditto, 1859, 2⅝; Ditto, 1885, 16 15-16. India Bonds, 5s to 9s. Exchequer Bills, 2s. to 5s. discount; Exchequer Bonds, 98. The demand on Tuesday, was limited, the investment being a further decline of ¼d. The Reduced were done at 87¾; Consols, 89¾; and the New Three per Cents, 89¾; Long Annuities, 1860, 3⅛; Ditto, 1885, 16 3-16; India Stock, 239. India Bonds, 5s to 9s. Exchequer Bills, 2s. to 5s. Exchequer Bonds, both sellers, 98. On Wednesday the English market ruled steady, as follows:—Bank Stock, 205 to 206; Reduced Three per Cents, 87¾; Consols, 89¾; New Three per Cents, 89¾ down to 89 for the account; New Two-and-a-Half per Cents, 72; Long Annuities, 1859, 3 3-16; Ditto, 1885, 16½; India Stock, 227½ to 228; India Bonds, 2s. to 5s. dis.; Exchequer Bills, 3s. to 5s. dis.; Exchequer Bonds, 98¾. The transactions on Thursday were very moderate:—Consols were done at 89¾, leaving off at 89. Reduced were 87⅝; and the New Three per Cents, 89¾. India Bonds, 2s. to 6s.; Exchequer Bills, 2s. to 5s. dis. Bank Stock, 205.

The dealings in the Foreign-house have been devoid of interest. Prices, however, almost generally have kept up remarkably well. Brazilian Five per Cents have marked 99; Granada One-and-a-Half per Cents, 20; Peruvian Four-and-a-Half per Cents, 74¾; Sardinian Five per Cents, —; Spanish Three per Cents, 38; Ditto, New Deferred, 19¾; Ditto, Passive, 9¾; Portuguese Four per Cents, 39¾; Ditto, New Ditto, 33 to 33⅝ ex.; Dutch Two-and-a-half per Cents, 63¾; Dutch Four per Cents, 92¾; Mexican Three per Cents, 19¾.

There has been more doing in Joint-Stock Bank Shares, as follows:—Australasian, 11; Colonial, —; Commercial, 30½; English, Scottish, and Australian Chartered, 11; London Chartered of Australia, 15¾; Ditto, New, 3¾; London Joint Stock, 23¾; London and Westminster, 47; Oriental, 40¾ ex div.; Union of Australia, 75½; Union of London, 29¾.

Miscellaneous Securities have sold slowly:—Canada Company's Bonds have realised 124; Ditto, Government Securities, 95 ex div.; Crystal Palace, 1½; Ditto, New, 4¾; General Screw Steam Shipping Company, 14¾; Peel River Land and Mineral, 2¾; Peninsular and Oriental Steam, 70½; South Australian Land, 35; Van Diemen's Land, 1. London Docks, 98; Ditto, New, —.

A few transactions have taken place in Railway Waterworks Shares at ¼ ex div.; East London, 102; Grand Junction, 89; Kent, 78½; Southwark and Vauxhall, 38½; and West Middlesex, 91¼.

As regards the state of the Railway Share Market, we may observe that the transactions have been devoid of interest, yet the prices have kept up tolerably well. The following were the closing prices yesterday (Thursday):

Ordinary Shares and Stocks.—Caledonian, 87½; Eastern Counties, 8½; Eastern Union, 8 Stock, 19½; Edinburgh, Perth, and Dundee, 101; Great North of Scotland, 65 ex div.; Great Northern, 107; Ditto, A Stock, 97; Great Southern and Western (Ireland), 101½; Great Western, 51½; Lancashire and Yorkshire, 76½; London and Blackwall, 6½; London and North-Western, 94¾. Ditto, Eighths, 1½; London and South-Western, 86; Midland, 84½; Ditto, Birmingham and Derby, 38; Newry and Enniskillen, 1½; North British, 26; North Eastern, York, 44½; South Eastern.

Preference Shares.—Caledonian, 112; Ditto, Seven per Cent, 106; Great Northern Four-and-a-Half per Cent, 109; Ditto Five per Cent Scrip, 7½; Great Western (Birmingham Stock), 65½; Lancashire and Yorkshire, 132; Manchester, Sheffield, and Lincoln, 60; London and North-Western, 103½; Midland Consolidated, 129; Oxford, Worcester, and Wolverhampton, 109½.

Foreign.—Antwerp and Rotterdam, 7½; Eastern of France, 36½; East Indian Extension, 16; Grand Trunk of Canada, 10½; First Luxembourg, 6 ex div.; Shares, 3⅜; Ditto, Obligations, 2½; Great Western of Canada, 22½; Ditto, Bonds, payable 1857, 99; Madras, New, 10. Paris and Lyons, 44¾.

All Mining Shares have been very dull. Tincroft and Unions, 4; were transacted; Ditto, New, 1; Wheal Rey, 30; Coplapo, 20; United Mexican, 4⅜.

Friday Afternoon.

As a favourable Bank return is expected in to-night's *Gazette* the Consol market is firm to-day, and prices are advancing. The Three per Cents, for Monday have marked 89⅝ ⅞; and for the Account, 89⅝ 89 to 89⅞; the Reduced Three per Cents 87¾; and the New Three per Cents, 89⅝. Foreign Bonds and Railway Shares are very firm

THE MARKETS.

Corn Exchange [illegible] United supply of [illegible] has been received up to our market this week [illegible] and by land carriage, and the show of samples has been very fair. [illegible] in favour of sellers. The imports of foreign wheat into London since 2000 quarters. The amount of business doing was very thin [illegible] yet Monday's currency was freely supported. Flour [illegible] and the rates of Monday last were fully maintained. The barley trade was very firm, and the finest malting qualities were held on higher terms. Malt sold steadily, at full prices. There was a slow sale for [illegible] and the quotations were not [illegible] Beans, peas, and flour realised full prices.

Mark Lane, Monday.—English wheat 1450; barley, 1770; malt 830; oats, 2370; flour, 950. Irish oats, 8850. Foreign wheat, 2400; oats, 10,090; flour, 3014 sacks.

England.—Wheat, 1 to 2s. per qr. dearer than last week; flour, 1s. per brl. dearer. Norfolk and Suffolk, 74 to 80s.; rye, 48s. to 50s.; grinding barley, 34s. to 37s.; distilling ditto, 36s. to 38s.; malting ditto, 39s. to 43s. Lincoln and Norfolk malt, 70s. to 78s.; Ware ditto, 64s. to 68s.; Kingston and Ware, 73s. to 79s.; Chevalier, 80s.; Yorkshire and Lincolnshire feed oats, 23s. to 25s.; potato ditto, 24s. to 27s.; Youghal and Cork black, 24s. to 27s.; ditto, white, 26s. to 28s.; tick beans, 40s. to 44s.; grey peas, 40s. to 44s.; maple, 42s. to 46s.; white, 36s. to 38s.; Suffolk, 40s. to 42s. per quarter. Town-made flour, 75s. to 78s.; Essex and Suffolk ditto, 70s. to 72s. per sack; Norfolk, per 280 lbs. American flour, 47s. to 48s. per barrel.

Scotland.—Our markets [illegible] Tares are dull, and lower. In the value of other articles very little change has taken place.

Ireland.—The arrivals [illegible] from Dublin and Odessa, 7 to 7½ barrels, 36s. to 36s. per quarter. Coriander, 26s to 30s. per cwt. Brown mustard seed, 12s. to 20s.; ditto, white, 8s. to 9s. per bushel. English rapeseed, 50s. to 54s. per quarter. Linseed cakes, English, £14 to £14 10s.; ditto, foreign, £13 10s. to £14 10s.; rape cakes, £7 to £7 5s. per ton. Canary, 56s. to 63s. per quarter.

Bread.—The prices of wheaten bread in the metropolis are from 11d. to 11½d.; of household ditto, 9d. to 10d. per 4lbs. loaf.

Seeds.—Cloverseed, [illegible] ditto, 36s. 3d.; barley, 39s. 6d.; oats, 24s. 6d.; rye, 30s. 6d.; beans, 40s. 3d.; peas, 40s. 3d.

Liverpool.—Wheat, 1 to 2d. per 70 lbs. lower; flour, 6d. per brl. dearer. Barley, 3d. per 60 lbs. lower. Oats, 1d. per 45 lbs. lower. Beans and peas, 6d. per 70 lbs. lower.

Smithfield, Monday.—Beef, from 3s. 2d. to 4s. 6d.; mutton, 3s. 4d. to 4s. 8d.; veal, 3s. 8d. to 5s. 4d.; pork, 3s. 4d. to 4s. 6d. per 8lbs. by the carcass.—Inferior beef, 2s. 8d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s. 2d.; prime large ditto, 4s. 4d. to 4s. 8d.; prime small ditto, 4s. 4d. to 4s. 8d.; large pork, 3s. 10d. to 4s. 4d.; inferior mutton, 3s. 8d. to 4s. 2d.; middling ditto, 4s. 4d. to 4s. 8d.; prime ditto, 4s. 10d. to 5s. 4d.; veal, 3s. 8d. to 4s. 8d.; small pork, 4s. 6d. to 5s. 4d. Robert Herbert.

SUBSCRIPTION.—The sudden death on the 18th of September last, of Mr. SAMUEL ROLLINS, who was for many years on the staff of the ILLUSTRATED LONDON News as Assistant Publisher, has left a Widow, 28 years of age, in delicate health, and six children almost entirely destitute of the means of support.

The family consists of four boys, aged respectively seven, nine, eleven and thirteen years; and two girls, two and five years old; the latter being a cripple.

These distressing circumstances have induced the friends of the deceased to commence a Fund for the purpose of purchasing an Annuity, or otherwise providing for the support of the bereaved family.

The following Gentlemen have most kindly consented to receive Donations:—

HERBERT INGRAM, Esq., 198, Strand (who will act as Treasurer)
THOMAS N. STOKES, Esq., 12, Clement's-lane, City
FREDERICK WEST, Esq., 3, Charlotte-row Mansion-House.

Messrs. VENABLES, WILSON, and TYLER, 17, Queenhithe.

METROPOLITAN HOTEL COMPANY (Limited).

Capital, £100,000; in 4000 Shares of £25 each; with power to increase to £500 000. Deposit, £5 per share.

Provisionally registered

Interest at the rate of 5½ per cent per annum will be allowed upon all sums paid up on account of Deposit.

The object of the above Company is the establishment of Hotels at the Metropolitan Termini of Companies whose Lines shall connect them to the Great Western Railway Hotel.

The Company has already secured several most eligible sites, under a title [illegible] Central Hotels Company; and upwards of 300 subscribers [illegible] have already signified their desire to become Shareholders; and it is intended to form a Board of Directors, and proceed to complete registration forthwith.

The Capital of the Company, and the certainty of its success, were referred to in a leading article of the "Times" newspaper, on Saturday, the 27th inst.

Forms and Prospectuses may be obtained at the Offices, 55, King William-street, City.

WILLIAMS & LINDSELL, Managers.

SPRING GROVE STATION, on the Windsor Line, Kight Miles from Hyde-park Corner; Trains every hour to and from Waterloo Terminus. Substantial VILLA RESIDENCES are erected, and elegantly finished, on any approved plans, on the Spring Grove Estate, Isleworth, Middlesex, on a site of the finest gravel, between Osterley-park and Richmond. These houses have good gardens, coach-houses, and stabling, and Stand land may be obtained if wanted. Particulars for rent on lease, or purchase, may be had from Mr. Manning, on the Estate, near the Station; or, in Town, at 17, Warwick-street, Regent-street.

A CHURCH for the Families of Sailors, Soldiers, and Dockyard Men, must continue useless and expensive without a HOUSE built in the Circle as Brydone's CONTRIVANCE FINDS for resting Pews. Plans and Estimates to be thankfully received by the Rev. George William Proctor, Devonport.

UNFURNISHED APARTMENTS, with whole or partial Board are offered by a Medical Gentleman residing in a healthy and open part of Islington, to a Gentleman requiring such accommodation. The advertiser's late profession may be of service to him. Terms are not [illegible] Address, Z. Z., Mr. Hyde's, Bird-in-Hand, High-street, Islington.

NAVAL EDUCATION, SOUTHSEA, PORTSMOUTH.—Young Gentlemen are PREPARED for entry under Her Majesty's Service as NAVAL CADETS, MASTERS' ASSISTANTS, &c., and for the Examinations for Lieutenants' Commissions at the ROYAL NAVAL COLLEGE, by Mr. [illegible] CHARLES, R.N., five years Naval Instructor at the Royal Naval College. The Course of Education includes Mathematics, some of the highest branches, Navigation, Nautical Astronomy, Steam, French, &c. The locality of the Establishment, commanding as it does an extensive view of the sea, presents great advantages for exercise with the nautical instruments—allowing, by means of the sea bathing, constant facility for taking the observations for ascertaining the latitude and longitude, and the variation of the compass on board ship. Terms by the Month, Quarter, or Year. Eastern Parade, near the Castle, Southsea.

BY HER MAJESTY'S ROYAL LETTERS PATENT for a valuable and extraordinary Improvement in the most powerful and effective PORTABLE COMPOUND LAMPS, Moderator, and Paragon Glasses, to know the distances, at Messrs. [illegible] Sea, Land, and Race-course. Purchasers are invited to visit the York Hotel. They possess such extraordinary power that from 10 to 15 miles, and a half to six miles distant, and in any direction at church and at public assemblies. The unpleasant sensation of staring unless the eye is uniformly renewed; and it affords all the assistance that could possibly be desired. Albemarle-street Piccadilly. Observe, only at the York Hotel.

THE BEST FOOD FOR CHILDREN, INVALIDS, AND OTHERS. ROBINSON'S PATENT BARLEY, for making superior BARLEY WATER in fifteen minutes, has not only obtained the Royal Warrant of her Majesty and the Royal Family, but has become of general use to every one of the community, and is acknowledged to stand unrivalled as a culinary pure, nutritious, and light food for infants and invalids; much approved for making a delicious custard-pudding, and excellent for thickening broths or soups.

ROBINSON'S PATENT GROATS for more than thirty years have been held in the highest estimation during public estimations as the purest farina of the oat, and as the best and most valuable preparation for making a pure and delicate GRUEL, which is light and nutritious supper for the aged. In a popular recipe for cooks and invalids, is of general use in the sick-chamber, and, alternately with the Patent Barley, is an excellent food for infants and children.

Prepared only by the Patentees, ROBINSON, BELLVILLE, and CO., Purveyors to the Queen, 64, Red Lion-street, Holborn, London.

The Proprietors of Robinson's Patent Barley and Patent Groats, desirous that the public shall at all times purchase these preparations in a perfectly sweet and fresh condition, respectfully inform the public that every packet is now compactly enveloped in the parcel tinfoil, over which is the usual and well-known paper wrapper

Sold by all respectable Grocers, Druggists, and Oilmen in town and country, in Packets of 6d. and 1s.; and Family Canisters, at 2s., 5s., and 10s. each.

For the detail Stores, FIELD-PANGE BOOTS, the length of leg, with the outline of Foot and girth of Leg, Instep and Ancle, in inches, required. Price 21s. Extra Long Stockings, 6d. per pair. Waterproof Boot Gaiters, the Long-in Tops, 3s. 6d., and 4s. Gd.

THE LORD MAYOR'S SHOW.

The following is the official programme of the procession on the occasion of the inauguration of the new Lord Mayor, which took place on Friday (yesterday):—

ORDER OF PROCESSION.

Police Constables to clear the way.
Lay Marshal's Men.
Three Trumpeters.
The Beadle of the Worshipful Company of Coopers
The Barge Master on his state Barge.
Watermen bearing the Streamers, Banners of the Worshipful Company of Coopers
The Banner of the Coopers' Company
The Banners of the City Arms
The Banner of [illegible] the Third Ward
The Banner of [illegible] Esq., Sheriff,
The Banner of [illegible]
The Banner of the Royal Arms of Great Britain
The Banner of [illegible] Esq., Lord Mayor Elect
A Military Band
The Clerk of the Coopers' Company, in his Chariot
The Gentlemen of the Court of Assistants in their Carriages
The Master and Wardens in their Carriages
Guard of Honour on Horseback of the Royal Regiment
Light Dragoons.
The Under City Marshal on Horseback.
The Lord Mayor's Beadle.
The Lord Mayor's Barge Master, in his State Dress.
The Bargemen, bearing the various Colours
The Banner of the Lord Mayor
The Captain of the Thames Navigation Barge
The Principal Assistant Water Bailiff
The Watermen, with Colours
Grand Military Band
The Two Under Sheriffs.
The City Solicitor
The Remembrancer
The Comptroller
The Secretary
The Three Chief Clerks
The Judge of the Sheriff's Courts
The Coroner and Prothonotary
The Four Clerks
The Counsel to the Chamberlain
The Chamberlain
Mr. Sheriff [illegible], in his State Chariot, attended by his Chaplain
The Aldermen who have not passed the Chair
The Recorder
The Aldermen who have passed the Chair
The Late Lord Mayor
The Lady Mayoress, in her State Carriage, joined the Procession on its return from Westminster.
The Lord Mayor's Servants in State Liveries
The Band of the Life Guards mounted
The Upper City Marshal on Horseback
Gentlemen of the Lord Mayor's Household
The Right Honourable the Lord Mayor, in his State Carriage, drawn by six horses
Attended by the Chamberlain's Sword Bearer
Common Crier and Water Bailiff
Guard of Honour on Horseback

The procession moved from Guildhall at twelve o'clock precisely, and passed through King-street, Queen-street, New Cannon-street, St. Paul's Churchyard, Ludgate-street, New Bridge-street, to Blackfriars-bridge, thence by water to Westminster, and returned from Westminster to Blackfriars bridge, passing through New Bridge street, Ludgate-hill, Ludgate-street, St. Paul's Churchyard, Cheapside, and King-street, to Guildhall.

At the Obelisk, Bridge-street, the procession, on its return, was joined by the Ambassadors, her Majesty's Ministers of State, the Nobility, Judges, Members of Parliament, and other persons of distinction invited to the banquet at Guildhall.

THE RIGHT HON. DAVID SALOMONS, LORD MAYOR.—FROM A PHOTOGRAPH BY MESSRS. BEARD.—(SEE PAGE 558.)

NEW OFFICES OF THE DUCHY OF CORNWALL.

The Duchy of Cornwall was created in 1337, in favour of Edward the Black Prince, and settled by Act of Parliament on the eldest son of the King of England; such being the first creation of a Duke in England. The Duke enjoyed large revenues, arising from the lordships of castles, boroughs, and manors granted to him in Cornwall and Devonshire, the profits arising from the coinage of tin, and various other sources. The annual revenue on the average of the three years subsequent to the death of the Black Prince was £2403 7s. 8½d.; the clear revenue in 15 Henry VIII. amounted to £10,095 11s. 2½d.; in 44 Queen Elizabeth, in 1602 it had fallen to £7967 15s. 2½d.; and in 1814 the gross amount was estimated at £22,000, of which £8000 arose from the tin duty in the county of Cornwall, and £3500 from the rents of manors, fines, &c., in the same county, besides other sources.

The Office of the Duchy, for greater convenience, by an Act passed in the reign of George III., was fixed in the metropolis, in the centre of the east side of the quadrangle of Somerset-house. This office being required for the Commissioners of Inland Revenue and the Commissioners of Works and Public Buildings, it was thereupon agreed by the representatives of the Prince of Wales, who is also Duke of Cornwall, to purchase a piece of land in Pimlico, close to Buckingham Palace, and to build thereon an office for the Duchy, in lieu of the office in Somerset-house, under certain arrangements settled by an Act of Parliament passed in the 17th and 18th Vict., c. 93. The new site was part of the hereditary possessions and land revenues of the Crown. In the Session of 1854 Parliament voted £16,889 for carrying out the agreement referred to in this Act, and for other expenses. The plans for the new building were prepared by Mr. Pennethorne. The site, facing Buckingham-gate, was purchased by the public from the Land Revenues at £6300. The building is now nearly completed, as regards the exterior. The fronts are mostly in cement, which economy some persons may object to in a public building; and, following up the innovation, the fronts are to be painted stone-colour in the spring. The cost of the new building has been under £10,000. Mr. Pennethorne's facades are handsome; and the difficulties of the plan have been surmounted by the architect in a masterly manner.

A View of the Duchy of Cornwall Office at Somerset-house was engraved in the ILLUSTRATED LONDON NEWS, No. 55.

NEW OFFICES OF THE DUCHY OF CORNWALL, BUCKINGHAM-GATE.

THE PARIS UNIVERSAL EXHIBITION.

(From our own Correspondent.)

MESSRS. MINTON AND CO.'S CONTRIBUTIONS.

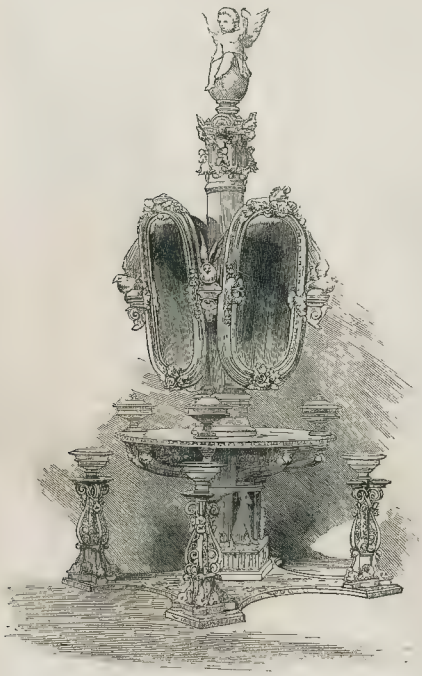
Messrs. Minton and Co. are the most conspicuous contributors of pottery in the Paris Exhibition. No single firm has contributed so many excellent samples of its manufactures. The collection, Englishmen will be happy to observe, includes some beautiful vases, drawn by students of the Schools of Design. Then there is the facsimile of the beautiful toilette service in blue and white parian, presented by Prince Albert to the Queen. The stand for scents is especially pretty in design; the various scents being marked by the groups of flowers from which they are extracted. The most complete specimen, however, of Messrs. Minton and Co.'s manufactures, is the great dessert service, in the centre of which are the two pretty candelabra, presented by the Emperor of the French to the Queen of England (which we have engraved). The collection of Palissy and Majolica ware, however, is that which appears to have created the greatest sensation among Parisian connoisseurs. The reader will remember that the main difference in these wares is that whereas the Palissy ware is coloured by a transparent glaze, Majolica ware contains the colour (opaque) in the material. The care and taste with which these manufactures have been brought by the Messrs. Minton to their present state of perfection, have been amply rewarded. Within a few days of the opening of the Exhibition all the specimens exhibited had been sold. One sample of Palissy ware—being a little tea-service spread upon a leaf, the legs of the teapot being snails, all exquisitely finished—was bought by Mr. Redgrave. In addition to these contributions, there are some fine statuettes and busts in parian, including one after the Count de Nieuwerkerke's bust of the Empress; a bust of the Emperor; a statuette of Lady Constance Grosvenor; and Cain and Abel, by A. Carrier (a French artist), which we have engraved.

CANDELABRUM BY MINTON AND CO., PRESENTED TO QUEEN VICTORIA BY THE EMPRESS OF THE FRENCH.

FRENCH GLASS MANUFACTURES IN THE NAVE STALL OF THE PARIS EXHIBITION.

FRENCH GLASS MANUFACTURES.

Nearly opposite MM. Halphen's "Star of the South"—the great diamond that, in this Exhibition, is put forth to rival the Koh-i-noor—is a Nave stall glistening with splendid specimens of French glass manufactures. The most prominent contributions to this stall are the two great green and white candelabra sent by the Compagnie des Cristalleries des Baccarat. These immense piles of solid glass are continually compared with the great candelabrum by Osler, exhibited near the St. Gobain glass. The French are said to have more effect; but the English glass is allowed on all hands to be purer in colour. The balustrade of this stall is of malachite crystal. Grouped near the candelabra are some beautiful tazzas from the Compagnies des Cristalleries of St. Louis, Moselle, and some vases from the Cristallerie de Clichy. This stall marks the entrances to the French Glass Manufacture Court. This court includes nearly all the artistic glass-work contributed by France to the Exhibition. The collection includes some beautiful ruby glass from the Cristallerie de la Villette; engravings upon glass by Becker; and a huge lion, with a serpent coiled about him, spun in glass by R. Lambourg, of Saumur (Maine-et-Loire). This immense labour was specially remarked by Prince Albert. Near it are some delicate artificial glass flowers, by the same expert contributor



WHITE MARBLE TOILET-TABLE. BY PROFESSOR GIOVANNI ISOLA.

PARIAN GROUP—"CAIN AND ABEL." BY A. CARRIER

The court includes, in addition to these curiosities, and the beautiful goblets from Baron de Klinglin and Co., &c., the delicate little articles in glass blown by J. Em. Pilon, of Clichy-la-Garenne, a deaf and dumb workman, who never served an apprenticeship, and who invented some of the tools with which he works. In contrast with this brilliant show of artistic glass manufactures, England must be confessed, makes a most insignificant figure. Only Bohemia and Bavaria can presume to cope with France.

PROFESSOR ISOLA'S TOILET STAND.

The neighbourhood of the Bohemian manufactures is one of the most interesting parts of the Exhibition. Perhaps the value of these contributions may be best tested by the number of samples marked "*vendu*." To the English eye some of the designs may appear extravagant, as, for instance, that very apoplectic lobster, planted upon a slab, for a paperweight. Then, of course, there are the long established privileged lovers, who have so long lived in the hearts, or moulds, of Continental potters; fowls setting upon the lids of dishes; Napoleon the First, the present Sultan, Napoleon the Third, dogs and horses reclining, excellently modelled; some beautiful dishes in imitation of shells; and some cheap and wonderfully pretty tea-services. It is opposite the stall crowded with these contributions that the authorities have placed the beautiful white marble Toilet Stand, sculptured by Professor Giovanni Isola. The Engraving here gives the merits of this artistic production than we can hope to do by words. We may, however, add that it is executed with the most delicate finish in spotless white marble

NAVAL AND MILITARY INTELLIGENCE.

THE Genoa papers announce that recruiting-offices for the British Legion have been opened both at Genoa and La Spezzia.

THE steam gun-boats *Badger* and *Redwing*, from the Baltic, last from Ramsgate, bound to Chatham, have put into this port on account of strong head winds. On Sunday morning they resumed their passage to their respects to the Commander-in-Chief, Vice-Admiral Sir T. J. Cochrane.

A LARGE body of labourers are now employed at Pembroke Dockyard in carrying out the various new works and alterations. The foundations for the new steam-basin are in course of being cut out, and good progress has been made. Although fresh sawyers have been entered, the present supply of labour is inadequate to meet the extensive demand for converted timber required for the vessels in course of building, and steam-mills for this purpose have become necessary. No more launches will take place this year at Pembroke, but there will be several early in the spring.

THE official returns on the 18th of October show that the numerical strength of the British forces in the Crimea was at that date 60,000 men of all ranks. The number of sick and wounded was nearly 4000—a remarkably low proportion, and, when the service on which the troops have been employed is taken into consideration, speaks highly in favour of the medical and sanitary arrangements of the army. The force in the East is composed of the following cavalry regiments:—The 1st, 4th, 5th, and 6th Dragoon Guards; the 1st, 2nd, 4th, 6th, and 13th Dragoons; the 8th, 10th, and 11th Hussars; and the 4th and 11th Lancers—in all 14 regiments, which, if are kept up and fight, cavalry, giving a force of 8000 horses. The infantry, which numbers fifty-two battalions, or about 33,000 officers and men, includes the following regiments:—Guards, Grenadier (3rd Battalion), Coldstream Guards (1st Battalion), Scots Fusiliers (1st Battalion). Infantry of the Line.—1st (two Lattalions), 3rd, 4th, 7th, 8th, 11th, 14th, 17th, 19th, 20th, 21st, 23rd, 28th, 30th, 33rd, 34th, 38th, 41st, 44th, 47th, 49th, 50th, 55th, 57th, 62nd, 63rd, 68th, 71st, 72nd, 77th, 79th, 88th, 89th, 90th, 93rd, and 97th (two battalions). These two battalions of the 42nd Superior, which form a brigade under Major-General Adams, leaving the remaining 10,000 to be made up of Commissariat, Land Transport, Army Works, and Medical Staff Corps. In addition to four regiments of Guards, there are at the present time eight regiments of the Line in the United Kingdom: the 15th, 22nd, 26th, 49th Rifles (3rd battalion), 80th, 86th, 98th, and the 3rd battalion of the Rifle Brigade, in the Mediterranean five (the 51st, 54th, 90th, 91st, and 94th). Two regiments—the 58th and 99th—are ordered home from New Zealand and Van Diemen's Land. There are also seven regiments of cavalry at home, exclusive of the Guards. The Norwegian Legion will shortly number in its ranks from 6000 to 7000 men, and the Turkish contingent may be estimated at 20,000.

THE *Hipon* transport arrived at Southampton on Monday morning from the Baltic with invalids, &c. Among them are, from Balaclava—Captain Arbuthnot, R.A.; Lieutenant De Winton, R.A.; Quartermaster Walker, 71st Highlanders; Lieutenant Maxwell, R.A.; Lieut.-Colonel Dickson; Captain Wade; Lieutenant Hall, Lieut.-Colonel Hillier, [illegible] Captain Brownrigg, Lieutenant Yeats, Lieutenant [illegible], Lieutenant Dawson, Lieutenant Bingham, Captain Pocock, 30th; General Bentinck, and Major Armitage. From Constantinople—Lieut.-Colonel Thomas. From Malta—Mr. Owen and Mrs. Eman. From Gibraltar—Major Strathan, Quartermaster-Sergeant Goodman, Messrs Smith, English Hick, &c. As soon as the Admiralty were made acquainted with the arrival of the transport, a telegraphic message was forwarded to the Peninsular and Oriental Company, asking what number of troops the *Hipon* was capable of conveying to the Crimea, in addition to 200 tons of coffee, and what would be the earliest moment she could be got ready to depart? The reply received was to the effect that accommodation could be provided for about [illegible] men, and that the ship would be ready for sea in the course of a week.

THE 23rd Fusiliers lost since their arrival in the Crimea 20 officers killed in action and died of disease, and 18 wounded.

THE King's County Rifles have given 150 volunteers to the Line. A draught of 50 volunteers from the 5th Lancashire Militia at Aldershott was expected in Limerick on Tuesday, to join the 9th Regiment of the Line.

THE *Niagara* steam-transport left Spithead on Monday morning for Helsoland, to embark 800 of the British German Legion, and convey them to Folkestone.

VICE-ADMIRAL SIR GEORGE FRANCIS SEYMOUR, K.C.B., G.C.H., will succeed Sir Thomas Cochrane, K.C.B., as Commander-in-Chief at Portsmouth, on the expiration of the latter officer's term next month.

VOLUNTEERING of troops at Chatham for the 19th Regiment of Foot, now in the Crimea, commenced on Monday last, and was continued next day. An especial parade of the provisional battalion was formed each day, on the parade-ground of the barracks, to the number of 2000 men. Colonel Henry Jarvis, with Major Jackson, appeared on the ground at two p.m., when the Commandant of the battalion, Colonel Jarvis, read the general order of Viscount Hardinge, G.C.B., the Commander-in-Chief, dated Horse Guards, 2nd of November, calling on the officers of the provisional battalion to volunteer for the 19th Regiment, none to be under nineteen years of age; the men must be of a robust and sound constitution, and able to take the duties of the field. The troops were formed in open order, and after the General had read the official letter he addressed the men of each depôt relative to their volunteering; a bounty of £1 to be given to each man, if approved of on medical inspection. Between two and three hundred volunteered on Monday and Tuesday. The provisional battalion is also open for volunteering to the corps of the Royal Sappers and Miners, and eighteen men have volunteered for that service. The volunteering is to be kept open for six months.

THE invalids at the Invalid Dépôt, Chatham, were paraded on Monday morning, before the barracks at Brompton, by Staff-Captain G. Read, acting Lieutenant and Adjutant Pope, in order to know if their having received information that the Commandant would be present to present Crimean medals to those invalids whose names had been sent down from the Horse Guards, as being entitled to receive them for the actions they were in—viz., Alma, Balaclava, and Inkerman. Out of the whole number assembled there were only fourteen men who answered to their names, and their medals were presented to them by Colonel Hill.

THE Messrs. White are constructing four more gun-boats for the Government at Cowes. They could not undertake to build any more, from the difficulty they have in obtaining shipwrights.

EXTENSIVE ROBBERIES AT A RAILWAY STATION.—No less than three robberies of passengers by the South Devon Railway were perpetrated last week at the Newton Abbott station. A party of pickpockets, who, whom was a woman, arrived by the north mail at Teignmouth on Thursday, at half past eleven o'clock. They got out upon the platform, where they stole £12 from a lady's pocket. They re-entered the train and proceeded to Newton Abbott, where a lady lost ten £5 notes, another person forty-eight sovereigns, and a third a sum which is not known.

THE EXPEDITION TO KINBURN.

The following despatches from General Simpson, Admiral Lyons, and Admiral Stewart give ample details regarding the Expedition to Kinburn:—

Sebastopol, Oct. 20, 1855

My Lord,—I am happy to be able to congratulate your Lordship on the successful termination of the expedition to Kinburn. I transmit a copy of the report of Brigadier-General the Hon. A. Spencer. This contains all the information I have received on the operations, with the exception that, in a private note, Sir R. Lyons mentions that the enemy had exploded the three forts at Otchakoff, commanding the northern entrance into the Dnieper.

In consequence of the continued fineness of the weather, great progress has been made in the construction of the road and railway. The divisions have all got some weeks' supply of rations in their camp; and I entertain no anxiety of there being a scarcity of anything during the approaching winter.

I informed your Lordship, in my despatch of the 13th inst., that the Highland Division, under Lieut.-General Sir Colin Campbell, were to proceed to Eupatoria, and co-operate with the French; but upon the receipt of your telegraphic despatch of the 13th inst., apprising me that the Russians had received to herald a battle, and adding that Admiral Lyons did not consider myself justified in weakening the force under my command by so many men, and I therefore countermanded the movement.

I have the honour to inclose the weekly reports of Colonel M'Murdo and Dr Hall.

I have, &c. (Signed) JAMES SIMPSON, General Commanding.

The Lord Panmure, &c.

Camp before Kinburn, October 17, 1855

Sir,—In reporting, for the information of the General Commanding the Forces, the fall of the garrison of the fortress of Kinburn this day, I have the honour to state that the force under my command, as per state in margin, effected their landing on Monday, the 15th, unopposed

During a heavy surf, and which continued all day yesterday, the landing has been accomplished with some little difficulty. The troops, however, were all got on shore on the first day, and have since been employed in entrenching our position. There are rumours of a force of the enemy collecting at Kherson, about forty miles from here, but our immediate neighbourhood appears to be clear

The advanced line of the position, flanked on both sides by the sea, is held by the force under my command, and is about a mile in extent.

I have, &c. AUGUSTUS SPENCER,

Brigadier-General Commanding English Land Force.

The Military Secretary, &c., Head-quarters.

OPERATIONS OF THE FLEET IN THE BLACK SEA.

Royal Albert, off Kinburn, Oct. 18, 1855

Sir,—My letter of the 8th inst. will have informed the Lords Commissioners of the Admiralty that an Allied naval and military expedition was to leave the anchorage off Sebastopol on the following day for the purpose of [illegible] and occupying the three Russian forts on Kinburn Spit, at the entrance of the Dnieper; and the telegraphic message, which I forwarded to Varna last night, will soon communicate to their Lordships the success with which that has attended this enterprise.

It is now my duty to give a more detailed account of the proceedings of the expedition.

I have, therefore, the honour to state that we arrived at a rendezvous off [illegible], but, owing to strong south-west winds, which [illegible] it was not until the morning of the 16th that the expedition was enabled to reach the anchorage off Kinburn.

During the night the English steam gun-vessels, *Fancy*, *Boxer*, *Cracker*, and *Cracker*, and four French gun-vessels, forced the entrance into Dnieper Bay, under a heavy but ineffectual fire from the Spit Fort; and on the following morning the British troops, under the orders of Brigadier-General Hon. A. Spencer, together with the French troops, under the command of General Bazaine, were landed about three miles to the southward of the principal fort, and thus, by these nearly simultaneous operations, the retreat of the garrison and the arrival of reinforcements were effectually cut off.

In the even ng the English and French mortar-vessels tried their ranges against the main fort with excellent effect.

The work having again opened road to the southward, with a great deal of swell, nothing could be done on the 16th; but in the forenoon of the 17th a fine northerly breeze, with smooth water, enabled the French flotilla-batteries, mortar-vessels, and gun-boats, and the *Odin* and the mortar-vessels and gunboats named in the margin,* to take up position off Fort Kinburn, and the fire was so effective that before noon the buildings in the interior of the fort were in flames, and the eastern face had suffered very considerably.

At noon the *Royal Albert*, *Agamemnon*, and *Princess Royal*, accompanied by Admiral Bruat's first-class screw-frigate, proceeded Fort Kinburn in a line abreast, which the shape of the coast rendered necessary, and the precision with which they took up their positions in the closest order, with [illegible] and only two fathoms of water under their keel, was really admirable. At the same moment the squadron under the orders of Rear-Admirals Sir Houston Stewart and Pellion pushed through the passage between Otchakoff and the spit of Kinburn, and took the forts in reverse, whilst the *Sidon*, *Arrogant*, *Viper*, *Snake*, and *Gladiator* engaged the flotilla-battery, and the *Hannibal*, *Dauntless*, and *Terrible*, that on the point of the spit.

The enemy soon ceased to reply to our overwhelming fire, and, though he made no sign of surrender, Admiral Bruat and I felt that a garrison which had bravely defended itself against so superior a force deserved every consideration, and we therefore made the signal to cease firing, hoisting a flag of truce, and sent on shore a summons, which was accepted by the Governor, Major-General Kokonovitch, and the garrisons, consisting of 1400 men, marched out with the honours of war, down their arms on the glacis, and, having rendered themselves as prisoners of war, they will be embarked in her Majesty's ship *Tribune* to-morrow.

The results to the Allied fleets are very few, amounting in her Majesty's ships to only two wounded. The loss of the enemy in killed and wounded is, I fear, very severe.

In the three forts, which have suffered considerably by our fire, we found eighty-one guns and mortars mounted, and an ample supply of ammunition.

This morning the enemy has blown up the forts on Otchakoff Point, which mounted twenty-two guns, and we learnt from a Polish deserter, who escaped in a boat from them during the night, that the commandant apprehended an attack from our mortar-vessels, which would not only have destroyed the forts, but also the neighbouring dwellings.

I have abstained from entering into the particulars of the proceedings of the squadrons under the orders of Rear-Admiral Sir H. Stewart, as he has so ably described them in his letter which I have the honour to forward herewith. I feel sure their Lordships will perceive that I have received from him on the occasion, as, indeed, I have on all others since I have had the good fortune to have him as second in command, that valuable assistance which might be expected from an officer of his distinguished and acknowledged merits; and I beg leave to add my testimony to his in praise of all the officers, and especially Lieutenant Maryat and Mr. Brooker, whom he recommended to your Lordship's favourable consideration.

To particularise the merit of the officers under my command, where all have behaved admirably, would be a difficult task indeed; but I beg leave to mention that the same officers of the Navy and the Royal Marine Artillery, who were in the command of the fall of Sebastopol, have, in this service, and that on this occasion, as before, they have been under the direction of Captain Willcox, of the *Odin*, and Captain Digby, of the Royal Marine Artillery. Nor can I refrain from stating what I believe to be the feeling of the whole fleet, that on this expedition, as on that to Kertch, the talents and indefatigable exertions of that very valuable officer, Captain Spratt, of the *Spitfire*, and of those under his command, entitle them to our warmest thanks, and deserve to be particularly mentioned.

I need hardly say that my distinguished colleague, Admiral Bruat, and I have seen with infinite satisfaction our respective squadrons acting together as one fleet.

I am, &c., EDMUND LYONS,

Rear-Admiral and Commander-in-Chief.

The Secretary of the Admiralty

Valorous, in Dnieper Bay, Oct. 18, 1855

Sir,—I have the honour to inform you that, in pursuance of your orders, I hoisted my flag in her Majesty's steam-ship *Valorous*, on the 8th instant, the 14th inst., immediately after the arrival of the Allied fleets at Kinburn Spit, and proceeded, under the able guidance of Captain Spratt, of the *Spitfire*, to take up positions at the entrance of Dnieper Bay, where, with the division of steam-vessels, placed under my order (as per margin†), and in company with those under the orders of my colleague, Rear-Admiral Odet Pellion, we remained in readiness to force an entrance into the Dnieper, for the purpose directed by you, of preventing, as far as possible, any reinforcements being thrown into the forts on Kinburn Spit, as well as to cut off the retreat of the garrison, should either be attempted.

At nine p.m. I instructed Lieutenant Joseph H. Marryat, of the *Cracker*, to take on board Mr. Steward Brooker, additional master of the *Spitfire*, and endeavour with him to determine the course of the intricate channel through which we were to pass, and to lay down buoys along the south side of it, the French having undertaken to perform the same service on the north side.

Likewise directed Mr. Thomas Potter (master of the *Fervent*, lent to do duty in the *Valorous*), to proceed with two boats of the *Tribune*, and, pro-

* First Brigade, Fourth Division; Royal Marines, 1200 men, rank and file; Royal Engineers, Artillery, and detachment at cavalry.

† Mortar-vessels—Raven, Magnet, Camel, Hardy, Flamer, Firm. Gunvessels—Lynx, Arrow, Viper, Snake, Wrangler, Beagle.

‡ Valorous, Gladiator, Fancy, Cracker, Grinder, Boxer, Clinker.

tected, by the *Cracker*, to search for the spit on the north bank, and on his return endeavour to place a buoy on the edge of the shoal off Kinburn Spit, that the entrance of the channel might be assured.

As soon as the preconcerted signal was given, indicating that this operation was effected, I dispatched the *Fancy*, *Boxer*, and *Cracker* into Dnieper Bay, with orders to anchor in such position as would best protect the right flank of our troops, upon the disembarkation taking place, and to make that their chief care, as long as there was any possibility of the enemy threatening them.

During the night Rear-Admiral Odet Pellion also sent in the French gunboats for the same purpose.

At daylight on the following morning I had the satisfaction of observing all the gun-boats, French and Engli sh, anchored nearly to the north-east of Kinburn Spit, and without any of them having sustained damage, although the enemy had fired both shot and shell and musketry at them during their passage in. Thus the chief part of the object you had most anxiously in view was accomplished

While still in considerable doubt as to the extent to which the channel for the larger ships was buoyed, at ten a.m. Lieutenant Marryat and Mr. Brooker came to inform me that the work intrusted to them had been completed, and that the latter officer was ready to pilot the ships in. The zealous manner evinced by these officers to furnish me personally with their report on this difficult navigation of the Dnieper deserves my warmest thanks; and the gallant manner in which Lieutenant Marryat brought the *Cracker* out for that purpose, under a very heavy fire from the whole forts and batteries, elicited the admiration of all who witnessed the proceeding.

We were now fully prepared to advance, and, in obedience to your directions, awaited the signal for general attack.

The whole of the proceedings of yesterday must be already fully known to you; but it is right that I should state briefly the share taken in them by the division you did me the honour to place under my orders, which consisted of the ships and vessels already stated, reinforced by those named below

It being necessary to advance in single line, it was arranged that the ships should do so in the following order:—

Valorous, Captain G. G. Buckle, C.B., bearing my flag; *Fancy*, Captain William Long, C.B.; *Assaulte* (French), bearing the flag of Rear-Admiral Odet Pellion; *Cacique* (French); *Sidon*—Captain George Goldsmith; *Leopard*—Captain George Gifford, C.B.; *Sans* (French); *Gladiator*, Captain Cowper Coles; *Vigilante*—Commander A. A. Ingleheld; *Stromboli*—Commander Cowper Coles; *Spiteful*—Commander F. A. Shortt.

At noon, the signal being made from your flag ship to weigh, we proceeded through the channel, each ship engaging the spit batteries and Kinburn Fort as they came within range

To Lieutenant Marryat, of the *Cracker*, is due the merit of preceding and piloting us through, which he did with great judgment

Had the enemy continued his defence of the Spit batteries, the *Sidon*, *Leopard*, *Sans*, and *Gladiator* were directed, in that case, to remain in front of them until their fire was completely silenced; but, as they were subdued by the accurate and well-sustained fire which was poured upon them by the ships which you had placed to the westward of the Spit, and by those of our own squadron on passing to the eastward, the became unnecessary: the whole division, therefore, continued its course through the channel, and anchored well inside Fort Nicolaieff and Otchakoff Point

During the time the four gun-boats, *Fancy*, *Grenier*, *Boxer*, and *Cracker*, did good service, by placing themselves in such positions as to throw a flanking fire on the middle battery and Kinburn Fort, at the time our division passed within short range.

Immediately on anchoring I transferred my flag to the *Cracker*, and, followed by the other gun-boats, proceeded close off the east front of Kinburn Fort to be ready to act as circumstances required, should the enemy's fire, which at that moment had entirely ceased, be renewed; however, the necessity for further action did not arise.

As the service intrusted to me was carried out under your own observation, I feel it to be unnecessary to do more than to record my grateful sense of the zeal and ability manifested by which the whole of the ships under my orders took up their appointed stations, and of the manner in which all employed performed their duty

I think myself fortunate in having for my temporary flag-ship so efficient and excellent a vessel as the *Valorous*, and I feel much indebted to Captain Buckle and his zealous First Lieutenant, Joseph Edye, for their unremitting attention and assistance

I am delighted to add that, in concerting with our gallant allies the arrangements necessary for carrying into effect the present successful operations, I have received the cordial support and concurrence of my excellent colleague, Rear-Admiral Odet Pellion

The enemy which you yourself ever feel to do full justice to merit and exertion, I shall be in no excuse for pressing to request your most favourable notice of Lieutenant Marryat and Mr. Brooker. They have had anxious, difficult, and dangerous work to perform, and they have each of them executed it admirably.—I have, &c., HOSTROY STEWART, Rear-Admiral.

Rear-Admiral Sir Edmund Lyons, Bart., K.C.B.

RECRUITING IN THE UNITED STATES.—Mr. Crampton, the British Minister at Washington, has been found guilty of violating our neutrality laws in the matter of recruiting soldiers in the United States for the service of the Allies against Russia. It is reported that our Cabinet [illegible] Mr. Crampton, our Minister at the Court of Spain, and the French Minister at Madrid, and her Majesty's Consuls implicated in the same unlawful business. Now, we have a Russian envoy or two in the same category. A correspondent of the *Times* of Saturday contains the following case in reference to the anticipated withdrawal of Mr. Crampton:—"I wish to know what steps have been taken, or are to be taken, to have the Russian Minister withdrawn. The whole country has been publicly and formally informed, in a peaceful, intelligent manner, that James C. Thompson, the proprietor of the machine-works on Cold-spring-creek, Albany, has been offered the situation of chief engineer in the Russian navy. We have it proclaimed that his salary is to be 6000 dollars a year, together with a free dwelling-house; and it is openly avowed that Mr. Thompson had gone to Washington to complete the engagement with the Russian Minister. Now, this is a direct breach of neutrality, and a violation of the law as that of the Russian Minister in the engagement of Mr. Thompson. The ship may be destined to some country not engaged in a war with a foreign enemy; but the admission that Mr Thompson has been at Washington to complete his arrangement with the Russian Minister, as chief engineer of the Russian navy, is a fact. The very reason why the President, his Premier, and his Attorney-General, is certainly a cool proposition compared with the proceedings of Mr. Crampton. What says the Premier?—*New York Herald*.

THE SOUND DUES.—The Prussian Government has resolved not to adopt any decision with respect to the Sound Dues until the Conferences proposed by Denmark shall have assembled. A letter from Copenhagen of the 26th of October says:—"Few persons in France, even among political economists, are acquainted with the question of Sound Dues in a statistical point of view. The subject is looked at as connected with the principle of Free-trade, and without calculating on the results which the abolition of those duties would have for the finances of Denmark. Conferences on this subject will open next month; the only thing which can delay them will be the obstinate opposition which the United States Government is expected to make to the capitalisation, which it wishes to see replaced by a tribute similar to the ransom made by the United States is really not justifiable when the small amount it pays is compared with other countries. The Sound Dues paid from 1851 to 1853 may be divided as follows:—United States, 453,000f.; England, 1,956,000f.; Holland, 60,000f.; 96,000f.; Prussia, 118,000f.; Russia, 45,000f.; the Scandinavian flag, [illegible]. The export duties for the ports of America and the imports from the continents of the United States for the Baltic amounted in the same period to about 250,000f.; for Holland, 400,000f.; England, 3,370,000f.; Scandinavian ports, 200,000f.; Bremen and Hamburg, 1o0,000f.; France, 400,000f.; Belgium, 100,000f.; East Indies, 320,000f.; the duty on vessels annuated in one year to 190,000f., and that on goods to 5,785,000f. The capitalisation of the above amount would be from 120,000,000f. to 130,000,000f. Denmark will only treat with the United States upon the basis of the payment for the purchase of the Sound Dues, because she has found, on minute examination, that the base of this revenue comes from merchandise imported or exported, and which represents the majority of the interests connected with the question. The above details will enable you to follow the discussions about to take place on the subject."

RUSSIAN STORES OF CORN.—A letter of the 19th ult. from Taganrog informs us that great activity prevails there in consequence of the permission granted by the Government to the firm of Gopovitch to export 107,000 tchetwerts of wheat, belonging to them, in the Sea of Azoff. It is hoped that the Russian Government will extend this permission generally to all neutral citizens having corn in the ports of that sea. It is said that these stores amount to nearly 3,000,000 of tchetwerts. When, in 1854, the Russian Government laid an embargo on the exportation of corn, it declared that it would take by force the corn contents in store at Odessa. A committee of merchants has been formed for this purpose, so that the Government will receive the corn and pays for it in ready money, at seven roubles seventy-five copecks per tchetwert. The corn now collected at this port amounts to 180,000 tchetwerts. The prevalent opinion is, that the Government will take 70,000 tchetwerts of it, and the rest will be for the consumption of the town. The Government pays for maize at the rate of six silver roubles the tchetwert.—*Le Nord*.

THE FRENCH LAW OF MARRIAGE SETTLEMENT.—An Englishman recently left Folkestone for France with £35,000 in his pocket. He for some time lived with a French lady, whom he subsequently made his wife. Upon his decease every farthing of his property, including the sod upon which he lay, was found to have been settled upon the wife, and the creditors in England could not obtain a shilling. Under the English law such a settlement would have been set aside. In France, by the Code Napoleon, it was unassailable.

THE ORGANISATION OF THE BRITISH EMPIRE.—(No. 3.)

Mr. Hincks, late Inspector-General in Canada, strongly opposes Mr. Howe's plan for the organisation of the British Empire; but his argument is defective in this respect, that it is entirely confined to British America, whereas the reasoning of Mr. Howe embraces the whole of our trans marine possessions. Mr. Hincks assumes that, according to the scheme proposed, British America is to return to the Imperial Parliament some fifty or sixty members, bear its share of Imperial taxation, and be dis possessed of the Colonial Legislature it now enjoys. It is not in this sense we understand Mr. Howe's propositions, nor can they fairly bear such an interpretation; for if all the Colonies were equally favoured (and it would be unjust to make exceptions), the representatives of the United Kingdom would be swamped by the united delegates from British America, Australia, New Zealand, the Cape, Ceylon, India, and the West Indies. At page 26 of his "Reply to Mr. Hincks" Mr. Howe only asks for "ten North Americans, clothed with the authority of half-a continent, and enjoying the confidence of millions of people;" and he adds, "they would be listened to with respect; and, even if only permitted to address the House of Commons, without voting, would render essential service to the Empire." It is this consultative voice that we have advocated, because we are persuaded that no Colonial Minister can ever possess a complete local knowledge of the various countries or departments whose affairs he is called upon to administer. But it is right that Mr. Howe should be heard in his own language, and we transfer to our columns the following passages from his "Reply":—

Twenty years ago, when Robert Baldwin, myself, and a few others claimed for the British provinces in North America the political privileges which they now enjoy, there were hardly ten men in England who did not believe we were mad, and powerful parties existed in all the provinces opposed to any change of system. The system has been changed, and what are the results? Read them in the subsidence of irritation in the settlement of old questions in the free competition for the prizes of public and social life within the provinces themselves—in the diffusion of education, and in the rapid march of internal improvement of every kind. All these wonders have been wrought out in a few years by the action of Colonial intellect left free to operate over our internal affairs. But have we no external relations with our British brethren? with our foreign neighbours with the United States, and Spanish colonies?—with the commercial States of Europe, Asia, and Africa? Of course we have. Now, what I want is, that the Colonial mind should be called in to aid in the discussion and adjustment of such questions; that the Queen should have the benefit of the advice of her Colonial subjects on all such questions: that Parliament should consult with them: that the people of the British islands should be taught to regard them as parties concerned; to respect and rely on them. Is this an unreasonable request? It may indicate unpardonable presumption, but I fear not to express the opinion that even upon purely British questions our advice might be useful; that Mr Hincks might be of service in the House of Commons, when such subjects as decimal coinage are under discussion; and that even Mr. Howe might have thrown into the debate on the Limited Liability Bill a little of Transatlantic experience.

Mr. Hincks also perverts the arguments when he speaks of the suppression of the local legislatures, and the imposition on the Colonies of Imperial taxation. Nothing of the kind has been recommended, and, if it were, we may be assured that not one of the Colonies would consent to the extinction of self-government, or be driven into the acceptance of our National Debt. In the passages we have quoted from Mr. Howe, that gentleman distinctly refers the existing and growing prosperity of North America to the political privileges granted to them by the mother country in the four Colonial parliaments, and it is ridiculous to suppose that he would advocate their suppression. In fact, in the very speech out of which this controversy arose, Mr. Howe exulted in the national existence of the British provinces, for he said:—

The very tone of this debate proclaims Nova Scotia a free country, a country whatever we may lack, we have the best gift of God to man—freedom of thought, of speech, and of public discussion. The people of this country select every public officer from one end of it to the other, either directly or by the representatives, with one single exception. The Lieutenant-Governor alone is appointed by the Imperial Government. We have more power than those who manage our affairs can they have in England, where the Peers are permanent, the Crown hereditary. Our people in their town meetings, do the local business. In Legislature forma Administration and assistant. We are as free as any people in Europe, Asia, or Africa: and, as for America, I believe the principles of the British Constitution secure a sounder state of rational freedom than the Constitution of the Republic.

We have dwelt the longer on these points because they are fundamental, and ought not to have been misrepresented. The authority of Mr. Hincks is deservedly high, and it stands higher than it did when he first opposed the plan of Mr. Howe, as Sir William Molesworth has just appointed him to the Governorship of Barbadoes. It deserves notice that one of Mr. Howe's complaints was that no colonist, however eminent his qualifications, ever rose beyond the rank of a provincial Minister; and he challenges the world to show "a colonist in our National Legislature—in any Imperial department, or who is now, or has been for half a century, Governor of the smallest colony within the Queen's dominions." It is a curious fact that Mr. Hincks, who reproved Mr Howe for being querulous on the point, should in his own person at once justify the argument of his opponent, and wipe away the slur which had roused his indignation.

With a view to bringing the mother country more immediately and rapidly into territorial connection with British America, Mr. Howe advocated an extensive system of railways connecting all points of the country, and running into the frontiers of the United States. In this plan he had hoped for the aid of England, and was, indeed promised it, but the promise was not fulfilled. On this subject he complains of the conduct of Earl Grey, then Colonial Secretary, who approved of his plans in a note dated 12th June, 1851, which was marked "private," but is now published in self-defence. His Lordship, addressing Mr. Howe, writes thus:—

I received your two letters of the 28th May, but I have little to say, beyond thanking you for them, and expressing the gratification your report of what is going on has given me. I think all you have done about the railway very judicious, and, without flattery, I may say that I do not know when I have read a better or abler speech than that which you made at the public meeting. I feel very sanguine of the ultimate assent of New Brunswick to the measure as proposed, and that we shall succeed in getting this most important work realised as I believe, to effect a change in the civilised world accomplished

The enterprise failed, because the Imperial guarantee was withdrawn. Nova Scotia was left to her own resources, and Canada called in the aid of English contractors. Now Mr. Howe contends that these occurrences would not have happened, had North America been represented by North Americans in the Imperial Parliament, and he does somewhat more than insinuate that those who got the contract had votes in the House of Commons which were always at the command of the Whig Government. Into the matter we shall not enter, but there are circumstances connected with this railway of great geographical interest which bear upon the organisation of the Empire.

It is evident that the five settled provinces should be linked together by iron roads, and the swiftest ocean navigation be established between them and Europe: and, with that end in view, it was proposed at the famous Portland Convention in the State of Maine, to run a line from the city of Bangor to the eastern boundary of that State, and continue it to some good harbour on the eastern shore of Nova Scotia or Cape Breton. The idea of a great intercolonial railway originated with the Earl of Durham: that of a shore line, connecting Europe and the United States, through the Lower Provinces, was suggested at the Portland Convention, in 1850. The trunk for either, or both of those lines, would pass for 130 miles through Nova Scotia. Had the shore line been provided for and executed, North America would have commanded the passenger traffic with the United States, which now goes to New York or Boston. Nothing more was wanted than the Imperial guarantee for the comparatively small sum of £7,000,000, which the provinces could have surely redeemed within a moderate period, as their largely increasing revenues fully demonstrate. But this magnificent project failed, because Lord Grey decided that the guarantee should only be given to the trunk line, and New Brunswick would not consent to any arrangement which did not connect her chief seaports with the system. Time would have been economised, and the danger of shipwreck lessened, had the united plans of Lord Durham and of the Portland Convention been adopted, for it is well known that the most dangerous part of the voyage between New York and Liverpool is in approaching either port. Steam-ships, after leaving New York or Boston, are obliged to keep far out at sea, to avoid the American coast for some 500 or 1000 miles, frequently enveloped in thick fogs; and similar difficulties or dangers are to a certain extent encountered in approaching or leaving Liverpool. Had the harbour of Whitehaven, near Cape Canso, been selected as the North American sea terminus, those difficulties and dangers would have been avoided on the Transatlantic side. Now it may be fairly presumed that, had some North Americans exercised a consultative voice in the Imperial Parliament, and pointed out the enormous advantages that would have resulted from adopting the views of Lord Durham and of the Portland Convention, instead of leaving the matter to the discretion of Earl Grey, deciding in his office without debate and without publicity, the Imperial guarantee would have been given, and the great line would have passed over British territory.

It must, however, be borne in mind, that this scheme for the organisation of the British Empire includes the whole of our transmarine possessions; and, in weighing its merits, a far-sighted statesman will extend his views from the present to the future, when the population and wealth of our Colonies will have advanced to Titanic dimensions. The last return issued by the Board of Trade of the declared values of British and Irish produce and manufactures exported from the United Kingdom in the year 1854, puts down the total at £97,298,900, and of this aggregate £33,898,716 were due to British possessions, or more than one-third of the whole amount. If we take the returns of the last three years we shall better appreciate the importance of our Colonial markets:

Exported to our Colonies.	To Foreign Countries	Total
1852	£57,681,932	£91,576,854
1853	£66,551,579	£102,541
1854	£63,400,587	£97,298,900

The great rise in 1853 was due to Australia; and though that market was then glutted, nevertheless, in 1854, the decrease was only £2,832,824; for then it stood at £11,931,352, being about one-half of our whole exports to the United States, including California, which figure for £21,410,369; and, within a fraction, equalling our whole trade to the Hanseatic towns, Prussia, Germany, and France, included. To the East Indies, in 1854, the increase was £1,840,274 and to British America the increase was £1,082,332. This arithmetical argument in favour of the importance of the Colonies is not to be refuted. Now the present war has compelled us to addito our National Debt; and, should it continue for a few years, the addition will be large but the magnitude of national obligations is relative to national resources; and as our Colonial markets are enlarged, our expanding wealth will enable us, if needful, to sustain the augmented pressure. We are now developing the riches of India by railways; and those powerful agents of commerce are stretching themselves through Canada, and are penetrating into the interior of Australia. In these directions lies our strength: from year to year these mighty limbs become more muscular. Remembering, then, the lessons of history, which have taught Europe how colonies may be lost, let us not think lightly of the organisation of the British Empire. Let us so attach our Colonies that they may not only prove to us growing mines of wealth, but take a pride in defending the old country in any hour of danger on sea or land. In the eloquent language of Mr. Howe we may ask, "Is the old pelican eternally to shed her blood for the nourishment of offspring who fly away when they are strong, or who, when the eagle descends upon her nest, fold their wings, and do no battle in her defence? Surely the mother is careless or indifferent, or the children are unnatural."

However, there are already symptoms of change and of a departure from that old exclusiveness which was at its height when the great Lord Chatham declared in the House of Peers that "no colonist should be allowed even to make a horse-nail." We have stated that Mr. Hincks has been appointed Governor of Barbadoes; and it may not be generally known that two cadetships in the Royal Navy are annually given to Canada, one to Nova Scotia, and one to New Brunswick. We expect much from Sir William Molesworth: he has before him a noble field of usefulness; and, as a Colonial administrator, we trust he will establish his own fame by consolidating the union between the mother country and her transmarine possessions.

COUNTRY NEWS.

Administrative Reform Meeting at Glasgow.—A large meeting of the citizens of Glasgow was held on Saturday last for the purpose of establishing a local society to co-operate with other parts of the empire in promoting a reform in the administrative departments of the State; the Lord Provost in the chair. Among those present were Mr. Hastie, M.P.; Sir Jas. Anderson, M.P.; Mr. Lindsay, M.P.; and a considerable number of the magistrates and town councillors of the city. The meeting was addressed by Mr. Lindsay, M.P. and Mr. Jacob Bell, after which resolutions were proposed with a view of forming an association in Glasgow to co-operate with the London committee, and reform must go hand-in-hand with a measure to secure the full, free, and fair representation of the people in Parliament."

The Great Property Case.—The Commission of Office appointed at the suit of the Crown to inquire into the position of the property of the late John Wilson, Esq., was brought to a conclusion at Swansea on the 2nd inst. The jury disagreed, and were discharged. Consequently, the claimant of the property will remain in possession of the estate, and continue to exercise all legal rights over the tenantry. The Crown claimed all on the ground before mentioned—that the late J. Wilson was illegitimate, and that he never married. The defence set up was that he had married the mother of the claimant of the estate; and, after eight days' inquiry, there were nine of the jury in his favour, and three for the claims of the Crown.

Early Snow.—On Friday morning, the 2nd inst., between seven and eight o'clock, snow fell for about ten minutes at Northampton. The flakes, which at first were only just distinguishable by their whiteness from the accompanying rain, became tolerably large before the storm ceased.

The Missing Clergyman Found.—The Rev. Mr. Farmer, Curate of the parish of Hardwicke, in the county of Gloucester, whose mysterious disappearance on the night before his intended marriage with the eldest daughter of a wealthy clergyman and magistrate of the same county has been already reported, has at length been heard of. After detectives had been down from London, the local police put in motion, a canal dragged, and the electric telegraph employed, it turns out that the Rev. gentleman is alive, and well in Ireland, the land of his birth. What circumstances induced the Rev. gentleman to take this extraordinary step have not transpired, except in rumours, the private reasons seem to have reached him at the last moment to fly from his engagement.

Reformation of Criminals.—A meeting was last week held at Hardwicke-court, near Gloucester, the object of which was the formation of a reformatory union for criminals. Among those present were—Sir J. Pakington, M.P.; Sir Thomas Wilmington, M.P.; Mr. C. H. Bracebridge, the Rev. Sidney Turner, &c. The meeting took place in the presidence of Mr. B. Baker, who, in conjunction with Mr. G. H. Bengough, established the first of the existing county institutions for the reformation of juvenile offenders. The discussion turned upon the best means of reforming criminals, the proper mode of preliminary punishment, and the plan to be adopted to secure those who had been inmates of reformatory institutions against a relapse into crime when they left them. The result of the meeting was the formation of a provisional committee intrusted with the task of organising a reformatory union, the vocation of which would be to consider and promote the best means of reforming criminals, to procure employment for them, and to restore them to society; also to promote the practical training and preparation of efficient teachers for reformatory institutions. It was agreed that a general meeting of the society should be held in London next May.

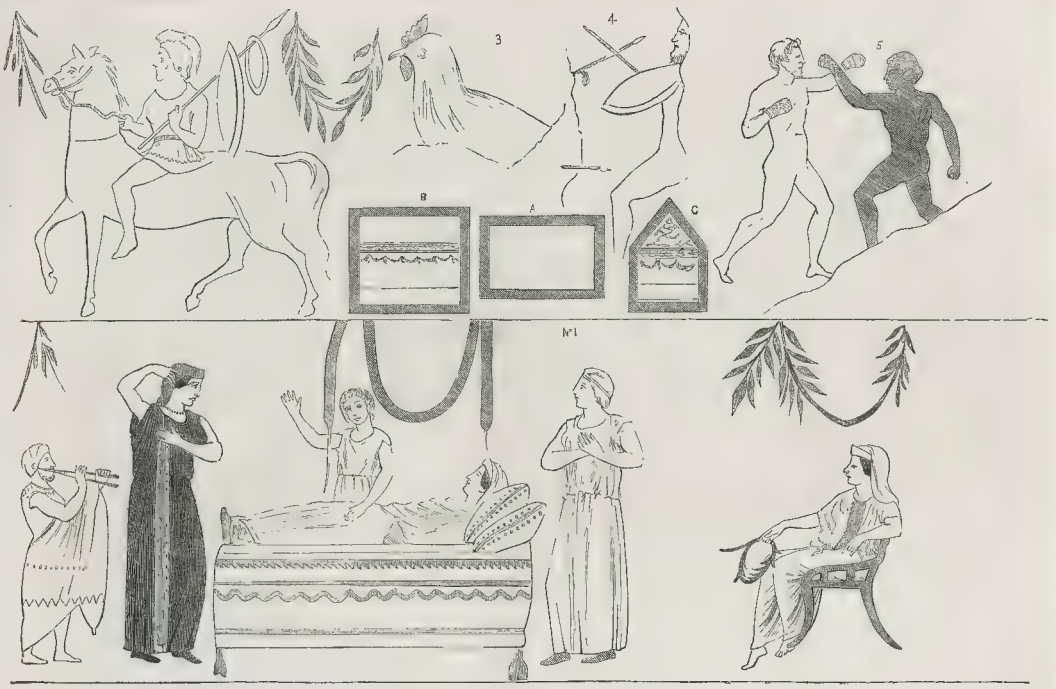
Winter Assize.—Ministers have determined upon holding a winter assize, for goal delivery, the more important of the counties generally throughout England. The authorities are in consultation with the Judges as to the most convenient period, and other necessary arrangements, of which due notice will be given to the public in proper time.

Lord Mackenzie's Act in Glasgow.—The profits of illicit trade are now so great that "shebeens" are known to exist in every low quarter of the city; and our police, zealous though they may be, are quite incompetent to the task of effectually hunting them down. "Shebeens," we are assured, have risen up in immense and destructive force since the bill came into operation; and the liquor traffic is now more subversive than the effects of drunkenness are viler than before. But, apart from this, we have heard on good authority that measures are in course of organisation by which Lord Forbes Mackenzie's Act is likely to be legally evaded by wholesale. Clubs are in course of formation in which the members may drink at all hours Sunday and Saturday; and, so long as the door is not blacken each other's eyes or disturb the general peace, they can snap their fingers at the police. The Western Club, with its ballot-box and entry-money of thirty guineas, possesses all the privileges of a private dwelling. According to a public intimation we have seen, a Workman's or Tradesman's Club is to be established at the Cross on the same principle and claiming the same privileges, the difference being only in the amount of entry-money, which in the latter case is to be £3 3s.—*Glasgow Herald.*

Another Fearful Gale.—The whole extent of the east coast between Harwich and Cromer was on Saturday visited by another most destructive storm, and the havoc among the shipping has been truly enormous. In some years since such an amount of destruction was witnessed, and, to add to the calamity, many crews have perished. The north-west gales of the early part of last week having moderated about Wednesday or Thursday, a large fleet of coasters, bound northward, which had sought shelter in the various ports, took advantage of the favourable weather and proceeded to their destinations. They were mostly colliers in ballast, bound to the Tyne, Hartlepool, Sunderland, &c., and altogether formed a fleet of between 300 and 400 sail. The gale which ushered in such fearful consequences upon them commenced early on Saturday morning. The wind, which had been blowing rather steadily from the north west, suddenly chopped round to the east-south-east, from which quarter it blew a terrific gale right on the coast, accompanied with hail, snow, and rain. A most exciting scene immediately followed the outburst of the gale among the fleet, in bearing up and making for the nearest place of shelter. A large number endeavoured to weather it out by dropping their anchors, but these suffered the most. The fury of the gale drove them from their moorings. They came in contact with each other in indescribable confusion, carrying away rigging, bowsprits, bulwarks, and many other serious damage. Indeed, it is feared that two or three foundered in consequence, and the fate of the crews is yet to be learnt. A large sail succeeded in reaching Harwich harbour, and of these upwards of forty had lost their anchors and chain cable, averaging from sixty to one hundred fathoms in length, with broken windlasses. Others were not so fortunate in seeking refuge, for in the vicinity of the entrance to the harbour four or five are reported to be ashore. The amount of damage on the other parts of the coast is reported to be serious. It is computed that in all more than fifty vessels were driven ashore, a large number of which will become a total loss.

The Dear-Bread Agitation in Stafford-shire.—On Sunday a meeting of not less than fifteen thousand persons assembled at the bank, near West Bromwich, about midway between Birmingham and Wolverhampton. A great many came from Birmingham, but the remainder were principally colliers and labourers, employed in the different iron and coal mines that abound there. They were all well-dressed persons of the operative class, but the meeting had one more remarkable feature—there were a great many females amongst the crowd; and, considering the domestic character of the subject which had called for such a manifestation, this is a fact of some significance. The meeting was held in consequence of a preliminal, one which took place at Smethwick, near Birmingham, on Friday week, for the purpose of considering the present advanced price of bread. The placard announcing the meeting contained the following appeal to the people:—"Attend in your thousands: and protest against the monopolies who grind your families." The only speaker announced was Mr. White, of Birmingham, editor of the *Democrat and Labour Advocate*. Mr. White was the principal speaker. Speeches were delivered by Mr. J. Robinson, of West Bromwich; and Mr. Curtis, a superannuated excise man. The whole proceedings, however, did not occupy more than an hour. The chief constable of the county (J. R. Hatton, Esq.) had taken very precautionary measures against disturbance. About 200 of the county constabulary had been brought into the neighbourhood from the Potteries and other districts. The police did not, at the meeting, however, were of the most orderly character, and the language temperate—much more temperate, indeed, than had been indulged in at Smethwick on the previous Sunday. The result of the meeting was the adoption of a resolution to be addressed to the Queen praying that an order may be issued forthwith for preventing the further exportation of the people's food, and imploring her Majesty to take such measures as may be deemed advisable for that end with the advice of the Privy Council, in order to check that monopoly, by which the price of bread is raised above a fair remunerative value, and thereby causes such misery and suffering to the industrious portion of her Majesty's subjects.

Extraordinary Murder and Suicide.—On the afternoon of [illegible] inst., Hermann Francks, a Doctor of Philosophy, and formerly editor of the *Allgemeine Zeitung*, at Berlin, arrived at the Albion Hotel, Brighton, from Portsmouth, with Hugo Lavard, his son. In the course of the evening they were called [illegible] Dr. Alfred Hugo, Dr. William German refugee, [illegible] and [illegible] forty [illegible] and [illegible] and [illegible] and



PAINTINGS ON A GREEK TOMB LATELY FOUND NEAR PÆSTUM.

pipe or flute. From this country the Greeks adopted this funereal custom, which was practised by the friends of the deceased; whilst the Romans, who adopted it from the Greeks, always employed hired performers. It will be observed, that the figure has also the Phrygian cap as well as dress. Upon the bed is an *unguentarium*, containing perfumes for anointing the body, in order to avoid the offensive smell arising from it. At a short distance is seated a female with a red-coloured garland in her hand, with which she is prepared to crown the deceased as soon as the ceremonies of sorrow are terminated; her feet are uncovered, and there is some difficulty in determining who or what she is. A Divinity she cannot be, who is preparing the reward of immortality for the dead, since she has a dress like those of other women. It is curious to observe that the fingers of the left hand are extended in the form of horns—a sign full of meaning amongst the modern Italians, though we have no direct testimony as to what it might have meant amongst the ancients. The figure of the greatest merit, however, is that which stands at the foot of the sarcophagus, clothed in a red Phrygian dress, and wearing a necklace. The other two women who are clothed in white, were perhaps the attendants on the dead. The short hair of both, and especially of her who touches the bier, shows clearly that it had been cut according to the custom common amongst the sex on such mournful occasions. Lastly, the *tænia* suspended above the body, and the pendent garlands, are portions of funeral apparatus, representing an apotheosis, or immortality.

In confirmation of the explanation we have given of the above interesting design, may be consulted, amongst the ancients, Plato, Pausanias, and Plutarch; and, amongst moderns, Hermann, Becker, Hetzen, and others; who in their writings make mention of the funeral ceremonies of the Greeks. There is a vase, too, in the Royal Museum of Naples, called the Vase of Athens, on which is represented the fable of Archemorus, who was bitten by a serpent. The gestures and occupations of the surrounding figures are exactly those which we have been illustrating.

Figures 3 and 4 are those of warriors armed with a spear. They do not appear to have any reference to, or connection with, the burial of a woman; perhaps we may risk the conjecture that in the same tomb were placed the remains of a hero, whose acts are represented on the other wall. The cock (Fig. 3) refers, perhaps, to warlike exercises, or to the transitory nature of life; and by its crowing it may be warning persons of the flight of time.

Of the two *pugilatores* (Fig. 5), one appears to be an African, judging from his deep colour and the expression of his countenance. The *manico* were an old custom amongst the Greeks. As to the meaning of this group, again we conjecture that it records the combat of Hercules—the type of the Greeks—with the African Antæus, whom he destroyed by keeping him suspended in the air, and clasping him till he died. Amongst the funeral games the memory of it may have been preserved, and represented as we find it in this tomb. As to the details of these paintings they are highly finished. The cushions are worked in arabesque, and everything is executed in the style of earliest Greek. In the interior of this tomb was found, says the *Athenæum*, "wonder of wonders—a warrior with hair on his skin preserved, and with his body covered with his cuirass of bronze." If so, this fact would confirm a conjecture we have hazarded above. This excavation took place twelve feet under ground, and was made so recently as the beginning of this year.—H. W.

NEW ALMSHOUSES AND SCHOOL BUILDINGS AT FULHAM.

THIS picturesque group of buildings has been erected during the past eighteen months at Fulham. The style adopted by the architect, Mr Francis, is of that latest phase of Gothic known as the Tudor—a character of design which, in the present state of architectural progress, few persons venture to revive. The structure comprises almshouse accommodation, boys' and girls' schools, and master's house. Red brick, with Bath stone for their quoins and dressings, have been used throughout. Stepgabling and embattled parapet-work have been freely adopted.

From the centre of the building rises a tower of important dimensions. This is embattled and pinnacled at the parapet, and in plan a parallelogram. The tower contains—above its lower portion, which forms a groined entrance vestibule—a roomy apartment with roof of open timbers in stained deal. The room is lighted by an oriel window, which, externally, forms a striking feature. In the body of the building is a similar room, for school purposes. Here, again, we find the open deal roofing,

ALMSHOUSE AND SCHOOL-BUILDINGS, AT FULHAM.

stone fireplace, and stuccoed walls, the stucco being pointed to represent ashlar-work in regular courses; a falsity with which stucco, being in itself a true and honest material, should under no circumstances be branded.

THE NEW OPIUM CLIPPER "WILD DAYRELL."

THIS new schooner, the *Wild Dayrell*, has been lately constructed by Messrs. John and Robert White, of the Medina Docks, Cowes, for the old established firm of Messrs. Dent and Co., of Hong Kong.

The yacht-like appearance of this schooner attracted the notice of several members of the Royal Yacht Squadron at Cowes, and other cognoscenti in naval matters, and is in every respect worthy the high reputation of her eminent builders. Her form for beauty, speed, and seagoing qualities is most admirable; and she is so constructed, with extra fastenings and scantling where necessary, as to give her the greatest possible strength, to contend with the tempestuous weather of the China Seas, without detracting from her sailing qualities by overloading her with material.

She has a heavy and most complete armament for protection against the swarms of pirates that now infest the Coast of China, and, in the event of coming athwart hawse of those junks, her "Long Tom amidships" will, no doubt, tell a tale. Her equipment is also of the highest order. All the latest improvements in rigging and sails have been adopted, and her fittings, in point of neatness and finish, are not excelled by the finest yacht. She is commanded by Captain Walter Macfarlane, a gentleman well conversant with the coast, and who expects his *Wild Dayrell* to prove herself to be the fastest model afloat, and the forerunner of a fleet of similarly armed craft for that peculiar trade. Her dimensions are:—

Length over all, 103 3 feet. Breadth, 23.7 feet. Depth, 13.3 feet.
Tonnage, O M., 253 6-94; and N.M., 188 43-100.

THE NEW OPIUM CLIPPER "WILD DAYRELL."

HOUSE OF THE ANGLO-FRENCH COMMISSION, AT SEBASTOPOL

THE ANGLO-FRENCH COMMISSION AT SEBASTOPOL.

IMMEDIATELY after the fall of Sebastopol a joint commission was appointed by the French and English victors to report on the booty found in the city, and to determine its mode of distribution; acting on the principle of dividing the spoils in proportion to the number of men actually borne on the strength of the respective armies in the camps before Sebastopol.

The Commission held their sittings in the villa-like building which Mr. Goodall has sketched. It appears not to have been a place of safety; for their labours were interrupted one day by a Russian shell, which scarcely gave them time to adjudicate on the proprietorship of its splinters, as it burst as soon as it fell through the roof of the building in which they were sitting. The gentleman who acted as Secretary to the Commission was

MR. A. W. JOHNSON, SECRETARY TO THE ANGLO-FRENCH COMMISSION.

Mr. A. W. Johnson, Naval Instructor on board the *Royal Albert*. We engrave this gentleman's portrait.

The number of guns of all kinds captured exceeded 4000; immense quantities of small-arms were carried off by the soldiers, and sold. As the Russians lost 18 000 men between the morning of the 8th and the evening of the 8th of September, it is likely that we captured at least 18 000 stand of arms, not to mention the muskets in store, &c., which belonged to men rendered *hors de combat* during the preceding part of the siege.

A letter from Sebastopol, received in Paris, states that the English have found in the Karabelnais 2222 guns, 300,000 bombs and round shot, engines to the value of £40,000, chains and anchors estimated at £20,000, and metals at £12,000, 3000 tons of coal, more than 3,000,000 rations, and arms and clothing of various kinds.

The *Moniteur* has since published the inventory of the different articles (the guns not included) found by the Allies, and forwarded to the Minister of War by Marshal Pelissier. The principal articles were round shot, 467,314; hollow projectiles, 101,755; canister cases, 24,080; gunpowder, 525,000 lb.; ball-cartridges for muskets and carbines—470,000 in good condition, and 160,000 damaged; waggons, 80; yawls, 6; logs of lignum vitæ, 500; anchors of different sizes, 90; grapplings and small anchors, 50; chains or anchors, 200 yards; old copper for sheathing, 104,000 lb.; old ropes, 100,000 lb.; water-casks, 300; new ropes of different sizes, 50,000 lb.; pulleys, 400; spars, 40; tools, 500; bar iron and steel, 1,460,000 lb.; iron wire, 400 lb.; iron checks, 320 lb.; sheet iron, 16,000 lb.; tin plate, 14,000 lb.; red copper, 120,000 lb.; nails, 6000 lb.; firwood, a large quantity; pitch and tar, 200 barrels; barrels of paint, 150; small boilers, 6000 lb.; the remains of a steam-engine of 220-horse power, taken out of a steamer burnt by the Russians; large copper boilers, weighing 100,000 lb., 8; old copper, 100,000 lb.; copper screws, 10,000 lb.; old iron, 160,000 lb.; large bells, 6; small bells, 10; hospital beds, 850; iron forges, in great numbers; main tackles, 12; coal, 2000 tons; steam-engines, of 30-horse power, for the basins, 2; large pumps, for the basins, 3; iron boilers, 3; 1 high-pressure engine of 16-horse power, for the basins; iron cranes, 17; an engine of 12-horse power in the military bakery; 2 dredging-machines of 30-horse power, unserviceable; a still, a clock, six marble statues, two sphinxes, a large basso-relievo; biscuit, 500 tons; flour, 150; barley, 9; buckwheat, 117; oats, 18; millet, 54; wheat, 20; peas, 1½; salt meat, 60; wheat in the granaries, 600 quarters, &c.

The Commission have made their report, and have decided that all the booty shall be divided between France and England; but it has been agreed at the same time that, after having valued the different articles according to their weight, the distribution should take place in proportion to the number of men in each army; and that, if on this calculation England should have a right to only one-fourth of the whole, she should restore to France the value of the additional amount she may have received at the price of old iron. There is no mention of the Turks in the report. As to the Sardinians, it is unnecessary to say that, being included in the English army, they have a claim to a portion of the amount assigned to the latter.

The orders from home for the preservation of the public buildings and forts of Sebastopol, with a view to their military occupation, and for the repair of the ruins of the town, have led to a cessation of the removal of timber and other articles which were being removed by the troops for the purpose of building themselves for the winter. The following notice has been circulated by General Windham, Commandant of the Karabelnais, in the several divisions, on the subject:—

OCT. 16.—Major-General Windham has just received instructions to prevent for the future anything whatever to be removed from any portion of the town over which he is Commandant. He therefore sends the notice to the Generals commanding divisions, that they may prevent all parties, public and private, from going to fetch anything from Sebastopol until further orders, as he will be obliged to order them back on their arrival.

A. WINDHAM, Major-General.

Memorabilia,

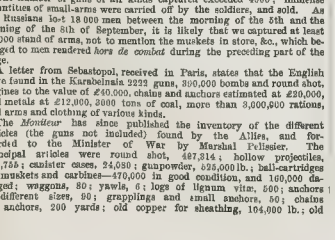
LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

A little chink may let in much light.—OLD PROVERB.

QUERIES.

THE WIVES OF CHARLEMAGNE.—W. T. S.—Your query *in extenso* would occupy more space than can be spared.

[The first wife of Charlemagne (for the testimony of Eginhard and other evidence tend altogether to disprove the alleged fact of his marriage with Hiltrudis, the mother of Pepin) was Desiderata, the King of Lombardy's daughter. From her he was divorced, and he then married Hildegarde, a Suabian lady of rank, and upon her death he espoused Fastrada. She was the daughter of a Frankish noble, named Rodolph, possessed great personal beauty, but is described as a woman of a very cruel and rapacious disposition. In the Cathedral of Mayence there is a curious inscription to her memory, not to be found in the ordinary guidebooks, and of which Victor Hugo, in his book on the Rhine, pronounces the last two lines unintelligible. It is a contemporaneous inscription, removed into the cathedral from an early church, which was destroyed by fire. There really is no difficulty in the translation; but, as the French author thinks differently, we append a facsimile of the inscription, leaving our readers to interpret it if they can.]



FASTRADANA PIA CAROLI CONIVNX VOCIDATA
CRISTO DILECTA FACT HOC SVB MARMORE

AVE

INSCRIPTION TO THE MEMORY OF FASTRADA, WIFE OF CHARLEMAGNE.

COULD you favour me with the origin of the letters *M* and *N* used in the *Church Catechism*, as well as in the *Solemnization of Matrimony*? I have heard it asserted that they were merely taken from the alphabet as being the *two middle* letters, and applied in the same manner as we make use of *A* and *B* at the present time. I think that the letters in question must have had some definite meaning—perhaps the initials of *Maritus* and *Nupta*.—R. V., Pontefract.

AUTHOR OF THE OLD "WEEK'S PREPARATION."—A devotional manual of much fervour for communicants was published in 1679 under the title of "A Week's Preparation towards a Worthy Receiving of the Sacrament of the Lord's Supper." Before long it reached its fifty-first edition. It was afterwards superseded by "The New Week's Preparation," and, in contradistinction, as generally known as "The Old Week's Preparation." Who was the author of this popular manual? or to whom has its authorship ever been ascribed? It has been lately republished.—AN Oxford B.C.L.

CAN any of your readers inform me who Sir Edward de Luck was? He was one of Jack Cade's leaders; and appears to have been decapitated, and had his estates confiscated, which I believe were very extensive (in the county of Kent) for the part he took in that rebellion.—Yours, F. S. A., Athenæum.

SIR JOHN CROSBY, THE REPUTED BUILDER OF CROSBY HALL.—I should much like to know who is the present representative of the above-named Knight. A family of the same name, and of great respectability, residing about fifty years ago in Wiltshire, bore at that time arms and a crest similar to those on Crosby Hall. I shall feel greatly obliged by your inserting this inquiry in that useful department of your Journal, "Memorabilia."—S. T. U.

CAN any of your numerous readers inform me who was the discoverer of the Kingsmill group of Islands in the South Pacific Ocean, lat. 2 deg. S. and long. 176 deg. E., lying to the north of Tasweil Island?—S. T. TAYLOR, Canbury Cottage, Kingston.

IN maps published twenty or thirty years ago the boundary of Europe and Asia near the Black Sea and the Sea of Azoff was the river Don, and, further north, the river Volga; so that the whole of the country between the Black Sea and the Caspian was put down as a part of Asia. In more recent maps and globes I find that this district, which includes Georgia and Circassia, is assigned to Europe, as well as a considerable tract farther north, the river Ural and the Ural Mountains being now put down as the boundary. Can any one inform me when and how this alteration took place, and who has the power of making such alterations?—R. W., Cheadle.

No division of the Ten Commandments being given either in the Old Testament or the New, although the expression "ten commandments" occurs in Exod. xxxiv. 28, and different churches having divided them differently, some making three commandments in the first table, and seven in the second, while others make four in the first, and six in the second; the following queries, to which I have in vain sought an answer in books, become interesting:—Are there any ecclesiastical or other records of the Middle Ages, or earlier, containing the commandments divided into ten distinct precepts? If so, what are the dates of such records? and what is the division there adopted? If there are none, what is the earliest instance of their being divided, and how did the difference arise?—R. W.—Cheadle.

PARALLEL HISTORY.—In one of Horace Walpole's letters, written in 1747, to Sir Horace Mann, he speaks thus of the battle of Lasfelt, in which the British (under the Duke of Cumberland) and their allies were defeated:—"We gave them, or did not take, the advantage of situation: what

part of our army was engaged did wonders. * * * We had contrived to post the Austrians in such a manner that they could not assist us; we were overpowered by numbers. * * * The Duke was very near being taken, having, through his short sight mistaken a body of French for his own people. He behaved as bravely as usual; but his prowess is so well established that it grows tame for him to exert other qualities of a General." So much for the military executive. In a subsequent letter he thus alludes to "the system" pursued in the choice of our diplomatists:—"You know little of England if you think such and so quiet merit as his is likely to meet with friends here. Great assurance or great quality are the only recommendations. My father was abused for employing low people with parts; that complaint is totally removed." This of course is an "age of progress"; yet I will venture to ask if these words might not, almost literally, have been penned in 1855?—A. YORKSHIREMAN.

ANECDOTE OF LOUIS LE GROS.—In the "Histoire de France," by Theod. Burette, 8vo, Paris, 1840, in the account of the battle between Louis le Gros and Henry I. of England, A.D. 1119, we read, "Louis, de son côté, failli, dit-on, tomber entre les mains d'un archer Anglois, qui saisit la bride de son cheval, et s'écria, 'le Roi est pris.' Le Roi l'abat * * * de sa masse d'armes à ses pieds, en disant, 'Ne sais-tu pas que le Roi ne se rend pris aux Archers?'" The writer adds, "Si l'on accepte cette anecdote, *qui ne se trouve ni dans Suger, ni dans Orderic Vital*, les deux grandes sources historiques pour ce règne, il semblerait que la journée de Brenneville eut été très sanglante." In many English writers the authority given for this anecdote is *John of Salisbury*, after an attentive perusal of his works I cannot find the passage. I would, therefore, inquire who is the earliest writer in which this anecdote is related, either French or English, and who first erroneously quoted John of Salisbury as the author of it? I find the error in Lambe's "History of Chess," published in 1764, and from him it has been repeated by numerous compilers of similar works. Where did Lambe find the anecdote, for it is certain that he borrowed it?—F. MADDEN, *Mus. Brit*

GOSSIP'S BIBLE.—Can any of your readers inform me if there is or has existed such a thing as a "Gossip's Bible?" If there has been such, I should be glad to know where I can meet with a copy, and if not, I would suggest that several others exist in England; but it has never been my fortune to hear of another. The date of the one I have seen is 1632, and a now neighbour, to whom I recently told how "these good Welsh people" still keep up the custom, thinking it "An excellent one," with the addition of a pretty piece of plate, by Chester, "I must read to you a passage in it." I thought it the oldest story and a true and pertinent one, and therefore make use of your most excellent institution of "Memorabilia" ere I go into the records in the British Museum.—W. B.

LOOSE LEAVES, OR WORD-LORE.—(No. I.)

IF any study be more useful than another to guard against assuming a thing to be true because it is specious and obvious, *word-lore* is that study. The changes and corruptions which words undergo in their passage from one language to another, or in the same language, from one generation to another, are so manifold and so delusive that, in many instances, they not only lose their resemblance to the true root, but acquire a resemblance to another by which even the lexicographer is occasionally deceived. I now propose to notice a few instances of this kind which have not, to my knowledge, been previously detailed.

Take the word "Milksop." The derivation seems obvious and suitable enough. And so, I presume, Webster thought it. As he supposes a noun at all. Yet there is the shadow of doubt that this is a compound. The word is the Anglo-Saxon *Miltesoc*, that is, melt-sick or hypochondriac. The latter word (hypochondria is *Milt-seocnesse*.

Another, and yet simpler, example is that of the word "Ready," which Webster without hesitation refers to "head," deemed probably by the use of the word *headstrong*. But *heady* is merely the English equivalent of the German word *hefftig*, violent, which has no near connection with the word *head*, "head;" though probably a scion of the same root.—*James*, to heave.

Now take "Goodman;" "the goodman of the house" in our English Bible, "goodman Dobson," &c. Here, too, Webster has evidently no doubt that the obvious derivation is the correct one. Not so, however, I am convinced. The term is corrupted from the Mœsogothic and Anglo-Saxon word *guma*, a man, which in most of the inflected cases appears as *guman*—whence the corruption.

Another corruption of this same word *guma* (which Webster has noticed) occurs in the word *Bridegroom*, which ought to be written *bridegome*, or *brudegum*, for the form *gom*, a man, occurs in our older poets. I need hardly add that *gome*, *gumen*, is the same as the Latin, *homo*, *hominis*, and I think it probable that this is one of the words which passed into the Gothic from the Latin language.

R. S. S. A.

ANSWERS TO QUERIES.

WAS SHAKESPEARE EVER IN SCOTLAND?—I think it very probable that Shakspeare did visit England, and for the following reasons: It is certain that a company of *English* comedians visited Edinburgh in 1593, when King James VI. was a great promoter of the drama, gave them a license to act, "though he thereby offended the [illegible] Bishop Spottiswood, who gives extraordinary [illegible] in his "History of the Church of Scotland." [illegible] company of native comedians in Scotland [illegible] VI's reign. James I. arrived at the Charter-house, London, on [illegible] May, 1603, and on the 17th of the same month granted a license to his servants, Lawrence Fletcher, WILLIAM SHAKESPEARE, Richard Burbage, and others, "freely to use and exercise the arte and faculty of playing comedies, tragedies, histories, enterludes, moralls, pastorals, stage plaies, and such other like, &c., as well within their now usual howse called the Globe, [illegible] within such towne halls, or mont halls, or other convenient places within the libertues and freedome of any other cite, universitie, towne, or [illegible] whatsoever within our said [illegible] and dominions, the [illegible] at full in Her Majesty's [illegible] Therefore, then, from these [illegible] obtain the Royal [illegible]

"THOSE MARRIED LIGHTS," &c.—The passage in Shelton's "Epesprychdon."

STIRLING.—The cloisters of Winchester College Cathedral, the original roof of 1487. It is entirely free from cobwebs, and is composed of [illegible], or oak, it is doubtful which. A WYKEHAMIST.

LITERATURE.

LANDS OF THE SLAVE AND THE FREE; or, Cuba, the United States, and Canada. By Captain the Hon. HENRY MURRAY. J. W. Parker and Son.

This is an excellent exception to our usual books of travel. Indeed, we fancy the author must be a happy exception to the common run of travellers, and, so far as we can judge of him by his book, should like no man better for our *companion de voyage*. There is a racy, life-warm humour about him which makes the current of his narrative merry and musical as a hill side brook. Like the brook, too, if he meets stony obstacles, prejudice, ill-will, vulgarity, he only showers over them from a cloud of his own exuberant spirits. He seems himself, singularly free from the amiable qualities just named. Professing, as all travellers do, a disgust for political partyism and a freedom from its trammels, Captain Murray is one of the very few who have been *just as tenacious of principle* and taken up men and measures in the light of its distinctive good sense and sincerity. We wish we could quote some of his comments at length by way of illustrating our author's impartiality; but, even if we could, it is not so much by isolated passages that this is manifested, as in the honest and fearless, yet generous and graceful spirit which pervades the whole. When a cultivated man, whose powers of observation have been further sharpened and, so to speak, subtilised by much intercourse with the world, writes a careful book of travel in such a happy spirit of courtesy and sincerity, he confers no common boon on society. With a thorough knowledge of his own country, he sets out to examine the condition and prospects of another. He institutes a comparison between contemporaneous states of existence, and shows men on one side the ocean what problems—in polity, philosophy, ethics, industry—have been solved by their brethren on the other. It is thus that the successful traveller anticipates the slower evolutions of single national life; and, so to speak, quickens human progress. We are not over estimating these interesting volumes of Transatlantic travel when we claim this high merit for the new and striking results elicited by Captain Murray's energy and penetration. Whether he is examining a peasantry, or criticising a national institution; inspecting a school, or scudding before the wind in the light yacht of the *Wild Marie*. he can still catch his humour and lay America and America by England. Let not the habitué reader take alarm at what may seem the forgetfulness and useful character of the book. It is a fallacy long vanished that in order to instruct it is necessary to be dull. Truth lies often nearer the surface than we think, and can be found without the solemnities of spectacles and a wig. Our author has a gift of easy, yet thoroughly racy, expression which never fails him. Indeed his style, with its pressure humour sometimes exhausts and irritates by excess our straitlaced selves; and if we might counsel the author for his next edition we would suggest as politic a few passages of a different character by way of relief. Here is a racy episode —

As it may interest some of my readers, I will endeavour to retail for their amusement a sketch which was given me of a scene of boat-racing in the olden time. The *Screecher* was a vessel belonging to Louisville, having a cargo of wild Kentuckians and other passengers on board, among whom was an old lady who, having bought a winter stock of bacon, pork, &c., was returning to her home on the banks of the Mississippi. The *Burster* was a St. Louis boat, having on board a lot of wild backwoodsmen, &c. The two rivals met at the confluence of the Ohio and the Mississippi. Beat or burst was the alternative. Victory hung in one scale; in the other, defeat and death. The *Screecher* was a little ahead, gradually the *Burster* closes. The silence of a death-struggle prevails. The *Screecher* has put on more wood, and place more weight on the safety-valve; she bounds ahead. Slowly, but surely, the *Burster* draws nearer. The captain of the *Screecher* looks wistfully at the fire, for the boilers are well-nigh worn out. The *Burster* is almost abreast. The enraged Kentuckians gather round the Captain, and, in fury, ask, "Why don't you put more weight on?"

Captain: "Boilers are done: can't bear it, nohow."

Kentuckians: "Can't bear it! you chicken-hearted coward"——. Knives are drawn, pistols cock a hundred muzzles levelled, "Put it yourself, or I'll bury this knife below your outer skin." Their eyes gleam, their hands are raised for the deadly blow. Wild boys, these Kentuckians! the Captain knows it too well. A choice of deaths is before him. A moment decides he mounts the breech, lights the *Screecher* down through the waters, quivering from head to stern. The Kentucky boys yell with delight and defiance. Again the *Burster* closes on her rival: Kentuckians brandish their knives, and call to the negroes, who are already half-scalded, "Pile de wood, pile like forty!" There is a negro on the fire now for every foot the *Burster* gains. Soon a cry of exultation is heard on board the *Burster*, as she shoots up close to her rival. The enraged Kentuckians gnash their teeth. "Oh, I swear! oh, by all creation!" "I smell it!" exclaims the old lady with the scent of bacon. A new gust flash fire: a few words to her slaves Pompey and Cæsar, and casks of bacon smashed quick as thought lay before the furnace. In it all goes: the *Screecher* is wild, the Captain bounds up and down like a parched pea; again the fight rages on the decks of her foes, "like a streak of greased lightning!" Suddenly -horror of horrors. the river throbs beneath: the forest trees quake like aspen-leaves; the voice of many thunders rend the air. The *Burster* is blown to atoms! The Captain sinks down, and joins his Kentucky boys in a yell of victory, through the bass notes of which may be heard the shrill voice of the old lady, crying, "I did it, I did it—it's all my bacon!"

We would gladly extract from the author's graver pages, or at least sketch the main features of his [illegible] but our limits will not allow this. We would only [illegible] to take it down with him to rural [illegible] and, as for the author, we will say of him [illegible] "I do desire of thee a little favour." Captain Murray may travel again.

PASSAGES SELECTED FROM THE WRITINGS OF THOMAS CARLYLE With a Biographical Memoir. By THOMAS BALLANTYNE. London Chapman and Hall.

There are few great writers of the present day with whose history the literary world is less acquainted than with that of Thomas Carlyle. It is now more than thirty years since he made his appearance as an author. In the house [illegible] his name has been a great [illegible] of that pastoral [illegible] [illegible] th year, is a [illegible] versity, [illegible] Lord student, and a yo[illegible] in the teaching of mathematics, in which he was greatly successful. At this period, he became tutor to the late Mr. Charles Bailey, in 1822, and continued in that capacity for a year or two, during which time he wrote the "Life of Schiller," and translated "Wilhelm Meister."

Both works [illegible] [illegible] In *Blackwood* [illegible] [illegible] [illegible]

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen, Prince Albert, and the Royal children, it is expected, will be at Osborne Palace the first week in December, provided the King of Sardinia does not visit England, which is anticipated.

The French Emperor left Paris on Monday morning for Fontainebleau, on a shooting excursion. Amongst the personages invited to accompany his Majesty are the Ambassador of England, the Minister of State, Count de Morny, and Baron de Rothschild.

The Duke of Cambridge is, it is said, immediately about to visit Paris, having been most pressingly and especially invited to do so by the Emperor of the French.

The Madrid *Gazette* of the 29th ult. publishes a bulletin stating that the King had been able to leave his bed, and had nearly recovered from his recent accident.

The Duchess of Sutherland arrived at Stafford House from Paris on Saturday. Her Grace had the honour of dining with the Emperor and Empress of the French, at the Palace of St. Cloud, on Thursday evening.

The French Emperor, wishing to shew his high esteem for General Bosquet, who was so greatly distinguished in the Eastern war, has sent Capt. Morand to Constantinople with the military medal.

All the members of the Cabinet will, it is said, assemble in London about the 16th inst., when a series of Cabinet Councils will be held.

The Duke and Duchess of Montpensier are now at the Castle of Compiègne, where the Countess of Neuilly (the widow of Louis Philippe), and the Duke and Duchess of Nemours, are staying. The Duke and Duchess of Aumale are expected at Genoa.

The people of Bradford are about to inaugurate a statue to the late Sir Robert Peel. The work of art has been executed by Behnes

The French Emperor, on Monday, gave an audience at St. Cloud to the Chevalier Paleocapa, Minister of Public Works at Turin, who came to Paris to be present at the deliberations of the International Scientific Commission on the subject of cutting through the Isthmus of Suez.

Earl Gifford has been returned for Totnes without a contest, in the room of Lord Seymour, removed to the House of Lords on his accession to the Dukedom of Somerset.

Princess Amelia, sister to the King of Saxony, who has been afflicted with cataract in both eyes for some time past, left Dresden for Leipsic on the 29th ult., to undergo an operation, the performance of which has been intrusted to the distinguished oculist, Dr. Cocceius.

Lady Molesworth, widow of the late Sir William Molesworth, has taken a house for the winter season on the West Cliff, Folkestone.

The Archduke Albert arrived at Naples on the 20th ult.: he intends to pass all the month of November in that city or the neighbourhood. During his absence the Archduchess Hildegarde, his consort, is to remain at Vienna.

The Bishop of Melbourne intends to leave this country, and proceed to his diocese on board Mr. Green's ship the *Wilmer Castle*, which is advertised to sail from the port of London on the 26th of next month.

On Saturday, the 3rd inst., the Austrian Minister of Finance, Baron Bruck, announced the ratification by the Emperor of the new Commercial and Industrial Bank, according the right of founding it to the house of Rothschild, the Princes Furstenberg, Schwarzenberg, Auersberg, Count Chotek, and Louis Hafner; the capital to be one million florins.

The statement that Mr. James Wilson has resigned the office of Financial Secretary of the Treasury, and has accepted the chairmanship of the Board of Inland Revenue, is contradicted.

Baron de Hugel, who was Ambassador of Wurtemberg at Vienna, has been named Minister of Foreign Affairs in the Wurtemberg Cabinet.

The Belvidere estate, near Broadstairs, formerly the property of Mr. Fletcher, has been sold to Mr. Mackinnon, M.P., who is making great improvements in the grounds.

The statement that Mr. T. E. Headlam has been appointed one of the Civil Service Commissioners is without foundation. It is now said that Mr. James Campbell, Q.C., has been appointed to the vacant post

The Marquis de Moustier, Ambassador of France at Berlin, returned to that city on the last inst., and the next day paid a visit to Baron de Manteuffel, President of the Council of Ministers.

The Lords of the Treasury have consented to grant retiring allowances to persons employed on the ordnance survey of the kingdom, when, after a continuous employment of not less than fifteen years, they shall be unfit for service.

The Chevalier Pietro Strada, of Turin, has offered a prize of 1000 francs for the best dissertation on the "Organisation of Medical Assistance in Country Districts, with a view to the practical improvement of the present system."

Mr. A. Buchanan, the British Minister at the Danish Court, left town on Saturday last for Copenhagen, to resume his diplomatic duties after a brief leave of absence.

By the death of Mr. French, of the county Roscommon, Mr. C. Coppinger, Q.C., inherits a property stated to be worth £1800 a year.

Mademoiselle Rachel has closed her performances in New York. Peacefully it is represented as very successful to all concerned.

General Regnault de St. Jean d'Angely, who was compelled by serious illness to return to France, and whose health has now improved, has resumed the command of the Imperial Guard of Paris.

It is stated in the *Law Review* for the present month that Mr. Joy, Q.C., Vicar-General of Chancery, has bequeathed £2000 to the society for the Amendment of the Law."

M. de Lamartine is expected to be present during this year at the usual annual rose given by the members of the Huddersfield Mechanics' Institution.

A work by Mr. W. Smith O'Brien, the Irish exile, is announced under the title of "The Principles of Government, or Meditations in Exile."

Mr. Charles Braham has made his début at the San Carlos, Lisbon, in Verdi's "Macbeth," and although he had to encounter opposition, has succeeded in making good his footing, and at the latest dates had established himself as a universal favourite.

Mr. C. Gavin Duffy sailed from Kingstown on Saturday for Liverpool, and was to leave that port for Australia on Monday.

The people of Honolulu have decided on erecting a column to the memory of the late King of the Sandwich Islands. The inscription will be in the following manner:

The *Moniteur* contains between seven and eight columns of names of officers on whom have been conferred the military medal for services rendered in the Crimea.

Peter's Grange Arcade, the property of the Marquis of Exeter, was sold by auction on the 14th instant

At the Hamburg theatre a fountain has been erected in the middle of the orchestra; it will play during the acts, and is intended to cool the house. The musicians are arranged on each side of it.

Count [illegible] has exhibited the expediency of the purchase from Mr. [illegible] anticipated that [illegible] will [illegible]

[illegible] the Deputies belonging to the [illegible] and Prussian Chamber have declined.

DEFEAT OF THE RUSSIANS BY

TURKS, AT KARS.—(SEE PRECEDING PAGE.)

PROPOSED ANGLO-GALLIC SUBMARINE RAILWAY.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

In taking up the subject of subaqueous railway transit, as applicable to rivers and straits, it may be deemed useful to collate briefly the various schemes that have, from time to time, been put forward. If, in the following enumeration, there should prove to be any hiatus, I hope some other correspondent will afford the data for filling it up.

In 1838 Mr. Rettie, C.E., of Glasgow, stated that he first suggested submarine railways, similar in construction to the plan of Mr. De la Haye, of Liverpool, hereinafter mentioned. I have not been able to find in what publication he did so.

In 1842, it appears, Mr. E. Pearse, of Tavistock, Devon, published a letter on the subject of submarine railways, in the *Railway Times* (see the *Builder* of March 21, 1846), in which he says:—

> I feel assured that an iron tunnel from Dover to Calais might be laid down at a vastly less comparative cost than the Thames Tunnel; for, instead of so many brick arches, one over the other, the whole might be speedily, and less expensively, constructed, by dovetailing segments of the arch, one after the other, using the shield, as in the Thames Tunnel, where the chalk would have to be bored, and the diving-bell, where the operation is carried on merely at the bottom of the sea. * * * I cannot help thinking that the entire cost of the work would fall greatly short of the estimate Mr. De la Haye has given.

In 1845 Mr. De la Haye proposed submarine railways for rivers and narrow seas; and instanced Liverpool and Birkenhead, North and South Shields, and Dover and Calais, as three of places to the connection of which they would be applicable. He says:—

> My plan is simply to construct wrought-iron tunnels in separate divisions; to sink them on the bed of the water; and then to connect them. * * * It will be admitted that to construct such a tunnel would be an easier matter than to build iron vessels, as it would be the same shape the whole length; then to sink it on the bed of the water would be the work of only a few hours for each division of 400 feet in length. Perhaps the part of the work which will appear the most complicated will be to connect the divisions under water. * * * This operation will be attended with no extraordinary difficulty to those who can remain during half an hour in deep water. * * * As regards that part of the tunnel which would be near the shore, it would be sunk under ground, and covered with stones fastened together, so as to render them immovable. * * Then the railway will be formed in forming the tube; there will be no hills to cut through, valleys to fill up, or arches to build; in short, the sum total of the work is comprised in the tunnel itself.

Supposing the divisions to be 1000 feet in length:—

> In that case, only 104 divisions would be required to join the rails of the South-Eastern Railway with those of the Calais and Paris, supposing each of these divisions would cost £40,000, the cost of the whole would be £1,160,000; and if we allow for the expense of throwing them in deep water, of connecting them, of building stations, &c., on a magnificent scale, it will, I believe, be found that the sum of £8,000,000 sterling would be quite sufficient to complete this submarine railway.

In 1848 M. Ferdinand, engineer, submitted to the French Academy of Sciences a proposal to construct a floating tunnel from Calais to Dover, to carry the wires of the electric telegraph, and large enough to be traversed by small locomotives for the conveyance of passengers.

In November, 1851, is depicted in the ILLUSTRATED LONDON NEWS the proposition of M. Hector Horeau, of Paris. From that number I extract the following description:—

> M. Horeau's project consists in crossing the English Channel, twenty-one miles in extent, by means of a tube made of strong plate of cast iron, lined and prepared for that purpose; and which, placed at the bottom of the sea, should, besides the path for the surveyors, contain the two lines for the trains which would run within it. The scope given to the submarine railway would admit of a motion sufficiently powerful to enable the carriages to cross the Channel without a steam-engine. The greatest depth of the sea at the middle of the Channel will admit of the construction of inclined planes, by means of which the train would be enabled to reach at once a stationary engine, or atmospheric pressure might be employed in propelling the train to the level of the land railways of France and England. These tunnels beneath the sea would not prevent navigation. Two lighthouses might be erected on the entrance of the tube near the shore ones between the lighthouses of France and England. These beacons should be lighted up at night, and would indicate outwardly the position of the submarine railway, so that mariners should not cast anchor near it, as the tubes might be damaged. The day and night lights of the lighthouses should be transmitted through the tube by means of reflecting metal plates. The upper part should have some strong glass windows, placed at equal distances, and gas, which would complete the lighting between the beacons. According to an estimate made, the cost might amount to about £37,400,000.

On June 2 of the present year appeared in the *Glasgow Citizen*, from the *Bonhgne Gazette*, the following notice:—

> There is once more a serious intention of uniting France and England by a submarine railway. The latest project is that by Dr. Payerne, who, with 40 submarine boats (of which he is the inventor), 1 steam-vessel and navies, 1 sloop-of-war, 1 yacht, and 1 steam-frigate, at a sterling expense, would undertake to construct a tunnel, by means of which the straits that separate the two countries would be crossed in thirty-three minutes. The portion of this tunnel would be, no doubt, nearly parallel with that of the electric telegraph, and contiguous to it, as being the narrowest part of the Channel, as well as that where the depth of water is the less.

On August 26 the *Builder* and *Glasgow Citizen* had notices, derived from *Gangnani*, stating that M. Favre, an engineer, had publish d observations relative to the possibility of making a railway *under* the Channel. The length he states at 30 kilomètres (18½ English miles), and its position such as to leave at least 25 mètres (82 English feet) between the arch and the bottom of the sea. The tunnel to be lined doubly, namely, with brick at first, the latter pierced with narrow openings in order that infiltration might be perceived. On July 21, in the *Builder*, was a brief notice which appeared to have reference to the same scheme. It speaks of the revived project of tunneling beneath the Channel, lining with iron, and making the tunnel level from shore to shore, in default of falling towards each end to drain off the water by help of steam power.

On October 24, in the *Times*, appeared further particulars of M. Favre's scheme, from which it seems that gentlemen, encountering difficulty of getting out (and, depending of the external mass of water between the portions adjacent to the two shores, proposes to sink a series of shafts through the bed of the Channel for that purpose.

I doubt whether Mr. De la Haye had a due appreciation of the difficulties probably to be encountered in the more than 100 feet of the Channel, at its bed [illegible] the engineering difficulties. Having adopted the total [illegible] that he would have only about 1-11th that of M. Horeau; but I presume it is that the cost of tunnelling between London and Paris must have put pounds for francs; for the latter would give £7,861,666 13s. 4d., or £178,412 13s. 11¾d. per mile in itself a pretty fair price, although I believe insufficient for the submarine railway Mr. Pearse, however, thinks that the entire cost would fall greatly short of Mr. De la Haye's estimate.

M. Horeau adopts the same position the bottom of the sea; but, rightly anticipating a greater depth about the centre than near the sides of the Channel, he proposes to adopt his tunnel in each moiety of its length, and so let the train proceed on its journey by gravitation solely: and, by means of the accumulated velocity obtained, it is to be enabled to reach a point, perhaps half-way, on the opposite shore. There it is to be pulled up by some applied power and propelled through the remainder of its course.

I do not know whether M. Horeau regarded the curvature on the sea due to twenty-one miles of distance. A line of equal gravitation would be concentric with that curvature; while the dead straight would form an increasing gradation towards the middle of its length, and form an attraction towards that point, which would be tantamount to the impediment thereto, and therefore of itself preventing the motive power from reaching it. But as it may, the difficulty arises—that the gravitation, having brought the train to the middle of the tunnel, would there begin to exercise a retarding influence, preventing its progress onward, as a line of equal gravitation. And I conclude that the proposal to introduce stationary engines for supplementing the gravitation as a motive power is open to grave objections, even against the gravitation power itself might fairly be urged that of the liability of the train to escape, when it ought to be caught, and start off back again, *by gravitation*.

M. Horeau must have, surely, to the difficulties of the bottom—adopts the surface in his project; thinking, as it would seem, the disadvantage that than these would be an end to navigation up and down the Straits. In such a position the tunnel would be exposed to the full action of storms, [illegible] of the wave against its sides, but the swelling of the sea and [illegible] which it was borne; and also the pressure of the tides, [illegible] would be an important barrier.

[illegible] to keep the tunnel from its bed, in a position suitable for [illegible] power to be [illegible] Channel, to connect the tube with the land, would also be an undertaking to hesitate upon. As regards the carrying a brick tunnel *underneath* the bed, while its great depth at the ends would be very objectionable, its enormous cost would place it out of the question.

If the tunnel supported from the bed be next to impossible, the tunnel floating on the surface athwart the course of the Channel is equally untenable, seeing the objection as regards the navigation. But in these days of angle-iron and boiler-plate, and when such a thing as the girdling the earth in forty minutes, as *Puck* talked of, would be readily undertaken by our telegraphers, this great project should not for such reasons be discarded. It becomes, rather, a duty, first, to see whether the thing proposed is worth having; and, if so, whether it can be brought within reach, by divesting it of the difficulties in which it may seem to be enveloped.

To myself it appears that an intermediate position for the tunnel might be adopted, by which both the objections just referred to would be got rid of. I propose to situate it at a uniform depth from the surface by means of ties below (and buoys above, if necessary) at suitable intervals. The continuation of the tunnel into the shore on either coast I should dispense with; and, in order that it should have a partial freedom of motion, it should terminate with solid ends before reaching the shores. To these points chain-piers should extend; or, if strict economy (say in the first instance) were aimed at in this item, the communication might be by small steamers. From the end portion at either termination of the tube a shaft or staircase should rise, terminating above the surface of the water in a railed and buoyant platform, with roof and other appliances for shelter and comfort. Between the terminal platforms, as it would probably be considered that ventilation could not be efficiently provided for at these alone, such intermediate shafts, of buoyant construction, should be provided as might be determined on.

The trains might be alternate from opposite shores, and the engine retain its position at one end of the train—pushing one way and pulling the other—there being only one pair of rails. Thus the subaqueous arrangements would be very simple. Electricity should, if at all practicable,

PROPOSED SUBMARINE RAILWAY.

be the motive power; and it is now pretty evident it might be the lighting medium. The top and sides of the carriages should be of glass, and the light in the tunnel continuous, that those who reside might read. In the sides of the tunnel there should be none of that material.

Supported from the buoyant base of each ventilation shaft might be one or more bells, so arranged as to be swung by the action of the wind and sea, and thus give notice to mariners by night of their proximity to the tunnel beneath them: or, were it considered desirable, the upper part of the shaft might be illuminated, as proposed by M. Horeau, so as to serve as beacon and indicate at night the position of the tunnel.

The principle of construction which I should propose would be analogous to that pursued in the cooper's craft; the tube should be cylindrical, and consist of a system of staves and hoops. The staves should be about a foot thick, of wrought iron, hollow; the side which formed an internal part of the interior of the tube, slightly concave; the opposite, slightly convex; the other two, planes proceeding from the axis in radial planes, or joints, should be a semi-cylindrical sinking, the two having forming as a whole, for receiving a cylindrical iron cord, or tongue, covered with some flexible material, which should also pervade the remainder of the joint, outside and inside the tongue. The hoops should be strong straps, say nine inches broad, in two or more pieces in the circumference, with staple-and-s of junctions, or any other of a tightening description. They should be placed close together, and numbered along a given line outside with the chisel, say every tenth from one shore, the number corresponding to others in the interior of the tube; so that, in the event of any [illegible] the infiltration of water, the place could be readily found with the help of a diving-bell, and remedial measures taken. Between the outside of the staves and the hoops a lining of flexible and stretched material, similar to that described for the joints, should cover the entire tube.

The line of direction being duly determined, the construction should commence at one end and proceed to the other, the staves in as long lengths as practicable and systematically breaking joint. This would become with suitable centring, upon framework fixed in halves upon pairs of barges, in a right pentagonal-like form and capacity, proportional to their burden, and placed with their butt-ends toward each other, successively moored, transversely to the tube, and connected together by chains. These could [illegible] be placed to the tube. [illegible] and be fixed [illegible] and [illegible] the estimated [illegible] drawn buoyancy, would per [illegible] and they would be reduced in number under the finished work [illegible] drawing such pairs as were not necessary for its support. [illegible] to construct one [illegible] under the other, the [illegible] [illegible] lining it with [illegible] work, dowelled so as not to depend for its strength [illegible] glory; also the forming the sideways, and [illegible] [illegible] the basis or materials—the brickwork being for the [illegible] [illegible] represents its gravity [illegible] dropped so as to lie in two [illegible] [illegible] parallel with [illegible] from the shore. The [illegible] [illegible] however decided would of course [illegible] [illegible] [illegible]

WELLS CATHEDRAL.

Among the most delightful of our reminiscences, connected with ecclesiology and the charms of English landscape, are those resulting from our repeated visits to Wells and its truly romantic neighbourhood. While our other cathedral towns have fallen within the iron network, whose meshes overspread the length and breadth of our island, Wells has to this day preserved the seclusion and quiet which have been its undisturbed heritage through centuries upon centuries.

In most of our cathedrals the solemn Gregorian has been, years since, commingled with the wailing shriek of the locomotive. Modern science has pierced the repose and jarred the associations of ages. But at Wells the lofty vaulting would seem to have never reverberated with an interruption more strange than that of the jackdaw's caw or the croakings of a rusty vane. And if at this day those munificent prelates Jocelin de Wells and Beckington, were to revisit the sacred pile, they might hear and listen within its hallowed precincts and hardly know that they had slept while many generations had successively arisen and passed away. In the building they would discover nothing that would tell of periods of whitewash or of vandalism of a more destructive kind; nothing that would indicate how the graceful aisle had been hampered with those wretched benjamins of smoke, which, in the form of monumental tablets, had encrusted and disfigured its walls. They would, indeed, in the choir, [illegible] and would still [illegible] witnessing the crumbling decay the very wreck of that sculptural splendour which, in their own days, had embellished the west front, and outrivalled, in England, all else of the kind. But, beyond these, and perhaps a few other such changes, the ancient city would appear to have evaded the influences of centuries. Little trace can be found in it of modern science and improvement, for of that steam-impelled whirl of commerce which elsewhere has obliterated so much that had remained to us of other times. The Mendip Hills, by which the town is engirdled, have held their own against the disciples of Watt and Stephenson. Rail rail and steam, after having been long held at bay by the hilly barrier, are at length to triumph; and peaceful Wells, with its silvery pan nales, moated palace, and memories of feudal England, is to have its railway station—is at last to yield to the spirit and bear the stamp of the century.

During the last few years—or, to speak precisely, since 1842—the renovation of the interior of Wells Cathedral has steadily progressed. A fund, headed by a £1000 subscription from the late Archdeacon Hyrme, and supported by very liberal contributions from Dean Goodenough, the late Dean and his lady, Mr. Dickenson, and other lovers of ecclesiastical architecture—having been raised, the professional services of Mr. Benjamin Ferry were in the first instance sought, and under the judicious direction of that gentleman, the nave, transepts, aisles, and lady-chapel gradually underwent *restoration*. We use this term in its strictest sense—for it is a word of many meanings as nothing was attempted in these portions of the structure beyond the removal of the thick coatings of whitewash which covered the entire interior of the building, the banishment by the reore of marble tablets and other monuments, and the repair.ng of fractured columns, mouldings, quoins, and carvings. In all instances the work was carried out with most conscientious care. Carvings of the greatest delicacy were relieved, without injury, from their integuments of plaster; and in the repairs of the masonry, done for the most part by local hands, can be discovered that freedom and life of manipulation which so precisely accords with the character of the old work.

In the vaulting of the lady-chapel, and, in a lesser degree, in that of the nave, some decorations in polychrome were essayed. These, although in some cases founded upon ancient patterns, discovered beneath the whitewash, can be considered as but partially successful. The patterns in themselves may be good enough, and there are obvious reasons why such traces of the old designs as were brought to light should have been preserved: But while nothing is more glorious in effect than a general system of colour in church decoration, few things are less pleasing than poly chromatic dribblets; and yet most of our cathedrals have been trifled with in this manner. We acutely remember the execrable instance of this sort of thing in the roof, at the intersection of the transepts, at Rochester; and now Wells, like its sister buildings, exhibits just that amount of colour which painfully indicates the want of more. In this instance, however, it is satisfactory to see that *what* has been done has been done well—a circumstance which makes the work peculiar in its way.

Wells Cathedral, in common with probably all religious edifices of early Christian art, was originally decorated with colour *throughout*—a fact which was satisfactorily established during the repairs; for, not only were traces of red and gold found in the carvings in all parts of the building, but on the walls, and even in the mullions of the windows, were such evidences discovered. The primitive colours and gold seem to have been systematically applied to the carved and elaborate portions of the structure, while on the plain ashlar-work it had been adopted a simple diaper, in white and chocolate colour, of a pattern that not uncommon at the period. On a white ground were coloured lines arranged in a manner similar to the joint markings of brickwork; and in the spaces were either circles or lozenges. In the latter the east window was the attention of Mr. Willmett, with considerable success.

The [illegible] in 1848, under the guidance of Mr. Ferry. To a surplus remaining from the former fund were added fresh subscriptions. These means having been exhausted on the general renovation of this part of the Cathedral, the late worthy Dean testified his great regard for the building by so liberal a provision of money as enabled the architect to carry his stalls round the north and south sides of the choir, and thus bring his work to completion. It will be seen by our Engraving of the choir that the new stall-work is not only of unusual material—stone instead of wood—but is peculiar in position, it being placed, in portions, *between* the piers, in opposition to the ancient practice by which they were always arranged in front of them. To gain the site thus required for the new stall-work, it became necessary to set further back the screens between the piers, and to effect this the removal of several stone coffins or tombs, which had been placed in the choir aisles, became compulsory. These tombs were known to contain the remains of some of the early bishops and dignitaries of Wells; and, on the removal of the lids in each case rudely-sculptured with an effigy representing the occupant beneath—were found the decayed remnants of all that was mortal of those once important personages. The vestments in which they were consigned to the last resting-place were, in two or three instances, clearly indicated. Tr-bed the materials of which armour and silk formed a considerable portion, at first yielded a bright and almost gaudy effect—mocking, as it were, the symbols of [illegible] by still enveloped; but the influence of the atmosphere soon reduced all to irrecoverable dust. In each of these repositories was found a thin leaden plate upon which was inscribed, in Latin, the name of the ecclesiastic and date of his decease. These were confirmed, in several cases, the speculations which had been made as to the identity of the effigies.

The bold departure from established authority in the treatment of the stall-work has provoked some difference of opinion as to the propriety of the innovation. Many, among whom was the late Dean, being so [illegible] and the natural [illegible], as to prefer the treatment to the ancient [illegible] the warmth of their enthusiasm, to express a [illegible] the beautifully-planned piers were ever intended to be hidden by stall-work. This theory, however, is quite untenable, as the Architect's stall-work, of a date close upon that of the Wells choir, would testify.

The new stall work is of elaborate character. In each arch are five [illegible] of an early type, supported with detached shafts of Purbeck marble, shafted: the canopy is of the plain gable form, crowned with a sub-gable arch, which projects from the springing to the finial. These are richly carved with crockets, cusp ornaments, and spandrils. Between each gable is a crocketed pinnacle, and the whole is borne on pretty little capitals, by which is some very successful carving, resembling natural leaves. The carving was executed in part by Mr. J. B. Philip and [illegible] th. The last-named carver also produced the [illegible] monument to the late Dean, and, with Mr. Philip, has well proved [illegible] in carrying out such work.

In addition to the stalls the work in the choir comprises a new stone pulpit, sedilia, and Minton's tiles on the altar, a carved reredos, repairing the old wooden seats, a complete cleaning from painted marbling of the Bishop's throne, and its general repair; and, of course, the removal of whitewash and obtrusive ornaments.

Altogether the [illegible] has been carried out with the greatest care.

We trust, soon to hear that the comparatively small sum required for the clearing and repairing of the chapter house will be raised and devoted to that remarkably fine example of chapter-house architecture.

It is now becoming better known than was recently the case, that this Cathedral is in a striking degree peculiar, from its abundance of noble sculpture and general richness of detail. The removal of the whitewash, which had smothered so many beauties, has made this very manifest. The building is therefore now worthy of the most earnest attention of the student and of all who are interested in the Christian architecture of the country.

SKETCHES IN NEPAUL.

Of the interior of the kingdom of Nepaul, which extends for upwards of three hundred miles along the southern slopes of the Himalayas, comparatively little was known in England until the visit of the Nepaulese Embassy, a few years since, drew attention to the romantic country and independent Court which Jung Bahadoor came to represent. Mr. Laurence Oliphant, in his very interesting volume entitled "A Journey to Katmandhu," dated 1852, states that no work had been published in this country upon Nepaul since Dr. Hamilton's, which appeared about 1819. Of late years, however, the political condition of the country and its position as regards our possessions in India have invested it with additional interest; and the accompanying Views which we are enabled, by an obliging Correspondent, to present to our readers, will show that the Valley of Nepaul possesses great attractions for the lover of the picturesque in its luxuriant vegetation, and its timeworn temples and other memorials of deep-lying splendour. These Views are selected from a series of large coloured Sketches, by Dr. H. A. Oldfield, of the Bengal Medical Staff, Residency Surgeon at Khatmandhu. Mr. Oliphant thus glances at the beautiful scenery of the country:—

The [illegible] wooded or terraced, with romantic old Newar towns crowning their summits, and villages of the valley [illegible] among cedar meadows—the banks here and there precipitous, where the soft [illegible] had yielded [illegible] to the [illegible] and [illegible] pursued ways leading between high hedges of prickly pear—the pagodas and temples studded in all directions, presented a scene as picturesque and perhaps more interesting than would have been afforded by the still lake embedded in wild mountains, and frowned upon by snow-capped peaks; while the richly-cultivated knolls in the valley formed fertile islands, the luxuriant vegetation of which would have softened the scene into one of exquisite beauty.

The three Views of Temples, &c., are all taken from near one spot, but looking different ways, in the centre of the large square of the city of Patn. There were originally three capital cities in the valley of Nepaul; viz., Patn, Bhatgaon, and Khuritpoor. The valley then formed part of the territory, and was under the dynasty of a tribe called Newars, a very ancient Hindoo race. About ninety years ago the valley of Nepaul was overrun and conquered by the Goorkhas, a neighbouring and warlike tribe. The Newar kings and nobility were either killed in battle, murdered, or driven into exile, and all their estates confiscated. There is now a single Newar of any capital or importance in the valley, the Goorkhas having annexed everything. The mass of the Newar population were reduced to till the soil, or perform menial or mechanical work, under their Goorkha conquerors. Khuritpoor, the last scene of their resistance, was in great part burnt and destroyed, and has never been rebuilt. Bhatgaon and Patn were neglected, but not injured, and, though now but thinly inhabited, and ruled by the viceroy, they still present a number of very ancient temples and other buildings, in good preservation; the principal edifices of this class being shown in three of the accompanying Views.

When the Newar dynasty was overthrown, and the present Goorkha rule was established, the then comparatively unimportant town of Khatmandhu was adopted by the Goorkhas as their capital: they enlarged the place considerably, enriched it with temples, establish[illegible] army and head-quarters there, and built a durbar, or [illegible] residence. They have, accordingly, made it a place of great importance, and by far the largest and most populous city in the country. In fact, it is now the only place of any importance in Nepaul; Bhatgaon and Patn having no political existence, however interesting they may be to the antiquary or lover of the picturesque.

The first View presents the richest architectural display. The building in the centre is a large temple, erected in 1620, and dedicated to Khrishna Jee: it was built by one of the Newar princes, and is considered the most sacred edifice in Patn. It is entirely of stone, there being neither wood nor brick in its construction. The summits of the [illegible] central tower, between fifty and sixty feet in height, [illegible] the tops of the smaller surrounding ones, are capped with [illegible] ornaments. The other buildings are temples dedicated to different [illegible] ground excepted, these being ordinary [illegible] temples vary from two to four or five [illegible] Bang, are supported by wooden brackets over [illegible] grotesque figures and monsters in rude deformity. This carving is executed with great skill, so as to give a very rich appearance to the buildings. The door and window frames are also often beautifully carved, the figures projecting in bold relief. The column on the right is surmounted with a figure of Goroo Narain. The figures in the foreground are Newars. The women are clothed as the common Newars ordinarily appear. The man carrying two children in baskets slung to a pole passing over his shoulder shows the usual mode of conveying children as well as heavy and other easily portable articles from place to place.

The next View is of [illegible], a Hindoo temple and [illegible] houses of the poorer class. In the foreground is a group of four Nepaulese sepoys, conversing in a whisper, or hammock, a lady of rank to the temple to worship, a large red velvet curtain being thrown over the conveyance to protect the passenger from the sun and [illegible] impertinent gaze. She is raising the curtain to look out on the [illegible] female attendants, three or four of whom on foot, with flowers in their hair, and trays of offerings in their hands, accompany their mistress. They are often very prettily dressed, in a sort of polka jacket, [illegible] gilded [illegible], always of costly materials.

In the third View the stone temple on the [illegible] is dedicated to the god Sru Krishna. It was built, A.D. [illegible], by the daughter of one of the Newar rajahs. The ornament at its summit is brass gilt, which tasteful is very general, and it has a very picturesque effect in the brilliant sunshine. The long galleried building on the right is a Pathu, or Dhurumsala, and was built for the benefit of the public by two brothers, Ministers of Nepaul under the Newar dynasty, A.D. 1678. The figures in the foreground represent a few Newars who are sitting with the Artist while he made his Sketch; a Nepaulese sepoy is also standing by. The prevailing colour of the bricks and tiles of the building and pavement is red.

The remaining picture presents a View of the highest peak of the Goosein Than, taken from near the summit of the Changunarain mountain, a spot about 3000 feet above the [illegible] valley lying concealed beneath the hills. [illegible] part of the Goosein-than is hidden by clouds. The range of hill [illegible] above the clouds, but beneath the snow, is part of the same [illegible] line of perpetual snow; it is accordingly covered with snow in the winter months, which melts off during the summer. In the Illustration some snow is represented still lingering on one of the higher peaks. In the foreground of the picture is one of the wharries, or hammocks, [illegible] to a pole, in which travellers are carried on [illegible] or wherever the road is bad. The cooli [illegible] ground the man who have carried the Ar[illegible] the right-hand foreground is a Nepaulese [illegible] accompanies travellers in this [illegible] distinguishing mark of his particular [illegible].

From Thankote the travelle[illegible] of Nepaul, with the snowy range of the Himalayan mountains [illegible] it should be explained, is a small village near the foot of the pass over the Chandunagiri mountain, and through which every traveller journeying to or from Nepaul valley must pass in going. It is a resting place after making a very long and difficult descent from the summit of the Chandanogiri, which mountain forms the southern boundary of the valley. From this point is seen the Dawalogiri, or White Mountain—a large mass of snow, apparently very near, from the extreme transparency of the air through which it is seen, though it is in reality [illegible] eighty and eighty miles distant as the crow flies. This peak, [illegible] mountain in the world, being upwards of 28,000 feet high. In the centre of this sublime prospect is also seen the Goosain-Than, which is upwards of 27,000 feet high. Further to the east, over the city of Khatmandhu, is a large bluff mass of snow, the Kinchungunga (situated in the direction of Darjeeling), which is over 28,000 feet high. Humboldt states it to be from 150 to 200 feet lower than the Dawalogiri [illegible] mountain the Dawalogiri, the Goosain Than, and the Kunchingunga, are seen at one view, and are the highest mountains in the world. From the extreme right to the left of the prospect the snowy ranges, in one continuous line, must be upwards of 500 miles in length! This is, indeed, a splendid panorama, requiring you to turn your head to take all in, the line of snow occupying nearly half the horizon. The nearest point of view to the valley—part of the Goosain Than—is about 50 miles distant as a bird flies, but much more by the roads, which are very winding and circuitous. To the right of the prospect, forming the middle distance, is seen the great part of the Valley of Nepaul, intersected by a low range of hills running from east to west. The valley itself is about 4500 feet above the level of the sea, and is surrounded or shut in on all sides by hills, varying from 6000 to 8000 feet above the sea level, or from 1500 to 3500 feet above the level of the valley. The whole of the valley of Nepaul, like that of Cashmere, is supposed to have originally been under water, having formed the bottom of a large lake, the water of which had been drained off, probably by volcanic action ages ago, long before the memory of man. In the centre of the valley is seen the sacred river, Baghmutty, winding along; over it is a large wooden [illegible], near which, on the far side of the river, on slightly rising ground, embosomed in trees, is the residence of Jung Bahadoor. To the left is the city of Khatmandhu, occupying a large space; the houses are entirely of red brick. From the centre rises a small stone column, 150 feet high, and near the foot is a long green open space, which is the parade-ground for military inspections. On the opposite side of the river, standing on a low hill, and by itself, is the city of Patn, the numerous temples of which may be seen distinctly in outline. In the distance (near the hills, just over the white pillar) is a green mass, which represents the sacred wood of Rashputty Nath. The British residence is not seen: it is prettily situated among the trees. In the smaller portion of the valley, cut off from the principal part of the valley by the low range of hills, are three or four villages; and on a swadish hill, among the intersecting range, and towards the right, is an old Newar city, mostly in ruins. The valley measures in its longest diameter from 13 to 20 miles, and in its shorter from 12 to 15; its general form is an irregular oval.

RAILWAY CLUB.—INAUGURAL DINNER.

The Railway Club recently formed in Manchester was most auspiciously inaugurated last Friday evening, by the assemblage at dinner of the club's assembling at dinner, at the Clarence Hotel, Spring Gardens. There were present representatives of the principal Railway Companies, David Wilkie, Esq., General Manager of the Manchester, Sheffield, and Lincolnshire Railway, and President of the Club, occupied the chair. On his right sat Charles Hindley, Esq., M.P. for Ashton; Edward Bouckley, Esq.; and Joseph Heron, Esq., Townclerk. On his left, Benjamin Nicholls, Esq., Mayor; Malcolm Ross, Esq., President of the Commercial Association; and George Wilson, Esq., Director of the Leeds, Bradford, and Yorkshire Railway. The Vice-Presidents were C. W. Eborall, Esq., General Manager of the East Lancashire Railway; Messrs. J. Chubb, R. Smith, T. Walkate, and B. Poole. The customary loyal toasts having been proposed from the chair, and duly honoured, as were those of "The Emperor and Empress of the French," and "The Allied Armies and Navies," the Chairman proposed the principal toast of the evening—"Prosperity to the Railway Club." The association had been founded by those who had sincerely at heart the progress of railway enterprise. Their object was to bring the various members together for the purpose of interchanging those experiences upon which all proper working must be promoted, and conduce to the advantage not only to themselves but to the public in general. The railway system which had arisen within the last twenty years had now connected with it men who had been engaged in literary, mechanical, and mercantile pursuits, and of almost every profession, who were now conducting this magnificent enterprise. They knew they represented, besides much intelligence, a capital of "nearly £300,000,000, employing more than 90,000 men. When they considered that they were administering a revenue of £[illegible],000,000 annually, they might justly [illegible] most important [illegible] in the country, having some connection with its [illegible], including the greatest and its progress, [illegible] who [illegible] had not only had [illegible] but [illegible] [illegible] purposes [illegible] for considering how they could combine to promote traffic with regularity, safety, and economy, for the [illegible] convenience of that section of the community, would conduce to the general welfare. He thought that [illegible] together occasionally, they could [illegible] [illegible], [illegible] to improve the [illegible] committed to their charge [illegible] [illegible] between [illegible] management of the [illegible] [illegible]. Mr. Watkin [illegible] that they, [illegible] [illegible] [illegible]

Published by HERBERT INGRAM and Co., 198, Strand, London.

THE WILD BIRD, KING RING, THE PHILOSTEGS of BEAUTY, A LAY of the FUTILE, and other POEMS. By HENRY SPICER. Foap. 8vo, cloth, price 5s. 6d.

"A most delightful book in which Mr. Harrison is at once and poetic."—Athenæum.

"The first poem in this volume is finely conceived and sustained throughout. . . . Mr. Spicer has a true vein of poetry, a delicate appreciation of the beauties of nature, and a large and illustrative command of language."—Examiner.

"He is a fearless and originality in the descriptions which indicate the poetic eye and fancy, and a refinement in the sentiment, which shows that the heart of the writer has been as carefully cultivated as his head. There is in the poem . . . no 'Paul and Jane,' we know not that we ever saw a richer series of pictures."—Spectator.

Recently Completed,

The Library Edition of the WAVERLEY NOVELS, produced at a cost of £15,000, and forming one of the handsomest works published in this country. It is illustrated by upwards of HUNDRED Engravings on Steel, after Original Drawings by Turner, Leslie, Stanfield, Wilkie, Roberts, Frith, Ward, Phillips, Elmore, &c., &c., the leading features of the Historical Personages and Scenes in the Novels having been engraved in the very first style of the art, and, by their characteristic expression and spirit of execution, impart an additional interest to the text which they illustrate.

The Library Edition contains Sir Walter Scott's latest Introductions and Notes, and some curious additions to "Guy Mannering," and the "Bride of Lammermoor," besides a carefully-prepared index to the whole of the characters and principal incidents in the series.

All those who would possess a copy of "these inimitable Fictions," in which the illustrations of the Author are worthily presented by the pencil of the Art, are recommended to add this series to their Libraries.

Complete in 25 vols., demy 8vo, with 210 Engravings, elegantly bound in extra cloth, gilt, price £13 13 0

Delivered and charged on same as if ordered from the works.

NEW BOOKS, &c.

UNIVERSAL LIFE ASSURANCE SOCIETY, 1, King William-street, City, London. Established by special Act of Parliament, 8 Will. IV., cap. 34. Sir Henry Willock, K.H., Chairman. John Stewart, Esq., Deputy Chairman. The success of the operations of this Society, have enabled the Directors for the last twelve years to reduce the Premiums on Policies entitled to participate in profits by 40 per cent., which will be found a most liberal reduction if the original premium be compared with those of other offices adopting a similar plan of division of profits. Weekly Board, 4s. Thursday, at One o'Clock. MICHAEL HILLIAM IMPEY, Sec.

THE ROYAL EXCHANGE ASSURANCE CORPORATION.
For Fire, Life, and Marine Assurances, and for Annuities.
Established A.D. 1720, by Charter of King George the First, and confirmed by Special Acts of Parliament.
Chief Office in the Royal Exchange, London. Branch, 29, Pall-mall.
Persons assured with this Corporation in our no limit class of Partnership. Payment of their claims is secured by a large invested Capital Stock. In common with the advantages of modern practice, with the mild principles of which it has been careful by its experience of a century and a half to avoid.
Tables of the Premiums and of the Bonus in the Life Department may be obtained at the offices of the Corporation, or from its Agents in the principal towns of the United Kingdom.
JOHN A. HIGHAM, Actuary and Secretary.

TO the MEMBERS of the GENERAL ASSURANCE ASSOCIATION.
1, Royal-exchange, Cornhill, London, Nov. 5, 1855.
The Directors have the responsibility of announcing to the Members of the Association, that the Report of the Committee of Management, which will be read at the Annual Meeting of the Members, on Thursday, the 15th inst., at One o'clock precisely, will contain a recommendation that a Bonus of Seven per cent. on the Premiums paid during the last five years, be added to the Policies of all Members who have been entitled by the operation of the Deed of Settlement to participate in the Profits.
The Directors have also the pleasure of stating that the Report will show a considerable increase in the Premium Income of the Association during the past year, and that the Fire Department has been conducted with unusual success.
Having been for a long period members of the Association, and having had many opportunities of watching personally its progress, the Directors feel confident that the Members will be glad to learn

THE ILLUSTRATED LONDON NEWS

No. 770.—VOL. XXVII.] SATURDAY, NOVEMBER 17, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

THE VISIT OF THE KING OF SARDINIA.

In a few days the King of Sardinia will leave Genoa for Paris, and, after residing a week in that capital, will proceed to London. We are confident that in both cities, and in London more especially, a brilliant and enthusiastic reception will await him. The private character and public position, the domestic and foreign policy of his Majesty, all combine to bespeak for him a welcome such as Englishmen know how to give to those whom they admire and honour. He appeals to their judgment as well as to their sympathies. Their love of constitutional liberty, their hatred of priestly domination, their appreciation of "pluck"—that quality which they admire even in a foe, but still more in a friend—all these sentiments and many others attract to the person of Victor Emmanuel an amount of respect and good-will not often felt in this country for the Sovereign of any other.

Perhaps the prevalent feeling among all classes during his Majesty's visit, will be one of admiration for the chivalrous part which the King and his nation have played in the great struggle now raging in the Crimea. And certainly, when the momentous nature of that struggle is considered, the brave Sardinians and their Sovereign deserve the warmest applause in the power of a free people to bestow. When cowardly Austria, suffering from the misdeeds of centuries, was afraid to be honest; and, though she knew the path into which honesty would have led her, refused to move an inch towards it;—when designing Prussia played fast-and-loose with the principles of justice, and would have sided at a moment's notice with the foe of European independence if she thought she could have gained anything by the treachery,—the King of Piedmont and Sardinia set them and the world an example of true nobility and generosity of mind. He threw in his lot with the friends of freedom, and braved the possible vengeance, not only of the arch-delinquent the Czar, but of all the waiters on fortune, and perfidious despots, who are only strong upon the strongest side. There was a time when the temporary triumph of the Czar seemed but too probable, and when darkness and perils encompassed the armies of Great Britain and France on the bleak and barren heights of Balaclava and Inkerman. But the heart of the King of Sardinia never misgave him even in those evil days. He was no hanger-on upon Fortune. He did not creep at the tardy heels of Victory, and, while expressing his sympathies, withhold his aid until his aid became unnecessary. He joined the alliance in the very thick of the struggle. How much the valour of his small, but admirably-disciplined army assisted in inflicting upon the Russians the great discomfiture which has rendered the name of the Tchernaya for ever memorable, the future history of Europe will declare; and how greatly the victory of the Tchernaya prepared the way for the still greater achievement at the Malakoff is known throughout the world, and felt with advantage wherever Russian despotism has a foe, or the independence of nations has a friend.

But it is not solely on account of his alliance with England and France in the great war which now tasks their heroism that King Victor Emmanuel will receive in this country, even more than in France, the heartiest meed of popular applause. In the Emperor of the French the people of Great Britain honour at the same time the inheritor of the most illustrious name in modern history, and the man who has added lustre even to that name by wisdom, and courage, and genius of his own. They see in him the chosen of the whole nation; and, as it is no business of theirs to find fault with the French for that significant and triumphant election, they shut their eyes to many points of the Emperor's domestic policy which might grate upon their feelings if too closely scanned, and which are not in strict accordance with their own notions of popular rights, however much they may accord with the political necessities of France, and the present state of the national mind. But in the case of the King of Sardinia, if there is no such great and paramount name to excite the feeling of hero worship, there are other considerations which speak more emphatically to the hearts of Englishmen, accompanied by no drawbacks on which policy may think it expedient to be dumb. Victor Emmanuel ascended the throne of his ancestors at a moment of extreme perplexity, distress, and danger, when the very existence of his kingdom was menaced by victorious Austria. By perseverance and skill of his own, no less than by those of the able men by whom he surrounded himself, and by whose counsels he was guided, his little Constitutional State, a model to all Europe, the oasis in the desert of Italian misery and despotism, was safely guided through all its perils. Foreign aggression was repelled, internal freedom was established, and a signal proof was afforded that at least one portion of the Italian people was capable of self-government and the wise restraints which it imposes. At the same time the material prosperity of the country received an impetus that made Lombardy and all its neighbours envious, and must have impressed the Austrians in Italy with the wholesome, though perhaps unwelcome, truth, that the prosperity of any country is inconsistent with its domination by an alien and a hated Power. These are results which we in this country can fully comprehend and cordially admire, and the knowledge of which will tend to increase the warmth of the reception with which King Victor Emmanuel will be greeted when he comes amongst us. The Peace-at-all-price party, with the view of throwing "devil's dust" in the eyes of plain men, are in the habit of saying that we are fighting in alliance with one despot for the support of another; but our over-wise men o the Manchester Gotham will scarcely allege that the King of Piedmont and Sardinia is a despot—in name or nature—or that the State which he so successfully governs is other than a model of temperate and constitutional liberty.

There is still another reason—powerful as these are—why the visit of the King of Sardinia will strike a strong chord in the English heart. Victor Emmanuel and his whole nation are under the ban of the Pope. They are excommunicated by the spiritual tyrant of Rome, the arch-enemy of human liberty and progress, for firmly declining to be priest-ridden any longer. The interference of Popes, Cardinals, and Monks in the affairs of the civil government was found (as it always has been everywhere else) to be incompatible with Royal dignity or popular freedom; and the King and his advisers, supported by the sympathy of the whole nation, determined that priests in Sardinia should be confined to their proper functions, and that the plague of monkism and friarism should be abated in the land. Without seceding from the Roman Catholic faith as he found it established, Victor Emmanuel, after a hard struggle

HIS EXCELLENCY THE COMTE DE PERSIGNY THE FRENCH AMBASSADOR.—FROM A PHOTOGRAPH BY MAYER AND CO.—(SEE NEXT PAGE.)

deprived the Pope of all authority within his dominions except that which is purely spiritual; and cleared the country of a whole army of Dominicans, Capuchins, and Jesuits, whose sole functions were to eat the bread of idleness, and retard the improvement of the people. For this feat—and, considering the circumstances of Italy, it is no light one—the people of these islands will give the King and his Government the credit which they deserve. They will remember this, as well as the other circumstances of his reward, and express, whenever they have the opportunity, markable reign, and express, whenever they have the opportunity, markable reign, and express, whenever they have the opportunity, the sympathy which they feel in his cause, and the hope that, out of the complications of the present war, if there be any State to derive accession of power and territory, that State may be Sardinia.

HIS EXCELLENCY THE FRENCH AMBASSADOR.

Of this distinguished diplomatist we shall give a Memoir in an early Number. In the meantime we cannot do better than quote the speech which his Excellency delivered at the recent Inauguration Dinner at Guildhall:—

The French Ambassador said: Je vous remercie, milord Maire, d'avoir proposé dans cette enceinte le toast qui vient d'être si chaleureusement accueilli. Il y a 35 ans que l'Empereur Napoléon I. exprimait le regret de n'avoir pu vaincre les préjugés des deux peuples et de n'avoir pu gagner l'amitié de l'Angleterre. "Que de grandes choses, s'écriait-il, "nous aurions pu faire ensemble!" Eh bien, Messieurs, ces grandes choses s'accomplissent aujourd'hui pour le bonheur et la sécurité du monde. Le tombeau de Napoléon a reçu la pieuse visite de votre illustre Reine, et sous un autre Napoléon, qui a compris les véritables intérêts de son pays, la France est devenue l'intime alliée de l'Angleterre (Cheers). Ce n'est pas tout. Notre alliance ne repose pas seulement sur des circonstances accidentelles, mais sur l'étroite union des deux peuples—(cheers)—intérêts aujourd'hui tellement confondus que rien d'heureux ou de malheureux ne peut arriver chez l'un sans se reproduire chez l'autre. Quand deux pays en sont arrivés là, leur alliance est à l'abri de toutes espèces d'intrigues (Cheers). Aucune puissance humaine ne peut plus les séparer (Cheers). Et quand on pense que l'union de nos deux pays, l'un plus spécialement maritime, l'autre plus spécialement militaire, constitue la plus grande puissance qui ait jamais existé, nous pouvons attendre dans la plus complète sécurité l'issue de cette guerre (Loud cheers).

[Translation.] I thank you, my Lord Mayor, for having proposed in this assembly the toast that has just been so warmly received. It is now thirty-five years since Napoleon I. expressed his regret at not having been able to overcome the prejudices of the two peoples, and to gain the friendship of England. "What great things," he exclaimed, "we might have done together!" Well, gentlemen, these great things are being accomplished at the present time for the happiness and security of the world. Your illustrious Queen has paid a pious visit to Napoleon's tomb, and, under another Napoleon, who understood the true interests of his country, France has become the intimate ally of England (Cheers.) This is not all. Our alliance does not only rest on accidental circumstances, but on the intimate union of the interests of the two countries (Cheers)—interests so identical that neither good nor bad fortune can happen to the one without being reproduced in the other. When two nations have arrived at such a point their alliance is sheltered from any kind of intrigue (Cheers). No human power can separate them (Cheers). And when we reflect that the union of the two nations, the one more especially maritime, the other more especially military, constitutes the greatest power that has ever existed, we may well await with the greatest confidence the issue of this war (Loud cheers).

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

On the 17th a splendid banquet will be given to the Prince Napoleon and the Imperial Commission of the Exposition Universelle by the Ville de Paris, and in the evening the salons of the Hôtel de Ville will be opened for a reception.

We believe we may, on good authority, state that a marriage will shortly be concluded for his Imperial Highness with a Princess of Bavaria. The preparations, which have been concluded as quietly as possible, are, we are credibly informed, far advanced, and will probably be shortly terminated.

Great arrangements are being made for the Imperial *chasses* at Compiègne, on the usual magnificent scale on which they are conducted. The shooting parties of last week at Fontainebleau were most successful, and the quantity of game bagged enormous for France. The Emperor and Empress have somewhat hastened the period of their return to the Tuileries, in order to superintend the preparation for the reception of the King of Sardinia, who is to inhabit that portion of the Palace called the Pavillon Marsan. The Empress's health continues in a most satisfactory state.

The reports relative to the Ministerial modifications already mentioned in the world here continue to gain ground, and a good deal of general credit, though the best authorities seem disposed to put but little faith in them. According to these rumours, M. Magne is to go to the Bank of France; M. Fould is named to take the place of Minister of Finance, thus left vacant; M. de Persigny is according to the same authority, to become the successor of M. Fould; while M. de Walewski returns to London; the Affaires Etrangères is spoken of for M. Drouyn de Lhuys.

News from Rome states that the health of the Pope is visibly declining; and that his mind is considerably affected.

In the general *sauve qui peut, or sauve que peut*, which has attended the breaking-up of the Exposition, the arrangements of the English exhibitors have been a subject of universal wonder and admiration to those of all other nations, as well as to the foreign public. While, in the other compartments, *exposants, commissionaires, ouvriers*, and *emballeurs* rushed frantically to and fro, packing, smashing, overturning, setting all at a high pressure, as may be pretty well understood when it is considered that but five days was given to undo the work of three months, not a sign of bustle or stir was visible in the English quarter; every preparation for departure was made before hand, and when, on the last day, the tumult elsewhere had reached its zenith, here, amid perfect calm, everything was safely packed and quietly removed without damage or difficulty. It is not only to the spirit of order and system so strongly marked in the British character that this trait is to be attributed, but it is also in a great degree owing to the fact that in such affairs we consider parsimony as the worst economy; we prefer paying well, so as to ensure the work being properly done, to doling out money with a niggardly hand, and thereby having everything feebly executed. Where the exhibitors of other nations employ fifty cheap unskilled workmen, we grudge not to pay three or four times the number of experienced ones. Many of the productions of foreign exhibitors must suffer most severely from this ill-judged economy, some must indeed be almost destroyed. We regret that we shall not be able to give an account of the ceremony of the closing of which we shall be an eyewitness—till next week.

Some indications lead to certain presumptions that the Emperor has renounced the idea of breaking up the Cent-Gardes. No further steps seem to be taking for the dissolution of this splendid body; and it is even known that the officers have, for some time since, been taking lessons in equitation from the celebrated Léopold of the Cirque de l'Impératrice Beaucher, who not very many months ago had both his legs broken by the fall of the great lustre of the circus, an accident from which his recovery has been marvellously rapid.

It appears that Jullien, who appeared to have adopted England as the scene of his somewhat fantastic triumphs, is about to return to Paris, and try his fortunes on a new stage. The Italian Opéra continues to command a fair success. Mario has, with his voice, lost much of his popularity, but nevertheless continues to draw good audiences. A *débutante*, Mdme. Penco, is very well received. A variety of new pieces are in preparation for the different theatres of the capital; those of Mdme. George Sand and A. Dumas *fils* are naturally those that command the greatest curiosity and interest.

OPENING OF THE BELGIAN CHAMBERS.

On Tuesday the King of the Belgians opened the Legislative Chambers in person. The only remarkable feature in the speech delivered by his Majesty is the guarded manner in which he alludes to foreign affairs in the opening paragraph:—

Messieurs,—I receive reiterated proofs of the sympathetic confidence of foreign Governments. My dear son, the Duc de Brabant, has learned by the reception which he has met with in different countries the high rank which Belgium holds amongst the nations. As father and as King, I am happy to record the existence of these sentiments.

AMERICA.

The *Atlantic*, which left New York on the 31st ult., arrived at Liverpool on Sunday. The most remarkable intelligence the American newspapers contain is the following "peace rumour." The Washington Correspondent of the *New York Herald*, writing on the 29th, says—

There are, I see, some doubts expressed about the advent of a new Ambassador from Russia, but I repeat that it is a certain fact. He will bring, besides his regular credentials, a confidential communication from the Czar, of the most important character, relative to the terms on which alone Russia will consent to a peace. What I now state will be known in the public in a few weeks. Russia mediated between Great Britain and the United States, and now the United States may mediate between Russia and the Allies. She does not ask American mediation, but will accept it, and will at once indicate her terms, which, as I stated in a former communication, will embrace such vast commercial advantages for all the world, that the industrial classes of France and England will clamour for their acceptance as soon as they are generally understood

The Attorney-General (Mr. Cushing) appears to be still endeavouring to raise a spirit of offended nationality against England. The following explanations in regard to the rights of belligerents in the United States have been issued from his office in Washington:—

1. It is a settled principle of the law of nations that no belligerent can rightfully make use of the territory of a neutral State for belligerent purposes without the consent of the neutral Government.

2. The undertaking of a belligerent to enlist troops of land or sea in a neutral State, without the previous consent of the latter, is a hostile attack on its national sovereignty.

3. A neutral State may, if it please, permit or grant to belligerents the liberty to raise troops of land or sea within its territory; but for the neutral State to allow or concede the liberty to one belligerent, and not to all, would be an act of manifest belligerent partiality, and a palpable breach of neutrality.

4. The United States do not concede the liberty. They limit its sales, with impartial justice; and that prohibition is made known to the world by a permanent Act of Congress.

5. Great Britain, in attempting, by the agency of her military and civil authorities in the British North American provinces, and her diplomatic and consular functionaries in the United States, to raise troops here, committed an act of usurpation against the sovereign rights of the United States.

6. All persons engaged in such undertaking to raise troops in the United States for the military service of Great Britain, whether citizens or foreigners, individuals, or officers, except they be protected by diplomatic privilege, are indictable as malefactors by statute.

7. Foreign Consuls are not exempted, either by treaty or the law of nations, from the penal effect of the statute.

8. In case of indictment of any such Consul or other official person, his conviction of the misdemeanour, or his escape by reason of arranged instructions or contrivances to evade the operation of the statute, is primarily a matter of domestic administration, altogether subordinate to the consideration of the national insult or injury to this Government, involved in the fact of a foreign Government instructing its officers to abuse, for unlawful purposes, the privilege which they happen to enjoy in the United States.

On the other hand, the French Consul has taken a step which forbodes difficulty, by giving official notice that the title to ships of a hostile nation, which citizens of the United States may have acquired by purchase since the beginning of hostilities between the Allies and Russia, will not be recognised by his Government.

The "Young Americans" had a mass meeting on the 30th ult., at the junction of the Bowery and Third Avenue, New York. After addresses from several speakers a torchlight procession was formed. When at the corner of Stanton-street, the procession was assailed by a gang of rowdies, and some of the banners seized and destroyed. Notwithstanding this interruption, however, the procession proceeded peaceably up First Avenue, and when at the corner of Thirteenth-street they were assailed by a numerous gang of Irishmen, from the Seventeenth Ward, known as "Mackerelvile." The American banners were seized and destroyed, the procession broken up, and many executed assaulted and beaten. The Irishmen were armed with clubs, pistols, &c. Fire-arms were repeatedly fired, and knives freely used. One gentleman, a bystander, was knocked down by a cart-rung and severely injured. A number of others were seriously injured. The whole attack is referred to as one of the most brutal and unprovoked that has ever occurred at New York.

Nicaragua was in a wretched state, owing to the civil dissensions of the people. Business was at a standstill. Colonel Walker expected a reinforcement of 900 settlers from Alabama and Mississippi. The Colonel had concluded a treaty with the Indians, by which he would be enabled to penetrate to the interior in safety.

Advices from Mexico report the resignation of President Albarez, and the appointment of General Comonfort.

INDIA.

The despatches from India, in anticipation of the Overland Mail, have been received, but they do not contain any news of much importance. According to the *Bombay Times* of Oct. 17, the Santhals still continue traversing the country, committing acts of depredation and violence. The panic that they at the outset occasioned was such that the people fled from the country, and there still continues much difficulty in getting the preservers of order to withstand or secure the insurgents. The insurrection has long lost its character as a civil war, and at present continues simply as a nuisance, mainly alarming from the difficulty in getting it finally extinguished. Serious disturbances continue every now and then to break out in the Nizam's dominions. Information having been received that a party of Rohillas were plundering the country to the north of Hyderabad, a force consisting of 250 men of the Nizam's cavalry under Captain Doria, a wing of the 4th Nizam's Infantry, and a couple of howitzers started on the 6th of September against the enemy. They reached Nanderer on the morning of the 9th, but experienced much difficulty in getting across the river, then in flood. They reached Sulghurra on the evening of the 8th, after a march of thirty miles. Here they learned that the Rohillas were ignorant of their movements, and it was hoped to take them by surprise. A further march of forty miles, on which they were compelled to leave their howitzers behind, brought them to Bunder Koontah by daybreak on the 12th. The Rohillas were now only a mile ahead, and the infantry, under Captain Daniel, with a few cavalry under Lieutenant Biden, dashed on and took the enemy wholly unawares. A few of them showed fight, and ten or twelve were cut down; 136 were taken prisoners, of whom twenty-five were found wounded. They had hardly well secured their captives and concentrated their force, when they heard of another body of Rohillas having established themselves at Lingi, a couple of miles off. Thitherward the infantry, with a few troopers, started in the afternoon. As they approached the village, the enemy made their escape, and no traces of them could for a time be discovered, till a man found in hiding undertook to show where they were, and they were soon afterwards perceived skulking in a ravine near by. It was now dark, and the bulk of them made their escape; 17 were taken prisoners. On their return to camp, another party were found in hiding, of these seven were captured. The extraordinary rapidity with which this most successful expedition was conducted is worthy of mention. Their second march was thirty miles in length; in their third they covered forty miles in thirty hours, over a country part of which black cotton soil, softened by showers, and part covered with loose jagged stones. Religious disturbances have once more made their appearance in Oude, and they are not likely on this occasion to be so easily disposed of as formerly. In February last a Hindoo renegade, who had become a Mahometan, preached about a settlement that would be defiled and destroyed a temple in Hunnoomanghurree. Contriving to collect a considerable force he proceeded thitherward, and established his head-quarters in the neighbourhood. A violent conflict ensued, in which the Hindoos proved victorious: some seventy or eighty of the Mahometans cut their way through and found refuge in one of their own temples near by. The Hindoos, in a state of the most violent excitement, now attacked the temple, and after repeated repulses, with heavy loss of life, succeeded in capturing it, and put the whole of their enemies to the sword. This was but the commencement of the strife; and both parties are now so violently inflamed that it is impossible to foresee the result.

THE WAR IN THE CRIMEA.

The telegraph has brought very little news from the East in addition to that furnished by our own Correspondent.

The *Moniteur* of Thursday contains a despatch from General Pelissier, giving an account of the reconnaissance made by General Allonville at Eupatoria on the 27th of October.

The *Invalide Russe* gives the following despatch from Prince Gortschakoff, under date of the 8th November, at nine p.m.:—

Nothing new has occurred in the Crimea.

The enemy continues to occupy the Valley of Baidar, where they have two divisions.

Nothing of importance has taken place at Sebastopol. The Allies have completed some very important works near Fort St. Nicholas, and increased the number of batteries bearing on the northern forts. The north side, however, is said to have been very quiet lately—indeed, scarcely a score of shots are fired from either side in twenty-four hours. It seems a kind of compromise between the two belligerents, arising probably from the conviction of the uselessness of firing.

A sharp look-out is kept on the Tchernaya, some Russian deserters having reported that General Prince Gortschakoff would attempt a general action before making a retreat. The Russian army having been ordered to hold itself in readiness for an attack, the Allies every night reinforced their advanced posts, and supported them with field artillery.

The first Anglo-German regiments have arrived at Constantinople. They have experienced exceedingly rough weather, and suffered severely. They have lost a Major and several officers.

The *Military Gazette* states "from a reliable source," that the Russian armies are at present thus distributed:—1. Bessarabia, Kherson, the Pruth, and embouchure of the Danube, 120,000 men. 2. In the Crimea, with the reserves at Perekop, 150,000 men. The Caucasian army 70,000, and the cavalry before Kars 35,000 men. 4. In Northern Russia there are not more than 80,000 men. Nothing is known of the number of troops in Poland, Volhynia, and Podolia."

GENERAL CANROBERT'S MISSION TO SWEDEN.

Up to a late hour on the 5th inst. numerous groups crowned the Holms, and other elevated situations near Stockholm, from whence a view of the channel, with the open sea in the distance, could be obtained, in the hope of welcoming General Canrobert on his landing on Swedish soil. On the following morning, at an early hour, the steamer *Gauthiod*, from Lubeck, was signalled, and the news flew from mouth to mouth with such celerity that a very large crowd had assembled at the landing-place by the time the steamer had arrived, who cheered the General vociferously on his stepping on shore. It was not only to General Canrobert, ex-Commander-in-Chief of the French army in the Crimea, that this ovation was paid—the belief was general that he came the harbinger of war. It is thought that the moment has at length arrived when Sweden will give to her armour its right earnest, and be ready to take a gallant part in the good cause. Great numbers of the Swedes are in favour of taking an open and honourably active part in the war against Russia. Enthusiasm in favour of war is not only to be found in the members of the army and navy of all grades, but it swells the bosom of the farmer, the artisan, the manufacturer; in fact, civilians of all classes. All eyes are, therefore, turned on the French General at this critical juncture, and rumours of all sorts are in circulation. In the military circles the plan of next year's campaign is the general theme of conversation, and those officers who have been in Finland and Russia are listened to at the mess-table and in the club-rooms with the most profound attention. A General officer who has access to Royalty has stated to his military friends that General Canrobert has full powers from the Emperor of the French to conclude a treaty of offensive and defensive alliance with Sweden, and to settle the needful stipulations. A plan of operations is circulated very extensively and discussed, in which it is said that Sweden is to furnish an army of 60,000 men, besides her fleet and 200 gun-boats, which are, however, to undertake operations in Finland under their own commanders, and quite independently of the Allied forces; that the Swedish contingent is to enter Finland in the spring at three different points simultaneously, and in corps of nearly equal strength, about 20,000 men in each. One corps will be concentrated on the northern frontiers during the winter; it will march by land, across the gulf by water, and landed under cover of the fleet and the flotilla of gun-boats upon two points which it would be unwise at the present moment to further particularise. The Swedish plan even goes further, and embraces the operations of the Allies in the Gulf of Finland with a force of 60,000 men. Land troops, which will be quite sufficient to hold the Russians in check, and enable the Swedes to overcome all difficulties in Finland, and arrive without serious opposition at the land defences of Sweaborg and Wiborg, where the Swedish and the Allied fleets may be expected to co-operate with them for the capture. Under these circumstances, it is not to be wondered at that not only the civil and military authorities but the inhabitants of Sweden generally, hail the arrival of General Canrobert as an event of the greatest possible importance, and await the result of his mission with intense excitement.

A telegraphic despatch, dated Hamburg, Tuesday, says that—

General Canrobert has met with a brilliant reception at the Swedish Court. A Royal carriage drawn by eight horses was sent to bring him in state to the Palace, where the whole Court had assembled. The Princes Oscar and Augustus, and the Minister for Foreign Affairs, were present at General Canrobert's interview with the King.

THE SARDINIAN STATES.

THE King of Sardinia opened the Chambers in person on Monday last. His Majesty delivered the Speech, of which the following is a telegraphic summary:—

The year which [illegible] has been [illegible] to the prosperity and real vitalness. I have not hesitated to unite the arms of Sardinia to those Powers who are struggling in the cause of justice, in behalf of the civilisation and of the independence of the nations. It is a proud thing for our soldiers and sailors to share in the dangers and the glories of the brave armies of France, England, and of Turkey. May God [illegible] their efforts crowned to make the next peace lasting—one which shall [illegible] the struggle. The expenses of the war necessitate a recurrence to the public credit, by which the Government will endeavour to render the general burdens less onerous. Let Sardinia continue to offer the noble example of a monarch and his people united by indissoluble ties of mutual love and confidence; maintaining inviolate the laws of public welfare, of order, and of liberty.

The municipality of Turin inaugurated this day the [illegible] where are inscribed the names of the Turinese slain in 1848 in the War of Independence. These tablets are to be placed [illegible] those in honour of the Piedmontese who died in the same cause.

THE RIGHTS OF REFUGEES.—A meeting, largely attended, was held on Monday night at St. Martin's-hall, Long Acre, to protest against the recent expulsion of refugees from Jersey, and the apprehended Alien Bill. Combined with this was to have been a demonstration [illegible] "the present war policy;" but the tone of the meeting was unmistakably opposed to the views of the Peace party, and this portion of the programme was given up. Letters expressing their sympathy with the object of the meeting, and their inability to attend, were read from Mr. Cobden, M.P., Mr. G. Thompson, Mr. C. Gilpin, Mr. T. A. Taylor, and other gentlemen. The chief speakers were Mr. Miall, M.P. (editor of the *Nonconformist*), Mr. W. Wilks (sub-editor of the *Nonconformist*), and Mr. Ernest Jones. A resolution protesting against the expulsion of the refugees from Jersey, and pledging the meeting to oppose any attempt of Ministers to restrict the right of sanctuary, was carried.

WHAT OUR HOSPITALS ARE DOING.—We find it stated in the appendix to the last report by the committee of management of King's College Hospital, that in the year 1854 there were entered on the hospital books 27,694 patients; and that since the year 1839, when the hospital was first opened, no less than 230,703 patients have been admitted to the benefits of the charity, for whom 17,343 were in-patients, [illegible] out-patients, and 5537 poor married women attended at their own homes.

APPROACHING VISIT OF THE KING OF SARDINIA.—Preparations on a large scale are being made at Windsor Castle for the reception of Victor Emmanuel, King of Sardinia, who, accompanied by Count Cavour and a numerous suite, is expected to arrive in the early part of December. The State apartments, which, by a notification from the Lord Chamberlain, are closed from the public until further orders, will be refurnished in the same magnificent manner as on the occasion of the visit of the Emperor and Empress of the French, in April last. With the exception of the Presence and Audience Chambers (which will be fitted up for purposes connected with the performance of the usual theatrical entertainments), the apartments placed at his Majesty's disposal will be precisely the same as occupied by the Imperial visitors; viz., the Rubens or King's Drawing Room, the King's Closet, the King's Council Chamber, and the Zuccarelli and Vandyke Rooms. A Correspondent of the *Presse* says that the King and Queen will embark at Genoa for Marseilles on the 20th November, [illegible] five days in Paris, five days in London, and will visit Brussels on his return.

THE GREAT EXPOSITION IN PARIS.

The following are the names of the English Exhibitors who have received medals and honourable mention in the classes:

FIRST CLASS.—MINES AND METALLURGY.

LARGE MEDAL OF HONOUR.—J. Logan, Montreal.

MEDAL OF HONOUR.—Geological Society.

FIRST CLASS MEDALS.—Ministry of Commerce, London; Bagnall and Son; Barkart and Son, Neath, Glamorganshire; Bowling Iron Company, Bowling; Butterly Iron Company; Codebank Dale, Cornwall or the Duchy of Cornwall; Cwm Avon Iron Company; Cwm Celyn and Blaina; Dowlais Iron Company; Dundyvan Iron Company; Griffith, Dublin; Mersey Iron and Steel Company, Staffordshire; Oakes and Co.; Rhymney Iron Company; Shelton Iron Company; C. Sopwith, Allenhead, Northumberland; Wrandale Iron Company.

SECOND CLASS MEDALS.—Barrows and Hall; Bascanyon Iron Company, Glastheritz; Great Cwmcadstad Copper Mining Company, Devonshire; Philosophical Institute, Bristol; Knight and Co; R. Mackworth, Clifton, Gloucestershire; Mullington and Co.; C. H. Read, Swansea; Rose, Price, Tredegar Iron Company; J. Wood, Hetton Colliery, Durham; Llanelly Iron Company.

HONOURABLE MENTION.—Abercoun Works; Anthracite Steam Fuel Company, Carmarthenshire; British Iron Co; Calder and Co.; H. Carr, Pottsborough; Rev. Edward Chitty, Jamaica; Clay and Newman, Smethwick; Lebbe Pacquier Tumby, Coombo, Ceylon; Lille Ball, W. Murray, Glasgow; Myine, London; Nosk, Droitwich; Ouse-Head Iron Company; J. J. Reid, Chester; Rogers's Coal-owners, Aberaan, South Wales; Samuelson and Co.; De Soisa, Ceylon, Tipton, Carr, and Co.

SECOND CLASS.—FISHERIES AND PRODUCTS OBTAINED WITHOUT CULTIVATION (ART FORESTIER, CHASSE, PECHE, ET RECOLTE DE PRODUITS OBTENUS SANS CULTURE).

MEDALS OF HONOUR.—English Colony of Canada; Colony of British Guiana; M'Arthur, Sydney.

FIRST CLASS MEDALS.—Board of Public Works, Ireland; J. Berry, Elys and Prestwidge, Jamaica; Ceylon Colony; Hudson's Bay Company; Colony of Van Diemen's Land; Colony of Victoria; Andrew Dickson, Canada (Kingston); Society of Arts, Jamaica; N. Wilson, Jamaica.

SECOND CLASS MEDALS.—E. Chitty, Jamaica; Cape of Good Hope Company; Sir Denison, Van Diemen's Land; Farmer and Deblaquiere, Woodstock, Canada; C. Moore, Australia; Pappe and Zeyner, Cape; G. Sharpless, Quebec.

THIRD CLASS.—AGRICULTURE.

MEDALS OF HONOUR.—W. Crawhill, Beverly; R. Garrett and Son, Saxmundham; R. Hornsby and Son, Grantham; J. and F. Howard, Bedford; Ransome and Sims, Ipswich.

FIRST CLASS MEDALS.—J. Dean and Son, N. B. Ward, London; W. Ball, Rothwell, Kettering, Barker, Victoria; R. H. Bentall, Heybridge; W. Busby, Newton-le-Willows; B. Coleman, Chelmsford; Universal Exhibition Committee, Guiana; Canada Company, Toronto; London Manure Company; E. Cox, Feru-hill, New South Wales; G. Cross, Montreal, Canada; Dickenson, Hewatt, Van Diemen's Land; J. C. Gie, Cape of Good Hope; F. R. Cornade, Van Diemen's Land; W. Lyman and Co., Montreal, Canada; J. M'Arthur, Camden, New South Wales; M. H. Marsh, New England, New South Wales; Smith and Ashby, Hamfort; W. Smith, Kettering; the Flax Society of Knockmgremnet of Ireland; E. Wade, Coburg, Canada, Wright, Van Diemen's Land.

SECOND CLASS MEDALS.—T. B Bayley, Cape of Good Hope; Burgess and Co.; G. Cox, New South Wales; J. Fisher, Montreal, Canada; Fleming, Toronto, Canada; Flett, Macking River, New South Wales; J. Grant, Van Diemen's Land; Hutton, Victoria; D. Laurent, Varennes, Canada; T. Learmouth, Victoria; Tipperary flax; Roscommon flax; Cork flax; Armagh flax; J. Milligan, Van Diemen's Land; L. Moss, Toronto, Canada; Mr. Reid, Sydney, New South Wales; Parks and Co.; Richardson Brothers, Edinburgh; Dr. Royle; A. Shaw, Toronto, Canada; G Shepperd, Montreal, Canada; W. P. Stanley, Peterborough; Neighbour and Son; R. Wade, Coburg, Canada; Walker and Son, Van Diemen's Land; Williams and Saunders.

HONOURABLE MENTION.—Orme, J. Dean and Son, Dray and Co., London; Evans, Montreal, Canada; P. Forsyth, Toronto, Canada; Antrim flax; Armagh flax; Down flax; Limerick flax; Londonderry flax; Neighbour and Son; Shaks and Son; The Abbé Villeneuve, Montreal, Canada; Coffin, Canada.

CO-OPERATORS, FOREMEN, AND ARTISANS.

SECOND CLASS MEDALS.—J Bonnal, J. Crosskill, J. Hill, J. Scott, W. Worby.

FOURTH CLASS.—GENERAL MACHINERY APPLIED TO INDUSTRY.

MEDAL OF HONOUR.—Tod and M'Gregor, Glasgow.

FIRST CLASS MEDALS.—Easton and Amos, London; G. Lloyd, London; Seaward and Capel, London; C. W. Siemens, London.

SECOND CLASS MEDALS.—Clover, W. T Grey, London; Moses Merryweather, London; Pratt and Whitney; T. S Prentice, Montreal, Canada; Rose and Co.; London; E H Bentall, Heybridge, Maldon, Essex; Carrett, Marshall and Co., Leeds; J. Thornton and Sons, Birmingham; Tyzer; T. Walker, Sheffield.

HONOURABLE MENTION.—C. de Bergue, Reginald J. Corbet, Dray and Co., T. Lambert and Son, London; Hanson and Chadwick, Salford; L. Lemoine, Quebec; Paddon and Ford; C. Schnell, Oldham.

NINTH CLASS.—INDUSTRY CONSIDERING THE ECONOMICAL PRODUCTION AND EMPLOYMENT OF HEAT, LIGHT, AND ELECTRICITY.

LARGE MEDAL OF HONOUR.—Elkington and Mason, Birmingham

FIRST CLASS MEDALS.—D. Edwards and Co., D. J. Alcock, Edwards and Son, W. T. Henley, Ordnance Map Office, London.

SECOND CLASS MEDALS.—Alcock, B. Blenkinsop, W. Jones, Kipper and Co., W. Perrie, T. C. S. Fedeaux, London; J. Christie, Somerd, Messrd, and Co., Quebec; Coal Company, Brookdale; G. E. Dering, Hertford; J. Dent, London and Son, Northampton; H. L. Hoole, Sheffield; R. S. Newall and Co., Gateshead.

HONOURABLE MENTION.—Bell and Sons, Son and Co.; Peetham and Co., London; James and Co., Southampton; Sheringham; T. Walker, Sheffield.

TENTH CLASS.—CHYMICAL ARTS, DYEING AND IMPRESSIONS, PAPER, INDUSTRY, SKINS, CAOUTCHOUC &c.

MEDALS OF HONOUR.—Gaudler and Palmer, Price's Patent Candle Company, London; Tennant and Co., Glasgow

FIRST CLASS MEDALS.—Blundell, Spence, and Co; Dixon and Whiting, Fischer, J. and T. Hepburn, Sambers and Butler, D. W. and H. Roberts, T. R. Saunders, G. and T. Wallis, Woolf and Son, London; A. Allwright, Birmingham; C. Allhusen and Co., Gateshead; East India Company; A. Cowan and Son, Edinburgh; R. and H. Draper, Kenilworth; J. J. Hollingsworth, Maidstone; Hurlet and Campsie, Glasgow; Ordarih, Dublin; Pincoffs and Co., Manchester, A. Pirie and Son, Aberdeen; J Paynter, Glasgow; W. Stockdale, Birmingham; Wade, Glasgow.

SECOND CLASS MEDALS.—Bevington and Morris, Z. Bossard, Brockman and Langdon, Davy, M'Murdo, and Co., J. S. Deed, Morson and son, J. Newman, D. Rowney and Co., London; W. Beaton, Rothesham, Yorkshire; Bluddridge, Kent; E. Fisher, Biddenfield; A. A. Fleming and Co., Leith; Hare and Co., Bristol; Hirst and Brooke, Leeds; Jardine, Skinner, and Co., British Colonies; Maudet Brothers, Wolverhampton; W. S. Portal, Malshanger; W. Slade, Haybourne-mills; Townsend, Glasgow; Turnbull, Wilson, Walker, and Co., Leeds; Wood, Stafford.

HONOURABLE MENTION.—F. S. Cleaver, H. W. Muller, E Rimmel, A. Ross and Co., London; Baldwin and Son, Birmingham; Burkley; C. J. Clark, Street; J. S. Corbett, Greenwich; W. B. Gee, Sydney; J. Lamb, Newcastle; Richardson Brothers, Edinburgh; F. W. Rudge, Mersey River; Savory, Jamaica; G. Simmons, East Peckham; Dr. Stephenson, Manning River; Thomson, Vienna.

ELEVENTH CLASS. PREPARATION AND PRESERVATION OF ALIMENTARY SUBSTANCES.

FIRST CLASS MEDALS.—J Dean, London; J. P. Cloete, Constance, Cape of Good Hope; J. W. M'Arthur, Camden, Australia; Fiefs, Paradania, Ceylon; T. Porter, jun., Guiana; Wiehé and Co., Mauritius.

SECOND CLASS MEDALS.—Allhusen and Co. Manufacturers; G. Baillie, Ceylon; the East India Company; Messrs. Daniele and Harbertson, Fortrose; the Industrial School of the Rev. M. Thurston, Ceylon; C. Pitts, Montreal, Canada; J. Gordon, Guiana; the Governor of Prince Edward's Island; Rev. Hughes and Jaynes, Indies; Hon. W. W. R. Kerr, Jamaica; R Lawson, Toronto; H. Leclezio, Mauritius; Z. G. Lowe, Guiana; J. Nasmyth, Toronto, Canada; Prescodo and Sons, Van Diemen's Land; T. Porter, jun., Guiana; J. D. Proctor, Montreal, Canada; Rebb, Montreal, Canada; the Superioress of the Loreto Convent, Riebetterre, Mauritius; Dominica Island; Wilkie and Co., Sydney, New South Wales.

EIGHTEENTH CLASS.—GLASS AND CERAMIC MANUFACTURES.

LARGE MEDAL OF HONOUR.—H. Minton and Co., Stoke-upon-Trent.

COLLECTIVE MEDAL OF THE FIRST CLASS.—Chance Brothers and Co., Oldbury; W. T. Copeland, Stoke-upon-Trent; J. Hartley and Co., Sunderland; T. J. and J. Mayer, Stoke-upon-Trent; F. Morley and Co., Shelton; Osler and Co., Birmingham; J. Ridgeway and Co., Cauldon-place, Stafford; Wedgwood and Co., Stoke-upon-Trent.

SECOND CLASS MEDALS.—S. Greer, Singer and Green, Swinbourne and Co., London; W. Baker and Co., W. C. Copeland, Elmore, Forster, and Co., Pinder, Bourne, Hope, and Co., and Walker, Pedmore, and Co., Stoke-upon-Trent; J. Hardman, Birmingham; Kerr and Binn, Worcester; F. R. Pratt and Co., F. R. Pratt and Co., Fenton; Ross and Daniel, Colebrook Dale; Shaw and Son, Burslem.

HONOURABLE MENTION.—Cottam and Hallen, Donlton and Co., G. Smith, London; Clark and Co., Wolverhampton; A. Kenrich and Son, Westborn-wich; T. Till and Son, Stoke-upon-Trent.

TWENTIETH CLASS.—WOOLLEN MANUFACTURES.

MEDALS OF HONOUR.—J. Ackroyd and Co., Halifax; Pawson and Martin, Leeds.

FIRST CLASS MEDALS.—J. and T. Clark, Trowbridge; J. and W. Wilson, Kendal.

SECOND CLASS MEDALS.—Brailwaite and Co., Kendal; J. and J. Crombie, Aberdeen; Dickeon and Laings, Hawick; Hudson and Bonfield, Leeds

HONOURABLE MENTION.—Ellis, Everington, and Co., London; Gill and Bishop, Leeds; W. and J. Simcomb, Trowbridge; Stow Brothers and Co., Leeds; Wilson and Armstrong, Hawick.

TWENTY-FIRST CLASS.—SILK MANUFACTURES.

MEDAL OF HONOUR.—Courtauld and Co., London.

FIRST CLASS MEDALS.—Campbell, Harrison, and Lloyd, East India Company, Grant and Co., T. Kemps and Son, J. A. Vanner and Son, J. and R. Watson, Wilson, Casey, and Co., London; Harrop, Taylor, and Co., Manchester; Thomson, Lancaster.

SECOND CLASS MEDALS.—T. Brooks, Cornell, Lyel, and Webster, Critchley, Brinsley, and Co., Keith and Co., J. Le Mare and Son, H. Sopar, London; J. Hart, Coventry.

HONOURABLE MENTION.—J. Foot, Wardle and Co., London; J. Chadwick, Manchester; Deverinne, Punjab, India; District of Manchester and Salford; Huffnagle, East Indies.

TWENTY-THIRD CLASS.—HOSIERY, CARPETS, LACEWORK, EMBROIDERY, AND LACE.

MEDALS OF HONOUR.—C. Ball and Co., Nottingham; Crossley and Son, Halifax; Rose, Mundella, and Co., Nottingham; the town of Nottingham.

FIRST CLASS MEDALS.—Barnet and Maltby, Nottingham; B. Birkin, Nottingham; Bright and Co., Manchester; S. R. and T. Brown, Glasgow; the East India Company, the Nizam of Hyderabad; Copestake, Moore, Crampton, and Co., London; J. D. Dunnicliffe, Nottingham, Henderson and Wildsell; T. Hooper and Co., Nottingham; Heymann and Alexander, Nottingham; D. L. J. Macdonald, Glasgow; R. Mallett, Nottingham; Seaklees and Hickling, Nottingham; J. Templeton and Co., Glasgow; Treadwin, Exeter; W. Vickers, Nottingham; Wild and Bradbury, Nottingham.

SECOND CLASS MEDALS.—Blackborne, Rerge de la Blanchardrère, Brown, Sharpe, and Tyars; Esther Clarke, Jane Clarke, C Glenny, Goblet, C. Harrison, Legwerth and Co., Morton and Son, Nevil and Co., Radley, B. Salomon and Son, Victoria Carpet Company, Walton, Low, and Bell, London; Brunton and Son, Kidderminster; India Company, Wilhams; India Company, J. Sallel; Fawcett and Co., Kidderminster; Forrest, D. Mills; Henderson and Co., Bolton; the City of Kingstown, Canada; Pardoe, Hoomans and Pardoe, Kidderminster; R. Lindsay and Co., Belfast; J. and W. Wallace, Glasgow; Wild and Bradbury, Nottingham; Withwell and Co., Kendal; and W. H. and J. Worth, Kidderminster.

HONOURABLE MENTION.—Foot and Co., Harrison, Spiers and Son, London; A. Bebb, Nottingham; Holden and Co., Belfast; T. Humphries, Kidderminster; Jacobi and Co., Nottingham; Mrs. J. Jones, Montreal, Canada; D. M'Arthur, Lerwick; M. Mortz, Nottingham; W. Palmer, Kidderminster; Miss F. Partenais, Montreal, Canada; J. Turnbul and Co., Glasgow.

TWENTY-SIXTH CLASS.—DRAWING AND MODELLING APPLIED TO INDUSTRY, PRINTING IN TYPES AND COPPERPLATE (TAILLE-DOUCE), AND PHOTOGRAPHY.

MEDAL OF HONOUR.—Lockett, Manchester.

FIRST CLASS MEDALS.—Abadie, G. Baxter, F Bedford, Besley, V. Brooks, Casion, J. & C. Claudet, Clowes, East India Company, Cripps, W. Day and Son, D. Wyatt, Eyles and Son, Fenton, Photographic Society; Figgins, M. and N. Hanlart, Harris, Holloway, J. Leighton, Leighton, Son, and Hodge; Llewelyan, Photographic Society; M'Queen; Maxwelle, Lyte, Photographic Society; Bevley, Cowderoy, Photographic Society; C. H. Thompson, Wright, A. White, London; S. Austin, Hertford; Roberts, Constantinople.

SECOND CLASS MEDALS.—J. Arrett, Bradbury and Evans, Clements, P. De la Norie, D. Diamond, W. Dickes, L. Gruner, J. K. Harvey, Lamb, Lawrence, Miss Sheppard, Smith, Towey, Townsend, B. B. Turner, Watelco, Wilson; Black, Edinburgh; G. Bowney and Co.; Rylander; R. H. Williams, Paris.

HONOURABLE MENTION.—Bishop, Bohn, Cole, Dunscomb and Walton, Miss Ironside, J Leighton, J. E. Mayel, J. Peal, London; J. C. Dean, Montreal; Adolphe Duperey, Jamaica; Miller, Montreal, Canada; T. J. Palmer, Toronto, Canada; Reade; Rose and Thanson, Edinburgh; Sir M. Rowson, Snelgrave and Thompson, Sydney; De Soisa, T. Underwood, Birmingham; Wallis, Louth; Waugh and Cox, Sydney; West, Wilkes, H. Yates, and Young, Montreal, Canada.

THE PRICKING FOR HIGH SHERIFFS.

THIS ancient and interesting ceremony was performed on Monday last on the morrow of St. Martin, in the Exchequer Chamber, at Westminster. All the Judges, with the exception of Mr. Justice Cresswell, Earle, Crompton, and Mr. Baron Martin, were present; and the two Chancellors and the President of the Council were for the most accompanied by the Home Secretary, who took his seat in order of precedence, fourth from the Chancellor of the Exchequer, who were his new robe of office, all stiff and glistening with gold embroidery, but, unlike his versatile predecessor, did not volunteer a remark throughout the entire proceedings. When all had taken their seats, the Judges presented a brief with the names of High Sheriffs present and to come on it, and the senior of the two who went the last summer circuit proposed as many names as the Remembrancer declared to be requisite, and also submitted to the Council sundry excuses with which they were severally furnished. These latter were hardly so racy as we have known them, and the crowded court was comparatively seldom in a roar. The excuses of "more money when my mother dies;" "educating children myself;" "owing to blood to the head, I am highly nervous, and obliged to avoid all excitement, especially the heat of a crowded court;" "private and domestic matters which occupy a great portion of my time;" and pedantic medical certificates which admitted the auditory, step by step from the patient's "viscera" to his "mucous membrane," were not heard this year. Many very quaint excuses were propounded, and, as usual, with very partial success. One Sheriff elect was "building a house;" another had "at his house," a third "lived with ten children in lodgings;" and a fourth alleged that he "had only a forty-acre farm in the county." The embodied militia officers of course escaped pricking, and an eminent contractor, who is conducting railway works in Canada, was put back for a year. There were hardly any painful cases of money troubles. One gentleman simply rose to show that he had "pecuniary disabilities," while others were more or less specific, and stated that they "had only £800 a year," or "not enough to keep up the office with due regard to dignity," &c. This class of excuse found a rather unfair one in "my father's will till I am thirty;" but as the Lord Chancellor happened to remember that the said gentleman's mother was a bride in 1823, he intimated that, in the course of things, he might be on the verge of thirty, and that it was better to put him back a year than lose him when they had once got him.

The medical excuses rested much more on the statements of the patients themselves; and, in the absence of certificates, even "paralysis, which forces me to use a stick when walking" "repeated attacks of the gout;" and "paralysis and nervousness, sounded amusing, from the very dry manner in which the Judges announced the symptoms on behalf of the squirearchy. One gentlemen especially spake of "a very irritable, nervous system, which compels me to lead a quiet and retired life;" but got the present Under Sheriff instead of a doctor to indorse his diagnosis. He, of course, received no pity; and Lord Campbell remarked that he knew from experience such men required rousing, and "always made capital Sheriffs." Sir John Jervis, the old association with the Principalities, was such a proficient at pronouncing the abstruse Welsh residences, that his colleagues jocularly complimented him; and he also acted as a solution of the difficulty, which occurs, that when a gentleman's name is Williams, and he lives at Williamstown, there is no end to the Williamses. Welsh names, that are the glory of the counties in which they are found, and which declared the vote carried against the claim, without taking the slightest notice of the Judges, who had stood up to be polled. On Baron Alderson demanding the cause of such a slight, with an indignant energy, which raised an involuntary burst of applause in the Court, Mr. Greville answered that only Privy Councillors could vote in a Privy Council, and the Baron rejoined with clenching logic, "How can this be a Privy Council when the President of it, Council cannot [illegible] some further remarks [illegible] of summons was made [illegible] not as mere assessors to the Privy Council, but on an equality for the time being, the question was postponed till this year. However, seeing the feeling which it had excited, the Lords of the Council did not think it advisable to reopen it, and the learned Master's name was struck out of the list in the interim. This jocose "afternoon with the Judges" occupied nearly two hours.

FINE ARTS.

THE WINTER EXHIBITION.—LANDSEER'S ETCHINGS.

THE fifth season of the pleasant little Winter Exhibition opened on Monday, at the rooms, 121, Pall-mall. The collection, though not numerous, is selected with a care for Art, and comprises specimens in Oil and Water Colour Painting; in Engraving, and Lithography; and, one or two only, in Sculpture.

In Oil Painting the gem of the room is unquestionably a little cabinet piece by F. Goodall—"Raising the Maypole" studied after a larger picture by the same artist, which adorns, if we mistake not, some one of the numerous collections in the manufacturing districts of the north; but of course somewhat varied in the treatment. Nothing can well surpass the minute delicacy with which every figure and object in this crowded and lively subject is executed; and yet the colouring is so judiciously subdued, that the labour bestowed on the handling is not apparent to the casual observer. Close to this charming little piece we observe a clever "Scene from Woodstock," by Frith, who has in another part of the room an elaborate study of a housemaid—a prim conceited piece of goods—asking "Did you ring, Sir?"—a worthy counterpart of the pert damsel who a season or two back set all the fast young men about town crazed with the invitation "Sherry, Sir!" So much Art naturalist to the vulgarest tastes if it would pay the baker's bill. F. Stone exhibits a gaily-painted female study of "the East," and an attempt at sentiment, in the person of a young lady, described by the poet:—

> She is far from the land where her young hero sleeps,
> And lovers around her are sighing,
> But coldly she turns from their gaze, and weeps
> For her heart in his grave is lying.

The female face is full of touching sorrow, but the booted young gentleman who so inopportunely presses his suit is obtrusive in every sense. Hemsley has a capital "Study from Nature"—a young urchin grinning with all his might, as he leans with his back against a brick wall. Mr. Arthur Hughes exhibits a pre-Raphaelite specimen of a very stiff flannel beldgown, with a little boy's head above it, as "A closer look from behind is and the coming race." J. Morgan indulges in a skit at the times in "A Royal Game at Chess—Scene, Tuileries," representing Queen Victoria playing out a game with the Czar Nicholas, whilst the crowned heads of France, Austria, and Prussia look on with marked interest at the board. He has also another amusing *pièce de circonstance*, "The Russian Map of the World." Ansdell has three animal subjects, of which "The Fallow Deer" is the largest and the best. S. Cooper has a group of "Cows in a Landscape"—not quite up to his usual mark. Creswick treats us to two pleasing landscapes; and J. D. Harding has three genuine English bits—composition, atmosphere, &c., all truly homely: "The Old Mill at Bathampton," and two "Views on the Thames, looking from Clifden, near Maidenhead." J. T. Linnell beams upon us with one of his ever-glowing sunsets, seen through a leafy screen. Philip, whose studies of gipsy life are inexhaustible, has a joyous specimen of the kind, entitled "The Duet." J. Sant has a single figure of some pretensions—"Early Morn"—

> It is the lark, the herald of the morn—

a shepherd-boy, on a mountain-heath, looking upward, as if listening to the early matins of the feathered choir. A. Solomon exhibits a repeat of his popular subject—scene, the interior of a first-class railway-carriage—"The Sailor Boy's Return;" Miss Rebecca Solomon has a clever bit, probably from real life, entitled "Quizzing;" Stanfield is successful as usual in a "Mediterranean Scene"—"Ruderstein, on the Rhine;" Wyld has very pleasing views of Genoa and Naples; and Woodington, a pretty little Venus-and-Cupid group, with the title "The Flattering Tale."

In the Water-Colour Department, which is not numerously occupied, we observe contributions by Aumle, Bonnick, Cashman, Hallyer, Mrs. Harrison, W. Hunt, A. Penley, H. Pidgeon, C. Smith, W. Topham, &c.

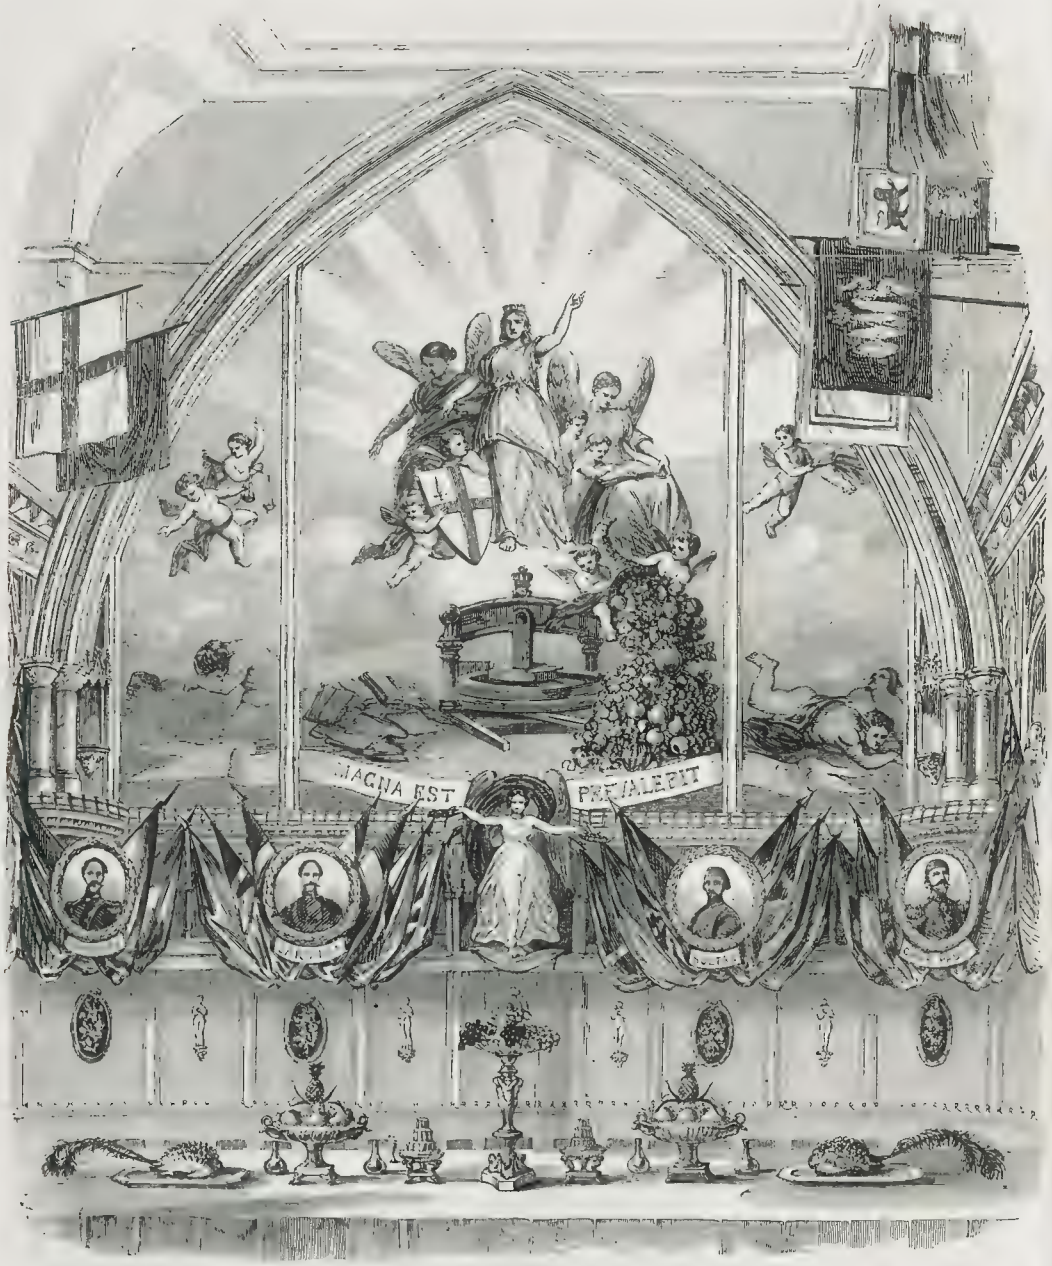
In Sculpture there are only four exhibits—Marbles, by Alex. Munro:—Dante's Beatrice, a medallion; The Seasons, a frieze for a chimneypiece; and two other groups;—all pleasing conceptions, executed with much feeling.

Undoubtedly, however, the most important feature in the present Exhibition is the fine collection of Sir Edwin Landseer's engraved works, said to be a complete set, and numbering no less than 278 pieces, of various sizes, and in many various styles. This collection, we believe, has been the growth of years in the hands of a brother artist of kindred taste. Many of the pieces composing it are extremely rare, some absolutely unique. We employed a couple of hours very agreeably the other day in examining the various specimens, scrutinising dates, and comparing the proof impressions of the same hand at various periods of its artistic career, and under circumstances very diverse. The result of our study was to convince us that in his school Edwin Landseer is without a rival; and, supposing his object to have been the highest, that he would have been entitled to the distinguished honour of the great gold medal recently bestowed upon him by the jury of the Paris Exhibition. Undoubtedly no living artist can compete with him in his peculiar line, which is that of animal life in all its varieties, and of nature generally; but, then, is this precisely the field of Art which should boast the culminating honours? It has not been so in France, where Vernet has been crowned with the Historic wreath. Then why—some people will be apt to ask, and ask angrily—why should English Art put up with honours in *genre*—an inferior walk? Nevertheless, the fact is so, and our Landseer has carried off the palm for British Art.

Another reflection forced upon us, as we gazed round this little room, containing the works of a busy life, was this: Have not the patronage does for Painting and Art, and the Public generally, in Painters and Artists. Landseer has only had to paint away, and others will be running after him, who, becoming fashionable, has had to pervert his genius to Fashion's ways, and to tame down his wild free pencil to suit the atmosphere of the boudoir and the drawing-room. Look at his first studies—"Heads of Sheep and Cattle," of "Donkeys," of a "Lion," of a "Horse and Bull," of a "Bear's Head," of the celebrated lion "Nero"—all drawn between the ages of eight and twelve, and some of them etched by himself, under his brother Thomas's tuition, and see what a genius of eye, of hand, and of appreciation of life and character there is in them; then go to his more careful works of a mature but early life—say 1824 and 1826—when he worked for the mere pay for the "Sporting Magazine," producing those immitable groups of foxes, hounds, studies of mastiffs, and terriers, and every outlandish "varmint" breed of dog, and those exhilarating hunting scenes, in which every line of horse and rider is instinct with healthful action. Gaze for an instant on that rollicking bit of fun, "The Sweeps:" what a desperate donkey—what a wretched limping our scrambling along in front! Or take that unapproachable (in more senses than one) "Cora—a Labrador Bitch," lithographed by the artist himself in 1823; consider the severe character which pervades its every line, and the perfect picture of a couch-inn yard in which the brute reposes. Take again, later still, his "High Life" and "Low Life" (1834); think how the first must have loved the lady, lanky legged monster in the last-named marvellous creation (which he repeated in innumerable studies), and do justice to the exquisite humour evinced in the selection of the accessories—the butcher's block, the large, stumpy, stiff-looking top-boots, the pert cockney hat, and bird's-eye "fogle;" and, in the midst of all, the never-to-be-lost sow; and that bus in the lowest pass of his life! Has continued to produce small prettinesses for golden pay, where, but for Fashion's patronage, he might have produced grand creations of Nature's inspiring, in true devotion to his art.

Amongst the curiosities in this collection are several pieces etched by noble and distinguished amateurs—the Duchess of Bedford, Ladies Elizabeth and Harriett Russell, Miss Wardrop (now Mrs. Shirley), and others. There is also amongst the subjects engraved on wood one—"Horses of William Wigram, Esq.," with a magpie on the [illegible] which we exhibited at the Royal Academy, which we recognise [illegible] ILLUSTRATED LONDON NEWS, the only engraving [illegible] pictorial picture.

[illegible] very interesting and [illegible]



DECORATION OF GUILDHALL ON LORD MAYOR'S DAY.—EAST END.

THE INAUGURATION DINNER AT GUILDHALL.

In accordance with ancient custom, the Lord Mayor and Sheriffs entertained the citizens of London, her Majesty's Ministers, and a large circle of the nobility and notabilities of the metropolis, at the Guildhall, on Friday week. The cards were issued as usual for four o'clock, and from that hour until half past six the company kept pouring in in a continuous stream, and as they passed across the Guildhall to the Council Chamber, where the Lord Mayor received his guests, were cheered more or less according to their standing and importance, or the position in which they stood in the estimation of the good citizens of London. The Turkish Ambassador was loudly cheered, and the Minister of Sardinia had quite an ovation. Lord Palmerston also had a hearty reception, but Lord J. Russell was allowed to pass with comparatively slight notice. The only other personage whose reception had anything of a political significance was Lord Hardinge, and his Lordship had such a welcome as showed that the citizens fully approved of his recent promotion.

The Guildhall was most artistically decorated for the occasion, under the superintending taste of Mr. Bunning, the City architect, and as these embellishments have a national significancy, and are especially characteristic of the great topic of the day—the war—we have engraved the emblematic groups with which the great east and west windows of the Hall were occupied.

Immediately facing the entrance into the Hall from the Law Courts is a life-like figure of a knight on horseback in full armour. The lobbies between this corridor and the banqueting-hall were hung with suits of armour and weapons, arranged in groups, and decorated with flowering plants and shrubs.

The eastern window of the Hall is filled with an allegorical design, painted by Messrs. Fenton and Absolon. The central figure personifies the Corporation of London standing boldly forward as the advocate of civil and religious liberty, and pointing to the printing-press, the emblem of Civilisation, with supporting figures of Education and Justice, repelling, by their superior light, Superstition, Prejudice, and the bad Passions."

In the upper part of the western window is the usual fixture of Messrs. Copeland's beautiful crystal star; but, beneath this, and on the Gothic screens, are allegorical figures of France and England, having between them portraits of her Majesty and the Emperor of the French. The general idea of ornamentation carried throughout the Hall is that of representing the Allied Sovereigns, with the Marshals and Generals of their armies, and the Admirals of their navies, engaged in the present war. Thus, on the gallery screens southward, are portraits of Prince Napoleon, Marshals St Arnaud and Pelissier, Generals Canrobert and Bosquet, with Admirals Sir Edmund Lyons, Brunt, and Hamelin. On the north side, portraits of the Duke of Cambridge, Lord Raglan, the Earl of Cardigan, and Generals Evans, Simpson, and Cathcart. In the centre of the screen, at the eastern end of the Hall, is a figure of Victory, to the right of which are portraits of the Sultan and Omer Pacha, and on the left those of the King of Sardinia and General Marmora. The portraits (painted by Mr. Coke Smythe) are encircled by laurel and [illegible] wreaths; above these are displayed the French, English, Turkish, and Sardinian flags, [illegible] mixed with trophies of ancient and modern arms.

We pass by Mr. Weigall's full-length portrait of the Duke of Wellington, Mr. Durham's bust of her Majesty (presented to the Corporation by the late Lord Mayor as his parting gift), and the finely-fancied design for a memorial monument to the Alliance, by Mr. Calder Marshall, which adorn the lobby of the Exchequer Court, to linger for a few moments in admiration at the "Timon," a marble statue by Mr. Frederick Thrupp, executed by him to order for the Corporation of London, and intended to be placed in the Egyptian-hall at the Mansion House.

Of the speeches after dinner, that of M. De Persigny on behalf of the Emperor of the French, which we have given elsewhere, and that of Lord

DECORATION OF GUILDHALL ON LORD MAYOR'S DAY.—WEST END.

Palmerston for himself and colleagues, were the most remarkable. The Premier's speech, after acknowledging the toast and its flattering reception, proceeded as follows:—

It must always be most gratifying to those who are honoured with the confidence of the Crown to be entertained at the hospitable board of the Chief Magistrate of this great city. Those persons who are charged with the conduct of public affairs must indeed be inadequate to the performance of the duties which devolve upon them if they are insensible to the value of that great principle of commercial enterprise which, I may say, is consecrated by those who sit within these walls. That commercial enterprise is one of the main foundations of the greatness and the power of nations. In peace the enterprise of commerce diffuses civilisation; it promotes the intercourse of nations; it throws down the barriers which separate people from people; and tends to unite mankind in the bonds of common brotherhood. When war, unfortunately, happens—as in the course of human events we must expect that it sometimes will—commerce furnishes those means by which war can be successfully carried on in such a manner as to ensure a safe and honourable and lasting peace. It must, my Lord Mayor and gentlemen, be deemed at all times by high-minded men one of the noblest positions to which an individual can aspire to be charged with the conduct of the affairs of a great nation like this. But if ever there was a moment when those who are charged with such a duty may feel peculiarly proud of the honour conferred upon them, and also peculiarly sensitive as to the deep responsibility which that honourable charge imposes, the present moment is beyond question the greatest that ever, perhaps, was in the memory of man; for never did a nation present a nobler spectacle to the world than does the British nation at this time. We have entered into a great contest, not rashly, not hastily, not with levity, but upon full and mature deliberation. We have entered into that contest because we felt that the war was necessary as well as just: and this nation evinces, from one end of the country to the other, a steady, a calm, but a deliberate determination to submit to every sacrifice which the conduct of the war may entail, to show itself equal to every exertion which the prosecution of that war may require, to exhibit the utmost constancy in carrying on the struggle, and to continue its sacrifices and its exertions until peace shall be obtained on conditions such as we may be entitled to demand (Loud cheers). We have present upon this occasion, gentlemen, the representatives of those three allies with whom we are bound in the enterprise which we have undertaken. We have at this board the Ambassador of the Emperor of the French—that great ally, who, I must do him the honour and justice to say, has, by the magnanimity of his mind, by his far-seeing perception, and by the honesty and single-mindedness of his policy, cemented a union between two nations which have too long been divided by jealousies and mistrust, but which, I hope, will from this period, in the words of my noble friend the French Ambassador, for ever continue to be intimate and confiding friends. We have also at this board the representative of the Sultan, in whose cause we have thrown ourselves into this war, and whose subjects have nobly shown that they were worthy of the assistance which we have afforded them. We have, too, the representative of the King of Sardinia—a Sovereign whose character and the conduct of whose people excite the warmest sympathies throughout this country, and whose good faith inspires our most implicit confidence. I trust that these representatives of our allies, let them go where they will through the length and breadth of the land, will see nothing and will hear nothing but what will enable them to report to their respective Sovereigns, that, while we place the utmost confidence and reliance upon the constancy with which they will support us in the war in which we are engaged, they may rely with equally implicit confidence upon the determination of the people of this great country; and no man can doubt that when these Four Powers are earnest in a cause—when they have drawn the sword with a full determination not to sheathe it until they have accomplished their purpose—(Loud cheers)—no human efforts opposed to their will can be successful in marring their exertions (Renewed cheers).

The Lord Mayor then gave "The House of Lords," the Marquis of Salisbury returning thanks; and subsequently "The House of Commons," coupling with it the name of Lord John Russell. The announcement of the noble Lord's name excited general disapprobation, which rose to a complete storm of groans and hisses when he rose to respond to the toast. After one or two vain attempts to gain a hearing, his Lordship was obliged to resume his seat.

Sir G. Grey proposed the health of the Lady Mayoress, to which the Lord Mayor responded, excusing her Ladyship's absence on the ground of indisposition; and after one or two more toasts the company broke up.

CALENDAR FOR THE WEEK.

SUNDAY, Nov. 18.—24th Sunday after Trinity. Wolsey died, 1530.
MONDAY, 19.—Charles I. born, 1600. Blackfriars-bridge opened, 1786.
TUESDAY, 20.—St. Edmund. Cape of Good Hope first doubled, 1497.
WEDNESDAY, 21.—Princess Royal born, 1840.
THURSDAY, 22.—St. Cecilia.
FRIDAY, 23.—Old Martinmas-day. First Balloon Ascent, 1783.
SATURDAY, 24.—Archbishop Tillotson died, 1649. John Knox died, 1572.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING NOVEMBER 24, 1855.

We continually receive complaints respecting charges made by the Post-office for the ILLUSTRATED LONDON NEWS. We particularly recommend purchasers of our Journal for post to procure the papers impressed with the old red newspaper stamp. The ILLUSTRATED LONDON NEWS weighs too much to pass through the post with a single Queen's head. The impressed red stamp frees the paper and supplement, without extra cost, for fifteen days after date of publication.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 17, 1855.

IF RUSSIA have friends in various quarters of the globe, it is certain that she has enemies in as many. To do the advisers of the Czar justice, they neglect no opportunity that diplomacy or cunning allows to establish amicable relations in all parts of the world. From Athens to New York, from Amoy to Paraguay, from the fiords of Norway to the pampas of South America, Russian agency is busily at work with bribes where bribes are acceptable, and with threats where bribery is of no avail—to construct and complete her network of political influence. Long ago the instinct of the English people pointed to Sweden and Norway as the countries where it was essential to meet and combat the arts of the Czar; and we now find that the Governments of France and Great Britain, lagging behind the people, have at the eleventh hour judged it expedient to try whether it be possible to enlist the Scandinavian nations in the great European league against Russia. We shall have occasion hereafter to advert to the mission of General Canrobert to the Court of Stockholm. In the mean time, wishing all success to a mission which has been but too long delayed, we wish to direct attention to the affairs of Greece—a country where Russian influence is predominant—and as regards which a new competitor, boding mischief, has suddenly started up. The Government of the United States, strange as it may seem, is desirous to obtain a foot in ancient Hellas, by the purchase of one or more of the multitudinous islands of the Morea. What, then, is the real condition of Greece? and what are the duties of Great Britain and France towards a State of which they were, in an unhappy hour, and in conjunction with Russia, the founders and protectors? In the outset of this inquiry we emphatically disclaim any intention of indulging in vituperative language against Hellenic Royalty. But facts must be recorded, nevertheless, with that unmistakable language which is the prerogative of Truth. Since the year 1843, when the Constitution was wrung from the unwilling hands of King Otho by General Kalergi, his Majesty has laboured hard to convince those through whose instrumentality the new system of government was introduced, that the change did not in the least benefit the country; but that, on the contrary, it created new difficulties for the Executive, by its alleged inappropriateness to such an infant State as Greece. It is a well-known fact that the prominent political weakness of his Majesty consists in a steadfast desire to be despotic. The knowledge of this fact served as a medium through which the band of unscrupulous courtiers who surrounded him worked out their own individual views, at the sacrifice of the country's welfare; and, unfortunately, the Prime Minister in office at the period referred to, was able to paralyse the wholesome operation of the Constitution by the boldness of his measures, and by his unflinching determination to do the King's bidding at any cost. The occupation of Greece by the English and French only cherished the irritation of the King, and completely baffled the Hellenic Court when engaged in seconding the views of Russia by its insane aggressive movements in Epirus and Thessaly. No doubt his Majesty, hemmed in on all sides by the preponderating force of England and France, feels "rather annoyed;" but has he ever considered the disastrous results to the nation which must inevitably be superinduced by his perseverance in a line of conduct indicative only of his determination to revenge the ideal injuries he has suffered from the best friends of Greece? If he has ever thus reflected, his dogged obstinacy must at once, be characterised as criminal, inasmuch as a whole nation suffers for his folly. England and France, however, are too much interested in the political well-being of Greece to allow such a state of things to continue. We feel persuaded that they have definitively resolved on having the country properly governed. The temporising system pursued by the King, and his dependence on contingencies, will prove to be unavailing, and may eventually make those two Powers more difficult to deal with when the day of reckoning arrives.

The sober-minded portion of the Greek people is impatient for any change that may benefit the country and infuse more order and honesty into every branch of the Administration. The native intelligence of the Greek people—that intuitive capacity for enterprise which so peculiarly distinguishes them—and last, not least, their heroic struggle for independence thirty years ago constitute an aggregate of claims on the consideration of the protecting Powers which ought to be satisfied by ensuring for them at least a good Government.

The King has still time for reflection, and it is to be hoped that he will see the danger of the course he is following. He must be positive of one thing—that, considering the actual circumstances of Europe, and his openly expressed sympathy with Russia, the patience and forbearance of England and France are likely to be soon exhausted. His desire to be a despotic Monarch he cannot be allowed to gratify; it would be as well, therefore, for his own sake, if he were to inaugurate a new and wiser policy, and govern his adopted country as becomes the ruler of an intelligent nation.

THE disapprobation which greeted Lord John Russell at the Guildhall dinner on the 9th of November does not seem to have had the effect of diminishing a certain energy which was always one of his characteristics. Since that time he has performed the part of President at another banquet, and that of Lecturer at Exeter Hall. In the former capacity he deemed it expedient to deliver some complimentary commonplaces, in eulogy of the valour and endurance of our soldiers and sailors, although he abstained from a word of exultation over their successes as means to an end. This perhaps, could scarcely be expected, for who can ask a man to rejoice in the prosperity of a cause which he has betrayed? His Lordship's lecture to the Young Men at Exeter-hall was more pretentious,—as became a discourse preceded by Lord Shaftesbury, and followed by a doxology. This was a carefully-prepared essay, arranged with as much forethought as the speeches of which, thirty years ago, it was said that "once in the Session Lord John Russell hems, crawls, and hesitates, over an excellently-written address on Parliamentary Reform." It is needless to say that his Lordship was eminently historical, and that a long catalogue of proper names garnished the display. Some pleasant anecdotes of past times also came in; and Lord John, who does not tell a story without some agreeable appreciation of its point—as Mr. Disraeli has felt—was, no doubt, considered singularly facetious by the class which crowded the hall of brotherly love.

But, let a Lord "recite the pointed" lines,
How the wit brightens, and the sense refines!

The noble lecturer told the young men, with great truth and propriety, that there was no royal road to learning; that if they worked hard, cultivated good habits, and generally were meritorious young men, then they would succeed; but that, if they did not, they would be so many Philadelphian Semproniі, whom he encouraged to deserve the success they might not command.

Cold compliments to valour, commonplace exhortations to virtue—such were the utterances of a leading British statesman at a time like this. A grapple of giants is shaking the Continent and its thrones, but he is unexcited; hearts at home are throbbing at fever heat, but he is frigid and decorous as ever. But no one, as we have said, who knew Lord John Russell expected much more; nor should we have devoted time and space to his icy demonstrations, did not the working of the system, or rather the routine, with which he has connected himself, constantly receive illustrations which demand grave attention. It is this habit of preaching at people, and not feeling with and for them, that destroys all the power which educated and well-meaning men, lay and clerical, would have over them. It is this substitution of didactic addresses for real instruction that has left the people ignorant and immoral. The aristocratic lecturer takes his stand before a mixed audience, and in the neatest periods, and the most pleasant manner, apprises them that goodness is the only way to success and happiness; and that really, for their own sakes, they ought to be good. He takes his leave, and the people depart—the value of his undeniable truths upon their daily walk and life being mournfully inappreciable.

Without referring, at this moment, to criminal records, or to vice at home, let us glance at the noble army whose military merits Lord John Russell is good enough to admit—the army in the Crimea. Read the accounts which have recently been admitted touching the *morale* of that gallant host. We are assured, and the assertion is reiterated and substantiated in a way that can leave little doubt of its truth, that the most frightful and habitual drunkenness is the all-pervading vice of the soldiery. The disgraceful sights occasioned by this wretched habit shock even the eye accustomed to observe the depraved lower orders of the London population. Punishments whose severity is tremendous—punishments which, were they tried upon debased scoundrelism at home, would only excite a cry of indignation from the sentimental friends of ticket-of-leave-men and the like—are inflicted upon the heroes of the Crimea, in order to restrain this vice, but without avail. The black-hole, the drill, the cat-o'-nine-tails, are all used unsparingly; but still the British soldier gets drunk.

Now, who and what is the British soldier, and what kind of training and teaching has he undergone before he left England? What means have been adopted to arouse him to a sense of the decency and dignity of human nature? what course has been tried to impart to him habits of self-respect and self-command? He represents, very fairly, the humbler class of this country. He comes from an agricultural or manufacturing district, and has enjoyed the benefit of the machinery which the wisdom of Kings and Parliaments has constructed for converting the stolid peasant into the intelligent and loyal citizen. Well, what have you taught him? Perhaps he can read even write a little, though this is by no means the case with the average of his class. He has mastered his multiplication table, though the applying that spell to any problem of actual life is usually beyond his comprehension. If he has lived in a manufacturing town, he is sharper than his bucolic comrade but is also less likely to have gone to church. He may, however, have heard some lectures. The agricultural recruit is less indebted to street corners and gin-shops for secular training, but he has probably stamped and clattered into the country church a good deal, and tried to keep awake during the early part of the sermon by counting the words in the Proverbs of Solomon with which the old Saxon arches are besmeared. Cometh the rattle of the drum, and Sam from Chimneytown, and Bill from Broadacres, are smitten with the desire of travel and combat, and away they go. They fight, like fine fellows as they are; but they cannot be always fighting, so they get drunk, because liquor is foolishly put in their way. They are put to extra drill—after which they get drunk again and are flogged, but still with the same sequel. Perhaps an army chaplain, struck with the good-natured expression of the persevering tipplers, approaches them, and, after some friendly remonstrance, asks, "Tell me, now, Sam, did no one ever warn you against this kind of thing? and you, Bill, surely you have been taught that the habit is degrading and beastly?" The soldiers consider; they would like to make a soldierly answer, and please the parson; but neither can recollect anything of the sort. But the clergyman is patient; and after a time a light breaks in upon them. Sam remembers that he once heard a lecture to young men in which a pleasant gentleman told some long stories, and advised everybody to be good and virtuous; and Bill is distinct in his recollection that the clergyman at Broadacres often preached against carnal wickedness, such as drinking, and the like. "And why did you not heed such good advice?" asks the chaplain. They look a little sheepish, and have, really, not the least idea. But is it not because they have been lectured at instead of *taught*? And is there not another reason—that it is unwise on the part of those in authority to allow the temptations of drink to be placed in the way of brave men for whom no other source of amusement or recreation is provided? If drink were not allowed to be introduced in the Camp, it would be impossible for the soldier to get drunk. To prohibit drink in a large city is no easy matter; but to prohibit it in a camp and amid a marching army is a task that would not greatly oppress either the intellect or the courage of a good commanding officer.

THE COURT.

The approaching arrival of the King of Sardinia in this country, on a visit to her Majesty, promises to impart unusual gaiety to the courtly hospitalities of the present winter season. The note of preparation is already heard at Windsor; and it is authoritatively announced that the State apartments appropriated to the use of the Emperor and Empress of France in April last are to be placed at the disposal of the Sardinian Monarch, whose presence in this country may be expected very early in the ensuing month.

The birthday fete of the Prince of Wales on Friday se'nnight has been the only incident in Court life during the past few days. The usual parade took place early in the morning, in the Home-park; and at a later hour the young Prince accompanied his illustrious father on a shooting excursion in the Royal preserves, during which the Heir-apparent killed several head of game with his own gun.

On Saturday last his Royal Highness Prince Albert joined the meet of the Queen's Hounds.

On Sunday the Queen and Prince Albert, with the Prince of Wales, the Princess Royal, and the Princess Alice, and the ladies and gentlemen of the Royal household, attended Divine service in the private chapel of the Castle.

On Monday his Royal Highness the Duke of Cambridge visited her Majesty. The Prince Consort went out shooting during the morning.

On Tuesday his Royal Highness Prince Albert went to London by a special train of the Great Western Railway, and honoured the studios of Messrs. M'Dowell and Bailey with visits, to inspect the works which they are executing for the new Houses of Parliament. The Prince afterwards visited Baron Marochetti's studio, to see the cast for the monument about to be erected to the officers and men buried at Scutari.

On Wednesday Prince Albert enjoyed the diversion of shooting.

Her Royal Highness the Duchess of Kent has dined with the Queen daily during the week; and among her Majesty's guests have been the Earl and Countess Granville, Viscount Torrington, and Sir Hamilton and Lady Seymour.

The Hon Flora Macdonald has succeeded the Hon. Mary Bulteel as Maid of Honour in Waiting to her Majesty.

His Royal Highness the Duke of Cambidge left London on Tuesday for Paris, on a visit to the Emperor and Empress of the French. Colonel the Hon. James Macdonald and Colonel Tyrwhitt were in attendance on his Royal Highness, whose absence from England is not expected to exceed ten days.

The Egyptian Prince Ismael Pacha left Paris on Wednesday on his return to Alexandria. His Highness's younger brother, Mustapha Bey, left the French capital some weeks ago, and has arrived safely at Cairo.

The marriage of the Marquis of Winchester to the Hon. Mary Montagu is to take place at St. James's Church on Saturday next.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS.—*Rectories:* The Rev. J. Warner to Bradwell-juxta-Mare, near Maldon. Rev. C. Norris to Melton Constable, with the Rectory of Burgh, and the Perpetual Curacy of Briston annexed, near Holt, Norfolk. Rev. P. B. Bridges to Danbury, near Chelmsford. Rev. [illegible] Rev. S. Evans to Much Birch, Monmouthshire. Rev. T. Jones to Colwinstowe, near Cowbridge. Rev. J. M. Ward to Hampsthwaite, near Ripley, Yorkshire. Rev. J. S. Oxley to Clent, near Stourbridge; Rev. T. W. D. Brooks to Pattrick, near Ampthill; Rev. O. F. Owen to Child's Wickham, near Broadway, Gloucestershire. *Incumbencies:* Rev. A. W. Snape to St. Mary Magdalene, Southwark; Rev. H. W. Wood to Welton, near Ashbourne Rev. Dr. D. Bell to Goole; Rev. W. Boulton to Lesbrockhurst, near Wem, Salop; Rev. J. Laycock to Aisleby, near Whitby; Rev. J. H. Cardew to St. Paul's, West Dean, Gloucestershire; Rev. R. H. Blanshard to Flamborough, near Bridlington, Yorkshire; Rev. J. Hughes to Cedig, Carmarthenshire; Rev. J. Hall to Knockholt, near Sevenoaks.

IN a Convocation held at Oxford, on Tuesday, Mr. B. C. Brodie was elected Professor of Chymistry

A TESTIMONIAL of respect has recently been presented to the Rev. E. Hewlett by the congregation of St. John's Church, Bethnal-green, on resigning the curacy of that church.

THE GOVERNOR-GENERAL OF INDIA.—The arrangements relative to the departure of Lord Canning for India are now concluded. The only members of his Lordship's Staff who will accompany him to India—the only members, we believe, yet appointed—are Dr Lorkie, late civil surgeon at Benares, now in Europe on furlough, who will act as his Lordship's medical attendant in India, and Captain Bouverie, A.D.C. The Governor-General and Staff will leave London for Marseilles about the 25th instant, and embark on the 1st proximo, at Marseilles, on board the *Caradoc* (the vessel which brought Lord Raglan's remains to England). He will proceed from Suez to Bombay in the Hon. East India Company's steamer *Feroze.—Overland Mail.*

THE LATE LORD TRURO.—By the demise of this nobleman a Chancellor's pension of £5000 a year falls to the Crown. There are still living three ex-Chancellors—viz., Lords Brougham, Lyndhurst, and St. Leonards. There are two of Ireland—viz., Lord St. Leonard's and the Right Hon. Francis Blackburne. Lord Truro was one of the survivors of the learned gentlemen who defended Queen Caroline. It is somewhat remarkable that all the leading counsel of that unfortunate Princess rose to judicial seats, amongst them being Lord Brougham, Lord Truro, Lord Denman, Mr. Justice Williams, Dr. Lushington, &c. Lady Wylde is in the enjoyment of a pension from the Crown.

RISE IN PRICES.—COFFEE, TEA, AND TALLOW.

We are threatened with a general rise in prices; the consequence primarily of a rise in the prices of food, which sooner (or later affects all other things, and, secondly, of the instinctive notion dealers have that, when any one commodity rises very much in price, like sugar, the production of other commodities, in place of which it can be grown or produced, will decline, and, consequently, they will become scarce. This probable effect is in part "discounted," to use the language of the market, before it actually occurs, and in anticipation of a comparative scarcity. It is known, for example, that the great rise in the price of sugar is already making the planters in the West Indies, in Brazil, and in Cuba attend especially to the cultivation of sugar in preference to coffee, and hence a motive arises, in addition to the shortness of the stock of coffee in the market, for the holders of coffee demanding and receiving for it an increase of price. At the close of last week the price of native Ceylon coffee in bond—called coffee consols in the market—was from 4s. to 4s. 6d. per cwt. higher than in the previous week. In this week it has risen again, and the price is now 56s. per cwt., which is 8s. above the price a fortnight ago. On the Continent, where coffee is very much used, and especially in Holland, which is the great Continental mart for Java coffee, the price has also risen. To justify the rise, besides the two general circumstances already mentioned, it is noticed that the stock of coffee in London is now only 167,130 cwt., against 138,503 cwt. at the same period in 1854; and it is said the stock in Holland and on the Continent is much less than usual.

The amount of coffee imported and exported was in the years—

COFFEE IMPORTED IN NINE MONTHS.				
1853.		1854.		1855
42,432,979 lbs.	...	42,492,319 lbs.	...	45,522,716 lbs.
EXPORTED				
20,870,017 lbs.	...	26,811,821 lbs.	...	22,344,498 lbs.
LEAVING FOR CONSUMPTION.				
21,562,962 lbs.	...	16,080,498 lbs.	...	23,178,218 lbs.

But the quantity taken out of bond for consumption was—

28,607,612 lbs.	...	28,410,719 lbs.	...	27,598,417 lbs.

From which we learn that the consumption has been for the three years considerably greater than the imports, though neither has been affected by the war—this year decreasing the stock, the small amount of which now justifies a rise in price. On the Continent and the United States consumption has increased; and, though the accounts from Ceylon, Java, and the Brazils, the great sources of supply, are favourable, it must be some time, at our present rate of consumption, before the stocks of coffee in Europe can reach their former level, and we can again have the price of native Ceylon down to about 40s. At present the prospect, in spite of large shipments from the Brazils and a great extension of coffee cultivation in Ceylon, is that the price of coffee will continue high, strengthening the inducements which always exist to use substitutes, and, still worse, to increase the abominable practice of adulteration. The dulness of the market at the close of the week is mainly the consequence of those realising who have bought for the rise.

Tea is also rising in price, and the wholesale price of congou is now 1½d. per lb. higher than ten days ago. For this rise there is probably less reason than for the rise in the price of coffee. The imports of tea in nine months were:—

1853		1854.		1855.
55,186,032 lbs.	...	62,851,970 lbs.	...	56,752,127 lbs.
EXPORTED				
4,041,054 lbs.	...	5,071,254 lbs.	...	10,726,720 lbs.
LEAVING FOR CONSUMPTION.				
51,144,978 lbs.	...	57,324,347 lbs.	...	46,025,407 lbs.
QUANTITY TAKEN OUT OF BOND FOR CONSUMPTION.				
45,496,[illegible]7 lbs.	...	47,002,329 lbs.	...	48,140,283 lbs.

The consumption of tea, which has rapidly increased, has, therefore, this year in some measure exceeded the supply, and has fallen on some of the comparatively large stock left over from previous years. We learn, however, from the *China Mail*, that the export of tea from China to Great Britain was, in the year ended June 30, 1855, 9,391,000 lb. more than in the year ended June 30, 1854; and between June and the end of August there was a further increase in favour of 1,850,000 lb. The supply promises to be ample, but there was a large increase in the exports of 1853—in fact, they were 2½ times as great as in 1853. This increase is, we believe, the consequence of the Russians having quarrelled with the Chinese at Kiatcha, who have withdrawn from that market. Russia—strange as it may seem—has received this year a large portion of her supply of tea, all of which she formerly obtained over land, by the route of the Western Ocean, through England and Prussia. The insurrection in China, now we believe coming to an end, and for some time not likely to be successful, has not much impeded our supply of tea, and has had little or no effect in causing the present rise in the price.

Another interesting household subject is tallow, for its price affects the price of candles, and the wholesale price of Russian tallow has risen in the market, within the last month, from 15s. to 16s. the cwt. Other tallow has risen proportionably. For this two reasons are assigned:—The supply of tallow in Russia is short; of this small supply the war will impede us from getting much; and our own cattle, from the short crop of hay and the high price of oil-cake through the summer, are very much less fat, we are informed, than usual. Another unfavourable circumstance is, that the supply from South America is less. The price of tallow, therefore, rises in consequence of the shortness of the supply, which is only in a small part caused by the war. Price, indeed, plays a much more important part in the economy of society than is usually supposed. If high, the consumers grumble; if low, the producers complain, and think little more of it; but as it rises or falls it stimulates or retards production, checks or promotes consumption, and is thus the guide to a vast number of actions. "Money-price," it has been justly said, "is the nicely-poised balance with which Nature weighs and distributes to her children their respective shares of her gifts, to prevent waste, and make them last till reproduced. It is an index to the wants of society—the finger of Heaven, indicating to all men how they may employ their time and talents most profitably to themselves and most beneficially to society." That war disturbs its beneficial agency is only another proof of the disastrous nature of war, and of the madness of that despotic ambition which forces nations for objects still more precious than the regulation of prices to engage in it.

LONDON ADVERTISEMENT HALL.—This is a novel appropriation of the premises formerly known as Hungerford-hall, Strand, which is now made a spacious thoroughfare to the suspension-bridge and steam-boats. Upon the walls are effectively-displayed advertisements; and classified registers are kept for gratuitous reference. As the traffic to the steam-boats exceeds six millions annually, great publicity is ensured for the wall-announcements, and the establishment bids fair to prove extensively useful, and deserves encouragement. The concentration which it ensures must greatly economise the time of persons in quest of information.

LORD JOHN RUSSELL ON PROGRESS.—Lord John Russell lectured on Tuesday evening, at Exeter Hall, on the Obstacles which have retarded Moral and Political Progress. Lord Shaftesbury presided: Lord Panmure, Mr. Vernon Smith, M.P., Mr. Beaumont, M.P., and the Hon. and Rev. Montagu Villiers were present. Lord John Russell was received with loud and continued cheering. The chief obstacles, he endeavoured to show, have been religious persecutions, commercial restrictions, intemperance, ignorance, and the vices of wealth, sensuality, excess, evil speaking, and unkindness.

LATEST INTELLIGENCE.

GREAT BATTLE BETWEEN THE TURKS, UNDER OMER PACHA, AND THE RUSSIANS.

On the 5th of November (the anniversary of Inkerman), Omer Pacha beat the Russians in a pitched battle, on the river Ingur, in Mingrelia. The Russians numbered 20,000. The fight lasted five hours. The Russians suffered severely.

A second despatch confirms this, and adds:—

Omer Pacha forced the passage of the Ingur at four points, against superior numbers. The Generalissimo has pushed on to Kutais.

We have elsewhere stated that, immediately on the receipt of the intelligence of the brilliant victory of General Williams at Kars, Omer Pacha set out at once, with considerable forces, from Souchoum-Kaleh. He appears to have proceeded by rapid marches to the river Ingur, in Mingrelia, where he found a superior force of Russians prepared to dispute the passage, which, however, he succeeded in forcing at four points, after a contest of five hours, completely defeating the Russians, and inflicting great losses on them. He appears to have pursued them, for the despatches add that he pushed on to Kutais.

Another despatch dated Trebizond, Nov. 1, says:—"The Russians have sent from Kars to Alexandropol the greater portion of their baggage. This seems to indicate that they are about to raise the blockade of Kars. The besieged are able to keep open their communications. Eight thousand Turks are marching on Kutais. It is rumoured that the Russians have evacuated Kutais, and have retired on Tiflis."

PEACE CONFERENCES AT CONSTANTINOPLE.

BERLIN, Nov. 15.—We learn from Vienna, that the instructions brought by M. de Bourqueney have led to the adoption of a basis for the future conferences at Constantinople on the subject of the Principalities. Austria is to resign to the Allies the positions they may require, in the event of a campaign on the Danube in the spring. The anticipators of peace say that everything is in a train for the renewal of negotiation as soon as Sir Hamilton Seymour, the new English Ambassador arrives at Vienna.

THE BALTIC FLEET.

DANTZIC, Friday.—The *Locust* has arrived. Admiral Dundas has gone to Kiel. Admirals Penaud and Baynes remain at Nargen. The transmission of mails, viâ Dantzic, ceases to-day."

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, NOV. 15.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.

„ 15	30.062	40·0	26·0	32·3	— 10·6	96	CALM.	0.00

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer increased from 29.77 inches at the beginning of the week to 30·18 inches by the 12th; decreased to 29.92 inches by the 14th; and increased to 30.07 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29.96 inches.

The mean temperature of the week was 43·7°—being the same as the average value.

The range of temperature during the week was 31·7°, being the difference between the lowest reading of the thermometer, 26°, on the 15th, and the highest, 57·7°, on the 11th.

The mean daily range of temperature during the week was 12·6°. The greatest was 23·2°, on the 9th; and the smallest, 4·4°, on the 13th.

Rain fell during the week to the depth of two-tenths of an inch.

The weather during the former part of the week was fine, but cloudy; and the latter part was dull and overcast. A thick yellow fog was prevalent during the 10th.

Lewisham, Nov. 16, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—During the week that ended last Saturday the births of 886 boys and 818 girls were registered within the metropolitan districts, exceeding the average of the ten corresponding weeks of the ten preceding years by 141 boys and 104 girls. The mortality of London shows a tendency to increase, but it continues much below the rate which is usually found to prevail in the beginning of this month. Last week the deaths of 986 persons were registered, viz., 473 males and 513 females. The daily average number of deaths is 141, being less by 31 than the daily average rate of mortality in the corresponding weeks of the last ten years, and exceeding the average number that occurs daily in the healthy districts of England by the same number. Cholera was fatal in only two cases. Scarlatina carried off 21 persons, and is on the increase. Zymotic diseases, 211 deaths, and to diseases of the tubercular class, 157; and to violence, privation, &c., 31 deaths are ascribed.

LORD PALMERSTON FOR THE CITY.—A movement is said to be on foot amongst a large number of influential citizens for making arrangements to return Lord Palmerston for the city of London at the next general election. It is not intended to ask the noble Lord to become a candidate, to which it is probable he might have some objection, but to nominate him, and when returned to give him the option of accepting the seat or not. This course is to be taken as an acknowledgment by the citizens of London of the vigorous manner in which he has carried out the war; and the general impression is that the noble Lord will be most triumphantly returned at the head of the poll.

FURTHER ADVANCE IN THE PRICE OF SUGAR, &c.—Last Saturday morning the retail grocers throughout the metropolis advanced the price of raw sugar to 7d., in some instances to 7½d., per lb., which is nearly 11 per cent dearer than sugar of the same quality was two months ago. Ordinary loaf sugar sells at 8d. and doubled refined at 9d. per lb. Demerara and St. Lucia crystallised sugar of superior qualities cannot be obtained for less than 9½d. per lb. Confectionery and sweetmeats of every description, and dried and preserved fruits, have also been advanced in price. The rise in these articles is attributable to the extraordinary advance in the sugar market.

THE GREAT CLOCK AT WESTMINSTER.—MESSRS. WARNER, of the Cripplegate Foundry, Jewin-street, Cripplegate, London, have received the order to cast the bells for the great clock of the Houses of Parliament. The great bell is to be nine feet in diameter, and to weigh about fourteen tons, and will be the largest bell ever cast in England; it is calculated that the four quarter-bells will weigh about ten tons more. The work is to be executed from the directions of Mr. E. B. Denison, Q.C., from whose designs the clock has been made, and the bells are to be subject to the final approval of that gentleman and the Rev. W. Tayler, F.R.S., and Professor Wheatstone.

BOILER EXPLOSION AND LOSS OF LIFE.—A terrific explosion took place on Monday afternoon at the manufactory of Messrs. Hall and Boyd, sugar-refiners, St. George's-street, better known as Ratcliff-highway, whereby four persons were killed and several others severely injured. One of the latter has since died, making five persons altogether who have lost their lives by the accident.

THE LAST HYDE-PARK SUNDAY MEETING.—In anticipation of a renewal on Sunday last of the disgraceful proceedings of which Hyde-park was the scene on the previous Sunday, every precaution was taken by the police, with a view to their prompt and effectual suppression. On Saturday night a notice was very generally posted warning all well-disposed persons to abstain from joining or attending any such meeting, and stating that all necessary measures would be adopted to prevent any such assemblage. Notwithstanding this notice, the gathering in the Park by three o'clock, or shortly after, was much more numerous and infinitely more respectable than that of the 4th inst., bearing a strong resemblance to that which took place on the 1st of July, when the interposition of the police gave rise to so much condemnatory comment. Well-dressed gentlemen, fashionably-attired ladies, and women with children in their arms, were visible in all directions; but there were, nevertheless, not wanting some four or five hundred young roughs, who contrived to keep up a good deal of uproar, but without the perpetration of any actual mischief. In fact, the preparations of the police were upon a scale which prevented any hope of even a momentary impunity, had any of the ruffians who made themselves so conspicuous on Sunday week been inclined for a disturbance. The various footways were lined with constables on foot, and strong parties of the force were spread about in all directions, with peremptory instructions and a strong determination to act energetically if necessary. A powerful troop of horse-police, under the personal command of Captain Labalmondiere, took up a position in the centre of the open space north of the Serpentine. The result was, that no breach of the peace took place. As dusk came on the crowd dispersed, and by half-past five all was quiet.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE Paris news of the week confirms in full the information we put forth a fortnight ago respecting the distribution of the prizes among English painters and sculptors. Sir Edwin Landseer has received, as we stated at the time, the highest honour, and stands alone; while Mr. Mulready and Mr Gibson, foreseeing the result, withdrew, or were withdrawn, from further competition. The decrees of the jurors are, in some respects, unsatisfactory. No one at all acquainted with art, ancient or modern, will be satisfied with the high and isolated position awarded to Sir Edwin Landseer. The palm of superiority should have been given either to Mr. Mulready or to Mr. Leslie. The assigning the highest rank in English painting to Sir Edwin Landseer is like assigning the highest rank in English poetry to Somerville for his poem of "The Chase." In one respect, however, we are glad to find that the French have in the selection just made read a lesson to the members of the Royal Academy. In the very first class is to be seen (and most deservedly to be seen there) the name of Mr. John Henry Robinson, the great English line-engraver. The Continental schools of Art do not assign to engravers those little "stools" to which we referred last week. They feel, too, that line-engraving is a superior art to mezzotinto-engraving, and have placed Mr. Cousins, a master in mezzotinto, in a lower class to that most properly assigned to Mr. Robinson.

Our American brethren of the Press, it appears, are not over well pleased with the appeal made to them by Mr. Thackeray not to print the lectures he is delivering to them and to the world, for the first time, on the Four Georges. Reporters were ready to record every word uttered by the great novelist; and editors of papers were looking for matter of moment to lend fresh interest to their columns. The appeal was, it is said, unexpected. Mr. Thackeray's lectures will depend, so say our brethren in America, not so much upon matter as upon manner;—his matter, it is true, is admirable, but his manner is inimitable. That the appeal will be complied with we have little doubt. Would Mr. Thackeray have ventured his wares without some certain expectation that a proper request such as he has made would be at once complied with? Here in England it would have been all but unnecessary to have made an appeal of the kind.

The fact of a great gift hereafter to be given to the public, in the shape of a most valuable library of English poetry and of books relating thereto, has just been announced in print, and with his name to it, by the most intimate friend of the person who is to bequeath so great a treasure to the public. It is no secret among collectors of rare books that the library of the Rev. Alexander Dyce, the learned editor of so many standard authors, is one of the choicest private collections in Great Britain containing many volumes that are unique, and more that are very rare. All are in fine condition. This collection Mr. Dyce has bequeathed to the University of Oxford. We had heard of this before, but, having no right to publish the fact, refrained from mentioning it. Now that it is told in print, and by the Rev. John Mitford we have great pleasure in giving further publicity to the fact. The Bodleian is already rich in its dramatic treasures. Malone bequeathed his collection to the Bodleian, and Mr. Dyce will leave his—but not, we trust, for many years to come. He is about to give us an edition of Shakspeare, and we may fairly look to receive editions of other British classics from his exact knowledge and his scrupulous care. The scattherment of the very curious library of Isaac Reed was, in the words of poor Tom Rodd (that best-informed of booksellers), "a national misfortune."

Mr. John Mitchell Kemble, the great Saxon scholar, the son of "Charles" and the nephew of "John Philip," is about to give us the result of his long and recent residence in Hanover, in the shape of a series of documents and other intelligence relating to the history of Hanover and its connection with this country. This reminds us that by far the ablest notice we have seen of Dr. Doran's recent work on the "Queens of England of the Hanoverian race" appeared in *Fraser's Magazine*, and came from the pen of Mr. Kemble. It was full of new matter unknown to Dr. Doran.

Our note of information, with its appended query respecting the burial-place of Vining Bourne, was copied into the columns of that useful publication *Notes and Queries*, and has since been satisfactorily answered by a correspondent of that paper. The "neighbouring country churchyard" in which Vining Bourne was buried was that of Fulham. There the Westminster Usher sleeps by the side of some half-dozen Bishops of London, including Sherlock and Lowth. He may not lie very far from Theodore Hook. The exact spot is unfortunately unknown. Let no Westminster boy forget where Vining Bourne is buried.

A curious sale has just taken place at Shotover, in Oxfordshire. An estate and house there were given by George I. to his favourite, Baron Schutz, the father of Augustus Schutz, who figures in Pope and Lord Hervey's Memoirs. The hammer of the auctioneer has scattered this property, and with it what few knew to be there—some unpublished MSS. of Archbishop Usher, a fine portrait of that great man, and a very remarkable and *unpublished* letter from Sir Walter Raleigh to Cope, the Lieutenant of the Tower. The Usher MSS. were properly secured by Trinity College, Dublin; and the portrait was bought for Magdalen College, Oxford. The Raleigh letter was bought by Mr. Toovey, of Piccadilly. Sir Walter requests the Lieutenant's permission for his wife to be restored to him. He was still a prisoner, and his wife had been sent away. We are told that it is a touching letter.

A correspondent reminds us that the volume just issued of Mr. Hallam's "Constitutional History of England" contains an error which he wonders with us that the well-known vigilance of its writer has not detected long ago. Mr. Hallam tells us (vol. iii., p. 236) that Swift never turned anything with his name to it. Now this, our correspondent observes, is not the case: Swift's famous "Proposal for Correcting, Improving, and Ascertaining the English Tongue" was printed by Swift himself, and with his name very conspicuously to it.

POLYTECHNIC INSTITUTION.—The lecture-hall was, on Monday evening, filled from floor to ceiling to hear a lecture from Mr. G. Godwin on "The Homes of the Thousands." The bearing of the question on the moral and religious well-being of the poorer classes was illustrated in a clear and forcible manner, and the evident earnestness of the lecturer's sympathy with the unfortunate dwellers in over-crowded, ill drained, and imperfectly-ventilated houses elicited repeated applause. The average duration of life in the localities described was recorded, for these causes, to be [illegible] years in England it was 45 years, and [illegible] lives were annually sacrificed in the metropolis alone through the want of better provision for health in the homes of the poor. The lecture was one of a course specially intended for the industrial classes, and to which Mr. Alcock Bell, Dr. Sheen, Dr. Pettigrew, and Mr. Pepper have already contributed. Sir Robert Peel is announced to lecture in this course, but the honourable baronet's subject has not yet been notified.

STANISLAUS.

We have to thank an officer of her Majesty's ship ——, off Fort Kinburn, for the Sketch of the town of Stanislaus, at the entrance to the Dnieper, engraved upon the next page. The steamer on the left is the *Danube*, with the flag of Sir Edmund Lyons. Stanislaus is a considerable town, and, from our Correspondent's point of view, has the appearance of being well built. It is situated in the gorge of the cliffs, which are high, and consist of a reddish sandstone. Here is a fine sandy beach, extending to a long and low sandy spit, on which are some windmills. There is likewise a long line of windmills upon the heights, which insinuates that large quantities of corn are ground here. The spit forms the entrance to the right bank of the stream, which is very wide. There are nine mouths to the Dnieper, only three of which have any depth of water: even in these the shallows are numerous, and are interspersed with low islands covered with reeds. "Our Admiral's flag," says our Correspondent, "evidently caused a great sensation; for, as we passed near the town, large bodies of troops were drawn up, and the inhabitants were moving about in all directions; on this occasion the flag was hoisted at the main—we trust a shadow of a coming event."

ISMAIL PACHA

(GENERAL KMETY).

THE accompanying Portrait of the hero of the late terrible struggle before Kars has been engraved from a photographic picture of the General receiving a present of an ornamental pipe. The likeness is admirable, and the group together highly characteristic.

Kmety was born at Pokoragy, a village charmingly situated on an eminence about two miles from Rima-Szombath, in the Gomorer county, where his father, a Protestant clergyman, lived and officiated. Unfortunately the latter died while Kmety was still a child, between five and six years of age. His mother left the parsonage, and removed with him to Nyiregyhaz, in the Szaboloser county, where his grand-uncle, John Schulek, was a minister, and in whose house both mother and son found a modest but happy home. While the boy, George Kmety, went to the elementary grammar-school of that place he evinced great abilities. He next went to Eperies, where he studied successfully for some years at the Protestant College of the district, and proceeded thence to Pressburg for continuing his studies at the Protestant Lyceum. Here he prepared himself for a German University. As one of the hardest, but at the same time least wealthy, students, he contended for a scholarship. The committee at Pesth, who had to examine and decide, awarded him a stipend equal to 40 florins of conventional money -a large sum in those days- and a friend sent off the glad tidings to Kmety that his petition had been complied with. A singular circumstance, however, occasioned this sum of 40 florins, intended for our George Kmety, to be bestowed on another student of the same name, through some error on the part of the notary, or the committee itself. This disappointment of his hopes caused the young man so much chagrin that he went to Vienna and turned soldier. His rapid advancement proved that here also he did his duty, for by 1848 he had become a commissioned officer. The events of this and the following year are well known. In the August of 1849 General Kmety passed over into Turkey with some other companions in misfortune. Here he became a Musulman, and we see that Ismail Pacha, like the Generalissimo, Omer Pacha, does honour to the school in which he learnt the art of war. "The hero of the day" at Kars is now in the prime of manhood, being in his forty-fifth year.

ISMAIL PACHA.—FROM A PHOTOGRAPH.

THE BATTLE OF THE HEIGHTS OF KARS.

IN a letter from Souchoum Kaleh, written by a person who was at Kars during the late engagement, the loss of the Russians is said to be much greater than was at first reported. He says that the number of killed was not less than 6500, and that the total loss of the Russian army was about 9000, which would be nearly one-half of the forces under General Mouravieff. This estimate is confirmed in the following account of the glorious victory.

(From a Private Correspondent.)

On the 29th September, about 3.30 a.m., the Russians were seen advancing up the Shorak valley in dense masses, but in what order could not then, on account of the darkness, be ascertained. Our troops were in a moment under arms, and at their posts. General Kmety, with one battalion of infantry and seven companies of chasseurs, was stationed in Shesbanegee Tabia; Major Teesdale, with one battalion of infantry, in Yuskek Tabia; and Hussein Pacha, with the Arabistan Corps, in Tahmasb Tabia, where he was soon joined by Kerim Pacha, the second in command of the army. Bashi-bozouks were also dispersed throughout the different works, and the Laz held a small work called Yarem Ai Tabia, in front of Yuksek Tabia. General Kmety was the first to open fire with round-shot on the advancing battalions of the enemy; he was immediately answered by two guns placed in position on a height forming the north-west boundary of the Shorak valley. In a few minutes the whole visible force of the Russians charged up the hill with loud cries; they were received with a terrific fire of grape and musketry, which mowed down whole ranks at every volley. General Kmety's position was attacked by eight battalions of the enemy; they advanced very gallantly to within five paces of the work, when so heavy a fire was opened on the head of the column that the whole corps wavered, halted, then turned, and fled down the hill in the greatest confusion, leaving 850 dead. They did not renew the attack there.

Tahmasb Tabia bore the brunt of the battle; about sixteen battalions, with many guns, were brought up against it, but its garrison was undaunted, and for a long time the Russians could not even get possession of the breastwork forming the left wing of that battery; but, at length, an overwhelming force obliged the Turks to retire within the redoubt. A scene of carnage now ensued perfectly terrible to behold. As the Russians came over the brow of the hill within the breastwork, to take the battery in rear, Tchim and Tek Tabias and Fort Lake opened on them with 24-pound shot, which tore through their ranks, but they did not seem to heed this. They charged Tahmasb Tabia, which was one sheet of fire, over and over again, and so resolute were their assaults that many of the Russian officers were killed in the battery, but they could not succeed in carrying it.

General Kmety, after having repulsed the Russians, went forward with four companies of chasseurs to Yuksek Tabia, which was sorely pressed. Major Teesdale pointed out a battalion of Russian chasseurs which lay hidden behind Yarem Ai Tabia (this work having been abandoned by the Laz at the commencement of the battle), and begged that they might be dislodged. The General at once determined to carry the battery; so, forming up his men, he charged and drove the Russians down the hill; leaving a company to defend the work, he returned to Yuksek Tabia, from whence perceiving a battalion of the enemy trying to turn the right wing of Tahmasb Tabia, he reinforced his corps with three companies from Major Teesdale, and charged the Russians here, too, he was successful. In the mean time reinforcements were sent up from below; these formed behind the tents of the reserve, and watched their opportunity in attacking the Russian columns, when driven back from an assault on the batteries. For seven hours this went on; reserve after reserve of the enemy was brought forward, but only to meet death. Nothing could shake the resolves of our troops, till at length the Russians, wearied and dispirited, at eleven a.m. turned and fled down the hills in a confused mass, not one single company keeping its ranks. The army was followed in its flight by the towns people and Bashi-bozouks, who brought down hundreds as they fled. While the infantry were engaged in this conflict, the Cossacks tried to penetrate into the tents of the reserve, but they were soon driven back by the townspeople and infantry reserves with heavy loss.

One battalion of Russian infantry attempted to march round the position, and take a small battery situated in a commanding position on the road leading to a village called Tchakmak. It commenced its march in splendid order, but ere it went 600 yards it was broken and in great disorder, and so terrified, that fifty or sixty of our chasseurs drove the broken mass down the Tchakmak valley like a flock of sheep The cause of the terror was the terrible fire opened upon it by Yuksek Tabia, the guns of Shesbanegee Tabia and Fort Lake.

A column of eight battalions, with sixteen guns and three regiments of cavalry, attacked the English lines at half-past five a.m. This line of fortification was at the time very weakly garrisoned; the breastwork was carried in a few minutes, the batteries Teesdale, Thompson, and Zohrab, successively fell into the enemy's hands, and the men who formed their garrisons retired into Williams Pacha Tabia. The Russians then brought up their artillery into position in front of Zohrab Tabia, and began firing upon Fort Lake and shelling the town, but Fort Lake (under the able superintendence of the gallant officer whose name it bears), Arab Tabia, and Karadagh, opened so heavy a fire on them with 24-pounders, that they were compelled to withdraw their artillery altogether. The Russian infantry then charged Williams Pacha Tabia, but were repulsed by a flanking fire from Fort Lake and a severe fire of musketry from the defenders of the battery attacked. They retired into Zohrab Tabia, re-formed, and again assaulted; a body of their chasseurs was at the same time sent forward to within 500 yards of Fort Lake, to take a small open work called Churchill Tabia, which was doing the enemy without the lines much harm. This was occupied by two companies of our chasseurs; they turned to receive the attack of the enemy; and, after retiring a short distance, halted, and kept the Russians at bay. While this was going on, Capt. Thompson, who had charge of the batteries of Karadagh and Arab Tabia, sent over the 5th Regiment of Infantry from Arab Tabia to retake the English tabias of Teesdale and Thompson, and from below two battalions of the 2nd Regiment came up to recapture Zohrab Tabia. The forces commenced the attack together from each end of the line, and drove the Russians out of the forts and breastworks at the point of the bayonet. Once out of the lines, they did not attempt to retake them. Unfortunately the enemy had time, while in possession of the batteries, to take away five guns, and to spike three, but they abandoned three of the captured guns at a short distance from the redoubts, so that we only lost two. As the enemy retreated our long guns again played on their columns, and they retired as speedily as possible.

Some cavalry attempted to engage the battery above the village of

STANISLAUS, AT THE ENTRANCE TO THE DNIEPER.—FROM AN ORIGINAL SKETCH.—(SEE PRECEDING PAGE.)

BATTLE ON THE HEIGHTS OF KARS.—THE FIGHT NEAR TAHMASH-TABIA.—SKETCHED BY AN OFFICER ENGAGED. (SEE PRECEDING PAGE.)

Tchakmak, but again the terrible guns of Fort Lake drove them off. By 10.30 a.m. the English tabias were silent

Such was the dreadful battle of "the heights of Kars." This is but a very lame account of the glorious fight. I have not the time to enter into greater details, but it will give an idea of what our men did and had to endure. The forces of the enemy exceeded 30,000, while ours, engaged, were below 6000. Not one of our men had tasted anything since the previous afternoon; hungry and thirsty, they remained undaunted, and repulsed column after column of the Russians; at last their heroism was rewarded with perhaps the most brilliant victory that has been gained during this war.

The field of battle was a sight too horrible ever to be forgotten by me: the dead in vast heaps in every direction around the forts—the ditches were full of mutilated bodies—the tents were torn to rags—arms, clothes, broken ammunition-boxes lay strewed about. Upwards of 6000 Russians fell, and more than 4000 muskets have been collected, and 150 prisoners taken. The total loss to the enemy in killed and wounded must have been very near, if not more than, 15,000. Several Generals were killed or wounded amongst the former, reports say, General Bruemer, the second in command; and General Baklanoff, who commanded the attack on Canly Tabia on the 7th of last August. Thousands of carts have been sent to Gumri (Alexandropol) with wounded.

Our list of casualties is but small, about 1000 in killed and wounded. Dr. Sandwith, the Inspector of Hospitals, had made his arrangements, and, thanks to his abilities, the hospitals are in good order.

For this great victory Turkey has to thank General Williams; during the past four months his exertions to get things into order have been astonishing; night and day he has laboured. He has had many and great obstacles to overcome, but nothing could break his energy. On the memorable 29th he directed the movements of the troops; the reinforcements always reached their appointed positions in time. The great results of the day prove how well his operations were conducted.

The loss inflicted on the enemy fully shows how well the positions of the redoubts were chosen by Colonel Lake. All the batteries flanked each other, and the Russians were unable to bring up guns to command any of our positions. The troops kiss the batteries, and say that the Mirahl Bey (Colonel) was "Chok akilli" (very wise) when he made them work.

Captain Thompson aided greatly in recapturing the English lines. He directed by order the guns of Arab Tabia and Karadgah, and sent the troops over to attack the Russians.

Major Teesdale was in the hottest fire, and acted with great coolness and bravery. He is the admiration of the Turks. He showed them how English officers behave in battle.

All the Turkish officers did their duty nobly. Kerim Pacha was slightly wounded, and had two horses killed under him; Hussein Pacha was hit; two Colonels and many other officers were killed.

The *Invalide Russe* publishes a nominal list of the officers killed and wounded at Kars. The list is as follows:—1 General (General Koveleski), 4 Colonels, 2 Lieutenant Colonels, 5 Majors, 14 Captains, 18 Lieutenants, 15 Subalterns, and 17 Ensigns, making a total of 76 officers killed. The list of wounded comprises—3 Generals (viz., Generals Prince Gagarine, Maidel, and Broudefsky), 8 Colonels, 3 Lieutenant-Colonels, 14 Majors, 30 Captains, 35 Lieutenants, 39 Subalterns, and 47 Ensigns; making a total of 176. The killed and wounded together thus number no less than 252 officers.

NATIONAL SPORTS.

THE racing season in England has at last come to a close, after upwards of eight months' duration, and, notwithstanding the war and the general tightness of money, it has not been below the average. The three-year-old crop has Wild Dayrell and Kingstown have retired, contains no horses of a good Cup stamp, except Fandango and Rifleman, and, in spite of his St. Leger mishap, the latter has, by his double defeat of Lord Zetland's colt, quite kept the premiership, which he earned as a two-year-old. We know no finer-looking Derby horse than Bird-in-Hand, who has never been seen within 10 lb of his true form yet; but at present the winter betting promises to be a sort of Tattersall's match between the North, with Ellington, Fly-by-Night, and Artillery, against the South, with Butterwith (a mere foil, according to many, for Roquerthorpe), Coroner, and Porto Rico. The owner of the latter shows very small symptoms of "retiring," as he has entered his horses largely in all the stakes which have recently closed, and has five nominations for the Doncaster Stakes of 1856. "Mr. F. Robinson," the *nom de guerre*, we believe, of a well known public man who has just come on the turf, appears in several Newmarket matches, and Sir R. Bulkeley's horses have returned to Peck's. One of the most remarkable features of the last season has been great prices given for Mary Copp, Oulston, and the yearling Lord of the Hills. It is rumoured that the owner of the latter has purchased Zuyder Zee, and, if so, he has three yearlings in his stable which average 1200 gs. a piece. The finest foal we have seen this season is a daughter of Melbourne and the equally celebrated Phryne, which has just received the name of Blanche of Middlebie.

Lord Glasgow's horses have left Newmarket for Middlecham; and the number of yearlings there is now hardly as many as John and William Day together are bringing forward at Stockbridge and Woodyeates. At the latter place they number thirty, and at the former upwards of fifty. There has been a strong rumour this week of a rupture between Mr. Padwick and Jem Mosley (Welsh), which may lead to the latter resigning the "black and orange cap" which he has worn so triumphantly for three seasons.

The only meeting of the coming week is a small steeplechase—at Waltham Abbey, and coursing meetings are equally scarce. Worksington crumples Monday and Tuesday; Appleby is on Tuesday and Wednesday; Limerick on Wednesday and Thursday; Sandorne (Salop) on Thursday and Friday; and Bryn-y-Fys on Friday.

Rowing matches seem quite eternal. Rice and Skinner row their £25 match, from Woolwich to Limehouse, on Friday; Turner and West's £5 one, from Charlton-pier to the Tunnel, comes off on Thursday; and on Friday the Cantabs contend for the University Sculls.

The sudden death of Sir Richard Sutton, of complaint of the heart, at his London residence last Wednesday, leaves a sad blank in Leicestershire. The season had not begun propitiously, as only two scarlets from Melton met him, when he opened it at Kirby gate last Monday week. Still, his threatened resignation bode fear to work an improvement in those foxhunting and yet fox-destroying followers of his hounds, of whose coverts it has been lately said, with sad truth, that "the hounds might as well draw for a wild boar or wolf as a fox." Under the above sad discouragement, he had hunted the country for ten years without a shilling's subscription, with a spirit never surpassed by the Meynells, Smiths, or Osbaldestons, and for two or three seasons past he had not only kept his own magnificent pack at Quorn, but placed his second son (for his eldest son, the present Earl, never hunts) at the head of another pack at Skeffington, so as to hunt the late Marquis of Hastings' country. With these two packs, the Duke of Rutland's in the Vale of Belvoir, and Sir John Trollope's at Cottesmore, the prospects of sport were never more bright for those for whom warprices did not keep from Melton. Sir Richard's joint studs amounted to fully a hundred first-rate hunters. He was hardly fifty-seven, and originally hunted the Burton country, taking to the Cottesmore when the late Earl of Lonsdale gave up hounds, and eventually succeeding Mr. Green of Rolleston as master of the Quorn. He was one of the finest game shots we ever had, and his aim was as unerring in autumn as ever, when he trod the Duke of Rutland's preserves at the Lucks and Owsley. Hunting was however, his ruling passion, and he thought nothing of taking a special train and travelling eighty miles to cover in a morning. A very beautiful painting, by Grant, of the deceased baronet in the midst of his hounds appeared in the Royal Academy a few years ago.

SHREWSBURY AUTUMN RACES.—TUESDAY.

Astley House Stakes.—Gameboy colt, 1. Bright, 2.
Racing Plate.—Lady Vernon, 1. Laura Seline, 2.
Aristocratic Plate.—Eulogist. 1. Whatcliffe, 2.
Shorts Handicap Selling Race.—Plausible, 1. Mayboy, 2.

Borough Plate.—Sandboy, 1. Cineas, 2.

THE EXPEDITION TO KINBURN.

(From our Artist and Special Correspondent.)

OFF KINBURN SPIT, Oct. 20.

WANDERING about the ditches and parapets of the fort of Kinburn a few days ago, I succeeded in passing into the body of the work in spite of the vigilance of the French sentries. I went in at an angle in the ditch, where a palisaded gateway defends the entrance to a small, low passage on the northern side of the work. The place was full of French soldiers, busy in various occupations, some of them carrying strange-looking bundles through the yards on stretchers, others noting down, from the dictation of non-commissioned officers, the list of the Russian materiel; others again ranging ammunition in piles, or removing rubbish and filling up the craters made by our large mortar-shells. Every one was at work, in fact, in restoring some apparent order amongst the confused ruins with which the place abounds.

The whole of the inner space of the fort had been covered by ranges of buildings, comprising the Governor's residence, the chapel, barracks, and provision magazines; but the slightness of these fabrics, chiefly built of wood, plastered over and whitewashed, had made them an easy prey to the flames at an early period of the bombardment of the 17th. The difficulty of procuring stones for the erection of solid masonry in a country which, for hundreds of miles, offers no other material to work upon than sand, explains the slightness of these buildings. The greater part of them had been burnt entirely to the ground, others had been rent to fragments by the balls and shells which entered them from all sides, and the whole presented an aspect of desolation and ruin not surpassed in any portion of the great wreck of Sebastopol. "There was no refuge anywhere from you," said the old Russian Commandant. The houses of the courts were untenable; the casemates of the south were invaded by shot from the northward, and those of the east by shot from the west; and those which were safest from direct fire were not proof against the perpendicular fall of heavy thirteen-inch shells from the English mortar-boats. In truth, the casemates, although built of solid mason-work, were none of them bomb-proof, the stone to all appearance having rotted with age. So weak, indeed, were they considered by the Russians themselves, that there were guns in two or three only of the stone embrasures; and the strength of the Russian artillery consisted mainly in the barbette pivot guns of the upper parapet, and nine or ten mortars in the interior of their works. The vaults, which were unused for hostile purposes, had apparently been made into provision magazines, or places of safety for charts, records, and miscellaneous articles: one of them smelt powerfully of sour beer, another of rotten cheese, none of saltpetre or sulphur. The whole cement which bound the fabric together had fallen away everywhere, and left the stones carried thither centuries ago by the Turks or Genoese to exfoliate and dwindle away. And this was not only the condition of the vaults internally, but of the outer walls also, which in consequences offered no effectual resistance to the breaching power directed against them. In many places, indeed, the Russians had made efforts to strengthen the traverses and magazines by piling up iron wheels of gun-carriages in rows, and mixing them with sand; but the whole of Kinburn Fort strongly reminded me in its external aspect of the fortress of Belgrade, which the authorities at Constantinople fancy to be a place of great strength, since they sent large sums of money to have it repaired—the fact being that the place, instead of being strengthened, was only whitewashed, the money having all been, I was about to say, expended in that solitary attempt at embellishment. It is difficult to conceive how the Russians should have left a place of such importance as the key to the mouths of the Bug and Dnieper in such a state of ruin as we found it to have been.

Although the French have made considerable progress in the repair of the place, especially on that side which looks towards the land, there were still, when I visited it, many parts of the parapets which have marks of the allied fire sufficient to prove the destructive force of our projectiles. There were but two or three pieces of ordnance in the whole fort capable of being fired at the time of the surrender. The carriages of the pivot-pieces, built of Russian pine, had in almost every instance been smashed, leaving the long tube of iron projecting into the air in a variety of attitudes—many of them so severely hit that they tumbled off the parapet and had fallen into the yard below. The guns themselves had not been spared. One had been struck and broken into two pieces, another had its breech knocked off, a third its muzzle, whilst a fourth and fifth had received such dents in their sides as to split them and render them unfit for further use. The ground around the guns bore marks of the explosions of our shells and their effects, where the fine sand had drunk the blood of the unfortunate slain. In eight or nine instances shells had fallen upon the vents of the casemates below, and, exploding as they fell into the vaults, caused those clouds of black dust-smoke which I had witnessed so frequently during the bombardment. The whole circumference of the parapets was marked by similar explosions, and it was creditable to the Russians that they fought so long under such adverse circumstances. Nay, if the old Commandant's assertion be true, the garrison would not have surrendered so soon as they did had the fire been confined to the gun-boats, mortar-boats, and small steamers. It was only when the English fleet, led by Sir Edmund Lyons, closing in, where they never dreamt that a three-decker could come, that despair seized them, and they lost heart. Then, as I am informed, a scene occurred different from that which I detailed to you in my last letter. The flags of truce from our Admirals landed on the spit, west of the fort, after seeing the white flag waved on the ramparts. The Commandant had not time to come down, but the messengers of peace were met by an officer—a Colonel of Engineers—who, after receiving the summons of unconditional surrender, declared that he would hear no terms, but was prepared for further resistance. The boats, upon this, were retiring, when the Commandant came up; and, after an altercation between him and the other officer, during which high words were bandied about, accepted the terms of surrender. They were, in substance, that the garrison should lay down their arms; but that the officers should preserve theirs, in token of the gallantry of their resistance. Then the Commandant returned to the fort, and came out to give himself up to General Bazaine, as I have previously described.

The new Commandant—a Frenchman of determined aspect—did not delay in making the necessary preparations for placing the fortress in a proper state of defence. The stones which had been displaced and not pulverised by us he gathered in heaps and used. The guns which were still serviceable he remounted, and where the carriages were destroyed he replaced the barbettes by embrasures, mounting the guns on ships' carriages. The western gate and drawbridge which had been blown in were cleared of ruins, and new works planned to defend the land front. The Russians themselves had destroyed the approaches to the drawbridge, and placed a palisade of stout pine-logs in front of it. These, though rive by shot, still stand erect, and are painted of the well-known colours of the Czar. In the fort thus strengthened the French will spend the winter, whilst our troops return to their old winter quarters. Large quantities of provisions, ammunition, and firewood in stacks will suffice to keep them comfortable. The Central and Spit forts being no longer useful, as the Russians can bring no ships to bear against us, will be blown up, and the long tongue of land become as of old untenanted, save by the gull and curlew. Provisions of guns to replace those which may be dismounted will doubtless be made so as to ensure a lasting defence; and good use will certainly be made for that purpose of the artillery withdrawn from the earthworks on the spit. The Russians, it was remarked, were without an arsenal from which to draw fresh supplies of guns, in case they had intended to prolong their resistance. The ground, it is true, was covered with old and rusty ordnance of various sizes, so coated with the dirt of years, that it was impossible to determine whether they were those which originally formed part of the artillery of the Turks, when they defended the fort against the Russians, in the time of Catherine, but not one of these was available for further use. The greater number had been deprived of their trunnions, either by accident or design, and the whole of them were in such a state as to leave them utterly useless; the only fresh marks about them, were those of some stray shot, or fragment of shell, which had glanced upon them, making broad gashes in their rusty sides, testifying by their depth to the weakness which age had inflicted on these old admirable engines of war. As for the mortars, although many of them still remained fit for use, I do not fancy them capable of much further employment, the iron being worn, and the vents enlarged, so than they may be classed much in the same category as that which we found in the Redan, at Sebastopol, and some were inscribed in huge letters, with "No bone, Johnny."

It may not be uninteresting to mention a few facts with regard to the other Russian works on Kinburn Spit which struck me as I visited them. These works will shortly cease to exist; but one of them, at least, furnishes an example to our military men of the ability of Russian engineers. The Spit Battery, as I told you, is built of wood, casemated and covered with sand. The Russians intended, had time been afforded them, to face the sand with turf, in order to give the work additional strength. But there was one radical defect in the redoubt which they could not cure. The embrasures, being cleverly made of logs cut square and dovetailed, were such as to answer all expectations at first. The men inside were effectually protected from projectiles of all kinds except those which entered through them—and hostile practice must be very good to insure such a result. But the capture of this work has proved that these wooden casemates are unfit for use for other reasons. Several shot having struck the upper part or roof of the embrasures, the logs were driven from their positions, and the superincumbent sand falling out through the interstices, blocked up the space through which the gun was fired. Casemates in sandy ground are, therefore, proved to be useless, unless provision is made to prevent the earth with which they are covered from falling through; and, as this is well nigh impossible, it is evident that open works are those most fitted for resistance in a sandy soil.

The centre battery of the Spit was open, and made a more prolonged resistance than the other. This may, indeed, be owing to its having been more feebly attacked than the rest; but there is little doubt that, had not the other works surrendered, that one might have continued to resist for a long time, as it was not damaged, and its guns were not dismounted. This battery was built in a peculiar manner. It was internally a parallelogram, of which three faces were armed, but externally it was marked out in a series of equilateral triangles, the appearance of which would naturally lead to the inference that the embrasure was in the deep angle. But, so far from this, the embrasure was cut, so as to point directly towards the external angle, or apex facing the spectators, each gun having a clear sweep of 45 degrees. The sides of this work were revetted with turf, and beautifully finished. A furnace for hot shot had been erected in the centre, and, as a whole, it was admitted to be a perfect specimen of Russian engineering skill.

On a visit to the *Devastation* French floating battery, which led the bombardment on the morning of the 17th, I also found much to interest me, and I left her with the conviction that, in the attack of maritime fortresses, a new era had commenced for which it will be necessary to make provision in future. The *Devastation* steamed into action and came to anchor at a distance of 700 or 800 yards from Kinburn Fort. The bulwarks had been removed from the deck, to lessen the mark, and the funnels of the steam-engine alone projected. The captain conned the ship standing on the companion, and giving directions to the helmsman below; and when the vessel came to an anchor he remained below. Twelve embrasures were opened, and the fire commenced. The effect of it, as I witnessed it from the village, was terrific, whilst that of the enemy's guns upon her was very slight indeed. I said in my last that the affair of Kinburn had taken place without a casualty; but in this, as regards the *Devastation*, I was wrong, as she lost three men killed and six or seven wounded. These losses were caused by a shot entering one of the embrasures, striking a gun near the muzzle, glancing off, and after killing three men, burying itself in the opposite side of the ship. The remaining casualties were caused by a shell entering a porthole and bursting inside. With these two exceptions, not a shot from the enemy damaged the *Devastation* in the slightest degree. She was hulled sixty or seventy times, the balls each time bounding from her sides harmless into the water, leaving their marks it is true, in the shape of dents, in some instances an inch and a half deep, but inflicting no real damage on plates of iron four inches in thickness. This, the first experiment, proved that at a distance of 800 yards 32 and 18 pounders are harmless against the sides of a floating battery; and, much to the annoyance of our navy, the trial has been made first by the French, and is not likely to be tested by us this year, in consequence of the unaccountable delay of the arrival of the *Meteor* and *Glatton*. Another remarkable result of the use of floating batteries was the loss which it inflicted on the garrison of Kinburn, and this by the simple application of the process common in the fighting of batteries ashore. Low down, near the water's edge, stanchions were fixed, on which a platform was erected, so that soldiers could stand upon it, and expose nothing but the upper portion of their head to the enemy. This platform was manned by fifty French riflemen, who made tremendous practice at 800 yards against the Russian gunners. It was remarked at the time the Russians were buried that many of them had been killed by rifle-balls; and the supposition gained ground that the garrison had been insubordinate, and that several men were killed by their officers. It is now certain that the death of these men was solely caused by the French riflemen in the floating batteries, who kept up a constant fire on the Russian artillerymen as they worked their guns the open parapet.

I am sorry to say that, whilst the success of the French floating batteries was thus great and encouraging, that of our gun-boats was in one instance the contrary. The *Arrow*'s Lancaster guns, after six discharges, both burst, fortunately without doing any damage, on account of the direction in which they were trained. This is another instance, added to those which precede it, showing that the Lancasters, as at present turned out of the hands of the manufacturer, are too slight for use, and dangerous to those who fire them. The *Arrow*, in her present condition, is only useful as a dispatch-boat.

OFF THE MOUTH OF THE BUG, Oct. 25.

French soldiers are not so dainty as Gil Blas' friend who was so much affected after partaking of a suspicious civet. We ourselves may have

indulged in dishes of a similar kind in the suburban retreats of Montmorency or Fontenoy, but none will suspect me of wilfully partaking of a *civet de chat*. Perhaps, however, Russian cats are better eating than those of other countries; and if we take this for granted we shall find the real cause of the disappearance of all those domestic animals from the villages around Kinburn. Had I not seen a French hare depriving a cat of his skin on the day of the bombardment, I would not accuse him of so foul an outrage on these defenceless prisoners; but that was proof sufficient to convince me that the vast number of feline pelts which I had seen in my perambulations was the result of French maraud. As for English soldiers, I verily believe they would rather live on salt pork and biscuit till they all died of scurvy than eat a horse-steak or a suspicious fricassee. Are they right, or are they wrong? This question I leave to the reader. In the mean while it must be owned we are suffering terribly from the want of fresh provisions, the cruise having lasted now a considerable time longer than was expected by most of us. But the Admirals and Generals, I suppose, have their plans, and will carry them out; so it remains for us to look on and be satisfied.

On the 20th the French and English armies, about 7000 strong, marched out from Kinburn towards Kherson, with provisions for four days. They took with them no tents, and bivouacked in the fields and villages on their way. I saw them safely to their journey's end on the first day, when they marched to a village of low huts, nicely constructed of wattle daubed with earth, and neatly whitewashed, surrounded by gardens and yew-trees, in a plain of sandy pasture. There was not a feature in the country more prominent than a windmill. A few trees, the sea, and a wilderness of sand were all that met the eye. In the village plenty of pumpkins, cabbage, and tomatoes; some poultry strong on the wing as wild fowl were all that was to be had. Fowls and geese seem, indeed, to be blessed in this country with a lightness unknown to those in our damper climate. If a hen catches sight of a stranger it flies like a pheasant, and geese sail up into the air like pelicans. The latter, however, have apparently a great fondness for their home, and circle their place of abode, with loud cackling and shrill noises, for hours. In this amusement doubtless all the geese of the village were engaged when we came up, and when I saw so many sharpshooters in our ranks I thought of those celebrated trials of sight of Natty Bumppo, and wished that my rifle, directed by his unfailing hand, might bring down two birds at one shot. The distance, it is true, was greater than Natty ever pretended to reach; but what is the use of mimic except to lessen distances? As I ceased to gaze at the flock of geese, I saw several soldiers point their pieces in the direction of heaven and fire together. One goose actually fell, and a scramble ensued which I can scarcely describe, for, like most around me, I could not see for laughter. However, after a manful fight for the goose, which did not yield his life without a struggle, the wretched bird was carried off in triumph. The soldiers here practised the plan learnt from the Zouaves for bringing down a Cossack, and it succeeded admirably. Yesterday we saw the army had returned, but I cannot give you the particulars of their march. I learnt, however, that they had not encountered the Russians, but had come back with some live stock, and pursued by 300 Cossacks. These active fellows, no doubt, followed up sharply for stragglers, having had a piece of luck a few days before in the capture of three sailors, belonging to the *Arthur Gordon*, who went out too far beyond the pickets for plunder, and who were served very right for their *penchant for lute* (plunder).

On the 23rd there was a considerable movement of ships from the anchorage outside Kinburn to that of the flying squadron in Dnieper Bay; that on board of which I have a berth being of those which had orders to go round. A fair opportunity was afforded me of seeing the batteries from seaward, and I found them very formidable on the northern front. Next day we closed the *Sidon*, and steamed up the lagoon towards the mouth of the Bug. Otchakoff, which appeared much less picturesque in front than it does when viewed from outside, was full of Russian soldiers actively employed in the removal of stores from the ruins of the fort. Carts drawn by stout horses were urged backwards and forward with feverish speed; and the Russians seemed to fear lest they should be interrupted, and anxious to do their work speedily.

There was a large Greek church near the shore, made up of ugly angles and faces, and covered with an enormous number of mushroom steeples; near it the ruins of large barracks, partially unroofed; behind it, to the westward, another large edifice in a perfect state, hundreds of houses, and farmyards filled with ricks of hay; and towering above all a telegraph with its wings in motion. The fort in ruins had stood on a spit approachable by water on three sides. It was quite untenable on Sept. 9, after the fall of Kinburn, and was, therefore, wisely blown up by the Russians. Such, apparently, was the fear entertained of the landing of the Allies on the mainland that the inhabitants appeared to have fled and left their homesteads to the tender mercies of the soldiers, who in Russia are not famous for respecting private property. It was doubtless to their exertions that the destruction of Otchakoff was owing, and the Russian peasants may learn from this among other examples that they have as much to fear from their own army as from that of the enemy.

It was evident, as we proceeded up the lagoon, that the Russians were in considerable force along the banks, in consequence of the constant alarm in which they were kept by the movements of our cruisers. We steamed up in the channel buoyed off by Captain Spratt, of the *Dauntless*, who, more than any other on the expedition, deserves credit for active exertion under fire as well as out of it. The *Hannibal* and other three-deckers had moved into the bay, whilst the whole of the French and English gun-boats, the *Ireton*, the *Stromboli*, and other steamers under the charge of Sir Houston Stewart, secured the shores from the Dnieper to the Bug. Sir Edmund Lyons himself, with several officers, had reconnoitred the mouths of both rivers a few days before; and during the reconnaissance the *Danube* tender, in which he made the trip, took the ground near Stanislav, where large numbers of troops were assembled. The Russians evidently feared, from all our movements, that a landing was intended, for the purpose of attacking Nicolaieff; and there is no doubt that every means was taken to confirm them in this belief.

With the exception of the enemy's movements, there was nothing to interest the spectators of this broad inland sea, bounded on one side by the low shores of the Bug, and on the other by the faint specks of trees or mills on the Kinburn Spit, which, casting reflections on the waters, seem to be rather formless masses floating on the surface than solid land covered with people. At the mouth of the Bug we found the *Stromboli*, the *Spiteful*, and *Ireton*, with the *Wrangler*, and several French gunboats.

A short engagement had taken place between the first of these ships and a battery inside of the Bug, in which no harm appeared to be done on either side; and, after a few discharges, the *Stromboli* retired. A French vessel made a reconnaissance of the same place, and soon retired also. On the hills behind these batteries, which occupy a point on the western shore, on the high plain of the eastern bank, are numerous encampments of cavalry. Straggling villages, with white steeples, are seen in the distance, and boats in great number are drawn up on shore. None of these have moved since we cast anchor, and at night we keep a sharp look-out for fire-ships. As yet, however, we have seen no signs of the Russians afloat, although we know that there are plenty of gun-boats and ships up the Bog towards Nicolaieff. It is certain now that, whatever the number of these may be, they cannot go very far with impunity.

DNIEPER LAGOON, Oct. 30, 1855.

After a dull week spent at the mouth of the Bug, where nothing of more consequence occurred than the capture of two oak-rafts, containing wood enough for two lines-of-battle ships, and worth £50,000 or £60,000, we returned to our old anchorage off Kinburn Fort, and found the fleets busy in preparations for re-embarking troops. The walls of the fort have been rebuilt, and covered with a stout gabionade, guns placed in position everywhere, and preparations made to meet any hostile attacks. The glacis was raised several feet, the old one insufficiently protecting the counterscarp. The Spit batteries have been disarmed, but not yet blown up. The *Sidon*, *Leopard*, *Tribune*, and some gun-boats, remain here until the frosts, to protect the garrison from seaward. The floating batteries will, I believe, also winter here. The only news current is that the divisions which had been marched to the aid of Kinburn too late to prevent its capture have made their way to the Crimea, where the Emperor, it is said, now remains.

I must not omit to tell you the names of the Russian Commandant and his second. The first is General Cochanovich; the second, Colonel Polisanoff.

POSTS DEPT. KAMIESCH, Nov. 3

After a long cruise of upwards of four days, with head-winds from Kinburn, I have just reached Kamiesch, where preparations are being made for another expedition. Rumour says Kaffa is our destination. The troops will not of course be disembarked here, but proceed as speedily as possible in the new direction marked out for them. There seems to be no change before Sebastopol, and I intend to follow this new expedition.

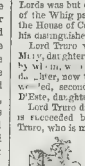
OBITUARY OF EMINENT PERSONS.

LORD TRURO.

THE Right Hon. Thomas Wilde, first Baron Truro of Rowes, in the county of Middlesex, was the second son of Thomas Wilde, Esq., of London, and of Saffron Walden, solicitor, by his wife, Mary Ann Knight. He was born the 7th of July, 1782, and was educated at St. Paul's School. Early in life he adopted the avocation of his father, which he soon relinquished for the higher branch of the same profession. He was called to the bar by the Hon. Society of the Inner Temple in 1817, and rose to great eminence as a Nisi Prius advocate. His rough and vigorous eloquence, and his consummate tact in common-law actions, proved remarkably effective. His soon became a leader of the Western Circuit, and a constant practitioner in Westminster Hall; he has acted as counsel in some of the greatest lawsuits of his time: to his conduct of one of these, the Sussex Peerage case, he no doubt owed his second marriage. His rise to legal honours was rapid: he obtained the coif in 1824, and was made a King's Serjeant in 1827; he was appointed Solicitor-General, and was knighted, in 1830; he was Attorney-General from June to September, 1841, and was reappointed to that office in July, 1846; he held it, however, but for a few days, being, in the same week, raised to the Bench as Chief Justice of the Court of Common Pleas. In 1850 he became Lord Chancellor, and was created a Peer, with the title of Baron Truro. His elevation thus to the highest legal dignity proved more honourable than prosperous. The eloquent and able leader of Nisi Prius and accomplished common lawyer found himself rather out of place while presiding over the chief tribunal of equity, having scarcely ever, except when officially called upon, practised in the Chancery Courts. He retired with his party in February, 1852; but when they returned to power he did not resume the seals. Latterly his appearances in the debates and legal committees of the House of Lords was but occasional. In politics Lord Truro was a strenuous supporter of the Whig party. He represented Newark, and subsequently Worcester, in the House of Commons, and, as a debater, was somewhat superior to many of his distinguished legal contemporaries who have figured in Parliament.

Lord Truro was twice married. He wedded, first, the 13th April, 1810, Mary, daughter of Mr. William Wileman, and widow of William Denison, Esq., by whom, who died the 14th June, 1840, he leaves issue two sons and one daughter, now the wife of her cousin, Charles Norris Wilde, Esq. Lord Truro married, secondly, the 13th August, 1845, Augusta Mary, Mademoiselle D'Este, daughter of the late Duke of Sussex: by her he has had no issue.

Lord Truro died on the 21st inst., at his residence, 33, Eaton-place. He is succeeded by his elder son, Charles Robert Claude, now second Baron Truro, who is married to Lucy, daughter of Robert Ray, Esq.



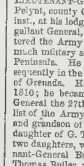
SIR JONAH HENRY STRACEY, BART.

THIS venerable Baronet died at Bognor, Sussex, on the 6th inst., aged eighty-four. He was the third son of Sir Edward Stracey, of Rackheath Hall, Norfolk, who was created a Baronet 3rd October, 1818; and he succeeded to the title at the decease of his brother, the late Sir George Stracey, Bart., 5th December, 1854.

Sir Jonah married, 23rd June, 1800, Diana, eldest daughter of the Rev. Sir [illegible] Bt., of Dalham Hall, Suffolk, Lady Stracey died in 1845, and only surviving son, Sir Henry Jonas Stracey, the present and fourth Baronet, M.P. for East Norfolk, who is married to Charlotte, only daughter and heiress of George Deane, Esq., of the Paddock, Canterbury, and has seven sons and six daughters.

LIEUT.-GENERAL BULLER

LIEUTENANT-GENERAL FREDERICK WILLIAM BULLER, of Lanreath and Pelynt, county Cornwall, formerly of the Coldstream Guards, died on the 8th inst., at his lodgings in Bury-street, St. James's, after a protracted illness. The gallant General, who had attained the advanced age of eighty-two years, entered the Army as Ensign the 20th January, 1790, and in his early career saw much military service, although he did not share in the martial events of the Peninsula. He was in the campaigns of 1793 and 1794 in Flanders, and subsequently in the West Indies, including the siege of St. Lucia and the reduction of Grenada. He was appointed Aide-de-Camp to George III. the 26th July, 1810; he became a Major-General the 4th June, 1813, and a Lieutenant-General the 27th May, 1825; since which period he retired from the active list of the Army. Lieutenant-General Buller was son of John Buller, Esq., and grandson of John Francis Buller, Esq., of Morval. He married Caroline, daughter of C. Tomlyn, Esq., by whom he leaves issue two sons and two daughters, who are the present Lady Polsmore and Mrs Hales. Lieutenant-General Buller's eldest son and successor is Major-General Frederick Thomas Buller, who married, the 18th August, 1831, the Lady Agnes Percy, fourth daughter of Hugh, second Duke of Northumberland.



THE REV. THOMAS PHILPOTT, M.A.

THIS respected and venerable clergyman, who, endeared by his virtues to all who knew him, was known by the appellation of the "Good Rector," died at his residence, the Rectory, Pedmore, in the county of Worcester (to which he was presented in 1791), on the 10th of last September, at the advanced age of ninety-four. He was son of the Rev. Other Philpott, Rector of Pedmore, and grandson of the Rev. Thomas Philpott, who was presented to the Rectory of Pedmore in 1721. He did the whole of the duty of his parish till about eighteen months ago, since which time his son-in-law has officiated as his curate.

His charities were very extensive; never, indeed, was an appeal known to have been made to him in vain.

WILLS.—The will of the Right Honourable Sir Henry Ellis, K.C.B., F.C., was proved under £35,000 personalty within the province of Canterbury; General Henry D'Oyly, £40,000; Admiral John Giffard, £16,000; Lieut.-Colonel W. F. Spicer, £36,000; John Burke, Esq., of Clifton, £50,000; Miss Mary Morrison, of Cadogan-place, £60,000; Sir Charles Chad, Bart., £45,000; Thomas Saul, wine-merchant, £10,000; Orpheus Pirrie Erard, harp and pianoforte manufacturer, £90,000, within the province of Canterbury.

THE SACRED HARMONIC SOCIETY, Exeter-hall, commence their season on Friday next, 23rd November, with Spohr's "Last Judgment" and Beethoven's Mass in C. Mr. Costa continues to conduct as usual.

NOTES OF THE WEEK.

LORD PALMERSTON'S speech at the Lord Mayor's banquet contained nothing peculiarly original or eloquent, but it uttered the feelings of the country, and was received with an enthusiasm which a far more brilliant oration by some crotcheteer like Mr. Gladstone or Mr. Bright would not have commanded. The tone of the whole company was bellicose, with an exception to which reference has been made elsewhere. The Representatives of the Allied Powers stood up in turn to assure the country of their perfect unanimity, and of their determination to carry on the war to a triumphant conclusion. They seem to have been in no way terrified by the accession of some of the Conservative party to the ranks of the Peacemongers; and, in spite of the most logical proof that Russia is the most virtuous and ill-treated Power under the sun, and that our successes in the Crimea are a wrong and an outrage, it seems likely that the Western Sovereigns will press on the war in due season, and will not think that the object is sufficiently obtained by Turkey being included in the European family. Lord Malmesbury, whose grovelling conduct in regard to Austria is well remembered both here and on the Continent, has ample reason to thank his stars that he is not now Foreign Minister (and the country will not be indisposed to join in his thanksgivings), for it is evident that bad times are coming for the despotic dynasties.

Lord John Russell's Exeter Hall address has formed the subject of remark in another place. Mr. Gladstone has delivered another lecture on the Colonies, and the mode of governing them, but it is not generally supposed that the display of so much antipodean wisdom will induce Lord Palmerston to offer the Colonial Secretaryship to the member for Oxford; unless, to be sure, he does so on the ground that, having offered it to Lord Derby's son, he may properly offer it to Lord Derby's former subordinate. Mr. Gladstone himself was about the worst Colonial Minister we have had for many years, and that is saying a good deal. The situation itself is understood to be still going a-begging, and it will be very remarkable if it should appear that the Colonies go on as well without a master as with one. Their own highly-irreverent idea of self-government has long led them in that direction, and this experimental interregnum may not tend to dispel it.

A defence of Sir Colin Campbell against the charge that he returns home because he will not serve under Sir William Codrington has been put forward. It is stated that "urgent private affairs" had caused him to apply for leave of absence before he could know of Sir William's appointment. It is not pretended, however, that he would have served under the latter had matters been otherwise, and, indeed, the reverse is stated. One General, who had returned on similar "urgency" before the new appointment, is understood to make no secret of the fact that he would have refused to serve under Codrington, and there is ground for supposing that Sir Colin might entertain similar notions of his position. A better answer is given to the allegation that the Highlanders were "laid up in lavender" during winter, the truth being that under Sir C. Campbell's leadership they did invaluable service; and the *Times*, one of whose writers had stated the case somewhat carelessly and imperfectly, has very creditably and frankly admitted that an injustice was done to a gallant officer. It is to the honour of the British press that, unlike those who abuse it for its general honesty, it is seldom unwilling to retract an error that may inflict an injury.

Every one is desirous to know what chance there is of the proposed treaty to include Sweden among the Allied Powers being negotiated. It is clear that true wisdom and policy would range Sweden with those who, in return for the valuable aid which she could lend them now, would guarantee her against the force and fraud of her powerful neighbour and inveterate enemy. But, as Jeremy Taylor says, "he knows little of the nature of man who thinks that he hath only to show him that which is good to ensure his embracing it." Roubles which, Russian gold, which has hired half the German nobility to be the tools and spies of St. Petersburg, has not been idle at Stockholm. Added to which Sweden may think that the aggressive propensities of Russia have received a lesson which will render her harmless for some time to come. Should, however, the treaty be effected, and these two Northmen joined with the Allies, a remarkable stroke of policy will have signalised the close of the campaign of 1855.

Domestic news is scarce this week, save that the November fogs are settling down murkily and sullenly. The Hyde park meeting went off quietly, owing to the pressure and the manœuvring of a couple of thousand police, horse and foot, who moved about among the assembled scoundrelism, separating groups, and handling them with undeserved tenderness, for what business had they there? A curious feature was the contentious display of the police van, which paraded slowly, like an omnibus plying for customers, and intimating that if any body desired a ride to the House of Correction the way was open to him. But though the rioters were dispersed without damage, it is not only a most unreasonable thing that such a display of force should be rendered necessary, but it is certain that this forbearance will not effect the object desired. We shall have a series of such meetings, until some one takes the town by surprise by a sudden exhibition of brutality, and then we shall regret the kind of toleration that has been given to it. If only out of respect to the humbler classes—the people—who have a right to the enjoyment of the parks, these assemblages of the ruffianism of London ought to be scattered and prevented.

A judicial decision at Exeter will give satisfaction to the lovers of peace and quiet. A Judge has decided that no person has a right to keep vociferous animals, like Cochin-China fowls, to the annoyance of his neighbours, and has given damages in a case of the kind. We sadly want some such Judge in London. The obstinate selfishness of many persons who, for the sake of an abominable "pet," a yelping cur, a screeching parrot, or a grinding organ, will annoy a whole street by day or by night, can only be met by the law. There is no doubt, indeed, that the inhabitants of London have to bear more of what may be called small miseries, but which, like the constant water-drop, irritate beyond reasonable endurance, than those of any metropolis in the world. The best districts are the most infested. From morning to night itinerant musicians, roaring costermongers, shrieking venders of cat's meat and water-cresses, and a whole herd of loud-voiced peripatetic nuisances grind, howl, and howl all over Belgravia and similar regions, and no one seems to think that a remedy is possible. Were Louis Napoleon Sovereign here, and a representation on the subject were made to him by an influential and tax-paying class of his subjects that their lives were rendered intolerable by such a set of vagabonds, there would not be one of them in the street a week afterwards; but a constitutional Government, municipal institutions, a costly police, and a free press, can do nothing to deliver us.

OPENING OF THE BIDEFORD EXTENSION RAILWAY.

IN the ILLUSTRATED LONDON NEWS for July 29, 1854, we recorded the opening of the North Devon Railway to Barnstaple, which has been a great means of rendering the romantic beauties of Ilfracombe, Combe Martin, and Linton, accessible to visitors. We have now to describe the completion of an extension from Barnstaple to the ancient and important port of Bideford, the opening of which took place, with great ceremony, on Monday, the 29th ultimo, and was celebrated in the evening by a splendid banquet in the Town-hall.

This new line of railway owes its existence chiefly to the support rendered by the Directors of the North Devon Railway Company, and their enterprising contractor, Mr. Brassey. It met, notwithstanding the immense benefit it confers, with the usual amount of ill-judged opposition, and after a struggle of two years, through unparalleled obstacles, has at length been brought to a satisfactory conclusion.

Leaving Barnstaple, the line passes over the alluvial flat of the Taw, to Fremington Pill, where the North Devon Railway Company have established a wharf, and reaches the pretty village and watering-place of Instow, opposite to which is Appledore, picturesquely seated on a steep promontory stretching out into the estuary. Facing the coast, behind Appledore, is an extraordinary pebble ridge, from two to three miles in length. From Instow the railway runs parallel with the Torridge to Bideford, and competes for the palm of beauty with the South Devon Railway below Exeter. From Bideford many interesting and pleasant excursions may be made. Clovelly, a little fishing-town, about eleven miles distant, will well repay the trouble of a drive. From Clovelly the coast stretches away north and west until it reaches

OPENING OF THE BIDEFORD EXTENSIO RAILWAY.

Hartland Point, with an altitude of 350 feet. To the geologist this place contains many features of interest. Hartland Abbey Church will also repay the trouble of an inspection. To the tourist in quest of the beautiful or sublime, or the invalid in search of health, the completion of this line affords opportunities of obtaining both amidst the glens and rivers, woods, and rock-bound coast, and pure and exhilarating air of Devon.

THE ILLUSTRATED LONDON ALMANACK FOR 1856.

NOTWITHSTANDING the legion of Almanacks which have appeared since the "Illustrated London Almanack" was first issued, this work maintains its high claim to popular favour. The Illustrations comprise a little gallery of statuesque figures characteristic of the months, designed by a Russian artist, each flanked with smaller vignette-like groups of the pastimes and aspects of each quarter. The central figures are throughout original, which is a recommendation, considering how dim the "mirror of the months" has grown by frequent repetition. Since the writer suggested to William Home for his "Every-day Book" Spenser's twelve Sonnets illustrated by Samuel Williams, there has been a pretty long trail of these monthly personages. Opposite the figure-heads in the Almanack before us is a group of flowers and leaves characteristic of the horticulture of each month, by W. S. Coleman. These are pleasing compositions, and the accompanying notes (also by Mr. Coleman) are full of variety and interest. The other illustrated page is occupied with neat views of natal houses and abodes, localities and memorials, and eminent persons, and events to be remembered—a class of illustrations germane to an Almanack. These engravings are 54 in number, and, with those before specified, make 58; in addition to which there are numerous illustrations in Mr. Glaisher's valuable pages of Astronomical Occurrences of the Months; and Illustrations of the Positions of the Five New Planets at the time of their discovery in the years 1854 5. In the Miscellaneous Records are an Explanatory Table of Public Acts of Parliament passed in the last legislative year; a Summary of Persons of Note who have died during the last twelve months; a Wa Obituary List; and a List of European Sovereigns, their Consorts and Heirs, and Chief Ministers; Population, and Naval and Military Forces; and the Coonial and Foreign Postage Lists are copious and complete.

We quote the figure of "December," and its "Leaves and Flowers," with the accompanying notes:

Our concluding group, like the first, is composed of some of the more remarkable form of leaves, being a selection from what the gardener calls "foliage plants," or plants which depend rather on their leaves than their flowers for their beauty or interest; in which points many of them are hardly excelled by any tenants of the conservatory, besides possessing the great advantage of remaining in equal perfection all the year through. Some of these rival in the richness of their tints the brightest flowers, such as *Dracæna*, *Caladium*, *Calathea*, and *Cissus discolor*. We figure the leaves of the last mentioned; but no engraving can show the beautiful variety and gradation on the

DECEMBER.

FROM "THE ILLUSTRATED LONDON ALMANACK" FOR 1856.

DECEMBER FLOWERS, FROM "THE ILLUSTRATED LONDON ALMANACK" FOR 1856.

rich velvet of its upper surface. The centre rib and principal veins are marked by various shades of purple and black; between the veins are silvery patches of white, and towards the edges the purple softens off into a lovely subdued green, forming altogether one of the most harmonious little pieces of colouring with which Nature indulges us.

The pearly sonnerila (*Sonnerila Margaritacea*) is one of the most charming of recent introductions. It has glossy green leaves, studded over with lustrous pearl-like-spots, and in the summer is ornamented with a spike of pink flowers of much beauty.

The curious plants from Java, called *Anæctochilus*, well deserve a place in any collection where sufficient heat is maintained. One of these plants at first sight gives the idea of a number of strange insects congregated on the ground, each leaf being so marked and shaped as to resemble the closed wings of a large beetle or moth—blackish green or brown, with golden or silvery veins, being the usual colouring. *Anæctochilus setaceus* is the species figured.

Several species of club moss—half moss half fern like feathery little plants—are very ornamental, for edging the aquarium, and for other purposes where their fresh bright green is acceptable. We figure the creeping-rooted club-moss (*Lycopodium stoloniferum*.)

We must now notice two of those curious mechanical contrivances which are met with in the leaves of some plants. The first is the half-animated Venus' fly-trap (*Dionæa muscipula*), whose leaves have the singular power o closing over and imprisoning for life any unfortunate insects which may alight on their surface: whither it is said they are tempted by a sweet liquor which exudes from the glands on the surface.

INAUGURATION OF THE STATUE OF THE LATE EARL OF BELFAST, AT BELFAST.—(SEE NEXT PAGE.)

REQUIEM FOR THE DEAD OF THE ALLIED ARMIES.

On Tuesday morning a solemn mass and requiem were celebrated at St. Mary's Roman Catholic Church, Moorfields, by Cardinal Wiseman, for the "repose of the souls of the soldiers who have fallen in the Crimea during the last twelve months." High mass was sung by Bishop Grant, assisted by the clergy of the church. Cardinal Wiseman attended, accompanied by the canons and clergy of the Roman Catholic Church in London. The latter were arranged on each side of a large

CENOTAPH AT THE ROMAN CATHOLIC CHAPEL MOORFIELDS, IN MEMORY OF CRIMEAN SOLDIERS.

cenotaph erected in front of the altar, on a black carpet bordered with white It consisted of two steps and a plinth of black, yellow-veined, marble of about 25 feet long, by 14 inches wide, supporting a large sarcophagus of oblong form, resting on four lion's-paws of white marble at the angles. This sarcophagus is of the same colour as the steps, but has a white bordering enclosing the four panels forming the sides, on which are written the following inscriptions in gold letters:—

MILITIBVS. QVI TERRA MARIQVE. PRŒLIARE. DECERTANTES IN. PACE TAMEN. CHRISTI. DIEM. SVVM OBIERVNT | SACERDOTES POPVLIQVE WESTMONAST SOLEMNI. RITV. LIBANTES. D.O.M. PACEM. ADPRECANTVR. MDCCCLV

And on the sides:—

IN. CERTAMINE. FIDEI. COMMILITONES. NOSTRI

and

AVETE. ANIMÆ. GENEROSISSIMÆ.

On the top of the sarcophagus rises a pyramidal rectangular cone, crowned with a lofty and massive silver ball and cross, on each face of which was a trophy of armour, offensive and defensive, intermingled with the flags of England, France, and Sardinia. The erection of this very elegant and imposing cenotaph reflects the greatest credit on the skill and zeal of Mr. Nosotti, of Oxford-street, from whose *ateliers* it was produced at the very shortest notice.

The pillars, altar, and pulpit of the church were covered with black hangings. After mass the Cardinal entered the pulpit and delivered a short discourse. He reviewed rapidly and with his customary eloquence the perils, the hardships, and indescribable sufferings to which our gallant troops had been exposed at the seat of war in the performance of their duty to their Sovereign and their country; how cheerfully they obeyed the orders which they knew would in all probability lead to their inevitable death; how heroically they rushed into the fearful struggle, and sacrificed their lives without a murmur; and how for all those acts of fortitude, courage, and indomitable energy, their country owed them a deep and lasting debt of gratitude. It was to perform a portion of the duty thus incurred that the solemn requiem was performed on that solemn and sad occasion. His Eminence next alluded to the conduct of our gallant allies who had fallen in the same struggle, and implored all present to pray to the Most High for the eternal welfare of their troops who had perished in the sanguinary struggle, and not to forget in their prayers even those who were opposed to them as enemies on the field o battle, who had gone "with the sign of peace,"—for Christianity made no distinction between the children of our common Father.

After the sermon, the Cardinal proceeded, vested in a magnificent cope of purple velvet, covered with embroidery, and preceded by his cross borne by George Bowyer, Esq., M.P., to give the absolutions round the cenotaph.

The church was crowded in every part by a highly respectable congregation, including most of the Roman Catholic gentry now in town.

WAREHOUSEMEN AND CLERKS' SCHOOLS.

THE anniversary dinner of this charitable institution was held on Monday, at the London Tavern—Lord J. Russell, M.P., President of the Institution, in the chair. A very large number of the friends of the charity attended. After the cloth was drawn, the noble Chairman gave "The Queen;" observing that every year increased the attachment of the

THE WAREHOUSEMEN AND CLERKS' SCHOOLS, MATCHAM-GROVE HOUSE, NEW CROSS

people to the Throne, owing to the virtues of the Sovereign (Cheers). Then followed "The Health of Prince Albert, the Prince of Wales, and the rest of the Royal family."

The noble Chairman next gave the toast of "The Army and Navy." His Lordship, in referring to the gallant deeds of our army at Sebastopol, said: They would all remember that, when privations of every kind—cold, and want of food and clothing—had reduced the physical strength of that Army, yet that its spirit and courage had sustained no diminution. At the battle of Inkerman that spirit and courage had been triumphantly displayed time and time again; for those of those who stood resistless and unconquered upon that hill (Cheers) But, however much they might honour the daring of those who had fought these battles, they must still more admire the unabated courage and firm discipline of those who went night after night into the trenches with no chance of encountering an enemy face to face and hand to hand, but who stood there exposed to all the danger of the artillery of the enemy, and feeling disease creeping upon them from the cold and wet in which they were plued (Cheers). However great had been the courage displayed by our Army in the battles of the Crimea, the example of that fortitude was still higher, and would be honoured to all future time. We had since had to rejoice over the fall of Sebastopol (Loud cheers)—and we had to rejoice that while the British troops bore the brunt of the battles of Alma and Inkerman, our French and Sardinian allies, both at the battle of the Tchernaya and at the taking of Sebastopol, gained the main part of the glory, and had succeeded in those undertakings by the gallant efforts they had made. He trusted that the union of the Allied Armies which had been consummated at Sebastopol would be a pledge of the long-enduring union of the two countries (Loud cheers). With regard to the Navy, their skill and valour were too well known to need eulogy. It was no doubt a disappointment to the Navy that no hostile fleet had appeared to try its strength with them; but in every operation in which they had been engaged, and recently in the Sea of Azoff and at Kinburn, they had displayed the same skill and gallantry as in former times. He had made an omission in not having spoken of the Turkish Army. That army at Silistria, and a very short time ago at Kars, had shown that they wanted nothing but good officers to make them equal to the best soldiers in Europe (Cheers).

Major Wood returned thanks for the Army and Navy.

The noble Chairman then rose to propose "Prosperity to the Warehousemen and Clerks' Schools." His Lordship described the rapid growth of their institution. It appeared that in December, 1853, the first suggestion was made of the necessity of making some provision for the orphan and necessitous children of warehousemen and clerks. Within six weeks not less than £3000 were subscribed by young men for the purpose of founding the institution (Cheers). A short time afterwards the principals of these establishments, finding the project taken up with so much spirit, came forward, and subscribed more than £4000 towards the object (Cheers). It appeared that the subscriptions in no long time, and after one public dinner, were augmented to the sum of £10,000. The funded property of the society amounted to £9000; the annual income was £1000; and the balance in the banker's hands was £866 (Hear). Fifteen children had been admitted to participate in the benefits of the institution, and six more would shortly be elected. Ground had been obtained upon a long lease for a piece of freehold, and the institution was now nearly finished upon it. His Lordship then proposed "Prosperity to the Warehousemen and Clerks' School" (Three times three).

Dr. Archer proposed "The Health of the noble President of the Institution, Lord J. Russell," whose services in the cause of civil and religious liberty he eulogised, while he claimed the right to differ from him in some passages of his career.

The noble Chairman said, he should be the last to complain if any person present, or if the whole country, should differ from him. There was no use in our free institutions if men were not to form their own opinions. He would only say that in all the opinions he had ever formed his chief object and reward was the welfare of his country. Possibly mistaken, no doubt, he had been on many occasions, but he had always said on those occasions, "If I am wrong, let the opinion of the country set me right and direct me." Meanwhile, all he could do was to follow his best judgment, and to thank them for the kind acceptance of his name (Cheers)

Other toasts followed, and before the noble Lord left the chair the total amount of subscriptions nearly reached £1700

The premises recently opened for the institution is Hatcham Grove House, situated in Queen's-road, New-cross. It is a spacious brick mansion, built in the last century; in the rear are extensive and picturesque grounds, appropriated for the recreation of the school-children, who have also a playing-field.

INAUGURATION OF THE STATUE OF THE EARL OF BELFAST.

THE great feature of the recent visit of the Lord Lieutenant to the north of Ireland, was the Inauguration of the Statue of the late Earl of Belfast, in the capital of Ulster, on Thursday, the 1st instant.

His Excellency arrived at Belfast on Wednesday. The streets were decorated with flags, and as the viceregal cavalcade passed along his Excellency was cheered with enthusiasm by the people. At the Ulster Railway Station his Excellency received an address from the Town-council. In the evening his Lordship honoured the mansion of Lord Dufferin and Claudeboye by a visit.

On Thursday morning his Excellency returned to Belfast.

The Statue, which is erected in College-square, in front of the Academical Institution, was veiled from public view by a large curtain of French grey-coloured cloth, which depended from an arch, surmounted with the armorial bearings of the Donegal family, emblazoned in the proper heraldic colours, and on the other side was inscribed appropriate mottoes. On the left appeared Campbell's well-known lines:—

To live in hearts we leave behind
Is not to die.

On the right was inscribed the well-known line from Pope

The kindred arts shall in his praise conspire,

With the words "Resurgam" on the one side, and "Excelsior" on the other. In front of the inauguration arch an extensive platform had been constructed, accommodations between five and six hundred ladies and gentlemen, who had been admitted within the inclosure by tickets issued by the Statue Committee. This company consisted chiefly of the subscribers to the testimonial and their friends, and embraced a large portion of the fashion of Belfast and its vicinity.

Shortly before one o'clock the members of the Town-council, in the regalia of office, with the Town-Clerk and Sub-Treasurer, took their places on the platform. The Statue Committee and the Committee of the Working Classes' Association had also their allotted places. Among the large number of noblemen and gentlemen on the platform were General Lord Gough, the Earl of Annesley, Lord Dufferin, Viscount Masserene and Ferrard, Lord Lurgan, Lord Robert Montagu, Lord Rossmore, Lord St. Lawrence, Lord Bishop of Down and Connor, the Hon. and Rev. S. Blackwood, &c. With these gentlemen and others were a very large number of ladies.

Shortly after its arrival, the Viceregal party were escorted to the platform in front of the Statue; and Lord Dufferin, having taken the chair, explained that, immediately upon the news of the death of the late Lord Belfast reaching the town, a feeling seemed to pervade all classes of its inhabitants that it would be desirable that their town should possess some memorial which would perpetuate the recollection of his many noble qualities. A committee was established for the purpose of carrying out the wishes of the inhabitants, and that committee had the honour of handing over to the Mayor and to the Corporation of the town of Belfast the Statue which has been erected.

The Rev. Vernon, Esq., Mayor of Belfast, having formally received the Statue, the Lord-Lieutenant then ascended the rostrum for the purpose of delivering the inaugural address. His Excellency was again hailed with genial and cordial cheering.

His Lordship, in his address, sketched the career of the deceased young nobleman with a skilful hand, and paid a most eloquent tribute to his memory.

The curtains were then rolled back, displaying the Statue in the most effective manner; and the band of the North Down Rifles performed Mendelssohn's Funeral March.

This concluded the ceremonial. As his Excellency was retiring, "Three cheers for the Lord-Lieutenant" were lustily given from the platform, and repeated by the vast crowd.

The statue is by Mr. Macdowall, and is a graceful work of art.

In the evening a banquet was given in the Music Hall, and was attended by upwards of 250 guests.

MARYLEBONE VESTRY.—On Saturday the representative vestry of St. Marylebone assembled for the last time under the provisions of Hobhouse's Act, which, after an existence of twenty-three years, is now superseded by the Local Management Act, carried through the last Session of Parliament by Sir Benjamin Hall.

FROM THE COMIC TIMES ALMANACK FOR 1856.

A GOOD REASON, TOO!—The reason the public now receives no intelligence from the Crimea is because general Simpson finds he hasn't any too much for himself.

THE ANNUAL PARADOX.—About the 1st of January each theatre in the metropolis will have "the best pantomime in London."

PRINCIPAL MODE OF EARNING.—Baked-potato cans, oyster-stalls, perpatetic coffee-shops, and baskets of penny ham sandwiches.

MAGNANIMOUS.—The Allies, knowing the boon of newspapers to the wounded, have, it is said, sent several thousand *Invalides Russe* to the Mauvaise Hospitals.

TO SPIRITUALISTS.—The best kind of table from which to obtain the means of conversing with your departed friends in the autumn is the Railway Timetable.

CURIOUS FACT.—When the eagle at the Zoological Gardens is suffering from indigestion, he is not allowed to walk about the grounds, for fear of the inquisitive tradesmen taking notice of it as an all-eagle-procuring.

ADDRESS OF THE GOVERNOR OF JERSEY TO A TIGER BESIDE HER QUEEN VICTOR.—*You go!*

IMPROVEMENT IN PHOTOGRAPHY.—Mr. Archer, the originator of the photographic collodion process, has been long working to render it more perfect, and to remove difficulties which all who make use of glass for negatives have experienced, not only from the weight of the glass, but from its liability to breakage, and other accidents happening to the picture film. Mr Archer has at length perfected a method which will be found an invaluable remedy for all evils. A solution of gutta-percha in benzole is poured over the collodion picture taken in the usual way; after being allowed to dry, which it does in a minute or two, the glass picture is then immersed in a dish of water, and the film immediately separates from the glass. It is then placed between paper, so that it will bear any amount of ordinary handling, and when removed, can be preserved in a book or paper case for printing from, and the glass after washing for another subject. Positives from negatives thus treated are quite as clear and delicate as those produced from the collodion picture by the old method, and the negatives can be placed in contact with the prepared printing paper. The result in particular will be to save the trouble and anxiety of carrying about large supplies of glass, and photographers will, we are quite sure, appreciate and quickly avail themselves of the advantages to be derived from this additional boon to the former valuable discovery, the collodion process of Mr. F. Scott Archer.

POST OFFICE LONDON DIRECTORY FOR 1856.—The proprietors of this work have now to add to themselves; but that they have [illegible] in their exertions on that account is fully evident from the expedition with which the Directory for the coming year. The map has been enlarged, so as to include within the circle within a radius of four miles from Charing-cross. The work is corrected up to the latest period, its removals, appointments, returns, [illegible] so as to render it as complete a guide as possible of a [illegible] to that change.

THE ARCTIC EXPEDITION.—At the meeting of the members of the Royal Geographical Society, on Monday, Captain Washington stated the Admiralty had that day received a telegraphic communication from Aberdeen, stating that Captain Kellett's vessel, which had been abandoned in the ice so long since, had drifted out into Davis's Strait, 1200 miles from where it had been left. It had been taken possession of by a whaler; and having been manned with a crew, was expected home almost immediately.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

As several rather large sales of Consols have been effected for [illegible], and as very few purchases have been made on account of the public or the large corporate bodies, the supply of stock has increased, and the tone of the money market for all national securities has been heavy, and [illegible] per cent. There has been an active demand for money, and the [illegible] combine very firm. At Lombard-street [illegible] have been made to run, have been taken at 5½, and those [illegible] per cent. There has been no change in the Bank rate of discount, but money is becoming scarce.

The arrivals of gold have been under £200,000, and we hear that a large proportion has been already purchased for France

It is reserved that Government should allow the Bank of England to issue bills to fill up the deficiency which has occurred since 1844 [illegible] note circulation, through the failure of country banks. The amount is supposed to be £700,000, the details of which, we are informed by Mr. Cobden, will be given in the Act of 1844. This would be a judicious step at the present time, and by this the profits of the additional issue would go to the State

The Consol-market, on Monday, was very flat, and prices were rather drooping. The Reduced marked 87⅛; Consols, 88⅜ to 88⅝; New Three per Cents, 88⅜; and Consols for Account, 88⅝ ⅝. Bank Stock was done at 208½ to 207½; and Bank Stock, 220. Long Annuities, 1859, 19; India Bonds, 2s.; and Exchequer Bills, 1s. to 2s. discount; Exchequer Bonds, 98⅛ ⅜. The following quotations were realised on Tuesday:—Bank Stock, 209. Three per Cents Reduced, 87¼; Three per Cent Consols, 88½. New Three per Cents, 87⅞ to 88⅛; Long Annuities, 1860, 3 7-16; Ditto, 1-32 [illegible] Stock, 220; India Bonds, 3s. to 6s. dis.; Exchequer Bills, 2s. to 3s. [illegible] Bonds, 98⅛. On Wednesday, Bank Stock was done at 209, and prices were [illegible]. The Three per Cent Reduced marked 87⅛; the Three per Cent Consols, 87⅜ to 88⅜; New Three per Cents, 88 to 87⅞; Consols for Account, 88⅜; Long Annuities, 1885, 19⅛; Exchequer Bills, 2s. to 3s. dis.; Exchequer Bonds, 98⅛ ⅜. On Thursday very little business was done. Consols for Money were 88 to 88⅛, for the Account, 88½ ⅝. Exchequer Bills were 2s. to 4s. dis. Bank Stock, 208. New Three per Cents were 87⅞ to 88; and the Reduced, 87 to 87½. India Stock, 223.

The Foreign House has been heavy, and prices almost [illegible] have given way. Brazilian Five per Cents have declined 1 per cent. Small [illegible] Five per Cents, 100½; Ditto, Three per Cents, 81; Granada One-and-a-Half per Cents, 15½; Ditto, Deferred, 10; Portuguese Four per Cents, [illegible]; Ditto, Five per Cents, 49; Russian Five per Cents, 104; Ditto, Four per Cents, 87; Sardinian Five per Cents, 89½; [illegible] Three per Cents, 45; Ditto, New Deferred, 10½ 20; Ditto, Passive, 6; Turkish Six per Cents, 93; Ditto New Scrip, 3⅞ to 4; Ditto, Belgian Four-and-a-Half per Cents, 92 ex div.; Dutch Two-and-a-Half per Cents, 63½; Dutch Four per Cents, 94; Mexican Three per Cents, 19½; Equador, 4½.

Our advices from Australia, California, and India on the all-sent of the wool of gold are very favourable, and we learn that commercial matters [illegible] improving. The shipments of goods from this side, however, continue small.

The last return of the Bank of France shows the following results, as compared with the previous month:—

Coin [illegible]	£8,412,000	decrease £97,400
Bullion [illegible]	4,774,240	[illegible] 5,440
Notes in circulation	2 [illegible]	[illegible] 44,000
[illegible]	[illegible]	[illegible] 6,480
[illegible]	[illegible]	[illegible] 1,000
Advances on French Government [illegible]	[illegible]	30,400
Advances on Railway Securities	[illegible]	1,000,000

The [illegible] of the [illegible] in the amount of advances [illegible] but this decrease is considered to have a most unfavourable influence upon the whole business of the country. The further decrease in the stock of coin was not [illegible] by many parties here, because they [illegible] suppose that the Bank had received a great addition to its metallic [illegible] during the month. We are not informed what amount of [illegible] has been obtained in London, but we understand that it was very large—e.g., over £2,000,000. That [illegible] with £831,200 given in the above statement, appears to have been well [illegible] when a glance is taken at the details of the Bank of France. The [illegible] showed a falling off of no less than £[illegible] in the coin and [illegible] over her with an increase of £1,334,000 in the discounts.

The [illegible] Joint-Stock Banks have been limited. Prices, however, [illegible] well supported. Australian have realised 95; London, 55; British North American, 64; English, Scottish, and Australian Chartered, 16; London Chartered of Australia, 18⅞; New South Wales, 36; Oriental, 40 ex div.; South Australian, 2½; Union of Australia, 74; Ditto, New, 82; Union of London, 30⅞.

Most of the Miscellaneous Securities have realised as follows:—Australian Royal Mail, 6⅝; Berlin Waterworks, 7½; Canada Company's Bonds, 124; Ditto Government Six per Cents, 107; Crystal Palace, 2; Ditto, Preference, 4⅞; East and West India Docks, 118; London, 99; New Zealand, 6⅜; English and Australian Copper Smelting Company, 1½; Electric Telegraph, 17⅝; General Screw Steam Shipping Company, 1⅝; Peel River Land and Mineral, 2⅜; Peninsular and Oriental Steam, 69½; Van Diemen's Land, 14.

The dealings in Insurance Companies' Shares have been limited. Globe, 107; Guardian, 50½; Imperial Fire, 360; Ditto, Life, 18½; Law, 9; County, 120; Pelican, 42½; Phœnix, 4; Provident Clerks, 2; [illegible] Fire, 2. Unpaid advanced prices have been paid for Mining Shares:—St. John del Rey, 30½; Cobre Copper 66s.; Linares, 7⅛; Santiago de Cuba, 2½; Tin Croft, 2; United Mexican 1.

There has been no actual pressure upon the Railway-market, but the business done in it has been trifling, and prices have shown a tendency to give way. The following are the closing money prices on Thursday:—

LONDON AND SOUTH-WESTERN STOCKS.—Caledonian, 87½; Eastern Counties, 5½; Edinburgh, Perth, and Dundee, 17; Great Northern, B Stock, 119½; Great Western, 48⅜; Lancashire and Yorkshire, 74½; London and Brighton, 94⅜; London and North-Western, 93; London and South-Western, 83½; North British, 26.

PREFERENCE STOCKS.—Caledonian per Cent, 105; Bristol and Exeter, 94½; Eastern Counties Extension, No. 1, ⅛ pm.; Ditto, No. 2, par; Great Western (Birmingham Guaranteed Stock), 68½; Midland Consolidated, 129; Waterford and Kilkenny, 3.

FOREIGN.—Bombay, Baroda and Central India, 4½; Great Western of Canada Shares, 21⅝; Namur and Liège, with interest, 4½; Royal Swedish, [illegible].

Friday Evening.

The Consol Market is very inactive to-day, and prices are rather drooping. The Three per Cents for Money are 87½ to 88; and for the Account, 88 to [illegible] one or two transactions having been recorded at 88⅜. The New Three per Cents have realised 87⅝; and the Reduced 87. In Foreign Bonds and Railway Shares very little is doing.

THE MARKETS.

[illegible] to our market this week, [illegible] fresh up to-day was limited, and the [illegible] in demand, and in some instances [illegible] were rather favoured for fine parcels. We had a fair demand for [illegible] of which were moderate, at fully previous rates. Floating cargoes [illegible] the number offering was small [illegible] here is unchanged. Grind [illegible] and Odessa [illegible] We had a [illegible] oats, at full prices. The flour trade [illegible] the prices of the [illegible] year, 2849

[illegible] Wheat, [illegible] Norfolk [illegible] Yorkshire and Lincolnshire [illegible] fresh up to-day was limited, and the [illegible] in demand, and in some instances [illegible] were rather favoured for fine parcels. These houses have [illegible] [illegible] [illegible]

SILVER CENTRE-PIECE, BY CHARLES GRANT.

THE PARIS UNIVERSAL EXHIBITION.

We have engraved three of the beautiful works of British Art which have been attractive even in the Art-capital of Paris. First is a silver Centre-piece, designed by Charles Grant, and manufactured and exhibited by Messrs. Elkington, Mason, and Co. The figures around the base are modelled from Sir Edwin Landseer's celebrated picture of "Bolton Abbey in the Olden Time." The centre support for the glass pan, here filled with flowers, is novel, but not very characteristic.

Next is a Clock Case, designed by John Bell, and manufactured and exhibited by Messrs. Elkington, Mason, and Co. The dial is encircled with figures of the twelve hours; and at the base are figures of Night and Morning. The design is more in the French taste than Mr. Bell's compositions usually are.

The third specimen is likewise one of Messrs. Elkington's contributions. It was executed in solid silver, as the Warwick Race Prize for the present year; the subject of the group is the last interview of Guy Earl of Warwick with the Countess, his wife

It is said that a number of foreign exhibitors, including several English, who have been the most successful, are recommended by Prince Napoleon, as President of the Imperial Commission, for the decoration of the Legion of Honour.

The Royal Dublin Society has sent over a collection of Irish-grown farm produce, which has been presented to the Imperial Commission. Those monster specimens of root crops show the luxuriant capabilities of the soil and climate of Ireland, in producing such extraordinary growth. Some of the mangel-wurzel weigh 25 lb. each, the Swedish turnips 15 lb. to 21 lb., and parsnips 4½ lb. to 6 lb.

Mr. J. W. Mackey (Chairman of the Agricultural Museum), with Dr. Tuohill, and Mr. A. Corrigan (Curator), are also in Paris, and have had an interview with Lord Cowley and the Minister of Foreign Affairs, through the kindness of Lord Clarendon and the French Consul at Dublin. They hope to obtain some contributions for their museum from the splendid collections of the British and French Governments.

HORRIBLE ATROCITIES IN CHINA.

(From a Correspondent.)

Canton, Sept. 12th, 1855.

As you are the depicter of events passing in the nineteenth century, I send you herewith a Sketch in connection with the daily events of 1855. Between 60,000 and 70,000 heads have been struck off by the executioners, in this little space of ground, since February last. Daily, except on the 1st, 15th, and three days at the time of the Emperor's birthday,

CLOCK-CASE, DESIGNED BY JOHN BELL.

SILVER GROUP (WARWICK RACE-PLATE, 1855), BY ELKINGTON AND CO.

have from 150 to 800 been carried in baskets by their fellow-men, to see the mangled remains of those who have by a few minutes preceded them carried or dragged out of the way, until the ground has become for several inches a filthy composition of blood and mud. Nearly every day one or two are tied to the cross; the executioner, facing the poor wretches, takes a sharp knife, and, rapidly cutting them in different parts of the body, finishes by putting it into their hearts. They are then cut down, their heads, hands, and feet are cut off, their livers and hearts cut out, and, with their heads, taken to show the Mandarins. I do not know that it is likely that your insertion of these will produce any effect upon the natives; but many of your pictures ornament the boats on this river. I am, Sir, your obedient servant,

Wal. Geo. Dickson, M.D.

THE PLACE OF EXECUTION, AT CANTON.

MONUMENT TO MAJOR DALTON.

THE Lincolnshire tenantry of Mr. John Dalton have just erected in Fillingham churchyard a highly-decorated Gothic monument (designed and executed by Keyworth, of Hull) to the memory of Major Thomas Norcliffe Dalton. The inscription is as follows:—

In memory of Thomas Norcliffe Dalton, aged thirty-five (third son of John Dalton, Esq., of Sleningford Park, Yorkshire, and of Fillingham Castle, Lincolnshire), late senior Major of the 49th. Major Dalton served with distinction in India, with the 61st, during the Punjaub campaign of 1848-49, taking part in the battles of Sadoolapore, Chillianwallah, and Goozerat, for which he received a medal and two clasps. Following up this career of glory in the Crimea, he fought gallantly at the Alma; and was killed while heading a charge at Inkerman, Nov. 5th, 1854—carrying with him the deep regrets of the brave 49th, and of all who knew him. This monument was erected by the grateful tenantry of John Dalton, Esq.

MONUMENT IN FILLINGHAM CHURCHYARD, LINCOLNSHIRE, TO MAJOR DALTON, WHO FELL AT INKERMAN.

MONUMENT TO THE HON H. A. NEVILLE AND THE HON. GREY NEVILLE.

A MARBLE mural monument to the memory of the two sons of Lord Braybrooke, who lost their lives in the Crimean campaign, has just been erected in the chancel of Saffron Walden Church, Essex. The sculptor, Mr Thomas Milnes, has produced a work of originality of design and striking effect. It consists of an elaborate Gothic sarcophagus: on the cornice is placed the bear-skin cap, sword, and sash of the Hon. H. Aldworth Neville, Captain in the Grenadier Guards; and, on the opposite side, the helmet, sword, and sash of the Hon. Grey Neville, Colonel in the 5th Dragoon Guards; and above these are placed the flags of the army and the regiment, thus forming a pyramidical group. The whole weighs about one ton, with scarcely a speck of colour to be found in it, very unusual in so spacious a monument: it is nearly nine feet in height and six feet in width, and projects eighteen inches from the wall. The following is the inscription on the tablet:—

Sacred to the memory of two gallant young officers, the third and fifth sons of Lord and Lady Braybrooke, who, having accompanied their regiments to the Crimea, were both cut off in the short space of one week while nobly fighting for their Queen and country. The Hon. Henry Aldworth Neville, Captain in the Grenadier Guards, after sharing in the glories of the memorable day at Alma, was mortally wounded at the battle of Inkerman, Nov. 5th, 1854, and expired a few hours after, aged thirty. The Hon. Grey Neville, Cornet in the 5th Dragoon Guards, died in the hospital at Scutari, Nov. 11th, 1854, of wounds received in the charge of the heavy cavalry at Balaclava, Oct. 25th, aged twenty-four. "In the sight of the unwise they seemed to die, and their departure is taken for misery, and their going from us to be utter destruction, but they are in peace"—Wisdom iii., 2, 3.

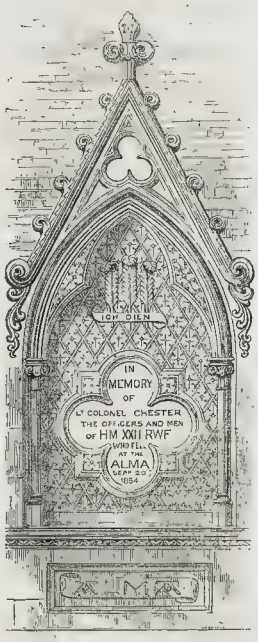
MONUMENT TO CAPTAIN THE HON. H. A. NEVILLE, AND CORNET THE HON. GREY NEVILLE, AT SAFFRON WALDEN CHURCH, ESSEX, WHO FELL IN THE CRIMEAN CAMPAIGN.

MONUMENT TO COLONEL CHESTER.

THIS elegant mural monument is now in course of erection by the citizens of London, Canada West, where the late Colonel Chester, with his regiment, was quartered for a considerable time, and gained general esteem.

This is an excellent demonstration of feeling for the "old country," which will be highly acceptable to remaining friends in the Crimea.

The monument is sixteen feet high and six feet wide; is of freestone; the inscription slab of marble. It will occupy a prominent position in the tower porch of the Church of St. Paul. The architects are Messrs. Smith and Beattie.



TABLET IN ST. PAUL'S CHURCH, LONDON, CANADA WEST, TO LIEUT.-COLONEL CHESTER, WHO FELL AT THE BATTLE OF THE ALMA.

SEBASTOPOL, FROM THE HOSPITAL WALLS.

THIS View was sketched by our Special Correspondent, Mr. Crowe, immediately after the fall of the fortress. Several of the buildings here shown will be remembered in our previous views. The temple in the extreme left has since been referred to in the following letter from Sebas-

SEBASTOPOL, FROM THE HOSPITAL WALLS.—SKETCHED BY J. A. CROWE.

topol of October 30, in the *Constitutionnel*.—"The fire from the Russian forts for several days past has been very hot. A shell set fire to the charming little temple which crowned the eminence above the military port. It is stated that Marshal Pelissier was near the spot when the accident happened. This temple, called the Temple of Theseus, was of a rectangular form. It was surrounded with Ionic columns, and stood in the midst of a delightful little garden, but the interior was uninteresting. The Russian guns are not gallant. A pretty young English lady had her veil torn by a splinter from a shell on Sunday last. Visits to Sebastopol are very dangerous experiments."

NAVAL AND MILITARY INTELLIGENCE.

STAFF OF THE ARMY IN THE CRIMEA.—BREVET.—Major-General Sir William John Codrington, K.C.B., who has at present the local rank of Lieutenant-General in Turkey, to have the local rank of General in the Crimea and Turkey: dated 22nd October, 1855. Colonel Lord William Paulet, C.B., Brigadier-General in Turkey, to have the local rank of Major-General in Turkey: dated 9th November, 1855. Colonel Duncan Cameron, C.B., 42nd Foot, Brigadier-General in Turkey, to have the local rank of Major-General in Turkey: dated 9th November, 1855.

THE Indian regiments and those in the Colonies are receiving daily additional recruits, by recruits entering Chatham garrison for the several [illegible] proceeding to their destinations. The present strength of the battalion is 1,215 sergeants, 28 drummers, and 2,041 privates; they are practising in their drill every day on the inner lines of the garrison.

THE *Chesapeake*, 50, is ordered to be fitted for commission; she is to be fitted at forward immediately.

MASTS, spars, rigging, and sails are being prepared at Sheerness yard for eight of the new gun-boats now building, ready for early service next spring.

A NUMBER of artificers in their various branches—shipwrights, smiths, sawyers, &c.—are under the orders for working extra hours at the dockyards to accelerate the completion of the seven mortar ship *Lucifers*.

THE *Pluto* steamer, with 500 men of the Army Works Corps, was expected to leave on the evening of the 1st inst. at the entrance of the Dardanelles. Her Majesty's steaming *Retribution*, having started about an hour before, was unable to assist her. A French steamer was ultimately sent to help her off.

A CIRCULAR has been issued from the Horse Guards directing that promotions of non-commissioned officers, at depôts, should only be made provisionally until the sanction of the Lieutenant-Colonel commanding the regiment be obtained.

A LARGE reinforcement, numbering 25 officers and 725 men of the British German Legion, landed at Folkestone on Saturday last, from Heligoland.

AN examination of the hull and engines of her Majesty's ship *Merlin* has taken place in the dry dock at Woolwich, the result of which has shown that, by the explosion of the Russian infernal machine, three sheets of her copper were stripped off, her bulkhead was driven in, and one of her timbers split.

THE invalids brought home to this country in the *Robert Lowe*, No. 124 steam-transport, were disembarked at Portsmouth on Monday morning, to the number of 180 military, and 28 seamen and marines. A few cases had to be conveyed to the hospital, whilst others were taken to barracks in omnibuses. Although improved, had so far recovered from their wounds or sickness that they could comfortably walk to quarters.

THE Anglo-Italian Legion is rapidly augmenting its numbers. By the last accounts the first regiment is stated to be nearly complete. The previous delay in the recruiting appears to have arisen from the circumstances of the people of Italy being generally unaware of the wish of the British Government to form a legion. We hear that a very superior class of men are being enlisted, most of them having previously served in the armies of the King of Naples, the Pope, &c. The recruiting officers are prohibited from enlisting the young men who are liable to the conscription.

THE following general order has been issued to the Crimean Army:—"The Commander of the Forces has been much surprised at the numerous applications for leave of absence which have lately reached him from officers of all ranks in the Army. He has to remind them that they are still in the presence of a powerful enemy; moreover, that they have duties to perform in camp not less important than those in the field; and that the instruction, discipline, and well-being of the troops are subjects which require the earnest attention of all good soldiers."

THERE is at present building in Woolwich Dockyard a new description of mortar-raft for use in naval warfare. The raft will be supported by four pontoons, fitted lengthways, and which will also serve for the powder-magazine, through cutting the whole surface of the raft clear for the working of the mortars. It will be so constructed that it can be taken to pieces and put together in a very short time, as it is secured with bolts and screws, so that it will be taken on in pieces in ships to which it may be attached, and put together when required for action.

COLONEL the Hon. Percy Herbert, C.B., will succeed Sir Richard Airey as Quartermaster-General of the British Army in the East. Colonel Herbert served with the 60th Rifles in the last Kaffir war, and as Assistant Quartermaster-General to the Second Division in the Crimea up to the time of his appointment to the very important place which he will now fill. It is believed, should that Major-General Sir Richard Airey, K.C.B., will, on his return to London, succeed Major-General James Freeth as Quartermaster-General at the Horse Guards.

ON Tuesday morning a considerable number of men, accompanied by their wives and families (the former belonging to the newly-formed Medical Staff Corps—arrived at the Waterloo terminus of the London and South Western Railway, in order to proceed to Southampton and there to embark for the hospital at Scutari. It was at first believed that the wives were to be allowed to accompany their husbands; but upon arriving at the terminus it was found that such was not the case, which produced some touching scenes. The women and children began to cry, and it was with great difficulty that they could be removed from the doors of the carriages. The parting were, however, after much trouble, taken off the platform when the train departed, the men being vociferously cheered by those at the station.

THE Edinburgh County Militia, now styled the "Queen's Regiment," was on Wednesday week paraded at Dalkeith for volunteering, when 90 young men—most of them colliers, to whom days passed and been allotted for the Scots Greys, the 1st Foot and the 72nd Highlanders—joined the regiment, which already consists of 375 volunteers to the line, and yesterday made a very respectable appearance. About 60 recruits have been received within the last fortnight. On Friday the second volunteering from the 3rd Royal Lanark Militia took place, when about 150 men—picked out of the ranks—were enlisted, making upwards of 400 since July, of whom more than three-fourths are for the 42nd and 72nd. This regiment has now enlisted more than 1,000 men.

THE BALACLAVA HOSPITALS.—Miss Nightingale lately visited the General Hospital, and the hospitals at the Castle and Monastery. The General Hospital has suffered an irreparable loss in the removal of Miss Weare, the lady superintendent of the nurses, from Balaclava to the Monastery. I have received several letters from officers in which, to whom days passed and been attended by the Scots Greys, the 1st Foot and the 72nd Highlanders—those regiments has already contributed 375 volunteers to the Line, and yesterday made a very respectable appearance. About 60 recruits have been received within the last fortnight. On Friday the second volunteering from the 3rd Royal Lanark Militia took place, when about 150 men—picked out of the ranks—were enlisted, making upwards of 400 since July, of whom more than three-fourths are for the 42nd and 72nd. LETTERS FROM THE CAMP AT SEBASTOPOL.

(From a Correspondent.)

AN UNEXPECTED VISITOR AND A CONVERSATION.

I HAD an amusing adventure the other evening. A stranger visited me, and I entertained a late distinguished *attaché* of the Reform Club to what was getting dusk, and I was very tired, having been engaged in the hospital wards all day—for we had a very sudden and violent outbreak of cholera there. Philipo, my Maltese servant, was down on his hands and knees, blowing the lighted charcoal in my fireplace, with the intention of expediting dinner. My mess was all ready

THE UNITED KINGDOM AND THE UNITED STATES.

We cannot believe that the United States Government desires a war with this country; but it is said that the people are more powerful than the Government; and that a restless party, anxious to disturb Europe, are straining every nerve to plunge the Old and New World into hostilities. That some buccaneering adventurers are eager to seize Cuba must be admitted; nor is it to be denied that the cupidity of others aims at the subjugation of our West India colonies; nay, we may believe that the more rampant fanatics aspire, in their dreams or their cups, to annex Ireland. But we must discriminate between the desperadoes, chiefly foreigners, and the native American population, who respect and sympathise with the Anglo-Saxon race from which they are sprung. There are, however, some facts to be considered, of great importance in speculating both on the present and future prospects of American institutions, connected as those facts are with the history of immigration into the States from Europe, and with the ultimate consequences that may flow from the law of naturalisation as it now exists. It *may* happen, at no distant date, that the United States Government may be unable to control the foreign element that is yearly becoming more formidable; but, should this state of things arrive, it is more probable that some internal convulsion would disrupt the federal organisation than lead to any united attack on Europe. Let us cast a rapid retrospect over the past.

North America was first settled by European immigrants in the beginning of the seventeenth century. In 1630 the number of English colonists did not exceed 4000; in 1660 it rose to 80,000; and in 1701 they were estimated at 262,000. The New England States—Virginia, Pennsylvania, Maryland, and the Carolinas—were principally settled by the English; New York and New Jersey by the Dutch; Mississippi and Louisiana by the French. The States which rose up after these were mainly settled by persons who emigrated from the oldest States, and to them were added large numbers who arrived from foreign countries, as Great Britain, Germany, Switzerland, &c.; but foreign countries, as Great Britain, Germany, Switzerland, &c.; but the Anglo-Saxon element largely predominated. The independence of the United States was acknowledged by Great Britain, and peace restored, in the year 1783; six years afterwards the American Government was organised. A Republic attracted many from Europe who could not enjoy at home political and religious liberty. Other immigrants, poor but industrious, hoped to improve their condition in a new country. The French revolution swelled the tide of emigration, and it continued to flow without interruption till war again broke out between England and the United States in 1812, when it appears to have been suspended; but on the return of peace, in 1815, the current resumed its old channel.

Prior to the recognition of independence the colonists were not permitted to manufacture a single article for themselves; they were compelled to buy from the mother country; and to such a fanatical extreme did even the great Lord Chatham carry this commercial restriction, that he avowed in Parliament that he would not allow the colonists even to fabricate a nail for a horse-shoe. This was one of the principal causes of the revolt against British authority; and how deeply this injustice rankled in the American mind is plain from the second Act of the Congress of the United States, passed 4th July, 1789, entitled an "Act for laying a duty on goods, wares, and merchandises imported into the United States." This Act was not a wise one, but it shows the spirit of retaliation by which Congress was animated. Louis XIV. had, by his ordinance, denied the right of emigration, when he endeavoured to prevent Protestants quitting the kingdom; and, though England never proceeded to that extreme, yet it prohibited by statute the departure from the realm of manufacturers in wool, silk, iron, &c., and also the export of tools used in certain industrial processes. Those who instigated mechanics to emigrate, or who sent machinery abroad, were subject to fine and imprisonment; but in 1824 these restraints were removed. Before the restrictive law was repealed, mechanics had stealthily quitted England under the pretence of being farmers, and, on reaching Canada, soon crossed the boundary and entered the States; but after 1824, when all danger was at an end, emigration largely increased. The construction of railways gave lucrative occupation to foreign labourers, and the cheapness of land attracted agriculturists. Germans went out in small colonies, and in Ohio particularly what they styled a "surplus population," and Government authorised the appropriation of parish funds to defray the expenses of the Transatlantic voyage. From year to year the Old World contributed to the population of the New, and in 1847 nearly 300,000 foreigners landed at New York, Philadelphia, and Boston. The Irish worked hard and saved their earnings; and, to their honour be it said, devoted their savings to bring to their new home those relatives and friends whom they had left in the land of their birth. Their aggregate remittances exceeded a million a year. By this vast accession of labour the United States added largely to their wealth, but whether they have not proportionately weakened their political institutions has been a subject of earnest inquiry among American publicists.

Mr. Jesse Chickering, of Boston, has investigated the history of immigration into the United States since the year 1820. He has availed himself of the official information collected by virtue of the Act of Congress, dated 2nd March, 1819, "Regulating Passenger Ships and Vessels." By that Act the collectors at the several custom-houses were required to make quarterly returns to the Secretary of State of the number of passengers from foreign countries arriving in the collection districts. Pursuant to that Act the returns have been annually reported to Congress, and published in the executive documents. They are somewhat imperfect, but give on the whole a close approximation to accuracy. From these papers Mr. Chickering computes the number of immigrants in decennial periods, and then compares the lists with the addition to the population created by the excess of births over deaths among the native Americans. These estimates are very copious and elaborate, distinguishing the foreign immigration into the free and slave States, and into each separate State; but it may be well to state, for the information of those who are rigidly exacting in the compilation of statistics, that the returns from collectors have been received from the Atlantic cities only, with scarcely an exception; none have been received from Vermont, nor from the northern and western parts of New York, and a portion of the country bordering on the Canada line, over which emigrants are constantly passing and repassing. However, a very sufficient accuracy is obtained from other sources. Thus, from 1820 to 1840 the number born in the United Kingdom, as registered at their departure from Great Britain and on their arrival in the United States, only differs by 11,000. However, it is not necessary for us to enter into minute details; as our object is mainly to show how, in the opinion of Mr. Chickering, immigration is likely to affect the stability of American institutions. We quote the following passage:—

> Supposing the number of white persons in the United States on the 1st January, 1848, to be 17,500,000—which is believed to be very near the number—and the number of foreign immigrants to equal the natural increase of this population at 2½ per cent per annum; when will the immigrants and their descendants, at the same rate of increase, equal the number of white persons in the country on the 1st January, 1848? We have already seen (p. 44) that in fifty years from 1790 the number from foreign immigration exceeded the whole number of the whites at the commencement of the period by 762,139. This foreign population in twenty-six years to 1st January, 1874, will be 17,856,705 exceeding the number of the whites above supposed [illegible] and the white population, exclusive of the foreign portion, will then only be 17,322,295 [illegible] Whose [illegible] great the new energy to show the integral part which the foreign elements constitute of the whole population of the United States. We have thus arrived at a period in the history of foreign immigration, when the number of foreigners coming here may be half of those born to the older inhabitants, and equals the whole natural increase of the whole population of the United States.

It must be conceded that the character of a nation results from the character of individuals, and is chiefly determined by the influences that proceed from central places, as large and populous cities, which give the tone to the surrounding districts. It appears that in Boston and New York city about one-third part of the whole population are foreigners by birth. Thus growing up side by side is a native and a foreign race, different in feeling, because different in training; and those American publicists who agree with Mr. Chickering contend that, owing to the facilities of suffrage, the naturalised citizens will soon be enabled greatly to influence, if not to decide, elections, and even nominate the President. To this subject the attention of Congress has frequently been directed, and numerous cases of fraudulent impersonation have been detected when party spirit has run high. The new party, called Know-Nothings, has been called into existence from this dread of the foreign votes. They appear to desire that the native Americans shall form the dominant race in a political sense, and that the only effective weapon in their hands is a change in the law of naturalisation. That law has undergone several modifications; so that precedents in favour of change may be appealed to. In 1790 only two years' residence was required; in 1795 the term was prolonged to five years; and in 1798 to fourteen years. In 1802 the period of five years was again adopted, and that rule is still enforced; but the foreigner must declare his intention to apply for naturalisation two years before he commences the probationary term. Then he must show that he has resided at least five years in the United States, and one year in the State where the Court is held before which he prefers his claim for admission to the rights of citizenship. The complete term is seven years. If we are rightly informed, the object of the Know-Nothings is to confine naturalisation to those born in the United States, who would be trained at the schools in the principles of the American Constitution. We must quote one more passage from Mr. Chickering, in which he speaks of the character of foreign immigrants, of course with many honourable exceptions.

> The majority, however, of those who come here know nothing of a rational or regulated liberty, nor consider the guards necessary to preserve it. The liberty in their minds is a licentiousness which has no respect for the rights of others. They come here smarting under injustice and oppression; to check by salutary restraints appears to them oppression; and to hate oppression and oppressive rulers is the only step they, in their ignorance, have thus far taken towards a rational liberty. By our laws they are admitted to political privileges upon easier terms than we admit our own sons—privileges which, in almost every State, are denied to a man on account of colour, though his father or grandfather was the friend and companion in arms of Washington. Is it that our privileges are too good for us—too good to be preserved? Is it that, in our ecstasy, we would, like children, part with our birthright, and, after it is gone, weep for the loss that is irreparable?

The facts and opinions here recorded may throw some light on the causes that *may* disturb the friendly relations that wisdom and humanity would desire to perpetuate between the United Kingdom and the United States. So long as the native American dominates peace will be maintained; but, if power should be transferred from the Anglo-Saxon to the mixed foreign race, war may be imminent; or, even in the heat of electioneering contests for the Presidency, should the native party be divided, and one section of it seek to triumph by the aid of the foreign votes, the anchor of the constitution might be lifted from the holding-ground. Our own population has been formed by a mixture of races, but they have been fused by time; not so in the United States, and hence the danger to which we have alluded. It is not, however, immediate, but prospective, and it may be completely averted by altering the law of naturalisation—a far less evil than the destruction of Liverpool and New York, or the destruction of the mercantile marine of the two greatest commercial kingdoms on the globe. War would ruin the Southern States, for England is the market for their cotton; and, if the cotton were unsold, how could food be obtained for the slaves? The stake is too large, and madness alone would stand the hazard of the die.

CONTRABAND OF WAR.—The United States Attorney-General has decided that it is no departure from neutrality for the citizens of a neutral State to sell to belligerents gunpowder, arms, munitions, or any other article of merchandise contraband of war, or for the merchant-ships of a neutral State to transport the troops or military munitions of either belligerent. Such commerce is perfectly lawful in itself, subject always to the chances of hostile capture by the other belligerent; and in the present war supplies of gunpowder or other articles contraband of war and military transportation have been furnished of lawful right by citizens of the United States to each of the belligerents, and more especially and in larger proportions to Great Britain and to France.—*Washington Intelligencer.*

TURKEY AND HER RESOURCES.—Turkey can, if necessary, bear the present kind of warfare for ten years to come. As long as Austria is the nominal ally of the Western Powers, Turkey is in no danger of breaking down, but it would be death to her if the war should by any chance be transferred to her own territories. A prolonged war must weaken and impoverish the State; but such vast sums in gold have found their way into the country, that the people are far wealthier than they ever were before. There is no longer distress in the remotest village of Anatolia who has not either directly or indirectly profited by the presence of the Sultan's allies, and, as they can find such a good market for their produce, the Asiatics and the Egyptians no longer object to lull their land. The harvest in Turkey has been so plentiful that there will be no want of grain even if the Allied Governments should raise their armies to 250,000 or 300,000 men.—*Letter from Smyrna.*

THE BOSPHORUS.—Had the Czar of Russia succeeded in overthrowing the Turkish empire in 1854, and fortified the entrance to the Bosphorus with the skill and costliness exhibited at Sebastopol, Cronstadt, and other important points, Western Europe would have been cut off effectually from the last participation in the Euxine traffic. This calamity has possibly been averted, and posterity, no doubt, will yet be called on to admire the wisdom of the two great Western Powers of Europe, who, having saved Turkey from Siberian bondage, took possession, in return, of the shores of the Bosphorus, fortified them after the best examples of Russian military engineering, and secured the most extensive market in the world for their respective productions and manufactures amongst the intelligent but fastidious inhabitants of Western Asia.—*From Letter XVI. of "Britannicus on the Turks and Turkey."*

BOMBA'S POLICE ENLIGHTENED.—The Turin Correspondent of the *Independance* states that lately the *Carlo Alberto*, one of the steamers of the Sardinian Navy, was obliged to put into Messina on her return from the Crimea with invalids. The young men of the town, anxious to testify their sympathy for the Sardinian soldiers, went on board the ship in a body, and were invited on board to a public dinner. The commanding officer was compelled to decline the invitation on account of some exigencies of his duty. The Sicilian police were greatly alarmed at the whole demonstration.

A DANGEROUS EXCURSION.—The Vale of Baidar is still the favourite ride of all those who have time and ponies; even ladies resort to it. It gains additional interest from its being the only place in our lines where one can have even an adventure. Thus the other day a party of ladies made an excursion in a jaunting-car, accompanied by several gentlemen on horseback. In coming back at nightfall, seduced probably by the smoothness of the Woronzoff road, they followed it too far, instead of turning down by Kamara towards Balaclava, where they were bound to, and thus lost their road in the midst of the French Camp, on the hills occupied by the old Turkish redoubts. I was coming back with two gentlemen from Baidar, and we could not make out in the dark what the crowd on the road was, when in passing we heard a lady's voice, saying, "We have lost our way." My gallant companion offered to show the way, and one lady, who seemed not over-confident in the topographical knowledge of her escort, accepted the offer; but she remained in the minority, and the cart turned down on a footpath which leads straight to the ditch of the railway to Kamara; but as the moon was just then appearing on the horizon, I fondly hope that they escaped it and returned safe to Balaclava.—*Letter from the Camp.*

COUNTRY NEWS.

GOVERNMENT EMIGRATION.—The following notice was posted in the underwriters' room, Liverpool, on Tuesday: "The Government emigration to Australia will, it is feared, have to be given up in Liverpool, from shipowners not tendering their vessels from this port.—Nov. 13."

MR. GLADSTONE'S LECTURE ON THE COLONIES.—On Monday evening the Right Hon. W. E. Gladstone, M.P., delivered a lecture on "The Colonies of Great Britain," at the Royal Hotel, Chester, in aid of the funds of the Chester Mechanics' Institution. The assembly-room of the Royal Hotel was crowded with the *élite* of the city and neighbourhood, John Williams, Esq., president of the Institution, presided.

MEARTH ELECTION.—This election, which will take place in the ordinary course in about a fortnight hence, is likely to present some peculiar features of interest. It is stated that the Roman Catholic Bishop, Dr. Cantwell, who has hitherto been looked on as the "returning officer" of the county, is likely to differ in the present instance from the majority of his clergy and of the Roman Catholic electors, having, it is said declared very decidedly in favour of Mr. McEvoy, a candidate whom the other parties are not inclined to adopt

SUNDAY MUSIC.—At a meeting of the Town-council of Helensburgh (Scotland), held on Saturday last, the Provost produced a petition to her Majesty, handed him by some gentlemen for signature of the council, craving the suppression of music in Kensington Gardens, London, on Sunday. Councillor Hendry did not think the council of Helensburgh had anything to do with English practices. They might as well ask her Majesty to prohibit music in churches as in gardens on the other side of the border. The members were generally of opinion that, whatever might be the merits of the question, they were not called upon to interfere, and the parties getting up such petitions were taking the worst possible means of accomplishing their purpose, even if it were a good one.

THE BREAD MEETINGS NEAR BIRMINGHAM.—An adjourned meeting of the working-classes in the neighbourhood of West Bromwich took place on Sunday morning on the Spoil Bank, Spon Lane, the object being to consider the best means of bringing about a reduction in the price of food. It is estimated that at least 15,000 persons were present. The meeting was addressed by [illegible] and a number of other persons, after which a petition to the Queen was read praying her Majesty to stop the exportation of grain, and to prohibit the distillation of it in consequence of the high price to which it has risen. It was then moved and carried that a deputation of working men should proceed to London to present the petition to the Queen. The meeting was then adjourned to the following Sunday, when a report of the deputation and the proceedings at the Queen's levee was to be given. The meeting was also adjourned to the following Sunday, when a report of the deputation and the proceedings at the Queen's levee was to be given. The assembly had attracted a good deal of notice, and was addressed by several persons on the question of dear food.

ANTICIPATED TURN-OUT AT WIGAN.—The expected turn-out of colliers at Wigan is for the recovery of five per cent reduction upon their wages made by the coalowners. The advance obtained by the colliers on the prices paid them in 1851 amount to an increase of the wages by 8½ per cent; and so large an increase is this upon the articles cannel, that the large gas-works in three of the neighbouring boroughs (Liverpool, Manchester, and Salford), which alone together take upwards of 120,000 tons of cannel per annum from Wigan, have to pay an advance of 2s. 6d. per ton, or a total increased cost of £15,000 per annum.

INCENDIARISM AT BARNSLEY.—The *Manchester Examiner* reports an incendiary fire at Barnsley, which took place on Saturday, upon the farm premises occupied by Sir John Kay and Co. The damage is estimated at £700. The property is insured. This is the fifth incendiary fire in four weeks; and only on Wednesday last a placard was published announcing a reward of £50, and a free pardon by her Majesty, to any accomplice who will give such information as shall lead to the conviction of the person who set fire to the stacks at New Lodge, near Barnsley.

A RICH MENDICANT.—James Skelly, a notorious begging impostor, was brought before the Liverpool magistrates on Monday, charged with begging at church doors. When apprehended, £3 in gold and upwards of £4 in silver and copper were found upon him. He was committed to prison for two months, the cost of his living during that time to be defrayed out of his own money.

HOMICIDE IN CAVAN.—A terrible drama was enacted at the verge of Leitrim, but inside the county Cavan, on Friday night last. A party of neighbours from Carrigallen direction were in the fair of Arvagh, and during the day a quarrel took place among them, in which a young man, named Gannon, lost his life. Two young men, named Murphy, have been arrested as being of the party; but the man who inflicted the wound has not yet been apprehended.

THE BRIGHTON TRAGEDY.—The medical controversy touching the death of Dr. Franeks and his son is continued. Dr. Forbes Winslow writes to the *Times*, arguing that the death of the son was natural, and that on the discovery the father committed suicide. Another writer supports the supposition that the father, in a paroxysm of grief and madness, murdered his son, and then committed suicide.

FATAL WAGER.—A shocking occurrence happened at Lydney, Gloucestershire, on Thursday week. Two men were drinking at a beer-house, and had become intoxicated. A person offered to pay for a pint and a half of rum for each of them, if they would drink it. They consented, and the rum was sent for from a public-house and drunk. One of the men died almost immediately, and the other died on Friday morning.

DISMISSAL OF A POLICE SUPERINTENDENT FOR FRAUD.—Last week the Town-council of South Shields, at their annual meeting, discharged the superintendent of police, Mr. James Bugless, from their service, on charges of fraud brought against him by the Watch Committee. It very often happens that persons fined by magistrates' courts say they will not pay, but after being locked up raise the money, and are liberated. The person so liberated, however, stands as committed in the police station book; but it was the duty of the police superintendent to correct this entry, and pay over the money so recovered to his employers. Bugless had not done this, but in August alone had returned thirty-four persons as committed to prison who had paid fines and costs amounting to £19 7s.; and this sum of money he appears to have appropriated to his own use.

HIGHWAY ROBBERY AND ATTEMPTED MURDER.—On Sunday night a disgraceful outrage was committed near Bristol. A young man, named Roberts, from London, was passing, about nine o'clock in the evening, down a lane leading to Redcatch Farm, when he saw two men sitting on a stile, and wished them "Good night;" but they made no reply. In a minute or two he heard them behind him, and almost instantaneously he received a blow with a heavy bludgeon across the back of his head, which felled him to the ground. One of the villains then knelt upon his chest, stuffed his mouth full of mud, and throttled him, threatening him at the same time with instant death if he dared to make the least noise. They then beat his head against the road, plundering his pocket of his watch and all his money, and threw him into a pond. The cold water revived him, and he succeeded in getting to the bank, and, screaming for help, gave the alarm. The robbers had decamped.

A ROCKITE NOTICE.—A Rockite notice was posted last week in Carlow which has seldom been excelled in atrocity in any of the districts in Ireland under the government of the ribbon code. It is a disgraceful document, published in the capital town of one of the most peaceable counties in the kingdom, and we trust the miscreant who wrote or posted it may yet be traced, and brought to justice, though we fear the perpetrator is confined to his own bosom. It appears that a highly respectable firm in this town has purchased potatoes on commission for a Liverpool house in the usual way of mercantile business; and in order to prevent future transactions, a ribbon or Rockite notice, of which the subjoined is a verbatim copy was duly posted in that town. "Men of Carlow, blood must be shed. It's time when a would-be gentleman turned Potato Hunter. It would be justice in the sight of God and man to shoot a rascal that would trade in the blood of the poor." A reward of £30 has been offered by the contributory authorities, signed by the resident magistrate, C. H. Tuckey, Esq., for such information within six months as may lead to the detection of the party concerned in writing or posting the above notice.

DISTURBANCE AT THE LEWES WAR PRISON.—On Monday, between one and two o'clock in the afternoon, considerable excitement prevailed in the town, in consequence of a large body of the Fins in the War Prison having displayed signs of a disorderly and riotous disposition. Two of their companions, it would seem, were about to be discharged under orders from the Admiralty, and rumours concerning the reason of their discharge were at least among the prisoners, that they had exercised a very bitter rancour in their breasts. Having, as they imagined, learned the period when the two in question were about to leave the precincts of the prison, they rushed out of the hall with shouts and threats of vengeance not only against their former companions but also the governor. Lieut. Mann rushed out and met them as they were advancing to the office. With great promptitude and courage he threw himself upon them, and with the assistance of the warders checked the advance of the foremost, and ultimately bore them back beyond the gate. The prisoners soon arrived on the scene of action in a body, and their appearance rather damped the courage of the disorderly Fins. They maintained their position, however, until the order for the charge was given and executed, when they retired before "cold steel" like a flock of sheep with a dog at their heels. Having got them into the common hall, the governor coolly went among them, and draughted them off to their respective cells. The Fins themselves will be the only sufferers in consequence of this riot. The indulgences which have been gradually extended to them since their former escapade will be again restricted.

SOUCHOUM-KALEH, FROM AN ORIGINAL SKETCH.

SOUCHOUM-KALEH ABKHASIA.

THE HEAD-QUARTERS OF THE TURKISH ARMY.

(From a Correspondent.)

Souchoum-Kaleh is now one of the most interesting places upon the Black Sea. The base of operations in the campaign which Omer Pacha has just undertaken, it will increase in importance in proportion as that enterprise is crowned with success. Its population is now composed almost entirely of the army of Omer Pacha and camp followers. The houses of the Russian officials and merchants are occupied by Turkish officers; the plains and hills are covered with tents; and the harbour is full of shipping. The scenery in the neighbourhood is magnificent. The forests abound in wild fruit-trees of every description; and the snowy peaks of the Caucasus here and there overtop the nearest mountain ranges. The force at present collected at Souchoum-Kaleh amounts to about 20,000 men; but they have commenced their advance into the interior, and new arrivals come to take the ground vacated by the departures. A lovely view is obtained from the brow of the hill in rear of the town, where the hospitals are situated, and where Omer Pacha at present has his head-quarters.

On the morning of the 13th of October the Turkish camp at Souchoum-Kaleh was the scene of a demonstration well calculated to raise the spirits of the army encamped there. The intelligence of the defeat of the Russians before Kars had arrived, and Omer Pacha, with true soldierly instinct, immediately ordered the troops under arms, and communicated to them the spirited news of the success of their beleaguered brethren. Then, exhorting them to march and complete the good work, he rode, at the head of 5000 men, with two batteries of artillery, instantly forth on the road to Kutais; followed two days after by 5000 more. At the same time that this gratifying intelligence reaches us, we hear that the Turkish Sirdar had appointed the Naib of Circassia Civil Governor of all the provinces of that country—a step which secures the co-operation of the mountaineers. Thus two important enterprises are fairly on foot—a diversion in Immeritia and Mingrelia, and a diversion in the mountain country.

The Muchir's army had been considerably reinforced, 20,000 men having arrived in the course of the first two weeks of October, and British transports had returned for others. The route of the advancing army runs along the coast as far as to Ilori, about forty miles from the starting-point, crossing as many as eighteen rivers, and then striking eastward into the interior. About twenty miles from the coast the army will have to cross the Ingur, the largest river between Souchoum-Kaleh and Kutais, and forming the frontier of Mingrelia. There are no bridges over any of the rivers at present, the Russians having destroyed those previously existing. No serious opposition is expected before the Turks reach Sugdidi, about five miles beyond the Ingur, unless the enemy should attempt to dispute the passage of that river.

FORT ANAKLEA.

THE BOATS OF H.M.S. "CYCLOPS"

AND THE FRENCH BRIG OF WAR "LA VIGIE" RECONNOITRING FORT ANAKLEA.

The Fort of Anaklea was reconnoitred by the boats of the *Cyclops* and *Vigie* on the 10th of last month. It is situated at the embouchure of the river Ingur, and is surrounded by a forest so dense as to render great caution necessary in making a reconnaissance. The nearest Russian troops are those now watching Redoubt-Kaleh; they are estimated at 4000, and are nine miles distant. There are 4000 more at Sugdidi, a town situated twelve miles higher up the Ingour. Fifty men from the *Cyclops*, commanded by Lieut. Ballard, and twenty-five from the French brig of war *La Vigie*, commanded by Lieut. De Villmorin, landed and planted the French and English flags upon the walls of the old fort. This reconnaissance was of some importance to Omer Pacha, whose line of march passes a few miles to the eastward of Anaklea, and his flank would consequently have been exposed had any considerable force taken up a position at this point.

Affairs here are going on rapidly, and in ten days or a fortnight Omer Pacha will be in the interior, at the head of 30,000 men. He will find nobody to oppose him until he reaches Kutais, in all probability. This expedition was recommended by Mr. Laurence Oliphant, in a pamphlet published by him some months ago. If it had been undertaken then, Tiflis would have been in our hands by this time.

AN ENCAMPMENT OF OMER PACHA, NEAR SOUCHOUM-KALEH

THE SUBMARINE ELECTRIC TELEGRAPH STATION, ON THE BOSPHORUS.

NEW CHURCH IN BRITISH GUIANA.

It gives us sincere pleasure to call the attention of our readers to the accompanying view of the Church of St. Peter, Leguan, which has just been finished and consecrated.

The island of Leguan, forming a portion of the colony of British Guiana, is one of the many lying in the mouth of the river Essequibo, which, with the Orinoco, Corentyn, and other giant streams, drain the north-eastern shoulder of the continent of South America.

St. Peter's Church was erected at an expense of £2500, of which £1000 were contributed by the Colonial Legislature, £100 by the Society for Promoting Christian Knowledge, and the large remaining sum chiefly by private individuals resident in the island, or otherwise connected with it.

The plan of the edifice was furnished by the present Colonial Civil engineer, Mr. John Frederick Bourne; and amongst the promoters of this good work the names of the Rev. Mr. Wyatt and of Doctor Boughton stand prominent—the former gentleman having been Rector of the parish when the foundation-stone was laid; and the latter being one of the most influential of the islanders. To these names that of Mr. Wyatt's successor, the Rev. W. J. B. Webber, has every claim to be added.

The ceremony of consecration, which took place on St. Peter's day, was very numerously attended, although the period of the year, the rainy season, well maintained its character by heavy showers during the day.

Amongst those present were the Governor, many of the chief officials, Mr. Macrae (Financial Representative), and several leading members of society in the colony.

ST. PETER'S CHURCH, LEGUAN, BRITISH GUIANA.

The Bishop of Guiana—to whom this must have been a most gratifying occasion—performed the service, assisted by a large gathering of the clergy; and the church (which is capable of containing about 500 souls) was, notwithstanding the weather, crowded by the Negro and other inhabitants of Leguan.

The church is built of brick: the roof is covered with shingles of wallaba (*Eperua falcata*) a peculiarly durable wood, the produce of the colony; and at the left of the north-western entrance stands a detached bell-tower, surmounted by an octagonal brick spire.

On entering the building one is struck by the lightness of the roof, which is constructed without tie-beams, although the span is upwards of forty feet. Each truss consists of two rafters, with collar-beams, wall-pieces, hammer-beams, and braces, so constructed as to form a heptagonal arch.

The length of the church is 70 feet exclusive of the apse.

The windows are pointed, and are filled with handsome stained-glass; the seven in the apse represent events in the life of St. Peter, the Patron Saint; and those in the nave contain flowered quarrels, with rich borders. The east end of the church is raised one step, with stalls for the clergy and choir. The sittings are open—of crabwood (*Carapa Guianensis*), carved in a plain but solid pattern. The service was remarkably well chanted by portions of the choirs of the Cathedral and of St. Philip's Church, Georgetown, which is attached to the Bishop's College.

At the conclusion of the consecration an interesting sermon was preached by Mr. Wyatt, who took this opportunity of alluding to, and acknowledging, the very creditable assistance afforded by the Creole and African inhabitants of Leguan, both by their labour and subscriptions.

We cannot conclude this notice of so gratifying a ceremony without calling our readers' attention to the success which, under Divine permission, has attended the zealous efforts for the extension of religion in the British territories of the South American continent.

THE SUBMARINE TELEGRAPH BETWEEN CONSTANTINOPLE AND VARNA.

For months past an electric cable, three hundred and forty miles in length, stretching from Varna to Balaclava, has brought us in a few hours news of the intrepid arguments of the Crimea. We venture to quote here the words of a member of the French Academy of Sciences, Marshal Vaillant, Minister of War, when asked for some particulars in reference to this submarine telegraph of the Black Sea, in April last:—"I send my despatch to General Canrobert, and I have an answer sooner than I should have it by letter from a town half-way to Lyons, to Bordeaux, or Strasbourg, and I have not yet recovered my amazement at this prodigy." The Field Marshal and Academician did not share the general indifference to this marvellous fact.

Although submarine telegraph engineering seemed by the successful laying of the Varna and Balaclava line to have been reduced to a certainty, we have recently had to record the signal failure, first, of an attempt to lay a submarine cable from Cape Breton to Newfoundland; and, secondly, the same unfortunate issue of an attempt to complete the telegraphic communication to Algeria by a submarine line, for the Mediterranean Telegraph Company.

In contrast with these mishaps we have this week to record some particulars from an eye-witness of a new triumph of Submarine Telegraph by Messrs. Newall and Co., who, in August last, contracted with her Majesty's Government to establish telegraphic communication between Constantinople and Varna, so as to complete the telegraphic circuit to the seat of the Ottoman Government by a line of moderate cost, and free from the risks of interruption to which over-ground wires in countries where there is no effective police would be peculiarly exposed, and without facilities of repairing injuries.

For this and another line in the Black Sea, upwards of 200 miles of cable were manufactured, transported 2000 miles, and successfully laid down in the short space of three months; for on the 5th of October the Varna and Constantinople line was opened for business.

The cable consists of one copper wire, thickly insulated, and covered with iron wires to give it strength and protect it from injury. Its weight is about 200 tons. In this respect it differs from the Varna and Balaclava line, which, for the greater part of its length, consists of a copper wire one-sixteenth of an inch in diameter, coated with gutta percha, and altogether little more than the thickness of a common black-lead pencil! The laying of such a line across the stormy Black Sea may fairly be characterised as the boldest enterprise ever made in electric telegraphing; the risk of doing which was undertaken by Messrs Newall and Co., who proposed it to the Duke of Newcastle, for the small sum of £22,000.

This marvellous line, which it was predicted by submarine telegraph directors and engineers could not be laid down, and if laid down could not last, has stood all the storms of the Black Sea for six months without the slightest injury or an hour's stoppage. These facts seem to indicate that heavy cables are a useless extravagance, save in very peculiar circumstances of exposure to anchorage. It is evident, also, that the small cable, such as the Varna and Constantinople line, brings within the easy reach of capitalists long lines (such as the Atlantic or Indian) which will pay a handsome dividend on the cost of the cable. We hear that although the single line to the Crimea is occupied in sending long despatches from the French, Sardinian, and Turkish Generals to their Governments, and *vice versâ*, yet its capabilities are far from being fully tested.

The operation of laying down the Varna and Constantinople cable was directed by Mr. Newall, and superintended on behalf of her Majesty's Government by Major Biddulph R.A., Director-General of the Black Sea telegraphs. The cable was shipped from Sunderland on board the screw steamer *Elba*, Martin D. Hammill, Commander. Her Majesty's steamer *Terrible*, Captain M'Cleverty, R.N., accompanied the expedition, and went ahead of the *Elba*, pointing out the course to be steered; and right well this important duty was performed.

Our Illustrations are from the sketches of Major Biddulph. The first shows the British Embassy at Therapia, on the Bosphorus, from which wires are carried on poles over high and steep hills to Pera, for the Sublime Porte; and to Kilia, on the Black Sea, near the entrance to the Bosphorus. The second View represents Cape Kilia, where the end of the cable was landed, and joined to the land line.

LANDING THE CABLE AT FORT KILIA.

The operation commenced on Monday afternoon, the 1st October. The cable was coiled on Mr. Newall's patent paying-out machine, and it was truly interesting to see the snake-like coils rapidly unfold themselves, and glide off as if alive, and endowed with instinct to free itself of kinks, the bane of submarining. In thirty hours the 150 miles were run, an average speed of five miles an hour. Communication was kept up throughout the day and night from a morse instrument on board with Kilia and Therapia, where Lord Stratford de Redcliffe evinced the greatest interest in learning the progress of the expedition.

The third View represents the landing at Fort Galata, about four miles

CONVEYING THE CABLE ON SHORE NEAR VARNA.

from Varna. From Galata the wires are carried on posts to the office in Varna. On the 5th the land line was completed, and the moment the line was joined to the instrument in the office messages were sent and received from Therapia with extraordinary rapidity by the experienced telegraphists trained by Major Biddulph. All the telegraphists, except two sent out by Messrs. Newall, are non-commissioned officers of the Royal Artillery. A staff of clerks from the London Telegraph Company are being trained to the use of the morse instrument, and are, we hear, to be employed at Therapia, Pera, and Scutari.

The Morse instruments are of the most perfect kind, by Siemens and Halske, of Berlin. They are marvels of workmanship, and their efficiency is two to three times greater than any other instrument that has been tried, notwithstanding that it has to contend with the difficulty of working through the longest submarine line that exists—340 miles.

THE CLUBS OF GLASGOW.*

The Muse of History marches generally *en grand pas*, and seldom condescends to observe or chronicle the shifting shadows and motive powers of the ordinary panorama of human life. Occupied chiefly with the vulgar great who pinnacle the high places of society, she has been accustomed generally to ignore the *odi profanum vulgus*, or carelessly to note down some of the many-coloured agencies which lurk within the lower levels and profounder depths of the body social and politic. Yet the people have never been entirely without their historians and *raconteurs*, from the days of Herodotus to those of the French memoirists and the crowd of English writers, who have nicely anatomised the social structure, and weighed, in a balance, all its social springs and moving agencies. And with this object, or a similar one, lo! here comes the learned Chamberlain of the city of Glasgow, with a goodly octavo under his arm, brim-full of delectable matter drawn from public munitments as well as from humbler social archives, and both richly illustrative of human life as it bubbled, and foamed, and fretted, and smoothly glided along the picturesque highways and byways of the ancient city of St. Mungo, during the three generations which preceded the present.

It is not very easy to furnish the reader with an accurate analysis of this curious and, in some particular points, truly original work, from its desultory character, and the rare variety of its materials, so as to put him in possession of a regular *carte des pays*. And it would exceed our limits to present anything more than a mere outline of its general contents and objects. Whilst the principal avowed object of the volume is to supply the cits of the Scottish commercial emporium with a *rechauffé* of the broader social peculiarities of their immediate predecessors, and to embalm these in a series of sketches, pictures illustrative of many of the phases of social life just passed away, the *statician* does not forget to interweave with these agreeable and spicy memorabilia the graver statistics which ascertain the progress of the community in all the great elements and agencies of social civilisation.

The Doctor commences with a clever panoramic view of the city in 1750, as introductory to a notice of one of its earliest and not least noticeable clubs or social fraternities, to which the gregarious and clannish tendencies of Scotchmen have always inclined them.

The description of this knot of social worthies, though brief, is very happy, and the *catalogue raisonné* of "the Literary Society of Glasgow in 1753" contains many names long since known to European fame. A sketch of the famous "Tobacco Aristocracy," who may be considered as the founders of the budding prosperity of Glasgow, next follows; and is amongst the most choice in the volume, and will be nuts to many an old citizen of St. Mungo. This introduces us to "The Hodge-Podge Club," composed of the leading citizens of the day; and some of whom—like Dr. Moore, the father of the General, and a man of undoubted literary talents—are well known to posterity. There is a clever *jeu d'esprit* quoted here, descriptive of the different characters in the club, by Dr. Moore, in the style of Goldsmith's "Retaliation," which is rich in talent and *élancé* humour. A brief notandum of the remaining contents of this *recherché* and curious volume will afford the reader a general idea of its rich composite material better than any partial selection. Thus, we have, "Glasgow from 1750 to 1780 and my Lord Rose's Club;" "Glasgow from 1777 to 1783 and The Morning and Evening Club;" "The Gaelic Club," "Glasgow from 1780 to 1795 and the Accidental Club;" "The Face Club," "Glasgow Loyalty and the Gigg Club," "The Camperdown Club," "The Meridian and the Pig Club," "Stockwell-street and the Beefsteak or Tinklers' Club," "The Medical Club," "Glasgow Theatricals and the What you Please Club," "Glasgow from 1795 to 1815 and the Caul Club," "Quandom state of the Glasgow Police and the Gigg Club," Next follow "The Banditti Club, the Peckers' and Every Night Club, the Post-office Club;" "Glasgow in 1814 to 1816, and the French Club;" "The Anderston Social Club, 1815 to 1816;" "The Wet Radical Wednesday and the Waterloo Club;" "Glasgow Charities and the Shuns Club;" "Progress of Liberal Opinions in Glasgow, and the Sma' Weft Club;" "Glasgow Politics in 1832, and the Crow Club;" including sketches of past and present clubs, with a curious Appendix.

Such is a brief digest of the varied contents of this amusing and instructive volume; besides which a copious variety of matter, hortative and illustrative, occurs, presenting a succession of social pictures à la Calcott, glowing with the hues of actual life, and instinct with social wisdom and instruction, if considered in all their bearings, social and political.

The Liberal tendencies of the accomplished author peep out in every page, and are never attempted to be concealed—whether judiciously expressed or not, it is not for us to say. Suffice it that we record our opinion that a more entertaining, and, in many respects, a more wholesome volume has seldom or never issued from the Glasgow press.

The Thin End of the Wedge.—It appears from a leading article in the *Constitutionnel* that the exhibition of cheap articles which has lately attracted so much attention in the special gallery devoted to that purpose in the Palais de l'Industrie is to be perpetual. The Prince Napoleon will contribute to the preliminary expenses; and, in order that no doubt may be entertained that the low prices affixed are really those at which the goods can be sold, it has been determined, after a good deal of hesitation, that the Exhibition shall not only be a spectacle, but a bazaar, and that any one shall have the right at once to buy the article to which he may take a fancy.

Russia and Spain.—In the Spanish Cortes, on the 5th, M. Arcas asked the Minister of Foreign Affairs if the relations of Spain with foreign Powers were satisfactory. The Minister of Foreign Affairs replied that the relations with all foreign Powers, "Russia excepted," were of the most friendly character. The remark of the Minister about Russia caused a considerable sensation, and the *Epoca* says that the consequences of it may easily be anticipated.

Indian Court Circular.—The *Calcutta Englishman* gives us the following highly interesting item of intelligence:—"We are informed that his Majesty the King of Delhi has been pleased to appoint Moonshee Fuzlah Kurreem, of Calcutta, his Dewan Khoh. He has been presented with the usual khelat, consisting of a jamah, a nemah, a pulkah, a surpeje, a gashunnah, a pearl necklace, jigah, and a kinjhop. The following title has also been conferred upon him: Manzoozee Dowlah, Mookuramed Mulk, Mahomed Fuzlaol Kurreem Khan Bahadoor, Mookah Jung."

Austria and Switzerland.—An incident has just occurred on the Lake of Constance, of the issue of which at Tessino which may become a serious matter. According to official reports which have been made to the federal authorities, it appears that on the 28th ult. the sentinels placed on the Austrian frontier fired on a man called [illegible] at the distance of nearly half a mile from the frontier, a man name[illegible]. He had proceeded to the frontier for the purpose of entering the [illegible] territory with a package of tobacco, but on seeing the Austrian sentinels he turned back precipitately on the Swiss territory, and was fired at as he fled, and shot through the back. The cantonal authorities have commenced inquiries, which are to serve as the grounds for complaints which the Swiss Government will [illegible] address to the Austrian Government on the subject of this violation of territory.

THE METROPOLIS LOCAL MANAGEMENT ACT.

This Act (18 and 19 Vict., cap. 120), passed the 14th August, 1855, comes into operation as to the new elections for Vestrymen in November, and finally and absolutely in December next. The metropolis, by this Act, includes the whole of the Registrar-General's district, extending north and south on both banks of the Thames, from Fulham and Putney, to Stratford-le-Bow and Woolwich, and from Hampstead to Sydenham. The whole metropolis, for the purposes of the Act, is divided into districts, composed of one or more parishes; and each parish with more than two thousand inhabitants is subdivided into wards, according to the extent of its population. All existing local boards or commissions for paving and lighting are abolished, as also the commission of sewers for the metropolis, but not for the city of London.

The management and construction of local sewers, and the carrying out of certain penal clauses of the Act relating to house-drains, water-closets, paving, lighting, &c., are placed in the hands of local Boards, whose constitution will presently be described. The construction and management of the main sewers, with power to declare any local sewer a main sewer, and specially the construction of a system of main sewers for intercepting and leading away as much as possible of the sewage that now falls into the Thames to the uninhabited part of the river, before the year 1860, are entrusted to a Metropolitan Board of Works.

The duty of this Central Board to control and so arrange all plans for local sewerage as to produce an harmonious work for the whole metropolis. It will also keep a register of the names of all streets; with power to substitute new names where several old streets bear the same name, to regulate the names of new streets, and the numbers of all houses. The Local Boards are elected in the following manner:—The wards elect the members of the parish vestry. The vestries of twenty-three of the most important parishes have complete control over their local works, regulated by the Act. All the other parishes are formed into districts—that is to say, the parishes of St. Marylebone; St. Pancras; Lambeth; St. George, Hanover square; Islington, St. Mary; Shoreditch, St. Leonard; Paddington; St. Matthew, Bethnal-green; St. Mary, Newington, Surrey; Camberwell; St. James, Westminster; St. James and St. John, Clerkenwell (considered as one parish); Chelsea, Kensington, St. Mary Abbot; St. Luke, Middlesex; St. George-the-Martyr, Southwark; Bermondsey; St. George-in-the-East; St. Martin-in-the-Fields; Hamlet of Mile-end Old Town; Woolwich; Rotherhithe; St. John, Hampstead, have their local affairs under the control of their vestries alone;—and the other parishes of the metropolis are formed into the following districts—each parish vestry electing members in proportion to its numbers to the District Board of Works, which will have the control of the Sewerage, Lighting, and Paving business, which is left to the management of the vestries of the large parishes, like Marylebone, &c.:—

Whitechapel District—which includes Spitalfields, the Minories, St. Katharine, Mile-end New Town, and the Tower, 58 members to a District Board.

Westminster District—57 members.

Greenwich District—including Deptford—57 members.

Wandsworth District—including Clapham, Tooting, Streatham, Battersea, Wandsworth, Putney, and Roehampton—57 members.

Hackney District—including Stoke Newington—57 members.

Saint Giles District—including St. George, Bloomsbury—48 members.

Holborn District—including St. Andrew (above Bars), St. George, St. Sepulchre (in Middlesex), Saffron-hill, Hatton-garden, Ely-rents and Ely-place, Glasshouse-yard—49 members.

Strand District—including St. Ann, Soho; Covent-garden, the Savoy, St. Mary-le-Strand, St. Clement Danes, and the Liberty of the Rolls—49 members.

Fulham District and Hammersmith—39 members

Limehouse District—including Wapping, Shadwell, and Ratcliff—36 members.

Saviour's District—39 members.

Lewisham District—including Sydenham and Penge—37 members.

Plumstead District—including Charlton, Plumstead, Eltham, Lee, Kid. brook—27 members.

(Lewisham and Plumstead are united to send one member to the Metropolitan Board of Works.)

Saint Olave District, with Southwark and Horseydown—28 members.

Thus, in the large parishes, the vestries, in addition to the usual parish duties of vestries, become Boards of Works. In the smaller parishes a double election takes place: first vestrymen are elected for each parish, and each vestry elects a certain number of members to the District Board. These two classes of vestries and District Boards make some clauses of the Act rather confusing. The qualification of a vestryman is an assessment at £40 a year, except where not one-sixth of the assessments are up to £40 per annum, then the qualification is to be £25 a year.

The Metropolitan or Central Board is composed in the following manner:—The Corporation of the City of London elects three, the first six principal vestries of single parishes each two, sixteen other parish vestries each one, and the District Boards of Works, with two unimportant exceptions, each one, forming in all a board of forty-six members, which has to elect a chairman, who need not be a member of the board; and, if he be, his election will create a vacancy to be filled up forthwith. The chairman is to receive a salary of not less than £1500 or more than £2000 a year.

The District Boards are to appoint and pay Medical Officers of Health, whose duty it will be to *inspect* and *report periodically* upon the sanitary condition of the district; to ascertain the existence of diseases, especially epidemic, increasing the rate of mortality; to point out the existence of any nuisance likely to affect the health of the inhabitants; the most efficient modes for the ventilation of churches, chapels, schools, lodging-houses, and other public edifices within the district; and also to appoint Inspectors of Nuisances, to superintend the execution of the sanitary contracts; to keep a book for entering complaints made as to nuisances; and, under the direction of the Board, to take proceedings before a magistrate for punishing any offence against health as directed by the Act.

The District Boards have power to compel the owners of houses to construct drains from every floor of a house, every sink, and out-office, to the common sewer, and to pave courts, and to substitute water-closets for open privies. They can enter and survey, give twenty-eight days' notice, and, on neglect of the owner to do the work, charge it to him, and recover the amount by order of two magistrates, who can inflict a penalty and issue a distress: tenants owing rent are bound to pay the Board of Works, and deduct the same from their rent. The drains and water-closets of any house constructed after the passing of this Act must be approved by the Surveyor of the District Board of Works before they are made, as neglect subjects the owner to have his house pulled down should the Board so order. The Boards have also power to enter, after due notice, and dig down to ascertain if drains, &c., are in proper working order. There are stringent clauses for regulating the height, ventilation, light, drainage, and conveniences of inhabited cellars. To enforce these regulations the Boards have stringent powers of inspection, and, if necessary, of forcible entry. For letting a cellar not qualified for habitation, according to the provisions of the Act, the owner is subject to a penalty of 20s. a day. The watering and cleansing of streets and footways is entrusted to the District Boards, in whom also is the right to sell ashes and refuse of private houses, which the inhabitants are bound to deliver to the scavengers who contract with the Boards.

The Metropolitan Board, in addition to the controlling power it will exercise over the main and local sewers of the metropolis, have power to make new streets or improve existing streets, &c., for facilitating traffic between different parts of the metropolis—subject, where the sum required exceeds £50,000, to the approval of the Commissioners of Public Works and Buildings.

The rates to be levied for carrying out the expenses and works authorised under this Act are to be levied in the following manner:—The District Boards will levy the rate they require in the same manner as the poor-rates and at the same assessment, distinguishing between the rate required for making or cleansing sewers from other expenses. They may exempt any parish or district not benefited by works done Sewers-rates levied on gardens or fields are to be assessed at only one-fourth of their annual value.

The Metropolitan Board have power to levy rates over the whole of the metropolis, or such parts as they consider benefited by their expenditure, and recover the proper proportion due by each district by processes directed to each Board of Works, and to the Chamberlain for the City of London.

As to *Accounts*, the Metropolitan Board and the District Boards are to keep accounts, which are to be balanced at the end of each year and audited. Each District Board is to print a summary of accounts, a report of their proceedings under the Act, and of works commenced and completed, with the reports of their Officers of Health, with lists of the names and addresses of the members of the Board and the officers. This list is to be sold to any one for twopence, and laid before the Metropolitan Board.

The Metropolitan Board is to report to the Chief Secretary of State. The Metropolitan Building Act, passed at the same time, invests the Metropolitan Board of Works with large control over the appointment of the District (Building) Surveyors, now acting and to be appointed.

These are the principal provisions of this important measure. It will be seen from the above abridgment that all the existing powers of local government (except everything relating to the poor, church matters, and baths and washhouses), and some very stringent and novel powers as to local sewerage, house drainage, and sanitary precautions, are entrusted to parish or district parliaments, with considerable patronage in officers and powers of local taxation; and that a sort of elective upper house is created for the purpose of securing needful agreement in the sewerage plans, and for carrying out the main lines or artificial rivers of sewerage which are required for purifying the Thames, as well as various general street improvements. The only local body which retains the greater part of its present powers is the City Commission of Sewers.

If the Act is properly carried out, we shall no longer have houses, courts, and even whole streets built cheaply, to breed fever, and every foul disease bred from dirt and corruption.

THE CURRENCY.

(To the Editor of the Illustrated London News.)

Sir,—I happen to have by me minutes of a statement on the currency made by the Duke of Wellington in Parliament on the 4th February, 1830:—

			The largest previous currency. 1825	
Bank of England Notes		£19,900,000	...	£26,000,000
Country Notes	...	9,200,000	...	28,000,000
Gold	...	23,000,000	...	4,000,000
Silver	...	8,000,000	...	7,000,003
		65,100,000		64,000,000

The above shows an *increase* of metallic currency of twenty-five millions, and a *decrease* of paper currency of twenty-three millions nine hundred thousand, but an excess on the whole of one million one hundred thousand.

The decrease in Bank of England Notes was	10,100,000	23,900,000
" Country Bank-notes "	13,800,000	

The total of the currency of 1829 thus being 65,100,000, will be some guide whereon to form a judgment—whether, after a quarter of a century of augmented mercantile enterprises, and a largely-increased population, the circulating medium of the present day is adequate to the requirements of the country? And, if found upon the foregoing data not to be so, the facts of the case, upon a full, fair, and candid exposition and advocacy in Parliament, cannot fail, I should think, to bring into operation some measure of alleviation acceptable to the public, and conducive to the exigencies and extension of our commerce and the safety of the empire.

I am, Sir, very obediently yours, W. D.

Long Ditton, Nov. 6th, 1855.

Trial of Fire-Engines in Paris.—Amongst the results of the Paris Universal Exhibition the trial of twenty-three fire-engines, on the banks of the Seine, is worthy of record. The experiments took place between the Pont de l'Alma and the Pont de l'Ecole Militaire, in the presence of Prince Napoleon, accompanied by the Secretary of the Imperial Commission. It is to be regretted that little trouble was taken to ensure accuracy. The distance to which the water was projected was *stepped*, not measured; the shelving bank of the river was not adapted for the trial, and there was a high wind blowing all the time, by which the best engines were the greatest sufferers. The engines were worked by a party of Sapeur Pompiers, who exerted themselves in a very creditable manner. The first engine tried, and, as the result proved, the first also in merit, was a London Brigade fire-engine, named The Emperor, upon Hadley and Simpkins' patent principle, manufactured and exhibited by their relative and successor, Mr. Merryweather, of Long-acre, London. This engine had two 7-inch pumps, with metal valves in separate valve-chambers and spherical air-vessels, the suction-pipe being 3 inches, and the delivery 2½ inches in diameter. Worked by twenty-six men, it threw a three-fourth inch jet upwards of 120 feet, and its elegant appearance and general performance gave universal satisfaction. An engine of similar construction, The Prince Albert, in the Hyde-park trials, threw a 1¼-inch inch jet upwards of 187 feet, the greatest range attained by any, except the large Canadian engine. In fact, in no trial have Mr. Merryweather's engines been surpassed. An engine of similar power to the Emperor, by Mr. Tyler and Son, of London, was next tried; but its performance was very inferior. A pretty ship fire-engine, named The Admiral, by Mr. Merryweather, could not be tried, in consequence of the barge having been lost. A farmer's fire-engine, by Mr. Baddeley, of London, was tried, and its performance gave much satisfaction, being far beyond what could have been expected from such a small and simple hand-worked machine. Mr. Ellis, of Canada, was also an exhibitor at Paris, and his engine worked well. M. Letestu, of Paris, exhibited several excellent engines, but none of any great power. Considerable efforts were made to establish a superiority on behalf of M. Letestu's engines, and the *Moniteur* went so far as to assert that the French engines beat the Canadian and English; "whereas," says the *Times* correspondent, "the fact is, that its performance was the worst of the three." The perforated plate-valve of M. Letestu has lately been introduced, with much advantage, into the English steam fire-engines. M. Fiand's fire-engines (used in Paris) gave much satisfaction; but the metal suction-pipe, with its right-angled sharp turnings, is very objectionable. Several German engines were tried, but their performances were very mediocre.

The Floating Batteries.—The invention of these new engines of war is ascribed by the *Moniteur* to the French Emperor, whose aim was to find out a way of constructing ships which should be cheaper and more easily and promptly built than ships of the line, drawing little water, capable of being served by a smaller crew, and covered with an armour against which hollow shot fired from Paixhans guns should be broken like glass. Experiments were made at Vincennes on the required strength in the defensive iron plates, and, after the necessary thickness having been ascertained, the Emperor drew the plan of the new engine, as it now exists, with a single tier of guns, its external covering defying alike solid or hollow cold or red-hot shot; and gave it the name of "floating battery," to indicate that it was not a ship built to pursue or avoid an enemy, but a veritable siege battery, capable of attacking with energy and persistence fortifications heretofore regarded as unassailable by naval means. "As soon," says the official writer, "as the preliminary artillery trials had been made, and before the plan had been actually wrought out, the Emperor lost no time in transmitting the result to our faithful and great ally. Competent judges, men of knowledge and experience, expressed some surprise, for the problem had been regarded as insoluble; but the trials made in England confirmed those made in France, and the two Governments resolved each to construct a certain number of these floating batteries, which have just been employed for the first time at Kinburn. The projectiles which have struck them, although of great dimensions, have not been able to penetrate or damage their surface; while the floating batteries have opened practicable breaches in walls of masonry."

The Crimean Photographs.—In the article last week upon these works an error of the press gave the name of "Mr. Salton" as that of the author of a new and remarkable pamphlet on the positive process. The gentleman in question is Thomas Sutton, Esq., of St. Brelade's, Jersey.

Memorabilia,

LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

"A little chink may let in much light."—OLD PROVERB.

UNPUBLISHED VERSES BY ALLAN RAMSAY.

In one of my rambles at the east end of London, in search of old black-letter lore, I met with the quarto edition of "Poems by Allan Ramsay. Edinburgh: Printed by Mr. Thomas Ruddiman, for the Author, 1721." On the fly-leaf of this volume, written in a clear bold hand, are the following verses, addressed to a well-known character of the period. John Theophilus Desaguliers, LL.D., was the son of a French Protestant divine, and received his education at Christchurch, Oxford. He became very eminent as an experimental philosopher, and was the first who gave public lectures on that science in the metropolis. He was the author of several philosophical works, and various papers read before the Royal Society. I transcribe two of his advertisements, extracted from the newspapers of the period :—

"On Wednesday, the 9th of Feb., 1725-6, at six in the evening, will begin a Course of Experimental Philosophy, wherein the Principles of Mechanics, Hydrostatics, Pneumatics, and Opticks, are prov'd and demonstrated by more than 300 Experiments. By J. T. Desaguliers, LL.D., F.R.S., at his house in Channel Row, Westminster, where Subscriptions are taken in and Catalogues of the Experiments may be had."

"On Monday, the 16th of June, 1729, at four of the clock in the afternoon, will begin a Course of Mechanical and Experimental Philosophy, wherein the Principles of Mechanicks, &c., will be proved. By Dr. Desaguliers, at the Rummer Tavern, in Paternoster Row."

The electric fluid which abounded in the worthy Doctor caused an occasional spark to fall upon those about him. In 1735, Mr Erasmus King, "lately coachman to the celebrated Dr. Desaguliers," is advertised to read lectures and exhibit experiments in natural philosophy, at Lambeth Wells, the price of admission being *sixpence!*

Dr. Desaguliers died on the 29th of February, 1744, at the Bedford Coffeehouse, Covent-garden, and was buried in the adjacent ground belonging to the Savoy.

EDWARD F. RIMBAULT.

TO DR. JOHN THEOPHILUS DESAGULIERS, ON PRESENTING HIM WITH MY BOOK

Is, then, the famous Desaguliers' son
To lear (1) the dialect of our Caliéon!
Wiel, Doctor, since ye think it worth your while
Sometimes on my laigh landart (2) shrine to smile,
Accept the haleware (3), and, when ye gae hame,
Stand by your post, and haud-up (3) the fame,
Gin ill-hair'd buckys girn (4) and shaw their spite,
Your good word will gang far, and put them byt. (5)
"Tis sport to see a critick fat (6) and fine,
And, like a dron-bee, daftly tune (7) his sting:
But the industr'ous whil (8), frae flower to flower,
Suck fra the sweet and bip (9) out o'er the sour.
While Arthur's seat shal my Parnassus be,
And frae its twasome (10) tap my nag can flee
Around this neither warld, us be my care
To gather muges handwal'd (3) and rare,
And gin I be sae leanny aft to please
The beast—my mind will be at muckle ease.
Then with a willing heart and fancy keen
Its be my study still to strike at spleen.

O worthy wight whase genius great refines,
And puts in practice Euclid's make (11) lines,
Be ever blyth, and keep a saul in heel,
Sae beneficial to the common-weal.

August 25th, 1721. ALLAN RAMSAY.

QUERIES.

Is there any record of the asserted fact that King Charles I. granted to the members of Exeter, Jesus, St. John's, and Pembroke Colleges the privilege of wearing silver tassels to their caps?—B. A., Oxon.

MANUSCRIPT OF BURNS.—Will you have the goodness to inform me, under your head "Memorabilia," whether an original MS. of Burns' celebrated poem, "Tam o' Shanter," of which I became the purchaser about thirty years ago, is of much value in the market for relics? The copy alluded to was evidently one of the very first penned by the poet, containing as it does several interlineatory corrections previous to publication, or even circulation in the MS. state among his most intimate friends. The manuscript in question, I was told, was given by Burns to a friend of his in Dumfriesshire, just after its having been composed, and long before having been printed. It is written on quarto-size post paper, and worn through on the outer leaf where folded for the pocket—no doubt to show to friends, and there are some memoranda written on the outside blank leaf in allusion to Melrose Abbey as being mentioned in Grose's "Antiquities of Scotland." I had this relic preserved in morocco half binding, and titled on the back "*Burns' Tam o'Shanter: Original MS.*" with the intention of presenting it to Lord Byron, having just then (about 1824-5) read his eulogium on the Scottish bard; but the death of the noble poet interfered with my design. *Anywise* of Burns: I may here observe that about thirty years ago, while passing through the small town of Lochgelly, a young man in the Scotch fashion, named Boyd, told me he was in possession of a considerable number of Burns' original manuscript pieces, chiefly verses, never published, which his father, then a small tradesman in that place, received at various times from Burns, who used not unfrequently in his poverty to share the humble bed of his friend Duff. It often happened during those times that Burns—under the powerful influence of his native "mountain dew," while sitting round the small three-legged table of the humble public-house—would repeat or pen down extemporaneous flashes of his wit ("which used to keep the table in a roar") or let fall his withering sarcasm upon some hapless wight who had attracted the lightning of his muse's ire. Copies of these effusions he would frequently, at the time, present to Mr. Duff, sen. I endeavoured to revive Mr. D., jun., to publish those pieces, along with any other unpublished effusions of the poet that could be found, with the interlineations or corrections of the manuscripts faithfully given; but I never heard that my suggestion was ever acted upon, nor what became of the relics then in Mr. Duff's possession.—J. J.

ANSWERS TO QUERIES.

CHILD-BED SUPERSTITIONS.—I beg to say that, as the same foolish custom still exists in Norfolk, I can explain the meaning of the superstitious ceremony of "going up-stairs before going down," which your Correspondent, "Benedict," objected to allow his wife to perform after an "addition" to his family. In similar circumstances I was once, on a snowy January day, requested by my fat "monthly" to take a recent "addition" in my arms, and mount by a cold attic stair: on remonstrating against which, I was told that I ought to carry the infant *heavenward* on his first journey, or else, if taken *downward*, his final doom would *certainly* be in the *same* direction; on hearing which I at once agreed to make the ascent required, and, to make assurance doubly sure, added to it a promenade along a range of cold attics, on descending from which I was received by my credulous domestics as one who had performed a meritorious duty.—F., Norfolk.

The following circumstance may throw some light on the custom mentioned by your Correspondent, "Benedict." In a family residing in Sussex, with which I was acquainted, it was usual to place every new-born "stranger" on the top of a high chest of drawers (appropriated to this special purpose) as a sign "that they would *go up* in the world;" in fact, as an omen and security of future station.—CELERIS, Oxford Union Society.

Like your Correspondent who has "given hostages to fortune," though of the opposite sex, I, too, have been advised by "old monthly" and her assistantaste go up-stairs before going down; and though from them I have been unable to extract a reason, I know that in the north it is believed that to dream that you are going up a hill "leads on to fortune," to dream that you are going down betokens grief. Thence, I believe, has arisen the superstition.—TROTTS.

"THE OLD WEEK'S PREPARATION towards a worthy Receiving of the Lord's Supper." I find by a copy of the "New Week's Preparation," in my possession, that the authorship is attributed to Keble or Keeble.—J. W.

Notices to Correspondents.—S. T. U.: A communication from the sole representative of the Crosby family, formerly of Wiltshire, has reached us, and is at S. T. U.'s service, if he will send his address. W. G., Tenby, is thanked for the sketch and description of the "Scold's or Gossip's bridle" in Walton Church. W. E. J., Dudley, should apply to Mr. Dickens himself. Hercules; T. Crosby; J. J.; A Cestrian; A. A. O.; Thanus; W. G.; A Constant Reader; A Wykehamist; L. C. R.; Brekekeka; M. A., Cantab; Aragon *y* Leon; Coventry; R. M., Beverley; W. E. J.; W. Newton, York; Senex; C., Inverness; T. D. Ridley; J. D. W.; the Revs. W. E. D. Palgrave and F. Lygon, All Souls, Oxford; J. C. Wilkin; R. O., Windsor; Achates, Liverpool; A Borderer; C. H.; T. O., South Shields; Maria Husband—received with thanks.

CHESS.

TO CORRESPONDENTS.

E. F. T., Hastings.—1. Ay, but suppose Black declined to take the Queen when you played her to Rook 4th, and moved his Bishop to Q Kt 5th, and then took the Q Pawn with Queen, &c. &c. Now could you possibly mate in the stipulated number of moves? 2. If in the game mentioned the young Ensign had taken the Kt at move 31, he would have been mated directly by Q takes Kt (ch), followed by R to Q Kt 3rd (ch). So, if he had taken it at move 23, Mate would have been given in two moves.

F. W., Bristol.—1. They are published in Walker's "Thousand Games." 2. The German's avocations prevented his remaining in this country.

A SUBSCRIBER.—1. The Key move to the Indian Problem is *R to Q B sq*. 2. Get a copy of the "Chess-player's Handbook." 3. It could not.

A. P. F., Jersey.—Well designed, but much too easy.

JASPER.—That which will afford you the least trouble and the most amusement.

"ONE PERSENT," &c.—Yes, truly a consistency doctrine for mediocrity, and quite worthy of the proposer.

G. W. Cousins.—We shall be glad to see the articles, but, as you must be aware, the theme is well nigh exhausted.

G. F., Dundee.; M. Hon. Sec., Leeds; J. F., Birmingham; H., Oxford; Capt. G., Leamington; W., Brighton; W. G., Whitby; T. Barton; C. W., Sunbury; received with thanks.

W. W.—The diagram appears to have been mislaid.

PARACELSUS.—It is always better for contributors to send their names and addresses, not for publication, but to facilitate communication with them.

H. H., Springside.—1.—There is no difference, except in name, between a Chess Problem and a Chess Enigma. 2. Your solution of No. 606 is imperfect.

S. M., Cheltenham.—We are totally ignorant of the game.

Q., Scrastopol.—It shall be given in our next.

S. MARKS.—"In playing a game the other day, I advanced a Pawn to the 8th square of the board, and inadvertently replaced it with my adversary's Queen. Was I at liberty to rectify the mistake, or was my opponent entitled to claim the Queen as his own?" It is not advisable to place an adversary's Queen on the board in such cases, because it may lead to mistakes; but to do so entails no penalty whatever.

SOLUTIONS OF PROBLEM No. 611, by Oscrof, Chilp, Dr. Field, Somerset; G. R., Omega, W. W., Excelsior C. W., Sunbury; MacLeus, Omicron, H. J. W., D. D., Shrewsbury Clerk, and Ware, are correct.

SOLUTIONS OF PROBLEM No. 612, by C. W., of Sunbury; Oldjam, R. P. H., Kemo, Mahomedan Perverse, Gregory, Alpha, are correct. All others are wrong.

SOLUTIONS OF ENIGMAS by Percy, R. P., Dr. Field, Derven, Mona; C. W., Sunbury; Diggory, P. T., Yes-sum, M. P., Mayor B—, S. W. R., Bombardier, F. R. S., are correct. All others are wrong.

SOLUTION OF PROBLEM No. 611.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to K B 4th (ch)	K takes R	3. Q to K 2nd	Anything.
2. Kt takes Q P (ch)	K takes R (best)	4. Q or P—Mates.	

SOLUTION OF PROBLEM No. 612.

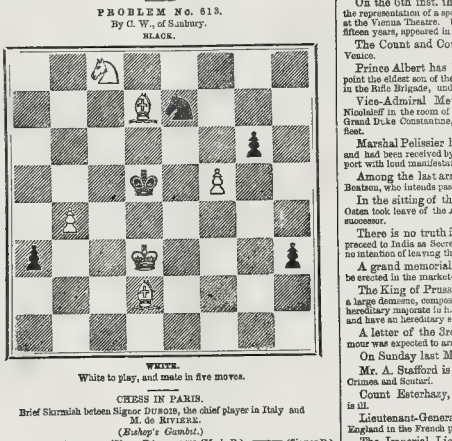
WHITE.	BLACK.	WHITE.	BLACK.
1. Q takes P	B takes P	3. Q takes P (ch)	R takes Q
2. B to Q R sq	R to Q Kt 7th, or (a)	4. B to Q 4th—Mates.	

(a) 2. Q takes K B
3. Q to K 6th (ch) K to Kt 5th
4. B to 3rd—Mate.
(If, for his first move, instead of "B takes P," Black play Kt to Q 5th, White answers with Q to Q K 6th, &c.)

PROBLEM No. 613.

By C. W., of Sunbury.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN PARIS.

Brief Skirmish between Signor DUBOIS, the chief player in Italy and M. de RIVIERE.

(*Bishop's Gambit.*)

BLACK (M. de R.)	WHITE (Signor D.)	BLACK (M. de R.)	WHITE (Signor D.)
1. P to K 4th	P to K 4th	9. K Kt to Q 4th	Kt takes B

CHESS ENIGMA.

No. 955.—By J. GHOLSON, St. Francisco.

White: K at Q sq, B at Q 4th, Kts at K 2nd and Q 2nd; Ps at K B 5th, K 5th, and Q Kt 5th.
Black: K at Q 8th; Ps at K 3rd, Q 4th, and Q Kt 3rd.
White to play, and mate in six moves.

A CHESS QUERY.

In the very interesting papers of Dr. D. Forbes, on the "Origin of Chess," which he clearly proves to have been invented in India, he states that in the original Hindoo game of "Chaturanga" the pieces consisted of Kings, Elephants, Horses, Ships, and Pawns; but that "latterly, among the Hindoos, the Ship was changed into the War Chariot." What proof is there of this change? Dr. Forbes adduces none; yet surely, if such a change took place before the game passed over to Persia, some Sanscrit works would be found to allude to it. The passage in the "Amaracosha," quoted by Sir William Jones, does not refer to the game of chess at all, but simply to the component parts of an army. Another point of the greatest interest in the history of Chess is the description given by Firdausi, in the "Shahnama," of the position and moves of the pieces when the game was first introduced into Persia. Dr. Forbes tells us that "no two manuscripts of it seem exactly agree," and that "sometimes whole passages are found in one copy and not in another." It is evident, therefore, that in selecting a text the utmost attention must be paid to the authority due to it, either on account of its antiquity or the internal evidence it may possess of authenticity, as representing what the poet really wrote. I should, therefore, be extremely glad to know from what manuscripts (their date, &c.) Dr. Forbes derived his translation describing the "moves of the pieces." In Chapter VI. of his "Observations" He informs us that he has chiefly followed the MSS. Add. 18,188 (written A.D. 1486) and 7724 (written A.D. 1621), preserved in the British Museum; but I am assured by a competent authority, that this account of the moves does not occur in either of the above MSS.; nay, more, that it is not to be found in any of the copies of the "Shahnama," in the British Museum (including a copy of great antiquity recently acquired, written A.H. 675—A.D. 1276); nor is it even in the text of "Firdausi," published at Calcutta in 1829, by Macan. It is true, however, that Hyde ("Hist. Shahirud," p. 63) quotes some lines from a copy of the "Shahnama," in which the moves are noticed; but this text does not agree with the version given us by Dr. Forbes; and the MS. from which it was taken can scarcely be relied on, since it contains some interpolated lines, in which two Camels are added to the other pieces on the board. ALPHA.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen has given orders for the appointment of Marshal Pelissier as an Honorary Member of the Military Division of the First Class, or Knights Grand Cross, of the Order of the Bath.

The Insignia of the Order of Charles III., conferred by the Queen of Spain on Generals Canrobert, Bosquet, and La Marmora, were sent to Paris by the *estafette* who was to leave Madrid on the 7th.

Prince Nicholas of Sweden, Duke of Dalecarlia, son of King Oscar, was on board the steamer *Gustilod*, which carried General Canrobert from Lubeck to Stockholm.

The King of Wurtemberg has conferred on Dr. Barth, the African explorer, the order of the Wurtemberg Crown.

The Czar and the Grand Duke Constantine witnessed the cannonade of Kinburn from an eminence at Cape Ochakoff. The fact has been confirmed by the Russian officers who were made prisoners.

A private telegraphic despatch from Trieste, of the 11th, states that the Archduke Ferdinand is in a very satisfactory condition, and only requires to be kept quiet.

The Duke of Cambridge, attended by Colonel the Hon. James Macdonald and Colonel Tyrwhitt, left his residence at St. James's Palace on Tuesday evening for Paris, on a visit to the Emperor Napoleon.

The Dowager Queen of the Netherlands, Anna Paulowna of Russia, intends to remain a few days at Potsdam, and then proceed to pass the winter at St. Petersburg.

Queen Christina has gone to Genoa to visit her daughter, the Duchess of Montpensier.

On the 11th ult. a Persian Ambassador, Abbas-Koull-Khan, arrived at Tiflis, on his way to felicitate the Emperor of Russia on his accession to the throne.

The Duke of Newcastle, after having touched at Kertch, and visited the eastern coast of the Crimea, has returned to the head-quarters of Omer Pacha. It is said that he will be at Constantinople about the 1st of December.

A grand full-dress banquet was given by the King of Prussia on the 8th instant, at which Barons de Budberg and Schimmelpenninck, Russian and Netherlands Ministers, were present.

Le Nord takes the trouble to assure its readers that the Princess Mary of Cambridge is not espouse the King of Sardinia.

The Danish Government has put forth a formal denial to the report that the Ministry had demanded the exclusion of Prince Frederic Ferdinand (not Prince William Frederic) from the line of succession to the throne.

On the 6th inst. the Emperor and Empress of Austria attended the representation of a spectacle entitled "A Story for Egg and Little Children," at the Vienna Theatre. Upwards of 100 children, of ages varying from six to fifteen years, appeared in the piece.

The Count and Countess of Chambord are to winter, as usual, at Venice.

Prince Albert has been pleased to signify his intention to appoint the eldest son of the Rev. Dr. Hook, the Vicar of Leeds, to an Ensigncy in the Rifle Brigade, under the command of his Royal Highness.

Vice-Admiral Metin, who has been appointed Governor of Nicolaieff in the room of Admiral de Berch, is a young man, protected by the Grand Duke Constantine, and was formerly chief of the staff of the Black Sea fleet.

Marshal Pelissier has paid a visit to Admiral Bruat, at Kamiesch, and had been received by the garrison of that place and by the vessels in that port with loud manifestations of enthusiasm.

Among the last arrivals at Malta from Constantinople is General Beatson, who intends passing the winter in the island with his family.

In the sitting of the Diet of Frankfort on the 8th, M. de Prokesch-Osten took leave of the Assembly, and installed the Count de Rechberg as his successor.

There is no truth in the rumour that Lord Dunkellin is about to proceed to India as Secretary to the new Governor-General. His Lordship has no intention of leaving the Crimea at present.

A grand memorial of Napoleon, to be executed by Dupres, is to be erected in the market-place of Ajaccio.

The King of Prussia intends to present Baron de Manteuffel with a large demesne, composed of three fine estates, which will be erected into an hereditary majorate in his favour. He will be also raised to the dignity of Count, and have an hereditary seat in the First Chamber.

A letter of the 3rd, from Vienna, states that Sir Hamilton Seymour was expected to arrive in that city before the end of the month.

On Sunday last Marshal Radetzky reached his 90th year.

Mr. A. Stafford is on his way home from his second visit to the Crimea and Scutari.

Count Esterhazy, the Austrian Ambassador at St. Petersburg, is ill.

Lieutenant-General Sir H. Bentinck, K.C.B., is on his way to England in the French packet the *Carmel*.

The Imperial Lieutenant of Lombardy, Baron de Burger, has issued a notification to the effect that the ordinary direct taxes for 1856 are to be increased by 4½ centimes per florin (about 6½ per cent.)

The Bishop of Melbourne intends to leave this country and return to his diocese on the 26th inst.

Count Prokesch-Osten, who succeeds Baron Bruck as Austrian Internuncio at the Porte, has formerly served his Sovereign diplomatically at Constantinople. He is to call at Athens on his way to Constantinople.

Sir Benjamin Hall has left Paris for Paris. The right hon. Baronet will remain absent for about ten days or a fortnight.

A letter from Warsaw states that Marshal Paskiewitsch is consulted on all the plans of the Russian campaign in the Crimea, and that his opinion is followed with extraordinary deference.

The Bishop of Lincoln has a new work in the press, with the title, "The Church of Christ during the first three Centuries."

M. Mayer-Charles de Rothschild has arrived at Munich, to negotiate for the concession to the house of Rothschild of the railways projected in Bavaria.

Lady Cranworth has been appointed to succeed Lady Canning as the directress-in-chief of the establishment for supplying the army in the East with nurses.

Le Nord specially commends Mr. Cobden's letter in the *Leeds Mercury* to its readers, as being "very vigorous, instructive, and interesting."

A dinner was given at Woolwich, on the 9th, in honour of Sir Robert Gardiner, K.C.B., by the officers of the Royal Artillery, on his return from Gibraltar.

The Prussian police have not found sufficient reasons to detain in prison the sham Prince of Armenia. As he was born at Java he will be handed over to the Government of the Low Countries.

Mdlle. Rachel does not seem to have succeeded well in New York. The receipts were considerably increased, it is said, by her singing of the "Marseillaise;" but the chefs-d'œuvre of French tragedy have frequently been performed before half-filled houses.

Professor Wilson is to give his introductory lecture before the University of Edinburgh on Thursday next, his subject being "The Agriculture of the French Exhibition." Professor Wilson was one of the English jurors.

Philaret Chasle is at Berlin, with letters from Heine, intending to give lectures on modern French literature.

Mrs. Smith O'Brien and family have arrived in Limerick from Brussels, after a long sojourn with Mr. Smith O'Brien, who, with his eldest son, has proceeded on a tour to Italy.

The celebrated mill of Alphen, on the Rhine, which tradition assigns as the birthplace of the famous Dutch painter, Rembrandt, has just been destroyed by fire.

The workpeople of "Christy and Co.'s hat manufactory, Bermondsey," have presented Sir Charles Napier with an address and an Admiral's hat.

The salary of Mr. Austen, the newly-appointed Secretary to the Board of Public Works, will be £1250 per annum.

The following paragraph appears in the Turin correspondence of the *Indépendance*:—"The King of Naples has nominated M. Mazza, formerly Director of Police, a Councillor of State." (!)

A considerable activity prevails in Germany—despite the war—in the theatre of letters. In the first half of the present year 3879 works appeared in that country.

The Lord Chancellor has appointed Charles Stanley, Esq., of Roughan, county of Tyrone, to the Commission of the Peace for said county.

An advertisement in the *Journal de St. Petersbourg* of November 1 announces that Colt's revolvers have arrived in that city in immense quantities.

THE ILLUSTRATED LONDON NEWS

No. 771.—VOL. XXVII.] SATURDAY, NOVEMBER 24, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

OUR NAVAL STRENGTH; AND THE WAY TO USE IT.

"ENGLAND is more especially a maritime, France more especially a military, nation," said M. de Persigny at the Lord Mayor's banquet. It can scarcely be said that this undoubted fact has been sufficiently recognised by the Government of this country. While the Administration of Lord Aberdeen affected to carry on the war, it did so feebly, both by sea and land, whilst that of Lord Palmerston, which is not to be reproached with any lack of spirit or determination, has not yet allowed the naval service to assume that preponderance of danger and duty which would seem to be the most natural as well as the most judicious course to pursue in the actual circumstances of Europe. In this we do not seek to blame the existing Government, which ever since its assumption of office has infused new vigour into every branch of the two services, and prosecuted the war with a wise and wholesome energy. But at the conclusion of the second year of hostilities, when the weather will in all probability prevent for several months any extensive operations either by land or by sea, it is useful to inquire whether the next campaign ought not to open under a different arrangement from the two last. Such an inquiry is necessary, with a view not only to the speedy and satisfactory adjustment of the European system, unjustly invaded by Russia, but to the honour and glory of the two great nations who have embarked their fortunes in, and staked their national position on, the results of the conflict.

Great Britain and France have not taken up arms for extension of power or territory, but simply in defence of the great principle of justice, and of the rights of one of the constituent Powers of the European commonwealth. As allies they fight for the sake of peace; as individual Powers each has its own honour in its own keeping. If either of them withdrew from the struggle until the common object was achieved, the honour of that Power would be seriously attainted. In like manner, if England allowed France, or France allowed England, to take an undue share of the perils of the enterprise, or so mismanaged its own resources, and misunderstood the temper of its people, as to permit its ally to bear the greater part of the burden, and to carry off the whole credit of each successive victory, the Power so shortsighted would sink in the estimation of its own subjects. The humiliating opinion would be shared by Europe, Asia, and America; friends would become lukewarm if not inimical; and foes would be encouraged to become both insolent and hostile.

Though we at present seem to run no risk of such a catastrophe, it is well to consider whether in the Spring of 1856 this country ought not to act as becomes the first naval Power in the world, and so distribute, between Great Britain and France, the glory that will for ever attach to the pacificators of Europe as to make each nation perfectly satisfied with its own share in the immortal work. Though we are, a military people, as far as the possession of "pluck" and the military spirit are concerned, we are not, and we trust never will be, a military people in the sense in which that phrase is commonly understood. We will not and can not keep up large standing armies; they are alien to our habits and to the principles of our Constitution. We will not and can not consent to the decimation of our youth by a Conscription. If we cannot have voluntary soldiers we will provide other means of defence; but on no pretext less serious than that of an armed invasion of our shores—when patriotism would render a Conscription unnecessary—would the proposal of such a form of recruitment be tolerated by the free men of this country. In France, and on the Continent generally, the case is different. The Continental States keep up standing armies on principle, and, on principle as well as from ancient habit and use, the people are reconciled to a wholesale consumption of the flower of their youth and manhood which we in England would not endure. We can, therefore, never expect to equal France as a military power. We cannot give her soldier for soldier against the common foe; and, when we fight by her side, it is not unreasonable to expect, however brilliant may be the deeds of our own brave officers and men, that ultimately the greater portion of the work, and consequently of the glory—the soldier's best, and too often only, reward—will fall to the lot of those who have the best military system and the largest army.

At the capture of Sebastopol, the British, without any fault or their own, and solely in consequence of dispositions necessary to be taken for the success of the attack, were content that the French should monopolise the honours of the day. The same result will doubtless occur again; and there is a probability that the honour of meeting the Russians in the open field—and defeating them—is one in which the British army will not share, but which will fall to the lot of General Pelissier and his admirable army. The French are, by virtue of their numbers, the real masters of the situation in the Crimea; and the English commander, however great and able he may be, must of necessity subordinate his tactics to those of the General who has the larger and more readily available force. The English nation does not begrudge France its glory. Even its reflex upon ourselves is something to be proud of. Though sensitive and high-spirited, our people are content that their firm friend and ally should bear the palm of military success as befits an essentially military nation. They are even willing that our Generals in the Crimea should be under the command of the French, if such a distribution of strength be considered advisable for the mutual in-

ADMIRALS [illegible] AND SIR BOUDOIN STEWART, WITH OTHER OFFICERS, IN A CASEMATE IN THE SPIT BATTERY, KINBURN.—SKETCHED BY J. A. CROWE.—(SEE NEXT PAGE.)

terests of the two, or the success of a present or any future campaign. But being so proud and sensitive, and yielding to the superior claims of France as regards her military assistance in the war, is it not incumbent on the Government to consider whether, in directing more attention to the military than to the naval operations necessary to subdue the enemy, we do not run a risk of cooling the enthusiasm of the nation?—nay more—of protracting the war, which it is desirable to bring to as speedy a termination as we can? In other words, would it not be wise to concentrate authority in the Crimea in the hands of Marshal Pelissier—upon condition that the whole of the naval forces of Great Britain and France should be under the command of a British Admiral—and that England, in downright earnest, should make up its mind to capture Cronstadt in the spring of 1856? During the next four months—with or without the co-operation of Sweden—we might prepare our gun-boats for the assault on that fortress, and we will not so affront our gallant seamen as to imagine that, if the nation provides our Admiral with the needful boats, the men will fail to do the work expected of them.

By the aid of the French the military supremacy of the Allied Powers has been triumphantly vindicated. It remains for Great Britain to prove that, as a naval Power, she is the first and the greatest in the world; that her old prowess upon the seas is to be surpassed by the new; that she has yet many Blakes and Nelsons in her service; and that if Sebastopol can be taken, so also can Cronstadt. The destruction of Bomarsund and Sveaborg, and the expeditions to the Sea of Azoff and the Dnieper—brilliant as these achievements may be are not sufficient either for our credit or our security. And certain we are—if we can read public opinion aright—that a very dangerous dissatisfaction will be created if, at the next thaw in the Baltic, there is not a British Admiral in command willing, and fully prepared with gun-boats and every other *matériel*, to attack Cronstadt. The capture of Sebastopol has as yet done little or nothing for the cause of peace; but the capture of Cronstadt, which would open to us the gates of St. Petersburg, would be a peace argument that Alexander II. would find it difficult to resist. This is England's true share in the business; and Europe and our allies, as well as our own people, expect that we should undertake it.

SIR EDMUND LYONS AND ADMIRAL STEWART AT KINBURN

"As I wandered past the Central Redoubt (says our Correspondent and Artist), a slighter one than the rest, into the Spit Battery, I found the English Admirals, Sir Edmund Lyons and Sir Houston Stewart, and Captain Meads, Sir Thomas Pasley, and other officers, busy in one of the casemates discussing lunch, while Lieutenant Mackenzie, of the Royal Marines, stood by doing the honours of his quarters, and an interpreter was rendering into English the details gathered from the mouth of a Russian deserter caught during the night. This poor fellow, it appears, had made his escape from Otchakoff during the night in a boat, and was several times fired at by our steamers, which sent out boats to capture him. It was said to appear from his statements that the Russians had already sent men round to reinforce Kinburn, but that our movements were far too rapid for them."

The sitting figure in the background of the Engraving is Sir Thomas Pasley. The two persons sitting near him are Sir Edmund Lyons, without a cap, and Sir Houston Stewart, with one. Standing near the embrasure is Lieutenant Mackenzie (of the Royal Marines), Captain Buckle, Captain Meads, and the Russian prisoner to whom Mr. Crowe refers.

THE COURT.

The Privy Council held at Windsor Castle on Wednesday, and the celebration of the birthday of the Princess Royal on the same day, have been the only incidents in Court life during the past week. The latter was inaugurated by the first of a series of dramatic representations—Sheridan's comedy of "The Rivals" being selected for performance. The Queen and Prince Albert entered at St. George's hall (which had been fitted up as a temporary theatre) at eight o'clock. Her Majesty and the Prince were accompanied by the Prince of Wales, the Princess Royal, Prince Alfred, Prince Arthur, the Princess Alice, Helena, and Louise, and the Duchess of Kent; and also by the Duchess of Atholl, the Marchioness of Waterford, the Marquis of Lansdowne, the Earl Spencer, Viscount and Viscountess Canning, Lord Panmure, Major-General Sir Colin Campbell, Colonel the Hon. A. Gordon, and the ladies and gentlemen in attendance. The performance commenced on the entrance of the Queen, a small circle were honoured with invitations to be present.

Among the guests at the Castle during the week have been the Marquis of Lansdowne, the Marchioness of Waterford, the Earl of Spencer, Viscount and Viscountess Canning, the Earl and Countess of Clarendon, Lord Panmure, Sir Baldwin Walker (Surveyor of the Navy), Major-General Sir Colin Campbell, General Sir Hew Ross, Colonel the Hon. A. Gordon, and Colonel Brownrigg, Assistant-Adjutant General to the Light Division of the Crimean army.

On Saturday last the Queen, with the Princess Alice, rode out on horseback, attended by the Hon. Flora Macdonald. The Prince Consort went out shooting with the Duke d'Aumale.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, Prince Alfred, and Princess Alice, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle. The Duchess of Kent and the visitors staying at the Castle were also at the service. The Hon. and Very Rev. the Dean of Windsor officiated.

On Monday the Queen, accompanied by the Princess Royal and the Princess Alice, took equestrian exercise in the Riding house.

On Thursday the Prince Consort left Windsor at an early hour in the morning for Birmingham, where his Royal Highness laid the first stone of the Midland Institute, now in process of building.

Lady Macdonald has succeeded the Duchess of Atholl as Lady in Waiting to her Majesty. Lord Waterpark and Major-General Berkeley Drummond have succeeded Earl Somers and Mr. R. Ormsby Gore as Lord and Groom in Waiting.

THE PRIVY COUNCIL.

The Queen held a Court and Privy Council at two o'clock on Wednesday afternoon, at the Castle. The Privy Council was attended by his Royal Highness Prince Albert, Earl Granville, the Duke of Argyll, Viscount Palmerston, Sir George Grey, Lord Panmure, Sir Charles Wood, the Right Hon. R. Vernon Smith, Viscount Canning, Earl Spencer (Lord Steward), and Lord Ernest Bruce (Vice-Chamberlain, officiating for the Lord Chamberlain).

At the Council, the Right Hon. Henry Labouchere was sworn in a Secretary of State (Colonial Department), received the seals of office from the Queen, and kissed hands on his appointment.

Sir Hamilton Seymour, G.C.B., was, by command of the Queen, sworn of her Majesty's Most Honourable Privy Council, and took his place at the board.

At the Court, the Duke of Somerset had an audience of her Majesty, and delivered the insignia of the Most Noble Order of the Garter worn by his father, the late Duke.

Captain Robert M'Clure, Royal Navy, was presented to her Majesty, at an audience, by Sir George Grey, Principal Secretary of State for the Home Department, when the Queen was graciously pleased to confer the honour of knighthood upon him.

Viscount Palmerston, the Duke of Argyll, Sir George Grey, and Earl Granville, had audiences of her Majesty.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary have left Kew, to honour the Earl and Countess of Hardwicke with a visit, at Wimpole-hall, Cambridgeshire. Their Royal Highnesses visited Cambridge on Wednesday last, and lunched with the Master of Trinity College.

His Royal Highness the Duke of Cambridge, attended by Lieut.-Colonel the Hon. James Macdonald and Colonel Tyrwhitt, arrived in town yesterday (Friday), from a visit to the Emperor Napoleon, at Paris.

The Duke of Newcastle was to reach Marseilles on or about the 20th inst. His Grace is expected in London before the close of the month

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

PARIS has not yet got over the effect produced by the grand ceremony of closing the Exhibition, which took place with much greater éclat and completeness of arrangement and effect than did that of the opening. To begin, the weather was splendid. From ten o'clock in the morning commenced the arrival of hundreds of carriages filled with brilliant toilets, splendid uniforms, and irreproachable black coats, white cravats, and straw-coloured gloves. During the next hour and a half this *beau monde* was occupied in installing itself; and then, woe to them who were behindhand!—the doors were closed, and neither prayers nor tears availed to obtain admittance. Soon after twelve the Emperor and Empress, accompanied by the Duke of Cambridge, took their place in front of the throne, and the ceremony commenced with the speech of the Prince Napoleon. The Emperor's reply followed. Rarely, on any occasion, has it been our fate to witness so remarkable a triumph so well won as on this occasion. The voice of the speaker rung with a distinctness and an emphasis quite extraordinary through the whole extent of the vast building, and between each pause thunders of applause, enthusiastic and prolonged, greeted every passage of this most novel, striking, and energetic discourse, whose tenor has marked yet more strongly, perhaps, than any preceding act or speech has done the resolution individuality, and earnestness of the Sovereign who pronounced it. During the greater part of the ceremony the Empress remained standing: she seemed to suffer little from fatigue, though a good deal from the cold, which, in spite of the attempts made to warm that portion of the building, could not fail to be felt in the evening costume she wore. Her Majesty's dress was of scarlet, covered with white lace, and decorated with diamonds and pearls; on her head was a diadem of the same stones. Behind the throne, in the gallery, was the orchestra, with one thousand two hundred and fifty performers, directed by Hector Berlioz. The position was unfortunate for the effect of the music, which was, consequently, somewhat inefficient. The ceremony concluded, the Imperial party retired, and then the general break-up took place. It is difficult to conceive the intreaties, the intrigues, the interests, that were employed to obtain tickets for this exceptional ceremony, the triumph of those who succeeded, the anguish and heartburnings of those who failed;—had we but space, we could amuse our readers with many anecdotes on this score. Since the grand ceremony, the musical fêtes in the building have been going on with great éclat: there being no longer any necessity for the performers being placed in the orchestra, which want of space rendered it impossible to place elsewhere than in the gallery on the occasion of the great solemnity of the 15th, the music produces a very much finer effect, and these fêtes are being well attended.

A most painful impression has been produced by the frightful fire which took place on Sunday evening, in which a large portion of the vast magazine of the military stores of forage on the Quai de Billy were consumed. Various persons were wounded in the attempt to extinguish the flames; but fortunately no lives, we believe, were lost. Happily, the direction of the wind drove the fire towards the river; had it been otherwise, the Annexe of the Palais d'industrie would have been in the greatest danger.

M. Thiers has, in person, presented to the Prince Jérome a copy of his new volume of the "History of the Consulate and of the Empire," in which his Imperial Highness's name figures importantly.

It is whispered among the Orleanist circles that the visit of the Duc de Brabant to the French capital had a more immediate and personal signification than is generally known or supposed. Here is the version we have received on the subject. The question having arisen respecting the disposal of such portion of the property of the Orleans family as might be claimed by the grandson of Louis Philippe, the Prince de Chimay was privately deputed by the Belgian Royal family to ask the Emperor what were his intentions in the matter. The reply—so says our information was, "Qu'on vienne me demander;—je verrai." Hence the presence of the Royal visitor, to whom the Emperor is said to have promised full restitution of such property as would, in the event of the continuance of the Orleans dynasty, have fallen to his share. It is further reported that, it having been represented to his Imperial Majesty that this act would be regarded as a precedent, and that the other members of the ex-Royal family would consider they had a right to put forward a similar claim the Emperor repeated the same phrase that he had used with regard to the Duc de Brabant.

The sudden death of Maître Paillot, the celebrated and universally-respected member of the French bar, has produced a most marked sensation not only in his own profession, but among the various classes of society, where his talents, his high character, and noble qualities of heart had rendered him as much beloved and esteemed as he was admired. It was while in the act of pleading, with his usual energy and eloquence, that an attack of apoplexy seized M. Paillot: after struggling some time against the symptoms, that impeded at once his ideas and utterance, he was compelled to take a seat; he then fainted; and, despite of every effort to restore him, expired in the course of some hours, without having recovered his consciousness. His funeral was a perfect ovation to the memory of a man so universally esteemed and lamented.

The arrival of the King of Sardinia is to be the signal for a variety of fêtes: his Majesty is to be accompanied by the Duc de Grammont, the French Ambassador at the Court of Turin. The report has gained considerable ground here that the principal cause of the meeting of the King Victor-Emmanuel, and the Duke of Cambridge, is the desire for a connexion likely to result in a union between the former and the Princess Mary of Cambridge.

The Théâtre Français has accepted a new comedy by M. Edmond About, entitled "Guillery." The Italian Opera is preparing a work named "L'Ascolo di Firenze," for Mario; the Gymnase, "Le Temps Perdu," and "Le Dessous des Cartes;" the Opéra Comique, "Les Saisons," and "Manon Lescaut."

AUSTRIA AND THE CONCORDAT WITH ROME.

The Concordat which Francis Joseph has made with the Pope has been published, and the discreditable document confirms all that had been previously said regarding its contents. It consists of 36 articles, every one of them a deadly stab to freedom of conscience and the independence of the crown, the church, and the laity of Austria. The first article declares the maintenance of the Roman Catholic religion, with all the privileges which, by the laws of the church, it ought to have—unlimited persecution of heretics being of the number. The second article gives to the bishops, clergy, and laity free communication with the Pope, without the intervention of the temporal rulers—thus depriving the Emperor of any power or control over the national church, and placing it in the power of the Pope to contrive and execute the most dangerous conspiracies against the Government. Is it impossible to carry this doctrine of *imperium in imperio* further, and tolerant Austria has thus submitted to a yoke which would have been scorned by bigoted Spain in the days of Ferdinand and Isabella. The third article gives the Bishops complete authority, pastoral and legislative, over their clergy; the fourth places the whole authority under the Emperor of the Papal chair. The fifth places all public and private schools under the control of the Bishops; and the sixth gives the Bishops the power of appointing and removing the only persons allowed to teach sacred theology. The seventh provides that none but Catholic professors shall be allowed to teach anything in the middle-class schools, and the books of instruction are to be chosen by the Bishops. By the eighth article, the Emperor is to be permitted to choose the inspector of the schools of the diocese, but under the degrading condition that the candidates from whom he is to select shall be chosen by the bishops. The ninth promises the help of the Government to suppress such books as are dangerous to religion in the judgment of the bishops. The tenth establishes ecclesiastical courts for the punishment of the clergy and the trial of cases relating to marriage and matrimony. The eleventh arms the bishop with the power of inflicting ecclesiastical punishment on clergy and laity, and the twelfth article surrenders to the spiritual courts the power of deciding on the right of patronage, except in the case of a disputed succession.

The remaining articles are all of the same stamp, as will at once be conceived from the fact that the last two provide that everything else relative to ecclesiastics and clerical matters, not mentioned in the Concordat, will be managed and arranged according to the doctrines of the church.

As might naturally be anticipated, the news of the submission of Austria to Rome has caused great exasperation in Italy.

The *Armonia*, of Turin, Italian but in name, commences and ends its remarks with the unpatriotic cry, "Viva Pandita, viva Francesco Giuseppe!" To which the *Piemonte* replies "Viva l'Italia, viva Vittorio Emanuele II!"

Dr Cumming has written a long letter to the *Times* on the Concordat, in which he says:—

I have no hesitation in asserting, as I am able to prove, that no serf in "Holy Russia" is more at the mercy of the Autocrat than the young Emperor of Austria is now at the mercy of the Vatican. The rare phenomenon of an empire laying its neck under the foot of a Pope has been presented in 1855 Austria, who refused to be the ally of the Western Powers against a despot in the East, has, in righteous retribution, become the serf and vassal of a miserable spiritual despot in the West. Sardinia rises daily to the dignity of an empire, Austria has sunk into the dimensions of a province of the Vatican

SPEECH OF THE KING OF SARDINIA.

Last week we gave a telegraphic summary of the King of Sardinia's speech on the opening of the Chambers at Turin, on the 12th inst. The following is a translation of it.

Senators and Deputies,—The year which is about to expire has been at period of sad trials for my heart, the bitterness of which, however, has been alleviated by the tears of the whole nation, sympathising with the sorrow of my house. But in the midst of grief God hath upheld me in the accomplishment of my duties. Turning my attention to the great struggle which for the last two years has been raging in the East, I have not hesitated to unite my arms to those of the Powers that fight for the cause of justice and civilisation, and for the independence of nations (Applause). I have been induced to take that step, both from the desire of contributing to the triumph of the principles for which we fight, and inspired with the generous instincts of the Subalpine people, and the traditions of my family (Applause). Our soldiers, united to the brave armies of France, England, and Turkey, and seconded by the zeal and activity of our navy, have shared their perils and glories, and increased the ancient renown of our warlike country (Loud applause). May it please God to crown our common efforts by continued success, and thus soon to render a durable peace possible, guaranteeing to every nation its legitimate rights (This passage was received with enthusiastic applause). The expenses of the war will render a new appeal to public credit possible. The sternness of the harvest, and the reappearance of the scourge of cholera, added to other unexpected circumstances, have reduced the public income. While necessity again obliges us against the wish of my heart, to call for fresh efforts from the nation, my Government, on the other hand, has sought the means of rendering the weight of some of the taxes more supportable. Bills will be laid before you for the better distribution thereof, especially as regards those which are most felt by the poorer classes (Applause). Other laws, intended to improve the political and economical administration of the State, the organisation of the courts of justice and public instruction, will be again presented to you for discussion.

Senators and Deputies,—In the important mission confided to you you will give proofs of that prudence, activity, and constant devotedness to the interests of the country for which you have hitherto rendered yourself conspicuous We shall thus continue to afford the noble example of a King and a nation united by indissoluble bonds of affection and confidence, whether in joy or in sorrow (Loud applause), and always unanimous in upholding order and liberty—the two great bases of public happiness (Enthusiastic applause)

At the sitting of the Chamber, on the 14th, the President, Boncampagni, in thanking the Deputies for the honour they had conferred in electing him to that office for the third time, made some noteworthy remarks on the present crisis. Referring to "the grave duties" imposed on him by that situation, he went on to say

In the exercise of these functions and in the performance of our common labours, I derive new confidence from the unanimity which exists between the Throne and the nation in this—namely, love for the free institutions which embody the spirit of progress and of modern civilisation, and devotion to the constitutional monarchy of Savoy, whose destinies are irrevocably bound up in those of Italy

The unanimity and accord of these sentiments will triumph over the difficulties incessant to the government of States, and more serious, perhaps, in our days when all people look with anxiety towards the future, and prepare to endure sacrifices which the wisdom of your deliberations may render less heavy. From him which no human power can free us. Happy are we, nevertheless, to have maintained intact in the midst of such grave difficulties—thanks to the loyalty of sovereigns and to the moderation of the people—parliamentary institutions which unite so indissoluble alliance the majesty of the Crown and the freedom of the subject. Happy to have kept safe that flag, the symbol of liberty and independence which floats upon the palace, the parliamentary assembly, and the battle-field, where the destinies of European civilisation are being decided, and where the bravery of our army has surrounded it with a glory which Piedmont salutes as the presage of great prosperity and noble destinies (Loud applause)

AMERICA

The steam-ship *Africa*, which left Boston on the 7th inst., arrived at Liverpool last Sunday evening. The news of the English squadron having sailed for the West Indies had been received, and had not produced so much excitement as was feared. Respecting the difference with England the *New York Herald* has the following from its Washington correspondent, who writes on the 5th:—"By the last foreign mail, which arrived here this morning, highly important despatches were received from our Minister in England, all of which, I understand, will be considered by the Cabinet to day, and it is believed have reference to Mr. Crampton's difficulty, the whole of which will be developed in a day or two." The same paper says:—"We have received by the *Baltic* a letter from a reliable source in Paris, communicating the important fact that the old Cuban imbroglio has been very recently revived in a most belligerent shape between Mr. Buchanan, our Minister at London, and Lord Palmerston, the British Premier." The United States' Commissioner in the Mediterranean had written for a reinforcement of a steamer and a sloop in consequence of the probable state of affairs on the Continent, especially at Naples.

It is stated that in Kansas a secret military organisation had taken place, designed to control the affairs of that territory, and to resist the execution of any law passed by the territorial Legislature.

Advices from Matamoras state that from 4000 to 5000 men had been ordered by the Mexican Government to the northern frontiers to repel the Texan rangers. Vidauri was appointed Commander-in-Chief in the Rio Grande, and had ordered the commanding officer at Matamoras to discharge the National Guards, which the latter refused to obey. Vidauri had addressed a note to Secretary Marcy complaining of the violation of Mexican territory, and charging the Commander at Fort Duncan with connivance with the Filibusters.

Advices from Nicaragua report that General Walker, having been reinforced by a small party of Californians, on the 12th ult. embarked at Virgin Bay on board the steamer *Virgin*, and before daylight next morning landed within four miles of Granada. After a rapid advance the expedition reached the city, and gained the Malaxa without encountering any serious resistance; but here a sharp contest ensued which resulted in a loss to the enemy of 15 killed and 40 severely wounded. General Walker afterwards took possession of the capital of Nicaragua. Subsequently the fact was captured by a detachment of Americans. Order having been restored, the citizens of Granada held a public meeting and tendered to General Walker the Presidency of the Republic, which honour he declined in favour of General Corral. Colonel Wheeler, the United States' Minister to Central America, after much solicitation, proceeded to Rivas with propositions of peace. Arriving at Rivas and learning that General Corral was absent, Colonel Wheeler attempted to return, but was prevented by the Governor, and detained two days, nor was he released until the town was threatened with an attack. This breach of faith on the part of Corral's forces led to a correspondence between the United States' Minister and the General. On the 22nd Corral surrendered; a treaty of peace was formed; and thus Walker's victory became complete.

A dreadful accident had occurred on the Pacific Railroad, which had precipitated 700 persons into the river, killing 30 and wounding about 50

THE WAR IN THE CRIMEA.

PROPOSED BOMBARDMENT OF THE NORTH FORTS.

The latest news from the Crimea consists of a telegraphic message from Marseilles, with an abstract of the news brought by the steamer *Indus*, which left Constantinople on the 19th instant. Admiral Bruat has arrived at Constantinople with the French Black Sea fleet, having on board two brigades of the Imperial Guards. Eight regiments of the line will likewise return to France. The exportation of corn from Turkey had been prohibited, and the importation had been declared free for three months. General Vivian had arrived at Kertch. General Wrangel was stated to be menacing the Allies' position at the strait of Yenikalé. The Allies had 30,000 men to oppose any attempts which General Wrangel might make, and expected to be reinforced by 15,000 men.

From Sebastopol there is nothing; but it was stated in Paris on Wednesday, in quarters whose information has often proved correct, that, although the winter will put a stop to field operations in the Crimea, it is the intention of the Allied Generals to subject the northern part of Sebastopol to a bombardment of mortars, which will probably have the effect of deluging the enemy from Forts Constantin, Constantine, and their vicinity. It is stated that the floating batteries, whose efficiency and invulnerability was so effectually tested at Kinburn, will take a prominent part in the attack, while twenty-six batteries, armed with mortars of the heaviest calibre, will deluge the Russian forts from the southern shore. Eighteen of these batteries will be manned by French and Sardinian troops, and eight by the English army.

THE CZAR'S RETURN FROM THE CRIMEA.

A telegraphic despatch from St. Petersburg announces that the Czar has at last returned from his tour of inspection in Southern Russia. In his journey he has, no doubt, picked up a large amount of valuable information, which will enable him to form a shrewd guess as to what the real state of affairs is, and what chance there is of his being able to mend the condition of "Holy Russia" by carrying on the war till the end of 1856. The *Invalide Russe* gives the following details of the Emperor's visit to the Crimea, but it maintains a prudent silence as to the actual state of affairs. All it ventures to say is, that the soldiers whom the Emperor saw are healthy and vigorous:

His Majesty the Emperor left Nicolaieff for the Crimea on the 7th of November at half-past ten a.m.; he passed through Perekop the following day, at eleven in the morning, and continued his journey by way of Simpheropol, where he arrived at half-past eight in the evening.

His Imperial Majesty was received in that town by Prince Gortschakoff, Commander-in-Chief of the land and sea forces in the Crimea, and on the 9th of November he left, at ten a.m., for Baktchesarai.

During his journey the Emperor inspected different divisions of the army in the Crimea, and on the 10th of November his Majesty visited the troops in the advanced positions from the north side of Sebastopol, as far as Mackenzie's Farm.

In these different inspections the Emperor was completely satisfied, not only with the perfect state of these brave troops, but still more so with their healthy and vigorous appearance.

His Majesty left the Crimea on the 12th, after having inspected the army in the positions of the Belbec, Joukarika, Ralessa, on the Katcha, and in the village of Taschbastu.

The latest reliable accounts from St. Petersburg give a gloomy picture of the state of feeling regarding the war among the higher classes; nor is it much wonder, when we look at the rapidity with which Russia has been using up what it calls the "raw material of war." According to a statement in the *Augsburg Gazette*, the levies made since February, 1854, have already called up two thirds of the "whole fighting strength of the Russian Empire." At this rate another year will see Russia at a much greater loss for men, which is her chief wealth, than either France or England can possibly be.

ALLEGED SWEDISH ALLIANCE

From the enthusiastic manner in which the Swedish people have received General Canrobert there can be no doubt as to what the wishes of the Swedish are, and, if report speaks truly, the King has resolved to respond to these wishes. The Paris correspondent of the *Times* (writing on Wednesday) says —

The rumours alluded to yesterday with reference to the mission of General Canrobert to Stockholm are stated on good authority to be well founded, and no doubt appears to be entertained that he has succeeded in his object. The terms of a military convention have, it is affirmed, been agreed on, in virtue of which Sweden will furnish a contingent next spring, to act conjointly with us in the event of peace not being made before then, and her gun-boats will co-operate with our fleet in the north. It is also stated that an army, composed of French, English, and Swedes, will be sent to Courland, so that both Austria and Prussia will be forced to declare themselves. The inducement offered to Sweden to take the important step is authoritatively stated, but there can be no difficulty in believing that the restoration of Finland, so dear to the hearts of the Swedish people, is one of the principal conditions of joining the alliance. Thus Russia finds herself gradually hemmed in, and if she does not come to terms we fully expect next year will witness events as great as, if not greater, than any that have yet occurred. The effect produced on Poland by an Allied army occupying Courland is not difficult to foresee, and from that moment Austria and Prussia may have quite as much to dread as our present enemy.

The Paris correspondent of the *Post* (of the same date) contradicts this statement. He says:—

I am able to assure you that there is no foundation in the report of General Canrobert having been instrumental in forming an alliance with the Western Powers, which would cause Sweden to declare war with Russia. General Canrobert may have satisfied himself as to the naval and military resources of Sweden, but nothing more. The relations between the Government of Stockholm and those of France and England are precisely what they were before the General's departure, highly satisfactory. The French General has received a most cordial welcome from the King, the Court, and the people. He will proceed to Denmark on his return to Paris.

ANOTHER DEFEAT OF THE RUSSIAN ARMY IN ASIA.

The letters from Constantinople received by the last steamer speak of another defeat of the Russians in Asia; but the details are so scanty that it is difficult to ascertain the precise facts of the case. The scene of this new disaster for the Czar is in Circassia, where Naib Mohamed Emir Pacha is said to have succeeded in collecting together a force of 20,000 men, and at their head marched in the direction of the Kouban, to take possession of the mountain passes leading across the Caucasus into Georgia. He soon made his position so hot for the Russians that they could not get their caravan of bat horses, laden with ammunition, from side to side. The enemy had now to make his way back, with his troops cut up, discouraged, and half-starved, toiling their way through rocks and roads, nearly impassable, and rendered more so by the opposition taken up by the mountaineers on the heights. Besides these difficulties, Mohamed Emir Pacha's men harassed them at every step, and disorganisation spread itself among the Russian ranks; and when they reached Kars Thay, on the border of the land in the possession of Russia, they fell into an ambuscade of the Circassians, commanded by the Pacha in person. The enemy was quickly put to the rout, with the loss of four guns and all their ammunition and baggage. The Russian commanding officer succeeded in making his escape, but eleven officers and 134 men were taken prisoners. Mahomed Emir Pacha, in his official despatch to the Porte, speaks favourably of the Abasza chiefs. He says they fought with great courage, and displayed unparalleled valour.

As regards the victory gained over the Russians by Omer Pacha, the Turkish despatch, dated Constantinople, Nov. 15, gives the following particulars:—

On the 6th of November the troops under the orders of Omer Pacha forced the river Aankara, or Ongour, in Georgia, under a terrible fire. The river was defended by 16,000 Russians, and our soldiers were in water to their waists. The Sultan's troops attacked the Russian redoubts with the bayonet, and carried them, notwithstanding the desperate defence made by the enemy. The Russian troops were completely routed, and took to flight. We have taken five guns, seven powder-carts, and forty prisoners. The Russians have left more than 400 dead on the field of battle, among whom are two superior officers and a hundred subalterns. Our loss is sixty-eight dead and 223 wounded.

A despatch of the French Ambassador, dated Pera, Nov. 14, although differing on one or two points, evidently relates to the same affair. It says:—

On the 5th Omer Pacha forced the passage of the Ingour. The enemy's army was composed of 8000 regular troops, and about 12,000 Mingrelian and Georgian militia. After a combat of five hours, in which the Russians suffered severely, the Turks crossed the Ingour at four points. The Generalissimo is marching upon Kutais.

From Trebizond we learn that the Russians have sent from Kars to Alexandropol the greater portion of their baggage. This seems to indicate that they were about to raise the blockade of Kars. The besieged had succeeded in opening their communications.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

A LONG-LOOKED-FOR book has just made its appearance. Who that is at all curious about old English literature and music has not seen, or at least heard of, Mr. Chappell's charming work on the "Old National Airs of England"? We well remember its appearance. We could quote, were it necessary, twenty different works of established authors in which it is authoritatively referred to. We have never seen a human being to whom it has given anything but delight. Old Tom Killigrew was a fool when he said that English music was confined to "marrowbones and cleavers." What fine old airs we have! Who does not delight in

> Sellinger's Round
> And Packington's Pound,

in the "Hunt is Up," and other airs? Well, here we have them (thanks to William Chappell) in their pristine purity, just as they charmed Queen Elizabeth and Sir Philip Sidney. Here they are in the very notes and words which Sir Walter Scott would have loved to hear from the lips of Sophia Lockhart. There are other charms in these four parts (four out of sixteen)—they are full of the most recondite learning on the music-literature of England told (thank you, William Chappell) in the pleasantest manner.

Lord Brougham is about to publish, in his "Works," his contributions to the *Edinburgh Review*. His Lordship, with that manliness of nature so characteristic of his career, will include in the series the far-famed review of the "Hours of Idleness" the review which occasioned the famous satire of "English Bards and Scotch Reviewers." The prevalent feeling seems to be that Brougham only spoke the truth about the volume. In the "Hours of Idleness" it is impossible to recognise a true poet. There is no promise in it of "Childe Harold," or of the satire itself.

Lecturing seems all the fashion. Peers and poets—even antiquaries—are smitten with the disease. Lord Stanhope (Mahon) is lecturing; Tennyson, it is said, is about to inform the Isle of Wight about Crashaw and George Herbert (the author of "In Memoriam" must be well up in both poets); Colonel Rawlinson has engaged the *solemn* theatre at Oxford (not at the request of Plumptree) for the purpose of talking about cuneiform inscriptions; and Mr. Peter Cunningham, at, it is said, the request of Mr. Macready, the great actor (we have now, but few), is advertised to deliver a lecture at Sherborne, in Dorstshire, on what does the reader think?—Temple-bar:

The Germans are even more alert than ourselves in doing honour to Shakspeare. We have before us while we write the first number in "imperial folio"—of a series of illustrations of our great poet, published at Berlin, and dedicated to Queen Victoria. Each number will consist of three plates. The first illustrates "Macbeth," and worthily illustrates that great tragedy. Actors, artists, and even commentators, may learn much from this Berlin Shakspeare gallery.

The *Times* portrait of Shakspeare (certainly a portrait of Shakspeare's period, Dr. Waagen asserts) is now on sale in Paris. The portrait was given to the great actor by, we are told, an English nobleman. It is little known in England. We shall be curious to hear what, in this advanced age of knowledge about Art, critics and connoisseurs will say about it.

A corresponde nt, who gives his name (and his opportunities of being well informed on every literary subject are not to be doubted) writes to remind us that Mr. Lockhart did, on one occasion, refer in the *Quarterly* to Sir Edward Bulwer Lytton. There is no separate article in the *Quarterly*, as we stated with the time, the great novelist; but Mr. Lockhart wrote about him, and somewhat pointedly, in an article on Moroer's "Zohrab the Hostage." This was in 1832, and Sir Edward (then Mr.) Bulwer replied in an article in the *New Monthly Magazine*, of which he was then the editor. Mr. Lockhart made no rejoinder. While on this subject we may add that Mr. Lockhart and Sir Edward met for the first time a few years ago; that they were introduced to one another by a common acquaintance; that the meeting was most cordial; and that Bulwer, the next day, wrote to Mr. Lockhart a manly letter of satisfaction at the friendship he had just formed, and the animosity he had now forgotten. They met at a Royal Academy dinner. Two such men, who had so much in common, should have known one another earlier.

There is a passage in Mr. Tite's valuable evidence before the recent Committee on London Roads that cannot be made too public

I will give another remarkable instance. In Cornhill, at the corner of St. Michael's-alley, there were four houses which belonged to the parish. The houses became dilapidated, and the parish resolved to pull them down and let the land, reserving enough to show the whole of the beautiful church tower down to the bottom. It is exactly one-fortieth part of an acre. The improved ground-rent which the parish obtained for that piece of ground, under these altered circumstances, is £900 a year more than the rent that was previously paid for the whole block of houses.

Here this, ye churchwardens of St. Bride's and St. Botolph's! In this church, *now* happily a piece of *street* architecture, was baptised the author of "An Elegy in a Country Churchyard." The improvement was made with what Lord Chatham called "the *prophetic* eye of taste."

There is a class of letters to which our contemporary the *Times* gives undue prominence. Under this head we may mention the recent series of letters on an alleged wanton destruction of works of art. This underhand system of advertising has been going on for near a month, and has now happily ended in a letter from the alleged "Vandal" himself—Mr. Boys, the printseller. Our readers will recollect that we called attention to this subject some time back, and put the matter in its true light. We wish we could agree with Mr. Boys in thinking that the places when destroyed were in "fine condition." Were they not worked almost bare?

It has seldom been less easy to impute to the restorers of our ancient church buildings the odium of having destroyed the poetical associations of the past than it is in the instance of the recent works in the interior of Westminster Abbey. Here at least we have no room for the indulgence of those regretful reminiscences which in such works are so often provoked. The greatest stickler for conservatism in matters of the kind can in this case deplore the loss of no greater historical relic or time-worn beauty than was represented in that monstrosity of modern carpentry which, until a few years since, formed a kind of packing-case for the grandest cathedral choir in England. Of the earlier proceedings in the choir restorations—by which the old deal fittings were exchanged for Mr. Blore's elaborate, though by no means unexceptionable, oaken stalls and seating—we have now but little to remark; nor does our present purpose lead us to discuss the propriety, or lack of that quality, of design in the new stained picture-glass that has been introduced into the fine rose and other windows of the south transept. Our notice is confined to the doings of the past twelve months, during which time the choir has been enriched by several noteworthy additions, comprising a pulpit in Purbeck marble, polished, a pair of wrought-iron ornamental screens, and a stained-glass window in the clerestory. The new pulpit and screens are from the designs of the present cathedral architect, G. G. Scott, Esq., A.R.A., whose recent election to academic honours has been endorsed by the expressed satisfaction of all to whom it is of importance. The designs for the window were furnished by his pupil, Mr. Alfred Bell, a young architect and artist of the greatest promise.

The pulpit has been worked in Purbeck marble of the very finest quality, and is of a proportion and character that at once stamp it as cathedral-like and appropriate. It has been planned in two octagons, the upper and smaller of them being reversed upon and contained within the lower, while, by a very artistic introduction of bold mouldings and sculptured spur ornaments, the opposing octagons are blended and perfectly harmonised. On the sides of the upper portion are six quatrefoil panels, from which are projected sculptured busts of S.S. Matthew, Mark, Luke, John, Peter, and Paul—the value of which carvings, in affording shadow and points of enrichment, in contrast to the general simplicity of the work, will be readily detected; and, on similar grounds, will be remarked the influence of the belt of foliated carving in circles under the quatrefoils. On one of the angles of this upper portion is an engaged shaft, which, with the displayed eagle in its capital, forms the support to the book-desk. The whole is surmounted by a set of cornice-mouldings, with a trefoil brattishing enrichment. Some experimental decorations of gold have been applied to the carved and some of the moulded portions of the work with but partial success. The intention here, however, is a good one; and we hope to see it followed out to ultimate success, as the grey-green of the marble and colour of the gold harmonise in the pleasantest manner. The execution of this work was intrusted to Mr Samuel Cundy, of Pimlico, who has most ably discharged his trust, and given ample evidence of his executive skill in such subjects. The pulpit is worthy of the noble building.

The erection of the iron screens has arisen from a necessity which has been forced upon the Chapter by the unblushing effrontery of those numerous visitors to the Abbey who, during service, come neither to scoff nor pray, but to stare and perambulate from transept to transept, to the great annoyance of the worshippers and disturbance of the minister, under whose book-desk these migratory visitors do not scruple to pass and repass. The entrance to the Abbey being by the transepts, these intersecting as they do with the choir at the eastern part, between the stalls and altar, no doubt prompted and offered facilities to the practice alluded to. The evil has, however, been effectually repressed by the erection of the screens. These have been fixed in line with the stalls across the transepts, thus inclosing the choir from end to end. Of the character of design and execution which marks this specimen of modern Art-workmanship in wrought iron we must speak in terms of the highest commendation. While the purpose sought has been perfectly attained by these screens, they do not in any way obstruct the magnificent view across the transepts. In height these beautiful barriers do not exceed six feet. Their lower portion is treated in an ornamental manner that bears some relation to the grille of Queen Eleanor's tomb. For the upper part a treatment of geometric foliations has been adopted, and here we think the ecclesiastical character is somewhat too strongly pronounced, a defect which has been rendered more prominent by the over-working of the mouldings, in which the life-giving effect of the hammer is lost. But beyond this there is nothing to qualify the praise that must be accorded to the work. To Mr. Potter, the metallurgist, of South Molton-street, the executive merits of the screens are due.

The new clerestory window contains two effigy figures, of a scale perhaps a little too small to be perfectly effective. The glass is highly coloured, and of a character corresponding with the era in which the building was reared. The window was executed at the establishment of Mr. T. Ward, of Soho.

THE KING OF SARDINIA.

The King of Sardinia landed at Marseilles on Thursday, and was received with becoming distinction by Count Ney, Aide-de-Camp to the Emperor Napoleon, Viscount de Cateneglano, his Chamberlain, and Colonel Valabregue, his Equerry. His Majesty was to arrive at Lyons on Thursday, and rest for the night. The entry of the King into Paris was expected to take place yesterday (Friday) afternoon.

His Majesty will arrive in England, for a stay of five days only, during the first week in December.

The Queen will receive the King at Windsor, where preparations on a scale of fitting magnificence have been made for his Majesty's accommodation. The details of the visit have not yet been completely settled, but arrangements have been made for a visit to the city of London, to the Crystal Palace, and to Woolwich. When the King leaves England he will be conveyed to Belgium by an English vessel of war. His Majesty will arrive at Dover in a French ship.

At the Court of Common Council on Thursday, it was resolved that an Address of Congratulation be presented to the King of Sardinia.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

I thoroughly appreciate all that you have written respecting the approaching advent of his Majesty the King of Sardinia, and I sincerely trust the welcome we come may be given him in England as his enlightened policy demands. In England, however, it must, I think, be admitted we have but little to offer to a Sovereign as a popular demonstration except the pa.ds of such large multitudes as may be able to spare time to congregate in the streets along which he may happen to pass. A few flags decorate these thoroughfares, but they usually represent anything but the flags of those to whom the honour is desired to be shown. Such fantastic shapes and combinations of colours were, I think, never witnessed as when the Emperor of the French honoured us with a visit. Surely, Sir, with the large and influential circulation of your paper, you may suggest to London generally that the flag of Sardinia is a tricolor—viz., *dark* green, white, and red—the colours placed vertically, with the green next the flagstaff, and on the centre of the white ground there is a scutcheon of Savoy, red with a white cross, surmounted by a crown. If this were generally known it might, perhaps, prevent mistakes which have been observed, even in high places, respecting the flag.

A SUBSCRIBER.

THE SARDINIAN FLAG.

BIRMINGHAM AND THE MIDLAND INSTITUTE.

On Thursday his Royal Highness Prince Albert paid a visit to Birmingham, for the purpose of laying the first stone of the above Institute, the object of which is the promotion of science and art amongst the middle and working classes.

The Prince arrived at the Great Western station from Windsor at half-past twelve o'clock, where he was received by the Mayor and Corporation and the Council of the Institute; addresses were delivered, and then a procession was formed to the site of the proposed erection, closely adjoining the Town Hall. The Prince and his suite (the latter being unfavourable) were in the Royal carriages. In the town the occasion was observed as a holiday—flags, banners, and arches of flowers and evergreens were displayed along the whole route; and thousands of people lined the streets, windows, and house-tops.

His Royal Highness was received everywhere with the utmost enthusiasm. At the spot appointed the Prince received an Address from the Council of the Institute, laid the stone, and then proceeded to luncheon in the magnificent Town-hall which was crowded in every part; the galleries being filled with ladies, and upwards of four hundred noblemen and gentlemen participating in the entertainment. The Prince made an admirable and thoughtful address, on art and its cultivation by the masses. A powerful choir sung some novel and exquisite pieces.

About four o'clock the Prince took his departure from the Hall, amidst every demonstration of respect, and in a few moments after was on his way to Windsor. The whole affair was a complete success.

Strange as it may seem, Birmingham, with its immense population is, up to the time we write, without the many advantages which a public scientific institution, with its libraries, reading-rooms, lectures theatre, public and class instructions is so well calculated to afford. It is greatly to the honour of the promoters of the Birmingham and Midland Institute that they have determined to wipe off this reproach from their flourishing city and have, without distinction of class or sect, boldly come forward to found an institution the advantages of which can hardly be overrated. It is intended eventually that the building shall contain, under one roof, museums, libraries, record-rooms, a large lecture-theatre, and club-rooms; besides which, one entire floor is to be placed at the disposal of the Government School of Design, and another is to be devoted to class

instruction in chemistry and geology, as more especially bearing upon the industrial pursuits of the midland district. Before these objects can be attained, an outlay of at least £20,000 will be necessary, but as at the present time, in spite of much liberality, the subscriptions barely amount to half that sum, the Council of the Institute can only undertake the erection of a corresponding portion of the design. It is hoped, however, that the friends of Science and Art, and of education generally, will sympathise with the objects of the Council, and will enable them to carry out in its integrity their entire plan, so important in its educational bearing upon the manufacturing interests of the kingdom.

The building is to be in the Italian style, according to the designs of Mr. Edward M. Barry, architect, of 1, Old Palace-yard, Westminster, whose plans were selected in competition. The design, as may be seen in our View, is exceedingly appropriate, and reflects great credit on the talents of the architect. The interior of the lecture-room is admirably adapted to its purpose and position. It is a matter of regret the funds do not allow the architect a wider field for his exertions. The edifice is to be erected opposite to the Town-hall, and the necessities of the case have enforced a simplicity of treatment and a sparing employment of ornament.

HIS EXCELLENCY THE MARQUIS D'AZEGLIO, THE SARDINIAN AMBASSADOR.

HIS EXCELLENCY THE MARQUIS D'AZEGLIO, THE SARDINIAN AMBASSADOR.

Victor Emmanuel Taparelli Marquis D'Azeglio belongs to one of the oldest families in Piedmont, and one of considerable distinction at the present time.

The name of Taparelli is quoted in Novelli's "History of Savigliano" and Muletti's "History of Saluzzo" as belonging to one of the leading families in the small republics that divided that part of Italy as far back as 1100. They hold even now the feudal castle of Lagnasco, near Saluzzo, which one of the Sovereign Marquises of Saluces, taken prisoner by Prince d'Achaia, sold (to pay his ransom) to Petrino Taparelli in 1342. Another branch of the family settled in Saxony during the reign of the Electors Kings of Poland, and were rewarded by the highest honours for their services in the military and diplomatic careers.

The Marquis here represented was sent as Attaché to Munich and Vienna; he then acted as Charge d'Affaires at the Hague, Brussels, St. Petersburg, and Paris; lastly, he was appointed Envoy in London, at the age of thirty-four.

His father, Marquis Roberto d'Azeglio, has done a great deal in Piedmont towards promoting education in the lower classes, and securing to Protestants and Jews the same civil rights as those enjoyed by Catholics. He is, besides, a distinguished writer in fine arts.

He is a member of the Upper House, as well as his brother, Massino d'Azeglio, who is justly admired as a statesman, as a political writer, as a soldier, a novelist, and a painter. He married the daughter of Alessandro Manzoni. If we add that the mother of the Marquis Costanza Alfieri belongs to the family of the greatest tragic author in Italy, it will be seen how many distinguished associations are connected with this family.

GENERAL KOKONOVITCH SURRENDERING HIS SWORD.

This scene, of which our Artist has given a Sketch, took place on the 17th ult. When the flag of truce was waved from the parapet, two boats, each with a flag of truce, pushed off from the English and French Admirals' ships, and at the same time Sir Houston Stewart proceeded to shore near the battery, where he found the French General advancing to parley with the Governor. Major-General Kokonovitch advanced with a sword and pistol in one hand and a pistol in the other, threw down his sword at the officer's feet, and discharged the pistols into the ground, or at least pulled the triggers with the muzzle pointing downwards, in token of surrender. He was moved to tears, and as he left the fort he turned round and made some passionate exclamation in Russian, of which the interpreter could only make out, "Oh, Kinburn! Kinburn! glory of Suwaroff and my shame, I abandon you!" or something to that effect. As the garrison marched out they were ordered to pile their arms, but many of them threw them on the ground at the feet of the conquerors, with rage and mortification depicted in their features. It appears that the second in command—a Pole by birth—inflamed by courage and its Dutch ally, declared he would not surrender, and that he was prepared to blow up the magazine before the enemy should enter. He was supported by the officer of engineers and by the officer of artillery. Amid the crash of falling buildings, the explosions of mortars, the thunder of the fleet, and the smoke and flames of their crumbling batteries, the Russians held a hasty council of war, at which it was put to the vote whether they should surrender or not, and the majority carried the question in the affirmative, on the side of humanity and reason. In vain the fanatic Pole, the artilleryman, and engineer, tried to persuade the Governor and the majority to persist in the madness and folly of continuing their passive resistance, for active opposition was out of their power. "We can hold out for a week," said they. "What then?" asked the Governor. "You have not been able to fire a shot for three-quarters of an hour. Are you likely to be in a better state two hours hence, and, above all, where are the men to live meantime?" Such arguments, enforced by tremendous broadsides and by the knocks of the Admirals with cannon-balls against every side of the fort, prevailed, and the white flag was hoisted, much to the satisfaction of every humane sailor in the Allied fleet, the men of which could feel no pleasure in destroying a brave enemy, and much more to the gratification of those who were allowed to cease a demonstration of hopeless courage. Kokonovitch wept as he threw down the pen with which he signed the articles of surrender, but he had no reason to be ashamed of his defence. By the capitulation the garrison were permitted to retire with everything except their arms, ammunition, and guns; the officers were allowed to wear their swords, the men to carry off their knapsacks, clothing, regimental bugles, church property, relics, and pictures. When the Major General was asked to use his influence or to give a pledge that no harm should befall the Allies who might enter the place, he said he would do so; "but at the same time I must tell you," added he, "that the flames are at this moment very near the grand magazine." This was a friendly caution which produced, of course, a corresponding effect, and steps were taken at once to prevent any such lamentable losses as were caused after the evacuation of Sebastopol by the rashness of the troops.

THE MIDLAND INSTITUTE, BIRMINGHAM.

SURRENDER OF THE RUSSIAN GENERAL AT KINBURN—SKETCHED BY J. A. CROWE, ESQ.

CALENDAR FOR THE WEEK.

SUNDAY, Nov. 25.—25th Sunday after Trinity.
MONDAY, 26.—Dr Watts died, 1748 Lord Lyttelton died, 1779.
TUESDAY, 27.—Princess Mary Adelaide born, 1833.
WEDNESDAY, 28 Revolution in Poland, 1830. Goldsmith born, 1713.
THURSDAY, 29.—Sir Philip Sidney born, 1554.
FRIDAY, 30.—St Andrew. Duke of Gloucester died, 1834.
SATURDAY, Dec. 1.—Emperor Alexander I. of Russia died, 1825.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING DECEMBER 1, 1855.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 24, 1855.

RUMOURS of peace grow with the wintry nights. They give speculators and jobbers something to operate upon. They afford theses for the diplomatists of Germany, and are encouraged systematically by all the Philo-Russians of Europe. The reasons are obvious. Every statement that peace has been offered by the Allies, and every allegation that Prussia or Austria is anxious to play the part of umpire between the mighty belligerents, is a tribute to the power of Russia. They imply that the Allies are not likely to be offered peace by their opponent, or to be able to dictate it without the assistance of the other Powers of Europe. Even the rumour that Leopold of Belgium, a Philo-Russian, though he ought in gratitude, if not from the ties of relationship, to have been a Philo-Anglican, has volunteered the aid of his wisdom and experience to bring the dispute to a termination, has been favourably received by all who would exalt Russia at the expense of the Allies, and by all that class in this country which is swayed by the arguments of Mr. Gladstone and Mr. Bright, or which looks upon war and the loss of money as far greater evils than the loss of honour and of national position. But all these rumours we believe to be pure inventions, suggested by Russia in the first instance, and caught up and promulgated by weak and thoughtless persons, who are unable to perceive or appreciate the magnitude and significancy of the struggle. Peace is always to be desired;—always to be kept in view by nations and by those who govern them, and is the end and object of all war that is not a war of savages and cannibals, or fiends in human guise. But it cannot be too often repeated that peace without honour is but a truce—a lull in the storm of strife; and that the nation which accepts peace, not because peace is honourable and right, and based upon sure foundations, but simply because war is inconvenient and costly, and accompanied by many calamities and horrors—invites the warfare which it is unable to repel, and points out to the strong and unscrupulous aggressor the point of attack, and the readiest victim to bind to his car of triumph.

The excellent speech of the Emperor Napoleon at the close of the Great Exhibition—a speech full of pith, meaning, and purpose—designates a peace movement, which had it been made two years ago would have rendered war impossible. It is the cowards and trimmers who have forced Europe into hostilities. It is the cowards and trimmers who prolong the war. It is the neutrality of Prussia, and the hesitation of Austria, that encourage the Emperor of Russia to fight it out to the last. Had they declared themselves against him at the outset, the Russian armies that crossed the Pruth, would have simply recrossed it, and there would have been an end. But they were false to their subjects and to themselves, and the fire which they might have extinguished with ease has spread into a mighty conflagration, from the flames of which they will be more fortunate than they deserve to be, if they escape uninjured. Let them ponder well the words of the French Emperor—words which will find an echo in every honest heart in Europe—and which define the position of Austria and Prussia with the precision of genius, and the broad common sense of the statesmen and philopher:—

"You should, each of you desire, as I do, that peace should be prompt and durable.

"But to be durable, it should clearly resolve the question from which the war emanated. In brief, Europe must pronounce herself, for without the pressure of general opinion the struggles between the great Powers only threaten to be prolonged; whilst, on the contrary, if Europe decide to declare who is right and who is wrong, it will be a great step towards a solution.

"In the present state of civilisation at which we have arrived the success of the armies, however brilliant they may be, are only transitory. It is decidedly public opinion which always carries the last victory.

"In the midst of a grave European conflict, indifference is a false calculation, and silence an error."

No mere words, such as those which King Leopold might employ, will end this great struggle. If Prussia and Austria—awake to the knowledge that their indifference is indeed a false calculation, and their silence an error—will tell the Czar that if he do not yield to the demands of the Allies they will try whether their swords are not strong enough to compel him to do so, a speedy peace would be almost a certainty, and the peace-mongers of the Manchester, Oxford, and Brussels schools might stand aside and allow the world's business to be carried on by those who understand it. Unfortunately for Prussia and Austria, the solemn warning of the French Emperor is likely to be thrown away upon them. If hereafter the avalanche of war should roll in their direction they will have none but themselves to blame for the catastrophes that may accompany it.

THE Emperor of Russia has visited the province which is not likely to receive him again as even its nominal lord. He has inspected what remains to him of armies and fortresses in the South, and has had the more time to do this from the circumstance of any naval review making no demand upon the Imperial attention. The Navy of the South, in fact, has now been captured by the Allies, and we observe that preparations are being made to remove the sunken prizes. The Czar's praises are everywhere lavished, and, so far as the skill of his Generals and the courage of his soldiers are concerned, it is impossible that he should applaud too much. The bombast and the fallacious predictions with which these laudations are environed may also be forgiven to a Sovereign addressing a semi-civilised audience. The miraculous picture of St. Sergius, which had been selected from among his relics by the Patriarch at Moscow, and after being enveloped in a case embroidered by Royal fingers, has been taken to the Crimea by the Emperor, is to do wonders when the conflict is renewed; and the Czar returns home, satisfied that the defences of his dominions are being strengthened at every possible point, and awaiting the unfurling of this pictorial oriflamme.

It is not an unfavourable moment for a glance at the state of the war, and the relative situations of the antagonists. Let us first look to the North. Here the physical campaign is over; but, unless diplomatists are over sanguine, a great victory is being now won. Our giant ships are returning home, and ice is thickening round the harbours which it will shortly blockade. The events of the campaign in the Baltic have been few and far between; but, according to the new member for Southwark, it is the fault of our Government that Sveaborg—instead of merely sustaining a terrific bombardment which destroyed, a million's worth of fortification, and, it is said, hundreds of lives—is not utterly destroyed. Had the Admiral, says his predecessor, been properly supplied with mortars Sveaborg would have been blotted out altogether. We have elsewhere remarked upon the future conduct of the naval portion of the war. Suffice it to say here that the blockade has been effectively kept up—so far as a blockade with a Prussian free passage for Russian goods can be effective. But if General Canrobert—whose reception at the Swedish Court has been most friendly, and for whom the greatest enthusiasm is shown by the Swedish people—succeed in inducing Sweden to become one of the allies, the campaign of 1855 will not have ended without a victory, the results of which may be invaluable to the Western Powers.

Passing southwards, we find Prussia still maintaining her humiliating neutrality, contrary to the wishes of her people, to those of the Heir to her Throne, and to those of her notables who have not been debauched by Russian gold. We find Austria in a still more degraded position, grovelling at the foot of the Sovereign Priest who is kept in his place solely by the bayonets of one of the Allies. Austria, however, is thought to have gained something by her crafty yet cowardly policy; and the question of the Principalities may yet take a complex form. It may, also, compel Austria to take part in the European struggle; and the very device upon which her cunning diplomatists plume themselves may precipitate the crisis which they have been so eager to avoid. At present, as regards the war, Austria may be described as the undeclared ally of Russia, and the benefactress who treacherously released a Russian army and sent it to combat the Western Powers.

So much for the European frontier. We now enter the seat of war itself, and the chapter of Russian disaster begins. The mouth of the Danube, lately a Russian lock, is ours. Odessa could be laid in ruins by two days of such a bombardment as crushed Kinburn, and we cannot understand why doubts on this subject are entertained, or why, after due warning to the inhabitants, the Liverpool of South Russia is not destroyed. Are we not weary of rose-water wars? Then the fortresses which were gained by Russia at such a cost, and were so naturally and highly prized by her, lie in ashes at the mouth of the Dnieper. Cherson and Nicolaieff are threatened. Crossing to the Azoff, the shores of that sea from Taganrog to Kertch are studded with triumphs of the Allies, and the boasted "nursery of Russian seamen" is hers no longer. It is but a few days since we heard that two miles of stacked provisions for the Crimean army had been seized and destroyed in the face of a powerful force of cavalry and infantry. Thence into the Crimea, and who need speak on the fall of the terrible stronghold that made Constantinople tremble, and kept the Euxine a Russian lake? What need to speak of the sunken navy, of the army around which the toils would seem to be drawn? To adapt Goethe's line—

We name thee, O "Sebastopol," and all at once is said.

Crossing to the Asiatic frontier, and what do we find under the shadow of the Caucasus? The Russian sea-fortresses are devastated and abandoned; and in Armenia a Turkish garrison, under every disadvantage and privation, but commanded by English officers, has successfully resisted and routed a fine Russian army led by Mouravieff, who was considered the first General in the Empire until Gortschakoff's brilliant defence of Sebastopol rendered such an estimate an injustice. Kars has been saved; nor is this all. A Turkish army, landed at Batoum and led by Omer Pacha, has advanced into Mingrelia, fought a desperate battle—in which everything but numbers was with the enemy, even to a position which seemed to render Russian defeat an impossibility—and the Ingour was crossed in four places: and by this time Kutais is probably in the hands of the victorious Turks.

The Emperor, we have said, has reviewed his forces in the South, and it is probable that the sight of much admirable fortification and many thousands of devoted troops has produced the effect which the display of material strength usually produces upon all but first-rate minds. He may now believe that the disasters of the war have not been really felt, and that events will take a favourable turn. He may shut his eyes to the fact that his merciless levies are draining away his population, and that this cannot be replaced—that the supposed inexhaustible resources of his empire are being exhausted with fearful rapidity. He may also undervalue the power and endurance of the Allies, and, misled by the mischievous peace-mongers here, may form a wrong estimate of the determination of the people at home. But the facts are before him, and before Europe, and in the rapid sketch which we have sought to give are included the signs and tokens by which the future historian will indicate the date at which the Northern Colossus began to totter to its fall.

Now that the Turkish army in Asia, by its victories at Kars and Ingour, has proved itself worthy of being named along with the heroes of Oltenitza and Silistria, it is worth while to consider what might have been the present state of affairs in that part of the Sultan's dominions, if the "clandestine compact" of Messrs. Gladstone, Cobden, and Disraeli to upset Government, last July, had been successful. Rumour has been busy for the last few weeks with the preliminaries of a new coalition of the Peelites, Protectionists, and Peace-at-any-price party, whose object will be, when Parliament assembles, to contend that everything has been ill-managed because their advice was not taken last summer. In order to show what claim they have to the confidence of the nation, let us take a glance at the debate on the Turkish Loan on the 20th July, when the member for the West Riding and the two ex-Chancellors of the Exchequer strained every nerve to turn Ministers out of office, and when, through the treachery and apathy of the present House of Commons, they had almost succeeded in doing so.

One of the strongest arguments employed by Lord Palmerston in urging the House to sanction the engagement of the Crown to guarantee the proposed loan was the poverty of the Sultan, whose finances had been exhausted by the expensive armaments he had been obliged to maintain for the last two years.—

Does any man doubt (said his Lordship) that the Turkish Government is in absolute need of this money? If apprehend nobody can doubt that. Does any man doubt, if this war is to be continued, that it would be a great misfortune if the Turkish army were reduced, from the want of means of supporting it, to a mere nullity, and rendered altogether incapable of co-operating with the armies of England and France? (Hear, hear.) I apprehend no man can entertain a doubt on that subject. If it is essential to the great operations in which we are engaged, that the Turkish army should be properly armed, clothed, equipped, and supported, it is necessary to give the Turkish Government means for that purpose.

But the members of the "clandestine compact" had no wish to see the Turkish army properly armed and equipped, or rendered capable of co-operating with the armies of England and France. They had prophesied failure, and they wished to see their prophecies fulfilled. Mr. Disraeli viewed the proposal of Ministers with great alarm, and advised the House to refuse to sanction it. Mr. Gladstone objected to the loan on technical grounds, and because he could see no case of urgency; while Mr. Cobden pretended to discover in Lord Palmerston's remarks so complete a confirmation of what he had always said regarding the ruined condition of Turkey, that he thought it would be absolute folly to carry on the war any longer. "The proceedings of that evening," he said, "afforded the most conclusive proof that, if they wished to save Turkey, the best thing they could do was to put an end to the war."

If any argument were wanted to show the necessity for a dissolution of Parliament, it might be found in the narrow escape which Ministers had on that evening. Notwithstanding all that was said by Lord Palmerston, as to the evils which must arise from negativing the resolution, the majority in favour of it was only *three!* He had shown that to adopt the course proposed by the motley Opposition would be equivalent to the postponement of the Loan to next Session, "a course which would be attended with the most disastrous consequences to the military operations of Turkey." He had thrown upon the House the responsibility of whatever calamities might befal that Power from our refusing "this efficient means of enabling her to maintain her army and her operations in the field." And yet no less than one hundred and thirty-two members of the House of Commons—many of them in defiance of the wishes of their constituents—voted against Government! Had they succeeded in their nefarious attempt to defeat Ministers, it is easy to guess what the result would have been at Kars and throughout the neighbouring provinces. At the very moment when France and England were rejoicing over the downfal of Sebastopol, the *Invalide Russe* and the *Journal de St. Petersbourg* would have been filled with the most enthusiastic reports of the capture of Kars; and in all probability the total destruction of the Turkish army in Asia. An English officer, writing from Erzeroum in June last, describes the condition of the army at Kars as "at the lowest ebb, ill-paid and worse clothed." If the Russian brigade in our House of Commons had had its will no means would have been taken to improve the condition of that army. Looking back, then, to that eventful discussion, it is not too much to say that the triumph of Ministers in Parliament was as signal a victory over Russia on the 20th of July as the repulses of General Mouravieff by General Williams and the brave troops under his command on the 29th of September.

RECEPTION OF THE HON. MR. HINCKS IN CANADA.—The reception accorded to Mr. Hincks by the people of Canada is the best indication that could be afforded of the high estimation in which he is held by men of all parties, and the popularity he deservedly acquired by his able administration of their affairs, under the government of the Earl of Elgin. The demonstrations which have rendered the progress he has been making through Canada, before assuming the duties of his appointment as Governor of Barbadoes and the Windward Islands, a continued ovation, reached their climax in the banquet given in his honour at Brantford, Canada West, where upwards of 200 gentlemen assembled, representing all shades of political opinion, and including all the leading men of four counties. In responding to the toast of his health, which was drunk enthusiastically, Mr. Hincks reviewed his public career, and, in referring to his present appointment, pronounced a high eulogium to the late Secretary for the Colonies. His appointment was Sir W. Molesworth's first act in that capacity, and to be honoured by the confidence of such a man, and to receive assurances of his support, was an additional source of gratification. When he left Canada nothing, he said, was further from his thoughts than such an appointment, which had been conferred upon him with the view of carrying out a new principle in the civil service of the Crown, and of allowing the disposition which existed on the part of the Imperial Government to place the claims of individuals who had won distinction in the Colonies upon an equality with those of persons in the United Kingdom. The situation he was about to fill being given him upon this broad principle, every Canadian must feel gratified by the honour conferred upon him. Another banquet, followed by a ball, has been given to Mr Hincks at Niagara Falls, and a third of these festive demonstrations was to take place at London. The entertainment on the former place was on the most magnificent scale, and the Ministry, the Legislative Assembly, and all Legislative Council were numerously represented.

IN its sitting of the 15th, the Germanic Diet adopted a vote of thanks to the British Government for permitting the free export of saltpetre necessary for the fabrication.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, NOV. 22

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Lowest Reading.	Mean Temperature for the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			
Nov. 16	30.267	42.2	24.2	32.7	— 10.0	88	N.E.	0.00

Note.—The sign — denotes below the average and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer gradually decreased from 30.21 inches at the beginning of the week to 29.78 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 30.03 inches.

The mean temperature of the week was 38.6° —being 3.6° below the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 23.3° —being the difference between the lowest reading of the thermometer during the week, 24.2°, on the 16th, and the highest, 47.5°, on the 18th.

The mean daily range of temperature during the week was 8.7°. The greatest was 18°, on the 16th, and the least 2°, on the 20th.

Rain fell during the week to the depth of rather more than one tenth of an inch.

The weather throughout the week was dull and gloomy, and drizzling rain fell occasionally. Fog was prevalent during the morning of the 18th.

JAMES GLAISHER.

HEALTH OF LONDON.—In the metropolitan districts during the week ending last Saturday the births of 1640 children were registered—885 being boys, and 755 being girls; exceeding their average number in corresponding weeks of the ten preceding years by 138 and 104 respectively. The number of deaths during the week was 975; of which 5.7 were males and 448 were females, being less than the average corrected for the increase of population by 177.

STATE REFORM ASSOCIATION.

A general meeting of the members and friends of this association was held on Thursday evening, at the Wheatsheaf Tavern, Hand-court, Holborn; Mr. Jonathan Duncan, the President, in the chair.

Mr. Matson, the secretary, read the manifesto of the association which was agreed to at a public meeting held at the Freemasons' Tavern in September last. It was received with loud demonstrations of applause.

The Chairman said they had now heard the manifesto of the association, and he took it for granted that they received it as favourably as it had been at previous meetings. To make these meetings more varied it was usual for speakers to take up different points. Some would speak on manhood suffrage, others on primary education. He should refer to the monetary question, which was considered dry, uninteresting, and repulsive, but it really was very simple, and would be very intelligible if people would attend to it a little. People, however, had been averse to considering the subject because newspapers in the interest of bullionists told them it was too profound for them to understand. The working classes were deeply interested in this question, and he would attempt briefly to show why they should consider it, and in doing so he would advert to some popular fallacies which were very extensively indulged in. One of these popular fallacies got into great notoriety during the agitation for the repeal of the Corn-laws. It was a very popular fallacy, and excited a great deal of interest. It was put in these words: "That food is the first necessity of the working classes." Now, that was not true, although it appeared at first sight to be perfectly accurate. He divided society in reference to this fallacy into two classes—1, Those who lived upon fixed annuities, and did not produce anything; and, 2, those who lived upon wages, and who must produce before they consumed. If it were said that food was the first necessity to those who lived upon fixed annuities, he quite agreed that the proposition was perfectly accurate; but for the great mass, who did not live upon annuities, and who must produce before they consumed, the first necessity was not food, but money. If on one side of that room there was a large house full of food, and on the other side a warehouse full of clothing, a man without money might walk up and down and not obtain any advantage from the provisions or the clothing. With a man who lived upon an annuity, and who had already got the money, food was undoubtedly the first necessity; but to the working man money was the first and food the second consideration. He would next come to the question of cheapness. It was contended that cheapness was a great benefit to the working man. There were two forms of cheapness, which were not properly distinguished. A great deal of labour with little income was beneficial to those who lived upon annuities; but a deal of money for a little labour was advantageous to those who worked for their living. Men who adopted the fallacy to which he adverted proceeded upon the desire to buy their neighbours' goods cheap, and to get a good deal of money for those they had to sell, and in this species of antagonism they lost sight of the distinction he had pointed out. Other fallacies to which he would direct attention were those of over-production, over-population, and over-trading. No party objected to production, and the only objection was to over-production. Now, over-production never took place, except in reference to money, for it was never found in any state of society that there was production in excess over the natural wants of society—there never was more food or clothing or furniture than the community required for the purposes of consumption. But the evil was in this, that the bullionists passed a law to restrict the amount of money, and immediately afterwards declared there was an over-production arising from over-trading. Mr. Duncan, having gone thoroughly into this matter, proceeded with a masterly exposition of our present monetary system, which in many of its phases he severely denounced. He concluded by saying that, on the 5th of December, a great public meeting would be held in London on the subject of the Bank Charter Act, on which occasion he believed an impetus would be given to the subject equal to that of the Anti-Corn law League.

Mr. J. B. Standen moved the following resolution: "That this meeting cordially concurs in the objects contemplated by the State Reform Association, and pledges itself to yield the movement all possible support." He spoke of manhood suffrage, which he considered natural and inevitable; and dwelt upon the subject of popular education, an extension of which he most earnestly advocated. National greatness, no less than personal excellence, was dependent upon education. It was impossible to make men too learned, or to teach them too much. It should be incumbent upon the Government to establish a popular and permanent system, leaving it to the people of the various districts to decide in what manner it should be administered (Hear, hear).

Mr. Hoppy, barrister, pointed out many of the evils arising from imprisonment for debt. There had been many legal changes of late, but they were not reforms. The whole system should be swept away.

The resolution was carried; and the meeting, which was characterised by remarkable unanimity, separated after paying the usual compliment to the Chairman.

The new Lord Mayor took his seat in the Court of Aldermen on Tuesday for the first time. A vote of thanks to the late Lord Mayor was carried, after a short discussion, in which some Aldermen accused the late Chief Magistrate of some inattention in the discharge of his duties.

NATIONAL SUNDAY LEAGUE.—With a view to facilitate the co-operation of the public in the action of the Sunday League, its committee have prepared three forms of petition—one for the opening of the museums, picture-galleries, and botanical gardens throughout the United Kingdom on Sunday afternoon; one for the opening of the Crystal Palace on Sunday afternoon; and a third praying for the opening of the British Museum, the National Gallery, Marlborough-house, and other national institutions to the public on Sunday afternoon. In their prospectus the committee say—"It is not anticipated that the results of this movement will be confined to metropolitan institutions only. The inhabitants of our large towns have also their museums, their picture-galleries, and botanical gardens; and it is presumed that the impetus once given in London, its effects will be felt to the remotest corners of the empire. The support of the provincial seats of industry to the metropolitan movement will be the surest means of completing an undertaking which claims for itself the title of 'National.'"

ROYAL LONDON YACHT-CLUB.—The annual dinner of this club took place on Wednesday evening, at Willis's-rooms, King-street, St. James's, when nearly 200 gentlemen sat down, presided over by the Commodore, Mr. James Goodson. After the usual loyal and patriotic toasts had been proposed and responded to, the Commodore adverted to the extraordinary success the club had met with, and expressed a proud feeling of the high estimation in which it was deservedly held. Miss Henderson, Miss Marindale, Mr. Gempe, and a number of other professionals were in attendance, and contributed greatly towards the hilarity of the occasion.

ATTEMPT TO BURN DOWN THE DUBLIN STEAM-WHARF.—No fewer than four attempts have been made this week to burn down the premises known as the Dublin Steam packet Wharf, Lower East Smithfield. In each instance fires were found kindled in various parts of the premises, and but for the promptitude displayed by those employed on the establishment the most disastrous consequences must have ensued. The wharf is now strictly guarded by a party of the fire brigade and police.

NOTES OF THE WEEK.

THE new Colonial Secretary is a very good man of business, who has had experience in divers offices of State. He has been a Lord of the Admiralty, Vice-President and afterwards President of the Board of Trade, Master of the Mint, and Chief Secretary for Ireland. He has also had some little experience in the office over which he is now called to preside, having been Under-Secretary for the Colonies from March to August, 1839. For the rest, Mr. Labouchere is a very conscientious and upright man, with at least a due sense of his own self importance. He is rather subject to what the French call a *faux de bouche*, and is given to long and pompous exordia and perorations; but the habit of using fifty words where ten would suffice is not so uncommon in the House of Commons as to call for very severe notice. His family is French in its origin, and left France at the Revocation of the Edict of Nantes. It is generally considered that Lord Palmerston's choice is a good one, especially as Mr. Labouchere, a Whig of very durable blueness, has steadily supported our war policy.

Keeping the Privy Seal is not very hard work, so the Duke of Argyll has undertaken, in addition, to keep, or rather to forward, the public letters. The Sutherland interest has thus been kindly exerted to help a Premier in search of a Postmaster, and the arrangement preserves the Cabinet respectable and aristocratic, and excludes plebeians. It was feared at one time that Lord Palmerston might give the situation to some inferior person, for no better reason than that he understood its duties. But he has, happily, been saved from such self-humiliation.

The organs of opposition exult in the thought that the Ministry will be exposed to divers "cross fires" when Parliament meets. It may be so; but if Lord Palmerston will but be honest and straightforward, and put himself at the head of the people, he may go through the ranks of his antagonists as our cavalry did at Balaclava—as "if they were card-board"—not to say foolscap. The hint of a dissolution would send these valiant *tirailleurs* scampering to their constituents, eager to explain that when they said they were for peace they did not think that war was so desirable; but *now*, "God and St. George," "British valour," "Flag that braved a thousand years," "Queen on whose dominions the sun never sets," &c. &c. The peace-mongering martyrs will speedily reenact at the sight of the stake that is to hold up the hustings.

It is sworn that certain vagabond priests, called in their own jargon Redemptorist Fathers, have been testifying their zeal against Protestantism by burning some Bibles at Kingstown. A Mr. de Buggenoms, one of the set, has given a jesuitical denial to this, stating that he only ordered the burning of "immoral books," and that if "Bibles" were burned it was against his will. The words, read by the light that hangs in the cell where Dens and Liguori are studied, are ingeniously elusive, as the Ultra-Romanists describe the English Scripture as an immoral book, and deny that it is a "Bible" at all. But the Government has, very properly, resolved to bring the question to a satisfactory test, and informations at the suit of the Crown have been sworn against a "Redemptorist father," one Petchinini, for having taken part in the outrage. A police-constable proves his identity, and the prosecution is in the hands of Mr. Keogh, the Attorney-General for Ireland, who, himself a Roman Catholic, and a fearless and honourable man, will do good service to all right-minded Catholics, by convicting and punishing those who have offered this insult to the faith common to all Christians.

The late Admiral of the Baltic fleet has been returned for Southwark without opposition. Sir Charles told his constituents that he intended to show himself a discreet man; declared that when in command he had done all that he thought within the limits of possibility; and severely blamed the Government for not having placed more means at the disposal of his successor, who, had he been furnished with proper resources, would have utterly destroyed Sveaborg. He shadowed out an intention of letting the Ministry know his mind on such points; and added that the Peace party were hoping that the country would soon be tired out with the war, and that he was afraid that the party in question were stronger than we were aware of. If so, the reason for a dissolution before they can say mischief. Sir Charles's return affords fit opportunity to call attention to the abuse of authority which is sometimes manifested by the Admiralty, and to the difficulty a naval officer always has to struggle with when, by any misunderstanding with that Board, he may find himself betrayed into a false position. An old officer may have his claims and services cruelly neglected, his proceedings misrepresented, and his motives impugned; but a young officer is liable to all this and to much more, for he may be delayed in his professional advancement, and, through treacherous contrivance and personal and exaggerated prejudice, may never attain the rank of Captain. We admit that an Admiral or a Lieutenant may sometimes be justly charged with "*discretion*," but we cannot admit it to be right that a distinguished flag officer in command of a fleet should be superseded by telegraph, as Sir Charles Napier was at Spithead, or that even a simple Lieutenant who has given proof of practical talents, and acquired honourable distinction both in and out of his profession, should be discouraged or allowed to remain on half-pay when he is willing and able to serve his country.

The Concordat, by which Austria has placed all her religious liberties and no small part of the civil rights of her people at the foot of the See of Rome, has just appeared. It is, perhaps, the most humiliating document which has ever been registered in the archives of Vienna. Those who will take the trouble to read it *in extenso*, will find that it contains thirty six articles by which the complete subjugation of the Austrian Catholics is provided for in the most ingenious manner. At the moment when the Pope is a puppet, hated by his own subjects, and sustained in the chair of Jupiter only by the bayonets of the "eldest daughter of the Church," Austria, or rather her Government, lays herself down in the dirt before him. Of course we know Austria too well to attribute such an act to mere fatuity, and it is not difficult to point out the motives which induce this "religious" proceeding at a time when Italy is about to be again convulsed. Of this more at another time; suffice it to say, here, that were it possible for Austria to place herself in a more contemptible position than she has done throughout the war, she has effected that object by this disgraceful Concordat.

The Reports of the three Recorders, the Commissioners appointed to inquire into the conduct of the police upon occasion of the Hyde-park disturbances occasioned by Lord Robert Grosvenor and his brother Sabbatarians, has appeared. The learned gentlemen have entered with great minuteness into the history of the occurrences in question, and into every individual case which was presented to them. As might be expected, they report that, while certain policemen were guilty of serious misconduct, the behaviour of the great body of the force was exemplary, and that there are no reasons why the public confidence in the Metropolitan Police should be abated. Sir George Grey, the Home Secretary, basing his instructions to the Commissioners of Police upon the Recorders' Report, directs that Superintendent Hughes be reproved and cautioned, but not dismissed; and that with the policemen marked out by the Report, the Commissioners shall deal either by suspension or dismissal, as they may think best, except in the case of three men, whose behaviour was so outrageous as to warrant Sir George Grey in ordering them to be indicted. Improvements in the station-house cells, and an alteration in the mode in which a policeman's number is marked on his collar (mistaken identity, from the difficulty of reading the figures, having caused unjust charges), are recommended. The investigation has been elaborate, and the judgment is temperate, and should close the question.

THE INTENDED VISIT OF HER MAJESTY TO CHATHAM.—The visit of the Queen and Prince Albert to the sick and wounded at the military hospitals at Chatham, which was to have taken place on Friday last, has been postponed for a few days, in consequence of there being a few slight cases of fever and erysipelas among the inmates at Fort Pitt.—*South-Eastern Gazette.*

CLOSE OF THE PARIS EXHIBITION.

THE Paris Exhibition was closed on Thursday week, amid the pomp and solemnity befitting the occasion, and worthy of the exalted personages who presided at the ceremony. The contrast between the opening of this campaign, where Art and Industry were to contend for superiority on so noble a field, and its termination was striking indeed. Nothing could well be more unlike than its commencement and its close. The approaches to the building were kept free by detachments of military and squads of police, and the immense crowd flowed on in an uninterrupted stream. The weather, though cold, was fine; and, though a thin mist prevailed during the early part of the day, the sun shone sufficiently to impart still greater animation to the scene.

The external *façade* of the Palace was decorated with panoplies and escutcheons bearing the Imperial arms, and surmounted with flags of all nations. In the interior the *coup d'œil* was imposing. Opposite to the grand entrance, by the avenue of the Champs Elysées, to the nave of the building, the Imperial throne was erected. Under a lofty and gorgeous canopy of rich crimson velvet, supported by pillars on each side, with the Imperial eagle with outstretched wings on the top, and surmounted by an Imperial crown, four fauteuils stood on a platform, raised five steps from the estrade, and covered with a carpet of the same rich colour as the drapery. The two central ones, higher than the others, were destined for the Emperor and Empress. To the left of her Majesty was placed a fauteuil intended for the Duke of Cambridge, and to the left of that another for the Princess Mathilde. On the right of the Emperor, and close to his throne, was the fauteuil of Prince Jerome, and to the right of that the one to be occupied by Prince Napoleon. At about six or eight feet from the throne, to the right and left, were a series of benches covered with velvet. They were destined for the ladies in waiting of the Empress, the officers of the household not immediately on duty, the wives of the Marshals and Admirals of France, the widows of the high functionaries of the First Empire, the wives of the grand officers of the Crown, of the General commanding, the National Guard of Paris, the Adjutant General of the Palace, of the Grand Crosses of the Legion of Honour, of the Presidents and members of the Standing Committee of the Senate and Legislature, &c. On both sides of the throne benches were placed for the various bodies—civil, military, and clerical. In front of the throne, and at both extremities of the nave, benches richly decorated were prepared for the exhibitors who had received medals. Immediately under the galleries a vast amphitheatre was constructed, extending the whole length of the building, and with seats for at least 30,000 persons. The whole of the space allotted for the spectators was filled long before eleven o'clock, and the only parts vacant were those which were to be filled by the members of the Imperial household and the other persons in attendance on their Majesties. Immediately above the throne the orchestra occupied four of the largest compartments of the gallery.

Precisely at twelve o'clock a salvo of artillery announced that the Imperial cortège quitted the Palace of the Tuileries. A quarter of an hour later the drums beating to arms announced the arrival of the Emperor and Empress. Their Majesties were received at the grand entrance by Prince Napoleon, attended by the Imperial Commission and the Foreign Commission, and were preceded on their passage to the throne by the great Officers of State, the Officers of the Household, &c. As the Emperor advanced to the platform on which the throne was raised, the vast assemblage stood up uncovered, and received his Majesty with the loudest acclamations. The Emperor led the Empress to the throne, and both stood for some time acknowledging the salutations of the multitude. The Emperor wore his usual dress, that of Division, with the cordon and star of the Legion of Honour. The Empress was richly dressed, and wore a magnificent diadem of diamonds. She looked better than for some time past, though still pale. She appeared in good spirits, and chatted occasionally with the Duchess of Cambridge. She was dressed in military uniform, with the grand cordon and star of the Legion of Honour, sat beside her. The moment their Majesties made their appearance the vast orchestra overhead struck up the air "Vive l'Empereur!" and, as after the first burst of acclamation the voices of the multitude were heard, the effect of the music from so many performers, vocal and instrumental, was magnificent indeed. When this performance was concluded Prince Napoleon descended from his fauteuil, advanced to the foot of the throne, and (their Majesties, the Duke of Cambridge, the Princess Mathilde, and Prince Jerome standing) read the report of the Imperial Commission on the progress and close of the Exhibition. During the reading, which occupied about three quarters of an hour, the Emperor once or twice whispered to the Empress, evidently wishing her to be seated, but her Majesty, who did not feel fatigued, continued standing. Prince Napoleon then read the report, which alluded to the difficulties which first beset the Exhibition, and the subsequent great concourse of strangers from every part of the globe, and its final success. It then referred to the labours of the jury, the harmony which pervaded those labours, the number of medals awarded, and concluded with expressing thanks for the support the Prince had received from the enlightened men attached to it.

The Emperor replied as follows:—

Messieurs,—The Exhibition now about to close offers a grand spectacle to the world. It is during a serious war that the most distinguished men of science, of arts, and industry have come from all points of the universe to Paris to exhibit their works. The concourse in such circumstances is owing, I am glad to believe, to the general conviction that the war which we have undertaken menaces only those who have provoked it: that it has been pursued in the interest of all; and that Europe, far from seeing in it a future danger, finds it rather a pledge of independence and security.

Nevertheless, with so many marvellous works exposed to our view, the first impression is a desire for peace: peace alone, in fact, can further develop these remarkable products of human intelligence. You ought all, then, to wish with me that the peace may be prompt and durable.

But, to be durable, it must distinctly settle the question for which the war was commenced. To be prompt Europe must declare itself; for, without the pressure of general opinion, contests between great Powers threaten to be prolonged; while, on the contrary, if Europe resolves to declare who is right and who is wrong, a great step will be taken towards the solution.

In the epoch of civilisation at which we have arrived, the successes of armies, however brilliant, are but transient; it is public opinion which in the end carries off the final victory.

All of you, then, who think that the progress of the agriculture, industry, and commerce of a nation contributes to the well-being of others, and that, as mutual relations multiply, national prejudices fade—tell your fellow-citizens, on returning to your country, that France has no hatred for any people, that she has sympathy for all who wish with her for the triumph of right and justice.

Tell them that, if they desire peace, it is necessary at the commencement that they at least offer some wishes for or against us; for, in the midst of a great European conflict, indifference is a bad calculation, and silence an error.

As to us peoples who are allied together for the triumph of a great cause, let us forge arms without slackening our manufactures or stopping our loans; let us be great by the arts of peace as well as by the arts of war; let us be strong by union, and put our confidence in God, that we may triumph over the difficulties of the day, and the chances of the future.

As soon as the Emperor had concluded his reply, the Commissioners, and others who had obtained recompenses, either in medals or decorations, were successively presented to the Emperor. Cases containing medals and crosses were placed on a table, and, as each person approached, were handed to the Emperor, who delivered them himself to the recipients. The various classes which had gained prizes were represented by banners, about which the medallists and others gathered, and in this order passed on successively. This distribution occupied some time, during which the orchestra continued to play pieces selected from operas. At half-past two the Emperor and Empress quitted the building, and returned to the Tuileries with the same cortège and in the same form as they had arrived. During the whole time that their Majesties remained in inspecting the works of art, towards the conclusion of the ceremony, the acclamations and shouts hardly ceased a moment. Above all rose the strong energetic English hurrah; and it rose again and again with such earnestness that the roof of the building rang again. On the whole, the ceremony was most brilliant, and evidently most satisfactory. It was generally admitted that it surpassed in splendour of decoration and in completeness of arrangement anything that has been seen for a long time, and, in a word, that it was a fitting conclusion to so noble an undertaking. Everything was done with great regularity, and, though so many thousands were assembled within and without, not a single accident occurred.

SIR WILLIAM MILNER, Bart., M.P., has, we understand, advanced the rents of his tenantry 5s per acre, which will be about 12½ to 13 per cent advance on the rents previously paid.—*Leeds Mercury.*

CLOSE OF THE GREAT EXPOSITION AT PARIS.—(SEE PRECEDING PAGE.)

THE CITY OF KARS.—(SEE NEXT PAGE.)

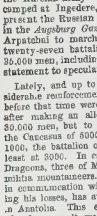
THE CITY OF KARS.

In the early part of last June General Williams left Erzeroum with his staff for the city of Kars (of which we have given a Sketch in this Number), in order to see what use could be made of the existing fortifications, and to raise the *morale* of the army, which had sunk to the lowest ebb in consequence of a long series of disasters and privations. At that time the Turkish army of Kars was encamped within a short distance of the city. Nominally, it was estimated at about 18,000 men; but the effective force did not amount to more than 12,000 men. At the same time the Russian army—50,000 strong, according to one statement—was encamped at Ingedere, about six leagues from Kars. Other accounts represent the Russian forces as not so large. A recent letter from Warsaw, in the *Augsburg Gazette*, states that when General Mouravieff crossed the Arpatchai to march against Kars he had only a body of infantry of twenty-seven battalions, and the whole of his corps did not exceed 35,000 men, including cavalry and artillery. The writer, proceeding from statement to speculation, adds:—

Lately, and up to the time of his assault on Kars, he had received considerable reinforcements, for in the reports regiments are mentioned which before that time were in the Caucasus. The present number of these forces, after making an allowance for the losses at Kars, may be estimated at 30,000 men, but to this force must be added the brigade of Grenadiers of the Caucasus of 5000 men, the battalion of Chasseurs of the Caucasus of 1000, the battalion of nobles and the artillery, which must be reckoned at least at 3000. In cavalry there are in Turkey in Asia three regiments of Dragoons, three of Musulmans, three of Cossacks, two of Kurds, and the militia mountaineers. The corps of Erivan, under General Sushoff, is also in communication with the army of General Mouravieff, who, notwithstanding his losses, has at his disposal 50,000 men, if not before Kars, at least in Anatolia. This explains why he did not raise the siege immed ately after his assault was repulsed. The army of the Caucasus has also been reinforced.

OBITUARY OF EMINENT PERSONS.

SIR WILLIAM MILBORNE SWINNERTON PILKINGTON, BART.



THIS youthful Baronet has survived his inheritance of the family title not more than seventeen months. He died after a brief illness on the 12th inst., aged twenty-four. He was second son of Sir William Pilkington, 6th Baronet, of Chevet, and succeeded to the estates not only of his paternal family, but of his mother's father, the late Thomas Swinnerton, Esq., of Butterton hall, county Stafford. As he has died unmarried, the Baronetcy devolves on his only surviving brother, the present Sir Lionel Pilkington, Bart.

The Pilkingtons are a very ancient race. Fuller says that they were gentlemen of repute in Lancashire before the Conquest; and he further asserts, that at that period the chief of the house, being sought after by the Norman soldiery, was fain to disguise himself as a thresher in a barn; from which circumstance, partly alluding to the head of the flail falling sometimes on the one and sometimes on the other side, and occasionally on himself, he took for motto—"Now thus: now thus." Of this right ancient stock was James Pilkington, Bishop of Durham, one of the six divines appointed to revise the Book of Common Prayer.

SIR RICHARD SUTTON, BART.

THE death of this opulent Baronet occurred on the 14th instant. Sir Richard was grandson and heir of the first Sir Richard Sutton, of Norwood-park, M.P., Under Secretary of State from 1766 to 1773, who was created a Baronet in the latter year on his retirement from office.

The subject of our present notice was born 16th December, 1798, and married, 17th December, 1819, Mary Elizabeth, daughter of the late Benjamin Burton, Esq., of Burton Hall, county Carlow, by whom (who died 1st Jan., 1842) he leaves several children: of whom the eldest son, now Sir John Sutton, third Baronet, was born in 1821, and married, in 1844, Emma Helena, eldest daughter of Colonel Sherlock, K.H., of Southwell.

THE HON MRS TALBOT.

THE Hon. Mrs Robert Talbot, whose death at Hampton-court Palace took place recently, was well known to a large circle of society, and was greatly esteemed, respected, and beloved. She was Arabella, second daughter of the late Admiral Sir Charles Ogle, Bart., and the present Sir Chas Ogle, and of the late Lady Aegill and the late Lady Daare. Early in life, in 1784, Mrs. Talbot became the second wife of the Hon. Edward Bouverie, third son of William, first Earl of Radnor, by whom she had one son, who has long since been dead. She married, secondly, in 1826 (her husband having died in 1824), the Hon. Robert Talbot, brother of the late Lord Talbot de Malahide. Her second husband died 17th March, 1843. Mrs. Talbot was distinguished by her excellent good sense and her remarkable amiableness of character.

ERRATUM. The late Robert Charles Tudway, Esq., M.P., has not, as stated, died without issue, but leaves a son and heir. His brother is a clergyman, the Rev Henry Gould Tudway.

WILLS.—Probate of the will of the Most Noble Edward Adolphus, Duke of Somerset, Baron Seymour, K.G., F.R.S., F.S.A., F.L.S., was sworn under £120,000 personalty. The Rev George Edmondson, M.A., Rector of Winwick, Vicar of Cro., and Preb. of Hereford, £18,000. Rev. W. S. Gilly, D.D., Canon of Durham, Vicar of Norham, £12,000 within the province of Canterbury. Capt. R. M. Begg, 65th Foot, late of Wellington, New Zealand, £12,000. S. W. Silver, clothier and outfitter, Bishopsgate, £120,000.

THE SOUTHWARK ELECTION.—The nomination of a candidate to supply the vacancy in the Parliamentary representation of Southwark, occasioned by the death of Sir William Molesworth, Bart., took place on Tuesday morning, in the Town hall, Borough. The usual formalities having been gone through, Mr. Cyrus Legge proposed, and Dr. Evans seconded, the nomination of Sir Charles Napier, Bart. No other candidate being proposed, the High Bailiff put the question to the vote, and it was carried unanimously. The High Bailiff then declared that the choice of the electors had fallen upon Sir Charles Napier, an announcement which was received with vociferous cheering. Sir Charles Napier then presented himself to the electors, and reminded them that they had not paid sufficient attention to that part of the writ which required them to return a "discreet" man. Now, he had been more than once pronounced "indiscreet," but he would, for the sake of the electors of Southwark, endeavour to mend his ways for the future (A laugh). With regard to his career in the Baltic he did all that the British fleet was capable of accomplishing; but, at the same time, he had no hesitation in saying that had he been rash enough to carry the fleet to beneath the walls of Cronstadt, not one of the sailors would have refused to accompany it. He insisted upon the importance of carrying on the war with the utmost vigour. Until recently that vigour had been wanting; while as for the Baltic, he was convinced that enough had not been done this year. He did not blame his successor in command, but the Government and Admiralty were to blame for not having sent more mortar-boats and gun boats into the Baltic, and directed the concentration of the allied fleets upon Sveaborg when that place was bombarded. Had that course been followed, the fortress would have been completely destroyed (Cheers). The work at Sebastopol had been well done, and the army deserved the highest honour; but there was one matter in connexion with the Crimea which he could not pass over in silence. No doubt the electors had recently seen the numerous cases of "urgent private business" which had brought officers home. Now, for his part, in these days of peril

MUSIC.

THE LATE EARL OF BELFAST

In our last Number we gave an account of the inauguration of the statue erected at Belfast to the memory of this young nobleman, whose untimely death is so deeply lamented, especially in the extensive district of his country with which he was more immediately connected. This ceremony, which took place on the 1st of this month, under the auspices of the Lord-Lieutenant, was followed the day after by a concert at the Victoria-hall, consisting chiefly of a selection from the young Earl's vocal and instrumental compositions. It is well known that, in addition to the amiable qualities which endeared him to his countrymen, the spirit of active benevolence, and the talents for business, which promised to make him a distinguished ornament of the peerage, he was gifted with musical genius and attainments of a very high order. Many of his compositions have been from time to time given to the world, and are well known in our best musical circles. It was his practice to apply this, like his other gifts, to beneficent purposes: and it is interesting to repeat what was mentioned by the Earl of Carlisle, that the sale of some of his earliest works brought him the sum of £100, which he applied to the relief of the sufferers by famine in the dreadful years of 1846 and 1847. Of his music we are enabled to say, as the result of a careful examination, that it betrays none of the crudities of amateurship. It shows inventive talent, imagination, feeling, and a thorough knowledge and command of the resources of the art. His compositions for the pianoforte consist chiefly of chamber pieces, in the form adopted by Mendelssohn (in his "Lieder ohne Worte") and other celebrated artists of our day; short movements, that is to say, which paint a single image or convey a single thought. Lord Belfast's works of this kind are distinguished by tenderness of feeling, always felicitously expressed, and often deeply tinged with melancholy. They are delicate and graceful, demanding much refinement and finish on the part of the performer.

On the occasion to which we have alluded, Lord Belfast's pianoforte compositions found the best possible interpreter in the person of Charles Hallé, of whom it would be superfluous to say a single word of praise. He played them *con amore*, and gave them a charming effect. The pieces entitled "Chant plaintif au bord de la mer," "La Fileuse," and "L'Adieu," gave ample proof of the composer's talent for descriptive music, and of the grace and beauty of his melody. In "La Fileuse" the monotonous movement and hum of the spinning-wheel is delightfully imitated, while a quiet and resigned sadness is expressed by the air. The "Nocturne in E flat" has the dreamy melancholy and extreme delicacy of phrase which characterise the music of Chopin. The "Napolitana" is fiery, vigorous, and picturesque; its modulations are bold and original, though its conclusion may be objected to as being too sudden and abrupt. The fantasias on Irish airs, and on themes from the "Prophète," are brilliant and effective. Lord Belfast's treatment of the melodies of his country is full of national character and feeling. His Irish piece, entitled "Homage to Thomas Moore" was rapturously encored.

The vocal part of the concert was sustained by Miss Ransford and Mr and Mrs. Tennant. The former is well known to our musical readers; the latter are a young couple, possessed of much talent, who have lately made their professional début with every promise of success. Mrs. Tennant is the sister of Mrs. Sims Reeves. These vocalists sang several of Lord Belfast's songs and duets with great effect; particularly the grand aria, "Far, far o'erhead," the song, "The Wanderer of the Highlands," and the duet, "Summer Longings." With these, and other vocal compositions of the noble Earl, we mean to make our readers better acquainted, by speaking of them as published works.

We have pleasure in adding that the large proceeds of the concert were presented by the Marquis and Marchioness of Donegal to the General Hospital.

At Mr. Hullah's second Choral Concert, in St. Martin's Hall, on Wednesday evening, Beethoven's Oratoria the "Mount of Olives," and Handel's Serenata, "Acis and Galatea," were, on the whole, well performed. The "Mount of Olives" presented no remarkable feature; but in "Acis and Galatea" considerable interest was created by the appearance of Lucy Escott, who made her début as a singer of Handel's music, having been hitherto known only by her performance on the modern opera stage. She was completely successful. She sang in a pure and simple style, and with much grace and feeling. Mr. W. Cooper, a young singer newly introduced to the public, was also very successful, especially in the martial airs "Where, where is the enemy fair?" and "Love sounds the alarm,' both of which he sang admirably. Handel's delicious and truly dramatic music was most warmly applauded by a crowded audience.

A New Entertainment, entitled "The Welsh Girl's Stratagem; or, Songs of many Nations," is advertised to take place at the Music-hall, Store-street, on Thursday evening, Nov. 29th. The whole weight of the evening's business devolves upon Miss E. L. Williams a singer whose claims to a high position in her profession have been recognised both by the provincial and the London press. She will, in the course of the evening, appear in several characters, and introduce, among a variety of other songs, "Robert toi que j'aime," "Casta Diva," "Within a mile o' Edinburgh Town," "Aileen Mavourneen," "The Bells of Aberdovey," and the new martial song of "England, dear England," which appeared in the Illustrated London News of September 29th.

THE THEATRES, &c.

Princess'.—The tragedy of "Henry VIII.," temporarily suspended in consequence of the indisposition of Mr. Kean is now acted with the usual popularity; and we are happy to hear that the invalid actor has entirely recovered. Laudable advantage has been taken of the opportunity given at this season of the year to revive the most meritorious specimens of our comic drama, which are performed on alternate nights in the manner we have been regaled with new representations of "The Heir at Law," which have been so successful that they are likely to continue for some time. On Thursday evening the comedy of the "Rivals" was revived, the cast of characters being nearly the same as on Wednesday evening, when the play was performed before Her Majesty at Windsor Castle, under the direction of Mr. Charles Kean. The revival of "Macbeth," which was announced for speedy reproduction, has been postponed.

Haymarket.—The comedy of "The Provoked Husband" was revived on Tuesday, Miss Cushman sustaining the part of *Lady Townly*, which she played in her most vigorous and careful style. Apart from the intensity which Miss Cushman is sure to throw into every character she performs, and which is somewhat too earnest for comedy, her execution of this marvellously-drawn portrait must be pronounced to be both brilliant and powerful. A considerable advantage was derivable from the nature of the work, which consists of dialogue, and revels in the display of mental energy, repartee, and wit. The strength of *Lady Townly's* replies to her justly-irritated and noble husband was unmistakably here Miss Cushman exhibited her force in conveying the author's meaning with the utmost impressiveness. It was manifestly impossible for *Lord Townly* to support such resources of verbal attack and defence as her Ladyship had at command. We have seldom seen *Lord Townly* more effective than by Mr. Howe. This performer with every higher rôle that he undertakes rises in our estimation; and we see no necessity for his being substituted, as he often is on great occasions, by a starring actor. Mr. Howe always takes full advantage of his opportunities, and manifests new qualities with every fresh effort. He belongs to the highest class of useful and respectable performers, and frequently surprises us with the intimation of yet higher talents. He has, in fact, been a gradually-improving actor for a long period; and continued practice accompanied by considerable intelligence has gifted him with remarkable precision in producing his points. The last scenes of the comedy, which are des gued for a moral lesson, and rise even into pathos, demanded both from Mr. Howe and Miss Cushman the display of the highest dramatic excellence. They succeeded in making a deep impression on the house, and the strongest feeling was produced in the audience, on whom the tenderness of the situation and the high merit of the acting had a decided effect. The comedy will bear several repetitions.

Adelphi.—The arrangements of this theatre are evidently progressing towards a state of completeness. The business, it is true, consists of revivals; but they are such as have proved their possession of permanency, and are likely to secure favour for an appreciable period. On Monday week the reappearance of Madame Celeste was identified with that of "Le Ducange," one of the most fortunate of Mr. Boyle Bernard's melodrames. It is always an auspicious circumstance when the name of a celebrated performer becomes associated for better and worse with that of a play or character. The drama partakes, then, of the fortunes of the living artist: it is no longer a dead letter, but has a vital interest, and shares in the reputation of its histrionic representative. This is particularly the case in the interesting drama of "Marie Dumange." We well remember its original production, and the strong impression then made on us by Madame Celeste's acting. It was then under and more impulsive than now; but it was, nevertheless, exceedingly effective. The scene she had to portray was of the romantic and startling kind, and there was besides a psychological element in it which had the appearance of profundity and conferred an importance on the theme. The awe and restoration of reason by means cunningly contrived, and suggestive of scientific insight, induced a process of thought, and took the drama out of the class of mere spectacle and melodramatic effect. At the same time, there was much of the latter in the reproduction of the scene, circumstances by which the mental alienation has been caused, as the best means of renewing the associations by which the patient might be recovered. Madame Celeste in her expression of the author's conception approached the domain of legitimate histrionics, and no higher praise can be given as much elaboration and finish to her performance that it merits to be regarded as one of the special impersonations of character and situation in the modern drama. The crowded audience of Monday fully acknowledged her power, and rewarded her efforts with unanimous applause. Madame Celeste is, in fact, an actress who wears well: and, in this quality of lastingness (so to phrase it), has the advantage over many of her contemporaries. So far from manifesting any failing in her energy of style, we feel that she improves, and also that there is improvement in the higher qualities of her art. She is therefore greatly deserving of public support. We have already remarked on the pleasing accession to the company in the person of Miss Kate Kelly, and have to distinguish her again as a most useful actress. Nothing could be better than the manner in which she recited the particulars of a long narrative in the character of a maid-servant, in fact, she made easy what to most professionals forms the difficulty of a scene. Perhaps Mr. Rogers caricatured too much the character of *Prong*; but this was probably owing to the character itself being too much of a caricature. The part was originally thrown in by way of broad relief to the serious interest, and now somewhat overrides the main argument to which it ought only to have been accessory. In spite of this blot, however, the piece must be accepted as one of the greatest theatrical successes of the day.

Standard.—This theatre has distinguished itself by the revival of Nat Lee's Alexander the Great." The magnificent hero is performed by Mr. Anderson, who sustains the character, and gives to the high metaphorical vein of the speeches a sonorous elocution that makes them appear as truly sublime. Such a performance is in these days a decided curiosity: and before such a miscellaneous audience its manifest effectiveness is a circumstance commanding reflection. The whole play was gradually acted, and the scenery and appointments were exceedingly picturesque.

Adulteration of Food.—Lecture in St. Martin's-in-the-Fields.—On Tuesday evening the northern school-room, Castle-street, Long-acre, was crowded with an attentive assemblage of the working-classes, who had been invited to hear Mr. Jabez Hogg deliver a lecture on the use of the microscope, especially as applicable to the discovery of adulterations in our food. The lecturer proceeded, first, to show how microscopes might be cheaply obtained or made; next, how they should be used; and, lastly, how by their aid food adulterations might be discovered which baffledefied all chemical investigation. Having thus opened his subject, Mr. Hogg poured forth a flood of valuable information as to the various modes in which bread, tea, coffee, sugar, and milk are adulterated; and how, more or less, the various adulterants act injuriously on the human subject. That it was fully appreciated was evidenced by the deep attention with which Mr. Hogg was listened to, and the frequent cheers that greeted the more remarkable points in his lecture. We were glad to hear at its conclusion that the investigations on the subject of food and its adulterations have already been attended with so much good that there is even now considerable difficulty in obtaining specimens of the spurious article for the purposes of experiment. A number of microscopes were placed on the table, and the audience gratified their curiosity before leaving with a peep at the horrors which form a portion of their daily food and drink.

Important to Ratepayers.—By a provision in the new Local Management Act all books relating to the new boards and vestries are to be open to the inspection of all ratepayers and others without charge, and extracts may be taken. Any refusal on the part of an officer is to render him liable to a fine of £10 on a summary conviction.

NATIONAL SPORTS.

Racing men bade farewell to the season of 1855 at Shrewsbury, with the reflection that its last meeting had been too plethoric for anything. The sports began before twelve, and brought out seven fields in succession till dark, that the "Ring" had hardly time to collect their wits. Upwards of one hundred and fifty horses were saddled, and many did not come for lack of a stable: while the town was full from baseboard to garret. Looking back through the long vista of events since February, it must, we think, be allowed, that Rataplan, Scythian, Rifleman, and Fly-by-Night are the "first-class men" of their different years. Epaminondas, Crown Pigeon, Champagne, and Lightfoot are all for sale. Timbrel (who would probably be disputed by Touchstone and Melbourne) joins West Australian and Stockwell, at Lord Londesborough's, and little Cruiser has gone to Hawcliffe Paddocks, where the Flying Dutchman subscription is quite full already. Steeplechasing has had quite a lauder like Bell-and-noble men, gentry, and even great horse-dealers have given it up in despair The Waltham Abbey open one produced no race. Next week will, however, be rather a merry week at Aberystwith, which will have three or four days' festivity consisting of races, steeplechases, and hunting mixed; while Ashbourne holds its steeplechases on Monday, and the shadow of the Great Metropolitan will be seen on Wednesday over Uxendon farm, near Harrow. Lord Glasgow's stud is now, we believe, under the care of Cartwright at Tuppill, near Middlehaim, and consists of young and five yearlings. His Lordship's luck has been worse than ever this year, albeit his "shooting days" had ridded him of all his weeds, and the two-year-olds, especially, were most highly bred. A sixteen miles trotting-match has just come off near Brighton, and the little mare, who had not left her foal many weeks, did the distance with about two minutes to spare out of the hour.

The Newmarket great open coursing meeting begins on Monday with Mr McGeorge in the scarlet, and extends till Friday or Saturday. Leamington holds a little meeting on Tuesday; the Hampton-court hares will be chased "round a bush and back again" (as the great dons of the coursing world, who have breeze downs extending miles away for their own field, contemptuously call it) on Tuesday and Wednesday. Biggar Club also meets on Wednesday, &c., and Hordley (Salop) is fixed for the same day. The young Bedlamites are running wonderfully well this year, and don't work alone. Hunter won the Altcar Cup, Jacobite the Sefton Stakes, and Riot the Craven Cup; while another of them, Bendigo (whose eccentric namesake now devotes himself solely to coursing, and fishing on the Trent) ran up bravely for the latter. Their sire is one of the most sickle thighed dogs we ever saw. This wonderful son of Figaro, who won everything before him, and was never beaten, except in the course where he broke his toe, is not six years old, and measures twenty-six inches. His running weight was 58 lb, or 4 lb. less than his sire's, and 3 lb. less than Mocking Bird's, and 3 lb. more than Hughie Graham's.

We have heard of no successor as yet to Sir Richard Sutton in the Quorn, though it is hoped that his second son may be left in a position to take them. Sir Richard had, like Mr. Osbaldeston, twice broken his right leg, and rode with iron splints on it. His hounds made wretched work last season, and, comparatively, seldom killed a fox. They had, we believe, a good deal of Scotch blood in them, and went, like Lord Suffield's, at racing pace, often overrunning the scent by a field. A most extraordinary instance of fox-preservation occurred at Conington Castle last week. Reynard entered there after finding at Sawtrey

THE LATE SIR RICHARD SUTTON, BART.—FROM A PAINTING BY F. GRANT, R.A.

orts, but is as passionately fond of music as his father was of hunting.

Our Illustration, by the kind permission of Messrs. Graves, is taken from the engraving (now publishing) of a picture by Francis Grant, Esq., R.A., of Sir Richard with the Quorn Pack and a field of the most celebrated Melton men Mr. Grant was himself a first-flight man in Leicestershire before he laid down the bridle to take up the brush.

A FORAGING PARTY AT KINBURN.

When the Allies made their appearance at Kinburn, on the 15th of October, they took the enemy completely by surprise, and the result was that a considerable amount of provisions fell into their hands. At one place a plentiful supply of salted mackerel and herrings was found; at another a quantity of poultry; and everywhere there seemed abundance cabbages, potatoes, and tomatoes; but all speedily disappeared under the consuming power of the Commissariat.

A number of pigs were caught by the soldiers in the village of Kinburn and slaughtered without mercy. The Scene we have engraved represents a foraging party in pursuit of sundry fugitives of that interesting tribe.

A FORAGING PARTY IN THE VILLAGE OF KINBURN.

PRINCE BEBUTOFF, THE NEW RUSSIAN COMMANDER-IN-CHIEF IN ASIA.

DELI MUSTAPHA, THE BASHI-BOZOUK.—(SEE NEXT PAGE.)

PRINCE BEBUTOFF,

THE NEW RUSSIAN COMMANDER-IN-CHIEF IN ASIA.

THE absorbing interest that once attached to the long-continued conflicts between the Russians and the Turks in the Danubian Principalities has, to a great extent, been transferred to the operations of those two belligerent nations still further East. The brilliant victory obtained by Omer Pacha at the passage of the Ingour, and the consequent insanity of General Mouravieff, the Russian officer in command, have led to the appointment of General Prince Bebutoff as his successor

Russian resembles Roman policy, in that it seeks to incorporate the conquered with the conquerors. In the course of the eventful history of Russian aggrandisement, for every instance of a hostile kingdom converted into a tranquil province, there is found a reason and an explanation in the extensive and unscrupulous use of bribery as a means of influence. Of all kinds of bribery, honours, titles, and dignities have ever been found the most serviceable, where the aristocracy of a country are the objects of temptation. The Princely rank of the Bebutoff family in the hierarchy of Russian nobility is owing to one of these transactions. For many a year, indeed for many a century, the independent kingdom of Georgia had sustained an unequal but determined struggle with the growing power of the Muscovite—a struggle which, under the Emperor Paul, was rapidly drawing to a close, the domestic dissensions of the Georgians having led to an application for his interference. At length, in the reign of Alexander, the long-sought result was arrived at; the Georgians were conquered; and, in the year 1807, the Royal family of that country were, by order of the conqueror, invited to come to St. Petersburg, where they obtained Court dignities, Russian titles, and military rank; their country being at the same time converted into a province of Russia. In this distribution the immediate ancestor of the subject of this notice participated. The family of Prince Bebutoff was of Princely rank in Georgia, and it obtained the same rank in the nobility of Russia. Its members still professed the faith of their forefathers, who had been Armenian Christians.

The connection of the family with Georgia led naturally to the selection of Prince Bebutoff for a high command, under Prince Woronzoff, on the frontiers of that province and Asiatic Turkey. He had been previously employed on various services, but on none of a character to bring his name into distinction; nor must he be confounded with his elder brother, General Bebuteff, who was among the Russian Generals wounded in the battles with the Turks on the Danube, and who has been for many years past stationed in Russian Poland.

When the present war broke out, the Prince Bebutoff who is the subject of this memoir found himself under the general orders of Prince Woronzoff, and commanding a corps in Georgia, the province of which his ancestors had been Princes with general instructions to watch the Turkish frontier. Reinforcements had very recently been sent from Sebastopol, and Prince Woronzoff had only just concluded a general military inspection The Turkish forces, a part of the army of Anatolia, were under the command of Selim Pacha, a man who subsequently proved himself to be utterly unfit for his position. Under him, among others, was afterwards placed the celebrated General Guyon, but, unfortunately for the Turks without power to make his will obeyed, or influence to make his opinion respected. In the month of October, 1853, matters were in this state, and the Turkish commanders in Anatolia had received orders from Constantinople not to act on the offensive, and to avoid a combat unless compelled to accept one; but very shortly after an accidental skirmish brought on a general action with 15,000 Russians, who were defeated. This success however, on the part of the Turks was but a gleam of prosperity, to be soon followed by serious reverses. The Russians received reinforcements which increased their number to 45,000 men, and they were encamped in the neighbourhood of Kars, but on the Georgian frontier; a point from which Prince Bebutoff might, without much difficulty, after a successful battle, have menaced Constantinople itself.

In most of the engagements between these opposed armies Prince Bebutoff took a prominent part. Towards the end of November Lieut.-General Prince Andronikoff, with 9000 men, attacked some 10,000 Turks who had advanced against Akatshik. The Turks intrenched themselves at Supils; but the Russians stormed their camp. After a fierce encounter

COSSACKS SKIRMISHING.—(SEE NEXT PAGE.)

which lasted eleven hours, the Turks had 1000 men killed and 200 made prisoners; and they also lost a considerable number of guns. Their camp fell into the hands of the Russians. Simultaneously the Mushir Abdi Pacha had advanced with the principal Turkish force against Alexandropol; but a sally was made by Prince Bebutoff, which ended in the repulse of the Ottomans. It should, however, be added that this is the Russian account of the affair. The Turks tell a different story.

Prince Bebutoff made a sally, and that, after three hours' fighting, he was obliged to return to the fortress. Prince Andronikoff made, however, the usual Russian report to the Emperor as to the affair in which he had commanded: and he received the Imperial thanks, together with the order of St. George of the third class.

Even at this distance of time it is extremely difficult to ascertain with accuracy what these various military operations really were. It is quite clear, however, that Prince Bebutoff favoured, perhaps, by the incompetency of the Turkish General, and the dissension which reigned in the camp—did succeed in obtaining important advantages over the Turks. His services were acknowledged at head-quarters. On one occasion he was his own biographer. On the 3rd of December, 1853, the Prince addressed to the Commander-in-Chief of the Russian army in the Caucasus a despatch in which he gave an account of the operations of the corps under his command. The Prince had, on the 25th of November, heard of the retreat of the Turkish corps from Bayoudoury upon Kyri; and, on the 26th, he marched in pursuit of them. Unable to overtake them, he took up a position at Bashshowragel. But on the 30th he heard that the Turks had rallied and formed a camp near the hamlet of Bash-Kadyk Lar; and he at once (according to his own account) resolved on forcing an engagement. The force under his command was not very large, consisting part of Russians and part of Caucasians in the service of Russia, with an auxiliary force of Cossacks. Finding the Turks prepared, he formed his troops in three lines, and attacked them. The Commanders immediately under him were Prince Andronikoff and Prince Mukhranski. As the fire of the Turkish artillery became troublesome, Prince Bebutoff ordered an attack by the bayonet. The troops ordered for this service were commanded by Prince Orbilian and Prince Bagation. They were ordered to ascend the heights, and to turn the right of the Turkish position. The Turks made a gallant resistance, but were compelled to retire; Prince Orbil ana being severely wounded in the affair. Simultaneously, the Russian cavalry, under General Bruevski, attacked the Turkish, and the pursuit

AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET.—The Week of MISS CUSHMAN'S Engagement MISS BLANCHE FANI will appear Every Evening in one of her Popular Characters. Monday, Nov. 26th, The STRANGER; Mrs Haller, Miss Cushman. Tuesday, Thursday, and Saturday, GUY MANNERING; Meg Merrilies, Miss Cushman. Wednesday and Friday, a Popular Play, in which Miss Cushman will appear. Monday, Tuesday, and Wednesday, THE LITTLE TREASURE; Gertrude, Miss Blanche Fane. Thursday, Friday, and Saturday, COURTEZAN OF VENICE, in which Miss Blanche Fane will sustain the principal character. To conclude each Evening with a Laughable Farce. Monday, 3rd, the renowned TERPA NENA and her Spanish Troupe will commence their Engagement previous to their return to the Continent.

ROYAL PRINCESS' THEATRE. — Monday, Wednesday, and Friday, DON'T JUDGE BY APPEARANCES. Tuesday, the BOOTH, and a GAME OF SKITTLES. Thursday, Friday, and Saturday, HOW TO SUIT YOUR GETTING, EVERY INCH A MAN OR FAULT (in which Mrs. C. Kean will appear), and THE MILLSTEER OF TOLEDO.

ROYAL PRINCESS' THEATRE.—On TUESDAY next will be served, for the first time at this Theatre, Mrs. Cowden Clarke's Comedy of EVERY ONE HAS HIS FAULT, in which Mrs. Charles Kean will appear, supported by Messrs. F. Matthews, Harley, Cooper, W. Lacy, Ryder, D. Fisher, Mrs. Winstanley, Misses Heath, Murray, and K. Terry.

THEATRE ROYAL, ADELPHI.—First Appearance of Mr. B. WEBSTER this season in JANET PRIDE this Monday, Tuesday, and Wednesday. MARIE DUNAY and VALENTINE AND ORSON, and the revived Farce of TWICE KILLED, with Mr and Mrs. Keeley in their Original Characters.

GREAT NATIONAL STANDARD THEATRE, Shoreditch, Mr J. ANDERSON, Lessee and Manager of the Pyrotechnic Opera Company.—Mr. F. Lumley, Mr. G. Perring, Mr. H. Calcott, Mr. Lubtine, Sig. Garcia, Miss Wyman, and Madame Colonieu. Increased Band and Chorus of 50 Artistes. The Brothers Elliot.

POSITIVELY the LAST WEEK BUT TWO of MISS LEWIS'S CONCERTS.—THE FALL OF SEBASTOPOL and Madame ALBERTAZZI Every Night. Commence at Eight. Doors Open at Half-past Seven. Stalls, 3s. Dress Circle, 2s. Upper Circle, 1s. Second Circle, 2s 6d. Pit, 1s. Gallery, 6d. Private Boxes, £1 11s. 6d. and £1 1s., can be obtained at the Box-office, or at the principal Librairies. Stalls, 3s. Dress Circle, 2s 6d. Upper Circle, 2s

A KNOW-NOTHING DEMONSTRATION.

THE meeting of which we give an Illustration, was held in front of the City-hall, New York, three weeks ago, and is described by the *New York Herald* as "one of the largest mass meetings ever held in this city." The following placard, calling the citizens to attend, will show what the object of the meeting was :—

AMERICANS TO THE PARK!—A mass meeting of the electors of the city and county of New York, opposed to the present administration of the general government, to the efforts of fanatical fanatics to destroy the union of the States, and to the reckless expenditure of over 5,000,000 dols., for the support of the Municipal Government; and all who are in favour of the election of the American ticket at the ensuing election to effect a thorough reform are invited to assemble in the park this (Wednesday) evening, at seven o'clock. Distinguished speakers will address the meeting, and a torch-light procession will be formed after adjournment.

The chief speakers were Colonel May, Colonel Bryce, Messrs. S. B. Cushing, George Briggs, L. C. Levin, and S. V. B. Mallory. The meeting appears to have been a large one, no less than 20,000 persons having been present; but we should hardly deem ourselves warranted, in the "Old Dominion," in calling such a crowd "a tremendous demonstration," as the *Herald* terms it.

TORCHLIGHT MEETING OF "KNOW-NOTHINGS" AT NEW YORK.

FIRE-ENGINE AT CINCINNATI.

THE application of steam as a substitute for hand power in fire-engines has recently been successfully tested, for the first time, we believe, in Western America. A steam fire-engine built in Cincinnati, Ohio, has been in operation since January, 1853; and during that time has been used at many great fires, at all of which it has fully realised the object for which it was designed. The frequency of disastrous fires in American cities is perhaps known to our readers. They may safely be set down as ten to one in comparison with those in cities of equal population in the United Kingdom. The cost of the fire department under these circumstances is enormous. In Cincinnati, where the voluntary system has been, by a recent law, replaced by the organisation of a paid fire-brigade, the annual cost is about £13,000; and the introduction of one steam-machine promised to reduce it by £5000.

The steam fire-engine of Cincinnati—which has now superseded the ordinary engines (of which, with the alarm bell and accompanying trumpeter, we give an Illustration below)—has the capacity of six hand-power fire-engines; and is capable of easy transit with the aid of four horses, assisted by steam power, which, by a clever contrivance, is put on the aft wheels, by means of a rod connecting them with the crank of the engine, when the machine is traversing the city. When the power is applied to pumping, this connection is detached by the engineer. In appearance the steam fire-engine is a cumbersome and unsightly object. Its weight is immense; but the builders declared themselves prepared to manufacture similar machines, with the same power, of a far less weight and cost. The first one, which is of the largest dimensions that can be effectively constructed, cost about £2000; and (being an experiment simply) is capable of much improvement in the matter of weight—a very important consideration. When passing through the streets the effect is singular, and not a little alarming. The noise is somewhat similar to about twenty well loaded omnibuses, and the houses are shaken to their foundation as it flies along. At night its appearance is hideous, as it leaves a stream of burning coals behind it, and, as a warning to pedestrians, sounds a shrill demoniac whistle.

It is arranged so as to throw from one to six streams of water. In a single stream from a nozzle 1½ in in diameter it throws 240 feet. Water is supplied by the suctions, each 24 feet long, attached to the forepart, which are let down into the cisterns located at street intersections in all American cities for this purpose. It will throw 2000 barrels of water per hour on a burning building; and of course will work as long as fire is kept up in the furnace without intermission. The cylinders are 10 inches in diameter, with 24-inch stroke, making from sixty to seventy revolutions per minute with 75 lb. of steam.

Steam can be raised sufficient to work the pumps in the space of three minutes and a half from the time of applying a match to the fire, but the usual time occupied on ordinary occasions is five minutes. This interval must in nearly all cases elapse between the sound of the alarm and the attaching of the horses; so that there is, in fact, not a moment's delay in raising sufficient steam for the purposes of locomotion and throwing water.

Its success as far as it has been tried is unequivocal, and the manufacturers, Messrs Latta, Shawk, and Co., of Cincinnati, are about to construct several more, both for the use of their own and other cities in the States.

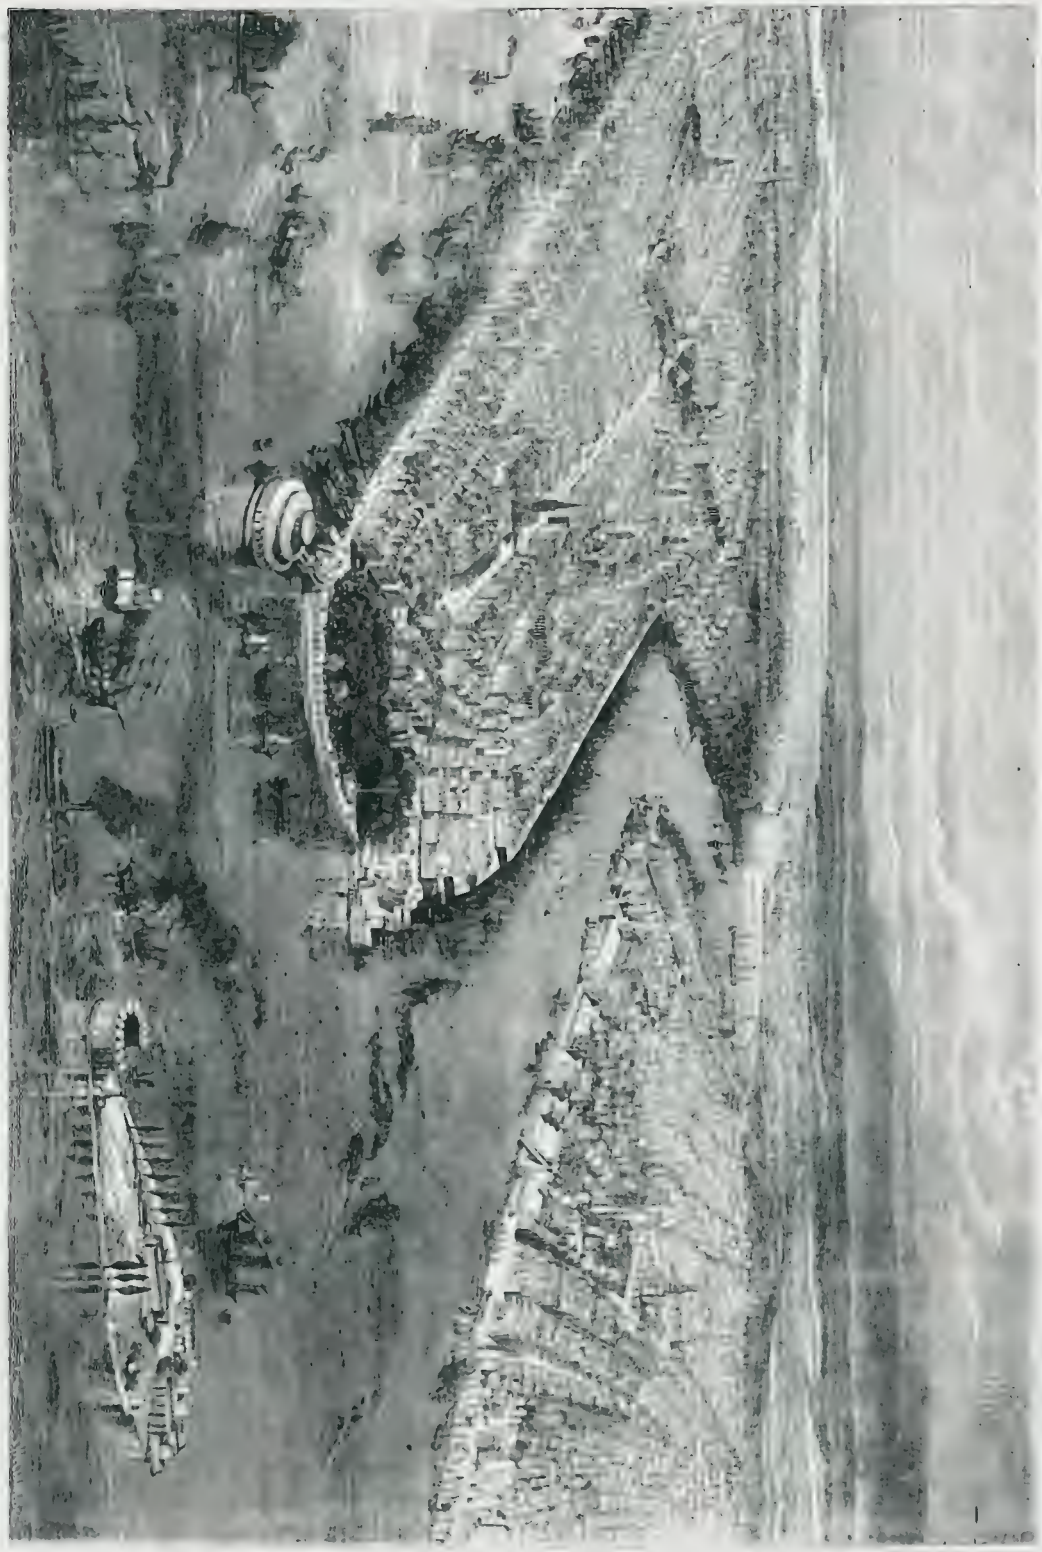
This machine runs on three wheels—the front one revolving in the centre of the car, in order to save the machinery from straining in passing over the inequalities of the pavement. Its introduction has marked an important era in the history of fire apparatus in America. It has at least proved the fact that the potent agent, steam, can be brought to bear with success on the most destructive fire.

Not the least important point in the steam fire-engine is the frame of lattice-work which, on the principle of a tressel-bridge, supports the whole machinery. The advantage of this arrangement is obvious—lessening the weight of the engine considerably, thus making locomotion more easy, without taking from the strength of the frame which has to sustain such a massive pile of iron work.

This engine was one of the great attractions of the New York Industrial Exhibition; and Mr. Dilke thus reported on its capabilities :—

On reaching the station we satisfied ourselves that there was no fire in the engine, and that the water in the boiler was cold. On the order being given to proceed to a particular point, the light was applied to the grate, always kept ready filled with very combustible materials, the horses were harnessed, and the engine left the house in three and a half minutes after the supposed fire was announced. It reached the spot indicated, 1450 feet distant from the engine-house, in two minutes and three quarters; and in six minutes and a half from the first announcement the horses were uncoupled, and the engine placed over the supply-cistern. In eight minutes and a half the steam-gauge was at 35, and the pumps self-feeding. In nine minutes a hose was affixed, and the reel dispatched in nine minutes and a half to about 100 feet distant from the engine, during which time a second hose was being fixed and laid out. In twelve minutes water was issuing from one hose, and in twelve minutes and a half from both. In thirteen minutes the jet of water reached 100 feet from the nozzle first applied, one of an inch diameter, and from that time a large body of water was pouring forth. In seventeen minutes the supply was strong enough to rise about sixty feet in height. In twenty-eight minutes it was playing over a moderate-sized house. In thirty-three minutes all six nozzles were in use. In thirty-eight minutes the issue of water was stopped, and the capability of supplying steam jets might be shown. In thirty-nine minutes and a half a very powerful blast of steam was issuing. We were informed that the engine had on two or three occasions played six hours continuously, and once twelve hours, and we were given to understand that it had thrown water 230 feet—a statement we could believe from the power exhibited, and which was shown by directing the steam against a heavy car, standing empty in the street, and which was driven by it nearly 100 feet.

FIRE-ENGINE AT CINCINNATI, UNITED STATES.



THE CITY OF NEW YORK.—(SEE NEXT PAGE.)

NEW YORK.

THE rise and progress of the commercial metropolis of the United States may be included among the marvels of modern history. That part of the American coasts which comprehends the State of New York was discovered by Sebastian Cabot in 1497; but he made no claim to it on behalf of King Henry VII. of England, by whom he was employed. In 1609 Henry Hudson sailed up the river which bears his name. The Dutch made a settlement by building some stores and cottages in 1620, and called the district in which they planted a colony the New Netherlands. On the island which the Indians called Manhattan they built a city which they named New Amsterdam. When Charles II. of England gave to his brother James, Duke of York, Long Island, Hudson's River, and other contiguous possessions, New Amsterdam became New York. In 1697 the population of the city was 4302; in 1784 it had increased to 23,614; and at the present time it exceeds 600,000. Seated on a river navigable for 150 miles from the sea, and possessing a sheltered harbour where a ship can ride in safety, it has become the emporium of trade between Europe and America. Its progress has been rapid since its independence was recognised; and it may almost be asserted that, while Liverpool has built New York, New York has built Liverpool. It is within the last thirty years that improvement and progress have advanced with the steps of a giant. It is within that period that the first line of sailing packet-ships was established between Liverpool and New York; and it was deemed so doubtful an experiment that it was only undertaken with two vessels of 500 tons. Complete success rewarded the adventurers, and very quickly similar lines were established from nearly all the Atlantic cities.

In 1818 a steamer called Savannah (having the same name as the port from which she sailed, and reached Liverpool in safety; and in 1838 the *Royal Williams*, of 180-horse power, sailed from Quebec to Picton, and thence to London. But these voyages seemed to have been overlooked, or only regarded as lucky accidents, for scientific men had declared the navigation of the Atlantic by steam impracticable. In 1838, however, the problem was solved by the arrival of the *Great Western* from Liverpool, and of the *Sirius* from Bristol in New York harbour. The Cunard line of steamers was then established, followed by the Collins line, the former British North American, the latter United States, but both running to New York. Then were added lines to Southampton, Havre, and Bremen. While rapidity of intercourse was thus promoted between America and Europe, a set of railways and of electric telegraphs brought into almost immediate contact all the main points of the United States, and an extended system of canalisation brought all the lake districts into juxtaposition. From these multiplied improvements New York derived incalculable benefits as the great point of distribution for the products of the Old and New World. Mr. William Chambers, in his recently published tour in America, states that in one single establishment for the sale of "dry goods" that is, clothing and haberdashery of all kinds—the annual returns exceed seven millions of dollars. It is called Stewart's Store, a huge building of white marble. This alone gives a vast idea of the traffic of New York.

The churches, theatres, and especially the hotels, are magnificent. One of the most remarkable objects in the neighbourhood of the city is the Croton Aqueduct. In the second volume of the "First Report of the Commissioners for the Health of Towns" the height of the water is described as 115 feet above tide, about 105 feet above the lowest, and 60 feet above the highest grade of streets. There are 100 miles of mains, besides 40 miles of aqueducts. The sizes vary from 36 inches to 6 inches. They are always charged, and the water is kept at high pressure in all the streets and at all times—a most valuable aid in case of fire. This splendid work cost 14,000,000 dollars. Libraries are among educational establishments in New York, and some noble libraries. One of the most splendid is the Astor Library, called after its munificent founder, John Jacob Astor, who bequeathed 400,000 dollars to erect a suitable building and fill it with books. Should the United States remain at peace with the world, New York may rival London at the close of the present century, for it must continue to flourish as the Far West is peopled and cultivated.

PAINTINGS FOUND NEAR PÆSTUM.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

IN your Journal of the 10th ult you published a copy of some sepulchral paintings found near Pæstum in the course of the past year. The drawing was accompanied by some explanatory documents from the pen of H. W., on which I intend you will allow to me to make a few remarks I shall confine myself to the largest of the two paintings you extracted.

H. W. conjectures that the swarthy individual at one extremity of the painting refers to the story of Antæus. And, indeed, the adjoining slops of ground does resemble that spoken of by Pindar, Philostratus, from which the gods were supposed to witness the struggle between Hercules and Antæus. On the other hand, however, I much question whether any two articles could have been selected than these two combatants as hardly sparring and sparring at each other. I believe it will be found that Hercules is invariably found as clutching hold of Antæus, and raising him bodily from the ground. Indeed, it is in this elevation from his mother earth that the whole pith of the story consists. Again, the subject is one to which it is difficult to attach any sepulchral significance. Suppose we do so in this wise. Owing to the influence of Asiatic—mind, I do not say Egyptian—art and religion upon the monuments which have been discovered in the bowels of Italy is a fact of which it becomes every day more apparent. Especially is this the case with those dogmas which prevailed in antipodyn on the destiny which awaited the soul after death. The struggle recounted in the *Lord Arden* of Hungarian legends of the Persians, between the good and evil genii, who made it their duty to protect and assault respectively the soul of the departed, find their counterpart in the pictorial illustrations of similar combats which we meet with in the cemeteries of ancient Italy. I should further remark that, in the Persian religion, to the cock or dog was assigned the task of aiding the good genii in their protection of their soul—a point of some importance with reference to the painting before us, and which I think ought to be borne in mind in all sepulchral monuments where the bird is introduced, unless some more obvious interpretation at once present our assent. Nor is this all. The representation of the soul under the aspect of a figure mounted on horseback, riding to "that bourne from whence no traveller returns," is one perfectly familiar to the archæologist. Not less so is the fact that black is the colour by which the evil genii of sepulchral demonology are distinguished from the good. I am aware that to attempt to discuss any question at present art without being in possession of such ample and minute details as cannot necessarily find a place in a journal like yours is a task of no ordinary difficulty, not to say rashness. Still I think, if your correspondent, H. W., would look at the painting from the standing point furnished him by the above imperfect remarks, he might not be unwilling to suppose that the artist's intention was to represent the departure of a soul from this life, its retreat, so to speak, being covered by the good genii engaged in combat with the evil ones. It is not impossible that some details in your drawing might then require some modification, the fruit of a closer inspection of the monument.

C. K. W.

AMERICA AND RUSSIA.—Letters from Athens mention that the new American Minister is leaving no time to prove to the Greek population that his Government is on the most friendly terms with the Emperor of Russia. With reference to my letter a few days ago, on the visit of the King and Queen to the Russian church, and that in the *Moniteur* now bearing it, they again state that that Majesties were received by the whole corps of the Russian Legation in full uniform, and by the clergy in their robes, and that hymns were chanted in the church. The letters do not speak of the Queen in particular or of the consecration of the church. This, however, is not of so much importance. What is important is the character of a manifestation of this kind in Athens, which, under certain circumstances was understood to have, and the effect produced on the Greeks, who would not give so innocent an interpretation to the incident. M. Persiani, the Russian Envoy, appears on excellent terms with the Minister of the United States. He paid a visit the other day to the American frigate in the bay, and was received with the greatest honours. All this, of course, is interpreted by the Greeks as a sign of good amity, and perhaps more, existing between the Emperor Alexander and the United States' Government. Another letter speaks of a journey made by the American Minister to the Greek Government with a view of receiving it from the protectorate of France and England, and, namely, the payment by the United States of the sum due to France and England, on condition that the interest of Mills should be given as security for ninety years.

M. BONAPARTE, who has been elected President of the Piedmontese Chamber of Deputies, filled the same functions last year. He is a member of the Left Centre, and was the candidate of the majority who support the Ministers.

MILLE CRAVELLI'S engagement at the Grand Opera, Paris, being about to terminate, the director has been authorised by Government to offer her a renewal of her contract, but no definition of salary is spoken of, the amount of which seems incredible—180,000 francs a year!

The Imperial Commission, having received intimation that certain sculptures and paintings not exceeding in number [illegible] exhibitors whose productions, according to their opinion, [illegible] Palace of Industry and the Champs Elysées, [illegible] purchase, [illegible]

Professor Nager, of Lucerne, was lately robbed on Mount Parnassus by brigands, who stole his watch, telescope, and ring, and abused him violently when they found he was too poor to be held to ransom.

PROCEEDINGS OF THE SQUADRON IN THE SEA OF AZOFF.

DESPATCHES FROM ADMIRAL SIR E. LYONS.

Admiralty, Nov. 20, 1855.

Despatches, of which the following are copies, have been received from Rear-Admiral Sir E. Lyons, Bart., G.C.B., Commander-in-Chief of her Majesty's ships and vessels in the Mediterranean and Black Sea:—

Royal Albert, off Sebastopol, Nov. 6, 1855.

SIR,—The accompanying copy of a letter from Captain Sherard Osborn, of the *Vesuvius*, with its several inclosures, will place the Lords Commissioners of the Admiralty in possession of a detailed account of the active and energetic proceedings of the squadron in the Sea of Azoff, under the command of that valuable officer.

The enterprise, which was undertaken and so successfully carried out by Commander J. E. Commerell, of the *Weser*, in crossing the isthmus of Arabat, and in destroying a large quantity of forage on the Crimean shore of the Sivash, reflects great credit on that officer, and adds still further proof of his having deserved that promotion which their Lordships have lately been pleased to confer upon him. The gallantry of William Rickard, Quartermaster of the *Weser*, deserves to be particularly mentioned, and I beg leave to recommend him to their Lordships' favourable consideration for the medal and gratuity for distinguished service.

Lieutenant Geo F Day, commanding the *Recruit*, has also displayed his usual activity and zeal in harassing the enemy on the north-east coast of the Sea of Azoff, and I regret to find that his foot has been severely injured by the recoil of a gun. I am, &c. (Signed) EDMUND LYONS,

Rear-Admiral and Commander-in-Chief.

The Secretary of the Admiralty.

Her Majesty's ship Vesuvius, at Sea, Oct., 25, 1855.

SIR,—I am now returning westward towards Gheniteki, having been employed with her Majesty's ships named in the margin (*Curlew, Recruit, Ardent*), since the 9th October, 1855, along the north coast of this sea as far as Taganrog.

On Crooked Spit, as well as Belosarai or White House Spit, the enemy had established a large force in the remains of the old fishing establishments, and constructed a series of rifle-pits and breastworks, from which they opened fire upon any of our vessels taking shelter under those points; and as the enemy had a number of boats with them, with which they could easily board a vessel in distress, I thought it right to destroy the latter and dislodge the men.

The *Recruit*, Lieutenant Geo. F. Day, came in collision with them on the 16th instant, and, although he could not dislodge the riflemen, he succeeded in destroying seven launches and five large fisheries, in spite of the enemy's cavalry and infantry.

Lieut. Day, I am sorry to say, received a severe injury of the foot by the accidental explosion of an 8-inch gun, but he speaks in high terms of the satisfactory manner in which Mr. Wm. Parker, second master of the *Recruit*, executed the service intrusted to him.

On the 20th October the *Ardent*, Lieut. Hubert Campion, drove in a large force of cavalry who made an attempt to prevent him approaching Crooked or Krivala Spit, and he likewise destroyed three boats.

On the 24th October the weather was sufficiently favourable to enable me to get the launches close enough to force the enemy from their rifle-pits upon the Belosarai Spit. At one p.m. the small-armed men and marines of the ship landed, under Lieut. Chetham H. Strode, Mr. R. R. Armstrong, mate, and Mr. H. D. R. Farquharson, midshipman, supported by the ship and boats.

Directly the enemy saw their escape threatened they beat a rapid retreat, though fully 150 in number, and effected their escape by a superior knowledge of the paths through the sands.

Lieutenant Strode then destroyed their posts, which had been recently reconstructed, they were eight in number, and collected to house 200 more, besides these, seven fine boats and an extensive fishery were set fire to near the town of Alti.

The *Recruit*, Lieutenant Day, at the same time destroyed in the neighbourhood of Mariopuol two large fisheries and some fine launches, mounted on regular travelling land-carriages, and in the evening we were complete masters of the only portion of the coast the enemy have attempted to re-establish themselves upon; and, as the troops have already set in, I am in hopes that they will not be able to recover their ground before next spring.

The extraordinary efforts made by the enemy to prosecute their fisheries upon this coast are the best proof of their importance.

They erect nets more than an arpent deep, while two escort large launches plus oared boats, carriages, and arabas drawn by oxen aides, with nets and gear, as well as fishermen to work them.

The fish, directly they are caught, are carried off into the interior; and, when it is remembered that we have destroyed some hundred and odd launches upon one spit alone, some dozen bedecked of the immense quantity of fish consumed on the coast, and, in proof of its being a large item in the sustenance of Russian soldiers, I would refer you to the fact that 1,200 tons of salt fish were found and destroyed by us in the late destruction of the military depôts at Berdiansk and Mariopol.

The report I send of Berdiansk, where I had the satisfaction of learning, as the inclosed letter from Lieutenant Commerell will show, that he had succeeded in destroying a large collection of forage and corn at the entrance of the Solgar or Kara-Su River.

The zeal and enterprise displayed by Lieutenant Commerell on this occasion, as well as whenever any service has to be performed, is most conspicuous, and his judgment in seizing the only good opportunity that has occurred for some time to cross Arabat Spit, and traverse the Putrid Sea, deserves to be particularly called to your notice. Mr. William Rickard, quartermaster, the man he had, I perceive highly by Lieutenant Commerell, was one of my boats crew. A fully concur in the high character given of him.

I have, &c., (Signed) SHERARD OSBORN,

Captain and Senior Officer in the Sea of Azoff.

Rear-Admiral Sir Edmund Lyons, Bart., &c., G.C.B.

Her Majesty's Steam Gun-vessel Weser, Genitchi, Oct. 12, 1855.

SIR,—I have the honour to inform you that on the evening of the 10th inst. I determined, in obedience to your discretionary orders, to launch a boat across the Spit of Arabat, and destroy large quantities of corn and forage, stored on the banks of Kara-Su and Salgir Rivers, on the Crimean shore of the Sivash; the proximity of a guard-house and signal station, also the distance the corn lay from the beach, rendered anything but a night surprise impracticable.

Having left the *Weser* in charge of Mr. Haswell, second master, and accompanied by Mr. Lillingston, mate, a quartermaster, and two seamen, manned by a party, we hauled a small prize boat across the Spit, embarked in her, and at half-past four a.m. reached the opposite side.

Leaving with the party six of the men, I forded the above-mentioned rivers, and at a distance of about two miles and a half from the boat arrived at the corn and forage we were in search of, stacked on the banks of the Salgir River, entirely for transmission by water, as the river was perfectly navigable for barges, the banks being cut, and towing paths on either bank.

In a short time the forage and corn, amounting to about 400 tons, was totally destroyed; not, however, without alarming the guard, and from 20 to 30 mounted Cossacks, who were encamped in a village close at hand. On our retreating we were somewhat pressed by them that, but for the circumstance of the last 200 yards being mud, and the cover of rifles from Mr. Lillingston and a man who remained in the boat, we could hardly have escaped capture. Having crossed the river we returned to the *Weser* by eight a.m.

I must bring to your notice the excellent behaviour of the small party who accompanied me, more especially that of William Rickard, quartermaster, who, although much fatigued himself, resented to assist the other seaman who, from exhaustion, had fallen in the mud, and was unable to extricate himself, now thinking the enemy were keeping up a heavy fire on us at the distance of thirty or forty yards as we crossed the mud.

Trusting my proceedings will meet with your approval,

I have, &c., (Signed) J. E. COMMERELL,

To Captain Sherard Osborn, Senior Officer. Lieutenant Commanding.

H.M.S. *Recruit*, off Berdiansk, Oct. 18, 1855.

SIR,—I have the honour to forward you a report of my proceedings since leaving her Majesty's ship *Curlew* at this place on the 12th. According to my orders I stood off and on during parties entering the Dnipe boats and Whitehouse Spit. When off the latter place, observing a number of mud boats engaged in fishing, and also that many large fishing storehouses had been built since my late visit here on the 14th of last month, I hauled close in to the shore, anchoring about 700 yards off, with the intention of landing with my boats and destroying all I could as soon as I had driven back the troops who were coming down in great numbers, both cavalry and infantry, to prevent us, the former we soon dispersed of, but the latter, entering themselves about in twos and threes, threw themselves on the ground, creeping along so that we could not see them to stop their advance with our shells from the ship; I therefore resolved to land at once, in hopes, by the quickness of our movements to get our work over before they could possibly assemble in force. [illegible] at me I [illegible] [illegible] [illegible]

THE CURRENCY CONGRESS.

On the 5th of December a public meeting will be held at the London Tavern to protest against the continuance of the monetary system created by the Bank Charter Act of 1844. Invitations have been sent to influential gentlemen resident in the great provincial towns, and a numerous attendance is expected. On the day following the meeting a Currency Congress will be held, when a petition to both Houses of the Legislature will be framed, praying that the Act of 1844 be not renewed. By a clause in the Act Government is empowered, after the 1st of August, 1855, to give notice to the Directors of the Bank that the existing arrangement shall terminate, and, on payment of the debt due to that establishment, all its privileges will expire. Considering this movement of vital importance to all classes engaged in the pursuits of industry, we hope it may be conducted with energy and judgment, and that all parties will agree to waive any controversy on minor details, so that they may concentrate their whole strength in placing gold at its market price in national legal-tender money of the realm of England.

There is a view of this subject which too frequently escapes observation, but it is one of grave importance. Every one knows that trade resolves itself into barter, and that barter is the interchange of equivalents; but, in a very material sense, this rule is violated under our monetary system. If we exchange cottons or woollens for wheat, the equivalency is preserved; but when we exchange gold for wheat the case is very different; for in the former case commodities *alone* are bartered for commodities; while in the latter we part not only with gold as a *commodity*, but with gold as our *legal tender*. When this happens the Bank puts on the screw—discounts rise, and production is arrested. Such is the position in which the country is now placed; and it will be the duty of the Currency Congress to impress on Parliament the folly of a system which restricts the operations of industry at the very time when the necessities of war require the fullest development of all our available resources.

Why are we called upon to make these enormous sacrifices? Simply to maintain what is called the convertibility of the bank-note. Writing in 1840, Mr. Jones Loyd said:—"It is not sufficient merely to ordain, as Peel's Bill (of 1819) did, the convertibility of the notes; it is further necessary to see that effectual means are provided for that end It is now discovered that there is a liability to excessive issues of paper, even while that paper is convertible at will; and that, to preserve the value of a paper circulation, not only must that paper be convertible into metallic money, but the whole of its oscillations must be made to correspond exactly, both in time and amount, with what would be the oscillations of a metallic currency, as indicated by the state of the bullion. Such a system, therefore, for the management of the circulation must be constructed as shall secure that due and steady regulation of the amount of the issues through which alone any permanent security for their convertibility can be maintained." It was in consequence of this advice that the Act of 1844 was passed, and it was styled the "complement" to the Act of 1819. It is plain that neither of these measures gave us a legal tender suited to the trade of the country, which ought to have been the object of a wise legislation; nothing more was done than to secure the convertibility of the notes into gold at a *fixed price*. To this all other considerations were sacrificed. No provision was made for the state of war or a scarcity of breadstuffs; panics were anticipated in cycles of every five or six years; but these were utterly disregarded, and the authors of the bill were completely indifferent to periodical suspensions of labour in the manufacturing districts. All that they cared about was the convertibility of the note. The system assumes that the be-all and end-all of monetary legislation is the retention of a single commodity, gold; and it avows that, when a country is in a state bordering upon *famine*, the supply of *gold* is more important than the supply of *bread*. If the bullionists were consistent, not a single bank-note ought to be in existence; the circulation ought to be exclusively metallic; that is the test by which their principles are to be tried; and we will now show that the mixed circulation of gold and paper is a "delusion, a mockery, a snare."

Government owes a debt to the Bank of fourteen millions, which it cannot pay in gold, while it compels all her Majesty's subjects to pay their debts and taxes in gold; moreover, it tells her Majesty's subjects that they shall not be permitted to trade or earn their bread in the sweat of their brows, unless they find gold which the Government itself is unable to find. It says to the Bank, as we cannot pay you what we owe, we will allow you to violate the law and issue notes to the extent of fourteen millions without any metallic reserve; and, while we tax the people to pay you three per cent interest on the debt, we will empower you to tax the people in the shape of discounts as much as you can extract on your inconvertible notes. Thus the Bank derives two distinct profits from the debt, and yet its notes are mere wind bills, as it is not bound to keep gold to represent the fourteen millions, but only for those notes which may be in excess of these fourteen millions. When it has a difficulty in getting these wind bills into circulation, it tempts the unwary, by low discounts, to borrow and expand their trade; and, when it finds that it has more wind bills out than it can conveniently redeem, it rapidly raises discounts and ruins those it has beguiled. Thus, through a system at once arbitrary and delusive, the Bank is made a *despot* to the community, while she is herself a *slave* to circumstances; resembling him of olden time who, though playing the tyrant over others, was himself enslaved to secret alarms, and ever whose throne a naked sword was suspended by a single thread.

If the Currency Congress put an end to this iniquitous system, which periodically makes labour the victim of usury, it will deserve well of the country. A nobler field of exertion was never open to patriotism. With their success Free-trade will become a reality; the merchant would conduct his business without fear of panic; industry would never be driven into compulsory idleness; production and consumption would increase from year to year; and the revenue would improve, while the pressure of taxation would be lightened. Let the Currency Congress bear in mind the counsel of Junius—that "there is no extremity of distress which ought of itself to reduce a great nation to despair. It is not the disorder, but the physician; it is not a casual concurrence of calamitous circumstances, it is the pernicious hand of Government which can alone make a whole people desperate."

Hamburg letters state that the Swedish Government has contracted a loan of five millions of Swedish dollars with the house of Salomon and Heine, to be expended for purposes connected with the present high price of provisions

Eleven hundred workwomen have been employed at Metz for more than three months in making gaiters for the army of the East. The average amount of their daily earnings was 1f. 25c., which was surpassed by the women who were assisted by children.

The latest statistics of the passenger traffic between England and France show that the aggregate number from and to Boulogne during the past month was 17,006, against 10,861 in October, 1854; [illegible] 4345, or 60 per cent.

A brisk trade has sprung up between Ma[illegible] and Kamiesch. Several private steamers and sailing vessels have been placed on that line, and every vessel which leaves Marseilles takes out a rich cargo.

WAR OBITUARY.

(*Continued from page 538.*)

BLAKISTON (Lawrence), Lieutenant 62nd Foot, who fell at the storming of the Redan on the 8th Sept., was third son of Major Blakiston, of Mobberley Hall, Cheshire (the author of "Twelve Years' Military Adventure"), and nephew of Sir Matthew Blakiston, Bart. He was twice wounded on the advance and, still continuing to lead his men, was killed by a cannon-shot on the top of the Redan. His loss is deeply deplored in the regiment, both as an able officer and worthy and amiable gentleman.

EVAN (Lieut.-Col.), C.B., 41st Foot, who fell at the storming of the Redan, on the 8th September, entered the British Army as Ensign in 1838; he became a Major in 1852, and a Lieut.-Colonel the 8th November, 1854. Lieut.-Colonel Evans served in Spain with the British Legion from July, 1835, to January, 1836, and was present in the various skirmishes with the enemy during that period. He was with the 41st throughout the campaign of 1842 in Afghanistan, and obtained a medal. He shared in the engagements of the Pisheen Valley, Candahar, Ghoine, and Ghuznee, the taking of Cabool, the expedition into Kohistan, and in the capture of Istalif. In the Crimea he was in every action, and he was particularly distinguished at Inkerman. He has left a widow and three young children. He was, at the time of his glorious death, only in his thirty-sixth year.

GRAHAM (Thomas), Lieut.-Col. 1st Regiment, who died at Haslar Hospital on the 2nd inst., of dysentery, contracted in the Crimea, and accelerated by going into the trenches on the 8th Sept., was youngest son of the late General Alexander Graham Stirling, of Duchray and Ardkyle, North Britain. He was aged forty-six; and is deeply and truly lamented. Lieut.-Col. Graham entered the Army as an Ensign the 31st May, 1826, and became a Major the 3rd May, 1844, and a Brevet Lieut.-Colonel the 20th June, 1854.

HAYTER (William), Deputy-Assistant-Commissary Field-Train Department, who was killed at the storming of the Redan, on the 8th Sept., by a shell in one of the batteries, where he had volunteered to take the place of a wounded sergeant. Hayter when but fifteen years old was a trumpeter in the Artillery; he was afterwards a corporal and sergeant, and served for eleven years in the Artillery at the Cape of Good Hope.

OGILVY (Balfour), Colonel, who died of cholera at Balaclava on the 12th of July last, was the eldest son of Colonel William Balfour, a well-known Peninsular officer, who commanded the 40th Regiment in some of our most brilliant engagements in the last war. Colonel Balfour was a Company's officer, and served in India for ten years. He married Miss Ogilvy, of Tannadice House, Forfarshire, N.B.; and, upon her succeeding to the property, he took the name of Ogilvy. He was a Deputy-Lieutenant, an active and intelligent magistrate, and his loss as a good landlord, hospitable and social friend, will be long felt by those among whom he lived. Taking a very decided view as to the wrongs that Russia was inflicting on an inoffensive Power, Colonel Ogilvy and his old friend and brother officer General Cannon offered their services to Lord Cardigan, and her Majesty's Government, on Lord Cardigan's recommendation, appointed them chiefs on special service at the seat of war. Upon their presenting themselves to Omer Pasha, that great Commander very gladly received them, and gave them important commands in the Turkish army. Colonel Balfour Ogilvy assisted General Cannon in that eminently successful strategical movement which rendered the almost exhausted garrison of Silistria with 5000 fresh troops. This opportune relief was the immediate cause of the Russians raising the siege, which they did a few days after Cannon's troops entered the fortress. He was with the gallant Butler at the time he received his death shot at Ak Palanka, and assisted in carrying that brave officer from the battery to the town. The passage of the Danube and signal success of the Turks at Giurgevo was mainly owing to the gallantry and generalship displayed by Colonel Ogilvy on that occasion; indeed, he may be allowed the honour of having finished the Danubian Campaign, as Giurgevo was the last place on the Danube that the Turks and Russians met. But the triumphs of the day had for him its corresponding sorrow, for three of his old friends (one a near relative) were killed. They were English officers, and had joined him a few days previous to the battle of Giurgevo. Frequent attacks of ague fever (a malady common to the Danubian marshes) had so much impaired his health, that he was obliged to return to England in the latter part of September, 1854; but, thanks to his native air and a naturally robust constitution, he soon rallied, when he lost no time in returning to the seat of war. At Eupatoria he commanded three thousand Turks, and assisted greatly in the defence of that fortress in 1855. He was conspicuous here for his energy, coolness under fire, and presence of mind in critical moments. Omer Pasha, conceiving a great estimation for him, wished to attach him to his Staff; but Colonel Ogilvy, thinking that the best work would be at the head-quarters of the Allies, obtained a separate command and went to Balaclava, where he was regarded by every one who knew him as a brave and gallant officer. Shortly after he proceeded to the Sea of Azoff with the command of five thousand Turks, and took an active part in all our successes there. When at Kertch his health again gave way, and, after much persuasion, he accepted a medical certificate to return home on leave, and he arrived at Balaclava on his way to England in a very weak state, when, in a few hours, he fell another victim to that awful scourge, cholera. He was buried at the head-quarters of the English Army, and the officers who served under him, together with his personal friends in the Crimea, have erected a handsome monument to his memory. Omer Pasha considers the death as a very great loss, and one that could with great difficulty be supplied. And her Majesty's Government have shown their appreciation of his highly-distinguished and meritorious services both in word and deed. Colonel Ogilvy received the order of the Medjidié, the gold medal for distinguished conduct, a medal for Silistria, one for Giurgevo, and the Crimean medal from the English Government. It is satisfactory to know that the Government has very creditably awarded to Mrs. Ogilvy a Colonel's widow's pension, and has granted to Colonel Ross (Charles Cornwallis), Captain 3rd Regiment (the Buffs), was born April 5th, 1827, and entered the Army in December, 1845, as Ensign in the 52nd Regiment, then serving in Canada, where he proceeded in May, 1846, and returned to England with the regiment in August, 1847. In 1853 he exchanged into the Buffs, and joined that regiment at Malta in July. In the autumn of 1854 the Buffs were ordered to Athens, and in April, 1855, joined the army before Sebastopol. On the night of the 31st August Capt. Ross was in command of a party of his regiment covering a working party of another regiment in the advanced sap before the Redan. An Engineer officer came round and remarked that some of the sentries might be pushed further forward. Captain Ross immediately said that he would go forward and examine the ground himself. He asked another officer of his regiment to go with him, and they had reached a slight hollow where some men of the 97th Regiment had been killed the night before, and were looking at their accoutrements. Captain Ross observed that he would send a fatigue party for them, when a strong Russian picket, who had crept up unperceived, fired a volley at about ten yards distance. His companion most fortunately escaped with a very slight wound; but Captain Ross has never been heard of since, nor have any traces of him been found. He must, therefore, either have been killed on the spot or have been so badly wounded as to have died very soon afterwards in Sebastopol. On the 13th of October Prince Gortschakoff replied to General Simpson's third inquiry by stating that Captain Ross was not in the hands of the Russians. Captain Ross here the character of an "excellent hard-working officer, very attentive to the wants and comforts of his men, and one in whom the men had very great confidence." Captain Ross was eldest son of Mr. and Lady Mary Ross, and is the fourth grandson of the second and last Marquis Cornwallis who has fallen in the Crimea within ten months. His other grandfather, General Ross, was the intimate friend and companion in arms of the first Marquis Cornwallis, whom he accompanied to America and India.

ROOKE (William Frederick Augustus), Captain 47th Regiment, died on the 1st October last from the effects of a wound received at the attack on the Redan on the 8th Sept. He was Brigade Major of the Second Brigade; and, when fatally struck, was with Colonel Windham, then commanding the Brigade. Captain Rooke was wounded on the head, early in the day, by a piece of shell, and as there was no fracture of bone the wound was not considered to be of a very serious character. The mischief subsequently proved to be deeper than was anticipated; and though for some time under orders to leave for England, at the recommendation of a medical board, he was not in a fit state to bear the removal. He was an active, intelligent officer, and, from his industry and experience, the loss of his services as Brigade Major will be much felt. He is deeply regretted, not only in his own but in all the regiments of the Brigade. This officer was one of a numerous family who have served their country in the Army and Navy. He was the third and youngest son of Charles Rooke, Esq., of Westwood House, near Colchester, who himself served in the Royal Artillery, in Egypt, under Abercrombie. Captain W. F. A. Rooke accompanied his regiment to the East in March, 1854. At the commencement of the war he was never absent from his duty for a day, and was present in every engagement up to the fall of Sebastopol, sharing in the arduous duties of the trenches during the winter, and was placed on the staff in the spring of the present year

SCOTCH FACTORY GIRLS IN BOSTON.—Among the passengers by the ship *Star of Europe*, which arrived at this port on Wednesday, from Liverpool, were about sixty Scotch girls, engaged to work in the factories here. They are mostly young, neatly dressed, and some of them are quite [illegible] *Traveller*

WOUNDED RUSSIANS AT THE BATTLE OF THE TCHERNAYA.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

ON receiving a copy of your interesting Paper of the 6th October, I was much surprised on reading a letter headed "Battle of the Tchernaya," signed "Wm. John Cuape, Rector of Falmouth, and Assistant-Chaplain to the Forces," on the subject of the wounded on that battle-field, and containing grave imputations and reflections on the want of humanity of the British medical officers in their department.

Had the reverend gentleman confined himself to chronicling his own "good Samaritan" deeds I should not quarrel with him; but when he deliberately proceeds to charge his own countrymen with that want of humanity which they justly pride themselves in possessing as a national trait, I can only say that he has not only stated that which is not true, but that which is untrue, mischievous, and wicked as I cannot see what object could be gained or answered by exposing that which, *even if true*, could have only been *accidental* or *unavoidable*; and I consider that he ought to be officially called upon to retract the base calumny he has been guilty of towards the officers of this army.

I was for several hours present on that dreadful field as well as Mr. Caspe, who, by-the-by, has no business there at all (unless he professes the religion of the Greek Church), and saw several British cavalry surgeons engaged in the performance of their painful and self-imposed duty, exposed to that fire which the reverend gentleman appears to have innocently imagined was only intended for himself and his *white horse*. I likewise rode a white horse, and beg modestly to claim a very small share of the fire of the Russian "heavy guns," which your Correspondent wishes to monopolise; and I am somewhat at a loss to understand how he could have managed to place the *knapsacks* of the wounded under their heads when it is well known they had *no knapsacks with them*, or how the operation of placing them there could be performed without dismounting, as he states he was unable to dismount from a hurt in his leg. I was readily prepared to make due allowance for the excitement of the novel position in which he found himself—probably enhanced by the difficulty he must have experienced in keeping his seat on his prancing charger under a fire "directed against him" amidst the "shouting, sounding of bugles, and flying to arms"—as to have been unable to mark a scene of confusion to distinguish a British medical officer; but I beg to assure you and your readers, as a direct contradiction to his statements, that British surgeons were present when their services could be spared, and that Surgeons Crosse and Massey, of the 11th Hussars and 17th Lancers, who had their instruments with them, performed some capital operations on the field, and with others (Dr. Elliott, Artillery; Surgeon Wall, 38th; Assistant-Surgeon Lane, 50th; and some others whose names I do not remember) rendered every assistance in their power. I know likewise that Dr. Hall was there, and waggons and mule-litters; and that the Inspector-General of Hospitals himself accompanied the waggons and litters that were sent to the field at five o'clock the following morning. That more medical officers of the infantry were not present is due to the fact that all the troops in front of Sebastopol were under arms, and confined to camp by order of the various General commanding divisions, who were expecting an attack on the whole of our position. I am likewise enabled to state that several civil surgeons, from the General Hospital in Camp, proceeded to the field at an early hour the following morning, but were warned back by the French sentries. So much for the truth of your Correspondent's letter. I cannot help observing, when a person in the position of a clergyman makes statements to the public reflecting upon others, for which his profession may offer a natural guarantee, he cannot be too careful in accurately ascertaining their correctness, as well as application; and I would seriously advise him, when he next proceeds to the field of battle, mounted on his war horse, to charge the enemy instead of the Medical Department.

I am, Sir, your obedient servant, J. MOUAT,
October 27th, before Sebastopol. Staff-Surgeon First Class.

THE ISLAND OF KAWAN.

(*From a Correspondent.*)

THE Island of Kawan, one of the most picturesque objects in the neighbourhood of Auckland, is distant some thirty miles to the northward of the capital of New Zealand, and forms one of the principal leading points for vessels entering the Hauraka gulf. It is one of the numerous estates of the North British Australian Land Company, and is chiefly valuable on account of the rich vein of copper ore that traverses the whole island, and which is now being worked under the able direction and management of Mr. Berger, who, having arrived from England some nine months since, has, in spite of great difficulties, succeeded in keeping the greater portion of the Cornish miners sent out by the company, and in erecting an engine-house and engine of some fifty-horse power, fully capable of keeping the mine free from water for a considerable distance below its present depth. The mine itself is situated on the beach, with one of its principal levels running some distance under the sea.

A small landing, close to the adit level, has disclosed the copper ore cropping out in considerable quantities, with a green oxidised appearance, and about ten feet thick. Beneath this there are three other levels, at 9, 14, and 24 fathoms, from which already large quantities of ore have been extracted and sent home under the previous system of management.

Some years since certain gentlemen residing in Auckland, being aware of the richness of the lode, applied to Governor Fitzroy for permission to purchase so many acres of sea in the immediate neighbourhood of the island. Unaware for what purpose so strange an application had been made, their request was granted, when they commenced sinking a shaft beneath the sea; and it was not until some time and money had been expended in litigation that these gentlemen were bought off for £5000, when they received the expressive *soliciqued* of the Under-Mining Company. The mine is at present perfectly dry, and Mr. Berger proposes to sink the present shaft twenty-four fathoms more, as he finds that the lower he goes the richer becomes the quality of the ore.

The accompanying Sketch represents a view of Mr. Berger's residence, situated about half-a-mile from the mine, in a small shady bay; and, from the highly luxuriant vegetation surrounding it, together with its gentle shelving beach, one of the most romantic and lovely spots to be met with in the whole island. Momona Bay—signifying in the native language rich, fertile—is a small inlet from the more extensive harbour of Bon Accord, which runs about two miles into the centre of the island, and of sufficient depth and safety to shelter a considerable fleet of vessels.

About half a mile up this harbour are situated the smelting-works, which, although not at present in active operation, are still in excellent repair, and capable of smelting five tons and a half of ore per day. Mr. Berger anticipates in a few months hence to obtain sufficient ore to keep them in constant work.

The most beautiful forest scenery that can be imagined skirts the banks on each side of the harbour of Bon Accord, the stately and majestic Kauri pine towering above its lesser companions of almost every tree and shrub peculiar to these islands, among which, perhaps, not the least conspicuous is the tall and graceful tree fern. On the hills behind these forests are to be found numerous wild cattle, besides pigs, pigeons, and wild fowl, which will afford ample sport to the fowler.

There is little doubt that in a few years hence this beautiful island will form one of the most favourite resorts for the tourist, the merchant, the Government official, or even the valetudinarian from India, who, in consequence of the recent establishment of steam communication between Auckland and Sydney, are already flocking to visit this most interesting country.

A SURVIVING NEW ZEALAND CHIEF'S REMINISCENCES OF CAPTAIN COOK'S VISIT.

WE have been favoured by a Correspondent at Auckland with the accompanying Sketch of one of the natives of New Zealand who, at the date of the above communication, remembered the visit of our illustrious countryman, Captain Cook. The native whose portrait is here engraved, our Correspondent writes, "is known by the names of Horata and Taneura, and more familiarly by the Europeans as old 'Hook-nose.' He is a Chief of some importance, and has always evinced much friendship to the settlers." Our Correspondent writes —

I saw him when on a visit to the newly-discovered gold-field at Coromandel Harbour. As soon as he heard that gold had been found on his land, he was the first Chief who came forward to meet his Excellency Lieutenant-Governor Wynyard, and to make arrangements for the Europeans to dig for it. Upon my showing him some specimens of gold which I found on the river Waiau, claimed by him, he said that he should now be content to die—that he had lived many days, but that this day was the brightest of them all. He did not seem to value the consideration of the gain it would be to him, so much as the thought that his land, the place of his ancestors, should be the first to produce gold. He glanced at the fine honoured peak of Mota Tere (Castle Hill), and turning then to the setting sun, appeared to commune with the generation he had outlived. The following is the account he gi[illegible]t Cook's visit to Mercury Bay (Witianga). From what he says respecting

THE ISLAND OF KAWAN, NEW ZEALAND.

his own age at the time, it would appear that he must have been about twelve years old:—

We thought that Captain Cook's vessel was a large kind of whale, and the men on board were gods. When we saw them pulling with their backs to the bows of the boats we thought they must have eyes in the back of their heads. When the natives saw the salt pork which was used on board the vessel, they thought it was the flesh of whales—it was so very fat. For some time I was afraid to venture on board, but I did so after some of the men had returned in safety. Some other boys went with me. Captain Cook spoke very little—less than any of the others. He seemed to take most notice of children. He placed his hands on our heads and patted us. By making signs, he got our men to draw a large chart on the deck, with charcoal, of as much of the coast as they were acquainted with, which he copied on paper. As regards the North Cape (Cape Maria Van Diemen), the men took much trouble, by signs, to explain that at this place their spirits, after death, took a plunge to the realms below. Captain Cook seemed much puzzled by the mode of explanation used on this occasion. He gave us the first potatoes we had seen—a double handful. These we planted, and in three years called a great feast to commemorate their introduction, at which, for the first time, they were allowed to be used for food.

After Captain Cook went away we saw another party of Europeans, who got spars of Kahikatea (*Podocarpus excelsa*) from the river Thames, and after that a larger vessel than either of the other two came to the Thames. On taking her departure she fell in with a fishing-canoe which had been driven out to sea. The wind was so strong that, after taking the two young chiefs on board which it contained, she could not again make the land. The two young men were taken to France, and in about two years were brought back in another vessel, which at the same time introduced pigs.

The following story of an act of theft on the part of a native chief named Maru-tu-ahu, at Mercury Bay (Witianga), at the time of Cook's visit, and the subsequent adjudication on it by the natives, tend to illustrate the strong sense of justice so conspicuous among them, which they possess up to the present time. It also shows how much mischief one bad man may produce under such circumstances:—

Among the natives who went to trade with Captain Cook's ship was Maru-tu-ahu, a man who was always stealing. He was so bad a man that it any young man was found stealing, he was, as a proverb, said to be the son of Maru-tu-ahu. The words were quite known in the neighbourhood. He went in a canoe, with eight other men. He sat in the middle—four were in the stern, and four in the bows. He sat on a dog-skin mat. When he got alongside the ship, the gentleman whose business it was to collect the flowers of trees, shells, and things of that kind (the naturalist, it is supposed) made signs to barter for the skin, and, producing a large roll of calico, let the end of it fall into the canoe, and unrolled a considerable quantity—quite a heap. He then took a knife out of his pocket and cut it off, making a sign for the mat to be handed up.

Instead of being obeyed by Maru-tu-ahu, as he should have been, this thief made a sly use of the proverb, *Te uri a Maru-tu-ahu* (the son of Maru-tu-ahu), in order to let his companions know his bad intentions.

They were but too willing to take the hint; and, striking their paddles into the water, made for the shore. The disappointed naturalist disappeared from the deck for a moment, and returned with a double-barrelled gun, with which he took a steady aim over the bulwarks, and fired at the retiring canoe.

In the excitement of the paddling the extent of the injury done by the discharge was not noticed, for Maru-tu-ahu had scarcely altered his position; but upon reaching the shore he was found sitting nearly dead upon the heap of calico, which was dyed with his blood, and before he could be lifted out he expired. The ball had entered his back. A great meeting of natives took place to investigate the matter. They came to an agreement that he had deserved the punishment, and that his death should not be revenged upon the strangers. They said also that as he had paid for the calico by his death it should not be restored, but that he should keep it; and they accordingly wrapped it round him as a winding-sheet. That he had stolen, and was killed for so doing—one for the other. That he should not be deprived of that for which he had given his life. He should keep that for which he had paid. Captain Cook and others landed soon afterwards, and traded as if nothing particular had happened.

CHARLES W. LIGAR.

THE NEW ZEALAND CHIEF HOHATA-TANEWA ("OLD HOOK-NOSE"), CONTEMPORARY WITH CAPTAIN COOK.

THE HUTT VALLEY AND BRIDGE.—RECENT EARTHQUAKE.

An interesting account of this catastrophe (one of the localities of which is represented in the accompanying Illustration) has been communicated to the *Times* in a letter, dated March 5, from a resident in the Valley of the Hutt river, New Zealand. "We were sitting," says the writer, "round our table with a friend, when, at half-past nine o'clock at night, without the rumbling notice which earthquakes generally give us, the shock commenced; the house waved to and fro, rocked, and jumped, as you might fancy a ship would when she strikes upon a rock; the lights were dashed off the table, books, glass, china, &c., on the shelves round the room, came down, together with the chimney—part of which fell inside and mixed with the ruins of the furniture, &c. Our friend jumped out of the window, and clung to a post outside, but was thrown down then, and obliged to lie on the ground. I rushed to open the door, but it was some time before I could open it, and then only by watching the waving of the house; and when the door was opened, and I let go my hold of it, I was thrown down, and could not rise on my legs till the shock was over, which lasted about three minutes. No house, but one built with posts let into the ground, and wooden houses put together like a box, as the houses in this country are built, could have outlived such a rattling. Ours, though somewhat out of the perpendicular, is not down. Every one in this valley (of the Hutt) lived in tents for some weeks, as the shocks have continued up to the present time, but none have been so severe as the first. This part for many square miles is rent in every direction; cracks in the ground of many feet in length, and from a few inches to several feet deep, exist over very large spaces, at short intervals from each other; our horse-track to the river, which is about half a mile off, has more than twenty such across it, twelve of which opened and shut with violence during the shock, and threw water to a considerable height over the surrounding bushes. I saw the water, cracks, sand, and mud, which were thrown up, the morning after, and glad I was that no fissure had opened nearer to our house than 200 yards, or it must have come down on us. Fissures opened in two native 'warries' to my knowledge, and nearly smothered the inmates with water, besides bringing their light buildings down on them. Five natives, however, were killed in one house in this valley, and one man only in Wellington, 54 miles off."

THE HUTT RIVER AND BRIDGE, NEW ZEALAND.

THE CITY OF MELBOURNE.

A NATIVE AUSTRALIAN, OF THE WARRIALDA TRIBE.

By way of contrast to the scenes of progress described in the adjoining column, the accompanying account of a young native of New South Wales, lately arrived in London, will be read with interest. He is of the Warrialda tribe, of the district of the Gwyder, inland from Sydney upwards of 400 miles. He is of the family of the chiefs of his tribe, of which he is said to be a good specimen. He has been employed by Mr. Geddes, a colonist, who has brought him to England to show him the mother country. Mr. Geddes considers him active, honest, and trustworthy, and a good horseman after stock; he also considers him quite capable of improvement to any extent that an opportunity might offer

NATIVE AUSTRALIAN, OF THE WARRIALDA TRIBE.

for his instruction; and a similar report is made of him by the Captain of the barque *Balthazar*, in which he came passenger. His age is about sixteen.

MELBOURNE, PORT PHILLIP.

A CORRESPONDENT (Mr. Stubbs, sen., of the firm of Stubbs and Son), whom we have to thank for the above View of the present appearance of the capital of Port Phillip, emphatically writes:—"Let it be remembered that the site upon which the city stands was, only nineteen years ago, the resort of the untutored savage, and the feeding ground of the wild kangaroo." Our Correspondent, who is evidently a lover of facts and figures, adds:

"The population at the former period was about 700; and at the present time is 50s,000.

"The first public sale of land, which took place on the 1st June, 1837, averaged £70 per acre, and some of the very same land sold at the rate of £120 000 the acre the year before last (1853).

"The customs duties collected in 1837 was £3000, and the probable income under the same head for the present year is taken at £1,457,700; income from gold, £330,000; from licences, £150,000; from fines, £69,000; from fees of office, £37,000; from assessment stock, £70,000; from postage, £45,000; from port and harbour dues, £30,000; auxiliary to these there are other items bringing the revenue up to £2,400,000."

An interesting *resumé* of the present aspect of the city is given in *The Land and Banking News*, No. 41, whence we select a few items:—

The city of Melbourne, the capital of Victoria, comprehending a municipality and suburbs, is situated on the banks of the river Yarra Yarra, and on the shore of Hobson's Bay, in the harbour of Port Phillip. The municipality extends over 9000 acres, upwards of 3000 of which are public parks, squares, and reserves. The suburbs comprise 7000 acres. Like Rome, Constantinople, Moscow, and other celebrated cities, Melbourne boasts within its precincts of no less than seven hills. Part of the municipality is divided into wards the first four form the old city; the last is also called Collingwood, or the New Town. The suburbs are East Collingwood, Richmond, and Prahran. At a greater distance, but still in a measure suburban, may be likewise mentioned the seaport town of Williamstown, and the thriving and beautiful rural township of Brighton, situated on opposite shores of Hobson's Bay; a number of villages, such as Hawthorn, Flemington, Brunswick, Footscray, &c., &c., may almost be said already to form part of the rapidly-spreading metropolis.

The old portion of the city was unfortunately laid out in a rectangular block, and squares were totally forgotten. The principal streets are broad and convenient, but between them are lanes originally intended for back entrances to the allotments, which, having become valuable, were all built upon. These are now densely populated by singularly-contrasted classes. Some are full of merchants' warehouses, and in one of them, called Chancery-lane, are the chambers of nearly the whole legal fraternity. Collingwood was built on private property, and no regular plan was adopted: it forms, therefore, a heterogeneous mass of fine streets, narrow lanes, and blind alleys. The Legislative Council have voted £50,000 for opening up the streets and lanes, and as far as possible remedying the original defects. The other portions of the municipality, built upon since the gold discovery, form a marked contrast in plan to those above noticed. The streets are all wide, and large squares and parks have been judiciously reserved.

The style of architecture in the principal streets of Melbourne is singularly varied. Good stone and brick buildings, some of them of elegant and massive proportions, are very numerous; but frequently beside them may be seen wretched little wooden houses, which are not only unsightly, but are the subject of frequent fires, happily diminished by a stringent Building Act. In the recently-built portions, iron, zinc, and wooden houses are numerous. During 1853 and 1854 building operations were carried on to such an extent that the number of stone houses was at least doubled.

Amongst the many buildings claiming notice is the Town Hall, in Swanston-street, an imposing structure not yet completed: it is in the mixed Italian style, reminding one of the manner of Inigo Jones. Next are the new National Schools, at the east end of Lonsdale-street: the Exhibition-building in William-street, not less remarkable for its artistic and tasteful design than for the rapidity with which it was constructed. The Hospital, in Lonsdale-street, recently much enlarged, is also an imposing building; the Offices of Government and the Courts of Law, interspersed in various parts of the city, are massive structures. Almost every Christian religious denomination possesses several places of worship, to nearly all of which are attached excellent schools; but, with the exception of the Roman Catholic Cathedral, dedicated to St. Francis, in Elizabeth-street, none lay claim to massiveness of design or size. The Anglo-Episcopal Cathedral of St. James, in Collins-street, is simply a parish church, without any pretensions to architectural display. The churches of St. Paul, Swanston-street, and St. Mark's, Collingwood, are spacious, roomy edifices. But, taken altogether, Melbourne is deficient in high and decorative church architecture. A University of noble design is in course of erection on a commanding site in North Melbourne.

The effect of the gold discoveries in Australia has been strangely to cheapen the fortune of the colony; and this is specially evident in Melbourne. Our Correspondent is of opinion that the gold-fields are unbounded in extent, and favour the supposition that they are capable of giving employment to 100,000 persons for the next century.

Yet a letter dated July 18 states that—

The whole Colony is now in a state of destitution and riot. There was a

THE TOWN-HALL, MELBOURNE

detachment of police sent under arms to the diggings, on account of a previous row between the Tipperary and the English diggers. This disturbance is caused by a general scarcity of gold. Some may say in reply that the present returns of go d are equal to any former return. This may be the case, we will allow; but consider the increased population of the diggings, which is three times that of 1853, and yet the same amount of gold only is obtained. But Melbourne and the district is in a state of poverty: there are thousands prowling about the streets who cannot get work. . . . . I do not write through interest in any way, but in pity for those poor unfortunate beings who have been so foolish as to believe the reports of some of the Australian papers, whose editors and proprietors are influenced by the squatters, whose interest it is to fill the colony with labour, for the purpose of getting shepherds and herdsmen for little or nothing except their rations.

Mr. Howitt, in his "Two Years in Victoria," lately published, gives the following scene of reckless extravagance of the successful diggers:—

You can scarcely pass Bourerie-street (a horse-dealing ground) without danger of being galloped over, for the diggers are always buying horses there, and come headlong out of the yard into the street, and gallop and rampage about the streets in a furious way. The whole street swarms with diggers and diggeresses. Men appear in slouching wide-awakes, with long untrimmed hair and beards, and like navvies in their costume. Some have heavy horse-whips in their hands, and are looking at the exploits of other diggers on horseback, with a knowing air. Others are swearing about the doors of pot-houses, where others, again, are drinking and smoking. Others, with a couple of bundles, or a pair of huge boots, swung over their shoulders, are lighting their pipes at a candle, or cheapening digging apparatus. The whole street abounds with second-rate shops, which supply tools, kettles, tin-ware, boots, clothes, and so on. You are amazed at the price of every article. These scenes are continually going on. Amid all this there were open carriages driving about crowded with diggers and their diggeresses, at the rate of £1 per hour. Diggeresses is gloriously in the ascendant here. One of the diggers asked the hire of a cab for the day. "Perhaps more than you'd like," said the Jarvis, for the digger was a very common-looking fellow. "What is it?" asked the digger. "Seven pounds," was the reply. "There is ten," said the fellow; "you can light your pipe with the difference."

By way of contrast with the handsome city engraved upon the preceding page, we have copied a Map of the site and the position of the huts and buildings previous to the foundation of the township by Sir Richard Bourke, in 1837; surveyed and drawn by Robert Russell.

OUR LODGERS.—(No. IV.)

THE SECOND FLOOR.

We let our second floor altogether as sitting-room, bed-room, and dressing-closet, for one pound one per week—boot-cleaning, fires, &c., extra, of course. Sometimes we have clerks in banking-houses, and sometimes young married couples just starting in life, and who generally derive a good deal of experience at the hands of Mrs. Mungo, who always contends that nothing's worth anything unless you pay for it; and by the time they have lived a couple of months with us they cut their wise teeth, I promise you, Mrs. Mungo's system of domestic economy is so very instructive. Some years ago we "let" to a Mr. Frederick Turtle (name is real because he has since married into a Royal family on the coast of Africa, and is called Prince Puddiboo, or something like that. When we showed him the rooms, both Mrs. Mungo and myself thought that we had got the quietest of good young men, for he scarcely spoke above a whisper, and was so particular about the regular habits of the other lodgers, that we made up our minds for prompt payment and very little trouble. What a mistake we made! He was articled to his own father, who was an architect, and, as a matter of course, went to his office whenever he pleased. His breakfast hour varied from nine o'clock until half-past two; and he had fellows dropping in all the morning to smoke cigars and drink beer, till all of us were nearly run off our legs. Our area railings were quite a sight of a morning, for the pot-boy always hung the pewter pots on the spikes in order to reckon up Mr. Turtle's account. Under our first impressions of his character we unfortunately let him have a latch key, and the use he made of it was dreadful. If any of his companions were locked out of their own lodgings he brought them home to his; and it was no uncommon thing to find one person snoring on the table, another on the sofa, and a third on the hearth-rug. Mrs Mungo gave him warning at the end of a fortnight, but he wouldn't take it. he said she wasn't a *fum-sole*, or something of that sort, and therefore the notice was illegal. So I gave him the next, but he would'nt go then because I had spelled "notice" with two t's, and he declared that a consulting barrister had pronounced the paper informal. I tried to pick a quarrel with him, but he was so good humoured over the matter that I could not do it, although Mrs. Mungo led me a terrible life in the kitchen. We put up a bill, "second floor to let," but he lay in bed three days playing the cornet, and swore he would not get up until we took the bill down. We threatened to double the rent, to which he agreed, because he said he should double the trouble, and take to learning the hurdy-gurdy in the morning, and the Scotch bagpipes in the evening. At last we hit on a stratagem to get rid of him. We found out that his father had gone to Paris; so what did we do but got a French dancing-master that we knew to write a letter, saying that old Mr Turtle was dangerously ill, and wanted to see his son. He packed up directly and started off to Paris; and we let the rooms the next day to a young married couple of the name of Dove (name fictitious; but it seems to rhyme to Turtle, and so I use it). Little did I think what we should get by our cleverness! Mr. Turtle called when he came back from Paris, and paid his little score, shook Mrs. Mungo and myself by the hand, and told us that he should never forget our kindness; and he did not—for one day a hundred undertakers at least called to measure me for a coffin: the knocker was never still. Another day as many ironmongers brought gridirons, and waited for their money. The Excise officers came and searched for an illicit still, and cut open all the beds in the house for smuggled bandanas. In short, we were driven almost mad, and could not for the life of us find out our tormentor, as Mr. Turtle generally called once a week to ask for his letters, and never failed to condole with Mrs. Mungo; and I do believe we should not have discovered the delinquent if he had not himself let us into the secret. This was how it was. One morning there came a ring of the bell, just as I was shaving; and, Mrs. Mungo and the girl being up-stairs, I went to the door myself. I found a Jew clothesman there with an enormous bag of clothes, which he had brought for the inspection of the second floor gent. I was very much surprised and thought there was some mistake, especially as the Jew did not know Mr Dove's name, but as the Hebrew had come a long way and was in a great perspiration, I went up and inquired. As I thought, Mr. Dove knew nothing about it, but it was a difficult matter to convince the Jew of his mistake; as eight Spanish cloaks were no joke to carry five miles for nothing. About this time Mr. Turtle left off calling, and I had seen nothing of him for a couple of months, when one day, whom should I meet in the Strand but Mr. Turtle. That is, I shouldn't have seen him if he hadn't in the pleasantest manner knocked my hat over my eyes, and given me a sharpish pat between the shoulders. He seemed very glad to see me—very glad, and asked all about our business, and whether we'd the same lodgers. I told him with pride that we had, and, to prove how satisfied Mr. Dove was, showed him an engraved card with that gentleman's name and address upon it. He smiled when he saw the card, said it was a very pretty design, and he should have some printed like it—so he put it in his pocket. We kept walking on and talking until we got into Jollywell-street (name fictitious), when all of a sudden a Jew clothesman ran out of his shop, and made a very polite bow to Mr. Turtle. I thought I had seen the man's face before; but my attention was taken from him by a boy selling some save-alls at four a penny. We'd been paying a halfpenny a piece for the same article only the week before. When I looked for Mr. Turtle I saw him in earnest conversation with the Hebrew dealer, who was pointing to me. What Mr. T. said I did not hear; but when he left the shop the clothesman smiled and bowed as though he had secured a good customer.

"Mungo," said Mr. T., "I've been greatly annoyed."

"Dear me, how, Sir?" says I.

"Until lately I have given my old clothes to one of my father's servants, but thinking a penny saved is a penny gained, you know"——

"Just so, Sir," says I, showing him the save-alls——"I resolved to sell them for my own profit. This servant has had the impudence to send away a man that I ordered to call, so I tell you what I've done—I have desired him to come to-morrow morning at half-past seven, and——." Before he could finish the sentence he had caught sight of somebody he knew in a cab, and play fully bonneting me again, rushed off like a mad man.

I was awoke the next morning, at half-past seven, by Mrs. Mungo's screaming thieves and murder. I heard a voice misapplying the v's and w's to a frightful extent—I thought I could detect a rush up-stairs. I jumped out of bed and put on my top-boots, and Mrs. Mungo's flannel dressing-gown, and ran up to the passage, where I found Mrs. M. gasping in an agony of rage, and pointing frantically to the ceiling above.

"What's the matter?" said I, shaking her at the same time.

"The Jew! he's gone, bag and all," she replied with much difficulty.

"What do you mean?" and I shook her again.

"He wouldn't take no for an answer. He said you had denied him once before; that his orders were to go up to the second-pair back room and to let nobody stop him. And he's gone! and Mr. and Mrs. Dove not up—and—"

There came such a clatter that I thought the roof had fallen in; but it was not so bad as that. It was the Jew clothesman, followed by Mr. Dove—without topboots even—kicking the unfortunate tradesman down-stairs three steps at a time, until he ultimately took refuge in the middle of the street, while I dragged in Mr. Dove exhausted by rage and exertion. I saw it all in a moment. Jollywell-street! the card!! the Hebrew!!! Mr. Turtle was our tormentor. He was revenging himself for his trip to Paris, and I was afraid to tell anybody what I knew; but I resolved to go to his office the next day and conclude a treaty of peace with him if I could. Judge of my delight when I learned that he had gone abroad for the benefit of his creditors, and that it was very unlikely that he would ever return to England. But he did; I met him in London some years afterwards, when he told me that he had married a black Princess on the Coast of Africa, was now a Prince, and if Heaven should bless him with an heir he'd have it called Mungo, after me. L.

THE JERSEY REFUGEES.

A PROTEST.

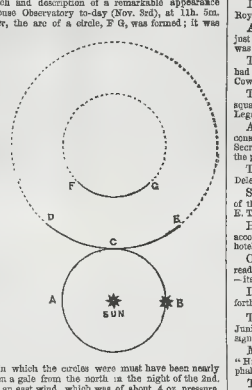
A liberal lady once kept open hall
For every wayfarer who chose to call.
No matter what his creed of church or state,
He met with welcome at this lady's gate.
Some, when their crowns sat loosely on the head,
Looked for a resting-place, and hither fled;
Some, fresh from slaughter and a tyrant's thongs,
Found in her house a safe retreat from wrongs;
Some, whose free faith offended bigot pride,
Beneath her roof the priestly scourge defied;
Some, whose big hearts had broken with their shame,
But that a hope of future freedom came!
Others there were, whose wild, fierce thoughts had made
A bloody drama by red murderers play'd,
And driven forth, like Cain, they sought and found
A resting-place at last on British ground.
Our liberal Lady bade the wanderers stay,
And asked but this, "My household laws obey.
Share in the peace which Order here ensures,
And every right *I own* is also yours.
They entered in—the Red, ungrateful crew;
And, life secure, their fears to boldness grew.
Soon in our Lady's house the restless herd
Was fierce in threat and desperate in word;
Sought to make strife where strife no more should be;
And proved themselves unworthy to be free,
By wretched slanders of the one who gave
A home when others offered but a grave
Let those go forth again who will not rest
Their patriotism's selfishness, at best.
Spurn at the cant which would, in Freedom's name,
The patriot and avenger rank the same.
God speed the man who'd set his country free,
But woe to him who'd make an anarchy. L.

REMARKABLE SOLAR PHENOMENON.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

I beg to enclose a Sketch and description of a remarkable appearance seen from the Highfield-house Observatory to-day (Nov. 3rd), at 11h. 5m. Immediately after a shower, the arc of a circle, F G, was formed; it was exceedingly bright, and had the prismatic colours very apparent, the red being nearest to the sun. The arc was a portion of a circle of about 46°, whose centre was in the zenith: it vanished at 11h. 18m. This was seen from the Beeston Observatory. At 12h. 55m. p.m. the same arc was witnessed at Highfield-house after a violent balastorm, and was equally, if not more, brilliant than the one seen at 11 o'clock. At 1h. 9m. the common halo of 22½° radius, A B C, was formed, together with an inverted arc of another circle, D C E; this had a radius of 45°, its centre being in the zenith. At the same time a mock sun, B, was formed on the horizontal level of the true sun on the N. side, and situated on the circle A B C. The phenomenon faded at 1h. 12m. No trace of cirrus cloud could be detected, the sky being particularly clear at the time. The crystals of ice in which the circles were must have been nearly transparent. There had been a gale from the north at the night of the 2nd. The day showery with hail, an east wind, which was of about 4 oz. pressure, except during the showers, when it rose to 2 lb. The atmospheric electricity was positive and feeble until the showers commenced; then during their continuance it became negative and powerful.—I am, &c.,

E. J. LOWE



P.S.—The dotted portion was invisible.

Observatory, Beeston, near Nottingham, 1855, Nov. 3rd.

PRINTERS' ALMSHOUSES.—We are happy to find that these almshouses—the Printers' Rest—situated at Wood-green, near Hornsey, are at length progressing towards completion, and, it is believed, will be ready for the reception of three inmates, to be elected in May next. The principal cause of the unavoidable delay which has taken place since the laying of the foundation-stone by the present Earl Stanhope on the 11th of June, 1849, has been the want of necessary funds. Although the sum of £4000 has been subscribed, which had been expended in the purchase of land and the erection of the building to accommodate twelve inmates, there is still a considerable sum required to provide for enclosing the premises, laying out the ground, and supplying the houses with water, as well as endowing the inmates with small annuities, without which the charity would be scarcely available for the superannuated workmen it is intended to benefit. We trust that this excellent charity, emanating from the body of the working printers, and brought to its present position almost entirely by their own contributions, will not now lack assistance and support from the author, the editor, and, indeed, all who are benefited by the art of printing—and who is not?—as well as the master printer and a benevolent public. Subscriptions will be thankfully received and gratefully acknowledged by the Treasurer, Mr. William Cowes, Duke-street, Stamford-street; by the Secretary, Mr J Dackin, 121, Fleet-street; or by the Collector, Mr. C. Pope, 14, Derby-street, King's-cross.

THE martello tower off the Spit Isle of Grain, erected by Messrs. Kirk and Parry, of Sleaford, Lincolnshire, is completed, and was on Saturday last officially given up to the Ordnance authority at Sheerness. This tower has been nearly two years in erection, and is completed within the time specified by the Board of Ordnance. The peculiar construction of this tower gives it the facility of firing the guns (which are to be of the largest calibre) on traversing centre pivots, so as to do execution in the fair-way of the rivers Thames and Medway. With the latter river this tower forms a crossfire with the Sheerness Battery guns, sufficient to sink any ships attempting to pass. The tower is struck from seven different centres, in order to give stability to the assailable parts thereof. The average thickness of the solid masonry is 12 feet. The outer dimensions are 63 feet by 71 feet; underneath is a barrack-room capable of accommodating thirty gunners, and an officers' private room. The basement story contains the following room:—viz., ordnance store, provision store, barrack store, regimental store, and magazine, the latter being encased with an entire coat of asphalte. The whole of this basement is lined with 9-inch brickwork, all being within a 2-feet wall of masonry. The estimated cost of this tower is about £14,000, exclusive of its foundation of piles, which support solid balks of timber, with York landings, being filled in to a depth of six feet with cement. The extreme height of the tower is 41 feet 6 inches. From the exposed situation of the tower, which is subject to the sea and weather, great difficulties were experienced during the winter months in proceeding with the work.

FRENCH RAILWAY RETURNS.—The annual traffic returns of the French railways has just been issued, from which it appears that the increase during the year on the principal lines is very great. The Paris and Lyons return shows in round numbers a total of 38,000,000 f. for 1855, against 21,000,000 f. in 1854—being an increase of 15,000,000 f.; Northern, for the same years respectively, 42,000,000 f. and 34,000,000 f.—augmenting 8,000,000 f.; Eastern, first concession, 30,000,000 f. and 26,000,000 f.—increase, 4,000,000 f. and Western, 30,000,000 f. and 23,000,000 f., showing an augmentation of 7,000,000 f.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The correspondent of a morning paper, writing from Oxford, says, it is rumoured in circles likely to be well informed that there is a probability of the youthful Prince of Wales becoming a member of this university.

On Saturday last the Emperor went to Versailles with the Duke of Cambridge, and passed in review the cavalry of the garrison.

During his stay in the metropolis the King of Sardinia will honour the Right Hon. the Lord Mayor and the Corporation of London with his Royal presence.

The King and Queen of Prussia and the Court moved from Sans Souci to Charlottenburg on the 17th inst., to remain there until Christmas, when they will return for the holidays, and then take up their residence at the Berlin palace during the carnival.

The Austrian Government has, in a note to Count Colloredo, Ambassador to the Court of St. James, announced its acceptance of the nomination of Sir H. Seymour to the post of English representative at Vienna, and expresses its regret at the departure of Lord Westmoreland.

Some of the Continental journals connect the visit of General Canrobert to Stockholm with some supposed matrimonial project pertaining to Prince Napoleon and a daughter of the King of Sweden.

The *Caradoc* has proceeded to Marseilles, to be in readiness to embark the newly-appointed Governor-General of India, Lord Canning, and Lady Canning, for Malta and Alexandria, *en route* to the seat of his government.

The Duchess d'Orleans, together with the Comte de Paris and the Duc de Chartres, arrived at Eisenach on the 11th inst., on a visit to the Court of Saxe-Weimar.

The Czar has dismissed Prince Menschikoff from his offices as Chief of the Staff and of the Imperial Convoys, and has named General Count Alderberg II. as his successor.

His Grace the Duke of Argyll, who, in accordance with established usage, was entitled to a second year's term of office, has been unanimously re-elected Lord Rector of Glasgow University.

The King of Prussia has, through the medium of the Prussian Consul-General, Baron Mesenbach, presented the order of the Red Eagle of the Second Class to Solyman Pacha, Commander-in Chief of the Ottoman forces in the Principalities.

In the Glasgow Town Council, last week, Mr. M'Adam gave notice that at the next meeting he would move that the freedom of the city be presented to Sir Colin Campbell. The announcement was received with applause.

The King of Naples is about, it is said, to procure from the Holy See the canonisation of his first wife, Maria Christina of Savoy—a pious Queen, whose memory is still respected by Neapolitan devotees.

The *Highflyer* returned from Circassia to the Crimea on the 5th inst., having on board the Duke of Newcastle, and Mr. Simpson, the artist, who accompanied him on the excursion.

It is said in Vienna that Baron Prokesch Osten, the new Austrian Internuncio at Constantinople, is to visit London before proceeding on his mission.

The Spanish Government has got wind of a plot to carry off the young Princess of Asturias, and in consequence her Royal Highness never goes abroad without an escort of forty or fifty dragoons.

Lord Montgomerie, Lord Eglinton's eldest son, has entered the Royal Navy as a Cadet. He has nearly completed his fourteenth year.

A letter from Dresden states that an operation for cataract has just been undergone by the Princess Amelia, sister of King John. The operation was performed by Dr. Cosins on both eyes, and was perfectly successful.

The *Moniteur* records that on Saturday the Bishop of Oxford had the honour of being presented to the French Emperor and Empress by Lord Cowley.

The Greek Minister has given up his late residence in Park-square West, and taken a mansion in Portland-place, where the business of the Legation will in future be transacted.

A vacancy in the representation of Taunton will take place in consequence of the appointment of Mr Labouchere to the office of Colonial Secretary. At the last election the right hon. gentleman came in at the head of the poll.

The Belgian Chamber of Representatives has elected M. Delehaye as its President.

Sir George Cornewall Lewis has resigned his office of member of the Oxford University Commission. The vacancy will be filled by the Hon. E. Twisleton.

His Excellency the Portuguese Minister at the Court of France, accompanied by the Portuguese Minister of Finance, has arrived at Claridge's hotel, from Paris.

On the 3rd of January Mr. Warren, the Recorder of Hull, will read a paper before the members of the Hull Mechanics' Institute, on "Labour —Its Rights, Difficulties, Dignity, and Consolations."

It is now said that M. de Lamartine is not likely to attend the forthcoming soirée of the Huddersfield Mechanics' Institution.

The Lord Chief Baron has appointed Mr. Edward Archer Wilde Junior Clerk of Assize on the Oxford Circuit, in the place of Lord Truro, resigned.

M. Thiers has personally presented the twelfth volume of his "Histoire du Consulat et de l'Empire" to Prince Jerome, ex-King of Westphalia, brother of Napoleon I.

The Chief Examiner of Army Accounts at the War-office, R. C. Kirby, Esq., after a service of upwards of fifty years, is about to retire on the full pay of his rank—viz., £1200 per annum. It is said that Mr. Smith, Chief Clerk of the Cash Account branch of the Ordnance, will be his successor.

The *Epoca* says that Victor Hugo is shortly expected at Madrid, and that a house there has already been taken for him.

M. Emile Augier, one of the most distinguished men of the French bar, died suddenly on Saturday last. He was the advocate who defended Madame Lafarge.

At the meeting of the Dublin Photographic Society, last week, Dr. Lover exhibited an apparatus for taking photographs by gas-light.

Mdlle. Dupree has resumed her duties at the Opéra Comique, Paris, after her late tour in Belgium: her reappearance took place in "L'Etoile du Nord."

The Town Council of Falkirk are about to present Sir C. Napier with a testimonial.

The projected National Opera Company is extinct, in consequence of the insufficiency of the number of shares applied for.

The Belgian Minister of the Interior has presented to the Chamber the draught of a projected law to prohibit the exportation of wheat, rye, oats, barley, and other cereals, besides potatoes and dried peas.

A letter from Kiel bears testimony to the comparative sobriety of the sailors of the English ships now stationed at Kiel. The discontinuance of the "evening rum" is said to have had a good effect.

An engineer employed in the telegraph direction at Naples is said to have invented a very simple machine for the discovery and repair of ruptures in submarine telegraphs.

The two young Russian officers who lately escaped from the war prison at Lewes have reached the neutral territory of Hamburg, and are now on their way to Russia.

The accounts from Hamburg state that the rate of discount has advanced to seven per cent.

The French Government is about to establish a Consul in Berlin to watch over the interests of French commercial men.

A memorial from Oldham praying for a remission of the sentences on Frost, Williams, and Jones, has been forwarded to the Home Secretary for presentation to the Queen.

On the 8th inst. two shocks of earthquake at Malta were felt. A similar shock was felt at the neighbouring island of Gozo some three weeks before.

The Belgian Government is about to introduce a project of law, bringing cases of outrage against the person of Sovereigns under the law of extradition.

The *Sheffield Morning News*, another of those small daily newssheets which came into existence on the passing of the Newspaper Stamp Act in June last, has just been withdrawn from circulation.

The Prussian Chambers will be opened on the 29th inst.

Unlike the city of London, the town of Hertford has adopted a resolution to found a public library. The meeting was a very large one; most of the Town Council were present; and the resolution passed without a voice being raised against it.

The clerks in the telegraphic office at Berlin will be locked up during the time of business, and for two and three hours afterwards, so that they may not be able to betray the secrets of customers. This precaution has been found indispensable.

COPENHAGEN, SKETCHED B

MILITARY COLLEGE UNIVERSITY

DANISH MAN-OF WAR[illegible]

BY J. W. CARMICHAEL.—(SEE NEXT PAGE.)

W. CARMICHAEL.—(SEE NEXT PAGE.)

CUSTOM-HOUSE.

KIEL AND COPENHAGEN.

THESE ports were last year places of considerable interest in connection with the war, and they have once more become so. At Kiel the Allied Baltic fleet has, in part, anchored; and the visit of Sir Charles Napier to Copenhagen, and his hospitable reception by the King of Denmark, will be remembered among our early Illustrations of the incidents of the war.

A letter dated Hamburg, 17th inst., gives the following particulars relating to the Baltic fleet:—

The Bay of Kiel presents a spectacle of great animation, in consequence of the arrival of the English line-of-battle-ship the *Duke of Wellington*, on board of which Admiral Dundas has his flag, and of the two French liners *Duguesne* and *Tourville*, with Rear-Admiral Penaud and the staff of the French squadron. On the 16th, four English ships-of-the-line—the *Duke of Wellington*, *Nile*, *Royal George*, and *James Watt*; two corvettes, the *Lightning* and *Firefly*; the steam transport *Royal Adelaide*, and the two French liners, were anchored in the port, where the *Orion*, the last of the English ships remaining in the Baltic, was hourly expected. The French corvette *D'Assas* was ordered by Rear-Admiral Penaud to stop at the island of Gothland and place herself at the disposal of General Canrobert, Extraordinary Envoy to Stockholm. It is impossible as yet to ascertain if Admirals Dundas and Penaud intend to await at Kiel the arrival of the rest of the fleet. A mail service has, in the mean time, been organised for the exchange of letters and despatches between the fleet and England. So far, nothing appears to have been decided with regard to the winter-ing of a portion of the Allied squadrons in a Danish or Swedish harbour. According to letters from Stockholm of the 13th General Canrobert was to leave that capital on the 16th for Copenhagen, where the Minister of France, M. Dotezac, had officially notified his proximate arrival to the Government.

The two accompanying Views were sketched by Mr. Carmichael in the last campaign.

KIEL, a city of Holstein and Lower Saxony, on the coast of Germany, in lat. 54 deg. 20 min. N. and long. 10 deg. 8 min. E., is situated upon a small and beautiful peninsula in a bay of the Baltic, and has a large and commodious harbour, with good anchorage and depth of water for our largest men-of-war, with well-wooded and pleasant shores on each side, which are thickly studed with villas. Kiel is a city of much commercial importance. Having an excellent canal, which was begun as early as 1777, and now connects Kiel with Tonningen, crossing the peninsula through the Duchy of Holstein, passing by Rendsburg, and falls into the river Eyder, and thence to the German Ocean, besides a direct railway to Hamburg distance about twenty leagues, much used as the best road to Sweden, Norway, Finland, &c.

COPENHAGEN, anciently called Kiobmansehaven, the capital city of Denmark, in lat. 55 deg. 41 min N. and long. 12 deg. 40 min. E., is situated on the east of the island of Zealand, in a good bay at the entrance of the Baltic Sea, two leagues from the Sound, and a little more than five miles from Schonen, in Sweden, being opposite the Island of Almack, which forms the harbour, into which only one ship at a time can enter. Formerly chains were stretched across for protection. There are several good canals intersecting the city, where large ships can lie close to the warehouses. It is about 100 leagues from Stockholm. The entrance to it is intricate, running through a narrow channel between the Island of Saltholm and the Middle Ground, which is a long shoal, that extends along the whole sea front of the city of Copenhagen, leaving an intervening channel (called Konigs-Stiefe) of deep water, about three-quarters of a mile wide. The harbour is defended by the batteries on Amag Island and two artificial islands called the Crown Batteries, with others that run along the northern and southern shores.

In 1801 they had twenty-three sail-of-the-line, besides smaller vessels. Now their strength consists of gun-boats, as they find that kind of craft is best fitted for the defence of the Great and Little Belts, &c. The celebrated Thorwaldsen collection of sculptures is here.

WINTER FASHIONS.

[For our information on Dress and Fashion we are indebted to the courtesy of Madame EINSTEIN DEVY, 73, Grosvenor-street, Grosvenor-square.]

THERE is perhaps scarcely any costume more generally becoming than a rich winter walking-dress; and the present fashions are peculiarly deserving of favour. The round cloaks, so common last season, have given place to mantles and paletots of various kinds, all of them being of full size and a graceful shape. One of the handsomest we have seen is of black velvet, trimmed with rich fringe nearly a quarter of a yard deep, the fringe being set on at the shoulder to imitate the capuchin or hood, and the sleeves edged with the same. Another, of black velvet, is trimmed with gimp and bugles.

Grey cloth is also much worn, and should be trimmed with braid and tassels of a mixture of black and white. For travelling we recommend a paletôt composed of grey *drap d'Armenie*, a sort of knit ed cloth extremely thick and warm. It is simply trimmed with braid and buttons, and has a deep pocket on each side.

For the mere carriage-drive, however, a very different style is adopted—namely, a close fitting jacket, with shawls and wraps to supply the extra covering we may be required.

Bonnets present an almost endless variety in point of colour and fa'ric, but the shape is nearly alike in all, it being a modification of that which has been recently worn. The winter bonnets are slightly larger than their predecessors, and though still worn towards the back of the head have brims which project forward in the centre more than usual, and tie down close at the ears.

A very charming bonnet is composed of pale violet-coloured velvet and white silk, the top of the crown being of the latter material, covered with a star of black lace, the points of which lap over the velvet; the edge of the brim is also of white silk, with a double fall of white and black blonde. A full blonde cap with flowers, and strings of violet and white, A stone-coloured terry velvet bonnet has a trimming of *grenadia* velvet, with feather to correspond, and white blonde embroidered with black.

There is a pretty bonnet made of black chenille, laid in chequers over pink silk, with pink and black chenille intermixed, and hanging in long tufts over the curtain. Cap of white blonde and pink flowers, with black and pink strings

There is another attractive bonnet of pale-green terry velvet, with feather of the same colour, and trimmed with white blonde and black velvet. A very full cap, with a bunch of flowers on one side. Curtain alternate pieces of the green and black velvet.

A handsome and more matronly bonnet is of dove-coloured moiré antique, with feather to correspond. The bonnet is otherwise trimmed with white and black blonde, and the inside is ornamented with cerise velvet and flowers the same colour

A black velvet bonnet, with bird of paradise plume, is a favourite; and many shades of brown are worn.

But for any occasion of gaiety a white bonnet, interspersed with any bright-coloured velvet, would still be suitable; or one of some pale shade in terry velvet, interspersed with white, and the star of white blonde at the top of the crown.

Dresses are nearly all made with flounces, three being the favourite number; and they are, if possible, more trimmed than ever. There is one dress composed of black silk with three flounces, a flounce having graduated rows of a running pattern of velvet ribbon, on a very d'Italy ground. Another dress, in a similar style, is of cinnamon-brown, the bronde on the flounces being of black and white.

For demoiselles plain skirts of plaid silk are much worn.

In all cases of demi-toilette the light jacket up to the throat is adopted; sometimes it is of the same material as the skirt, but not always. A jacket of black velvet is richly trimmed with knotted fringe and gimp, the basque being rather deep, and put in with broad plaits, on the surface of each of which is a medallion-like trimming of gimp with tassels, and the sleeves have large full puffings.

A jacket of black moiré antique is trimmed with black velvet, gimp and tassels; it fits to the shape, the trimming forming bretelles or braces, with short broad ends finishing in tassels.

A very rich jacket of garnet-coloured velvet is made something in the same style, with a fringe composed of bright beads, the same colour. In this instance, however, instead of bretelles, the trimming forms a sort of stomacher down from the shoulder to the waist.

When the jacket is of the same material as the dress, the trimming of course corresponds with the brocade or trimming of the flounces, though probably with the addition of an edging of black velvet and black lace. Steel beads and bead and bugle trimming are also used; and sometimes the jacket is formed of a deep frill or flounce of the silk, especially if the brocade of the silk forms the edge. The sleeves are always very large, and very full with puffings and much ornament.

The style of evening dress is scarcely yet established; but we may mention a very pretty dress of blue silk, ornamented with a ruche near the bottom of the skirt, and another within a quarter of a yard of the waist. Between these ruches are put on alternately slanting ruches of a narrower kind, and a trimming of black velvet and white blonde. The corsage is ornamented by lappets of blue silk with ruches of blonde crossing, and tying in long bows behind.

There is also a very Spanish looking dress of pink silk, intermixed with white silk and narrow black velvet and lace, the lower part of the skirt consisting of alternate vandykes of the different materials.

Velvet dresses of all colours are worn.

There is a decided change of style in *coiffures*. They are no longer worn entirely at the back of the hair, but lie flat on the top of the head, with ribbon, flowers, or feathers drooping behind or at the sides. A seasonable novelty is composed of a wreath of ivy, which comes forward on the forehead, and is interlaced with cerise-colour velvet, the latter falling in long ends behind, and with velvet flowers the same colour at the sides Another, something similar in style, is composed of velvet and gold braid, with drooping flowers of gold and ends of velvet.

A very pretty style of hair-dress is composed of plaited black velvet, which, though forming the shape of the head-dress, shows the hair through its folds; it has puffings of blue ribbon at the side, with loops of broad blue ribbon hanging behind, and a wreath of blue flowers passing across the forehead. A head-dress of pink ribbon, with roses and Michaelmas daisies, is also very becoming, and this one has also pendent loops instead of ends. It admits loops or plaits of hair to pass through at the back.

A coiffure of a different sort is formed of long lappets of lace, fringed with feather trimming, with a braid of cerise-colour velvet, coming in a point on the forehead.

When flowers are worn at the back of the head, a wreath to correspond should pass across the forehead.

The mixture of black and white blonde is still in favour, and, intermixed with velvet and bright-coloured flowers, has an excellent effect.

Chemisettes, unsuitable for cold weather, are not likely to be revived until the spring. Collars are worn large, though not preposterously so; and under-sleeves very full.

CHESS.

TO CORRESPONDENTS.

T. S., Darking.—It shall be referred to the author, and, if correct, the Solution shall be given shortly

ARIADNE, Hollo.way. Your Solution of the Indian Problem is quite right

S. L. You must have placed the men incorrectly in Problem 611. The Black King cannot move to Q 6th without going into Check of the adverse Queen, which in the diagram stands at White's Q Kt 5th

F. W. B., Lincoln.—A very promising first attempt.

C. B. J., Dundee.—They shall have due attention

C. M., Birmingham.—Correct, a Knight may be taken by an adverse Pawn. Who could have informed you otherwise?

S. N., Clapham.—Ably by Mr. John K., ing, Manchester Chess-lub, Ridgefield, Manchester

F. B., Lisle.—We have before had occasion to comment on the unreasonableness of foreign correspondents asking us to keep postage open for their friends' letters. Mr. —, of Lisbon has forwarded us Mr.'s three letters, and hoped, surely that we might—if not free—pass a penny of the enormous postage demanded on which he pretends to be so wrong

BRUHAL-GREEN. Your Solution of Problem No. 611 is incorrect 2. You will find it is no Problem at all, as the key-move is at once obvious to the merest tyro. 3. Your Solution of No. 609 is correct. 4. There is no reference whatever to your name

A. Reform Club.—1. You should join the St. George's Chess-club, by far the most important club of the kind in the kingdom. The numerous society of chess-amateurs is provided every Tuesday and Friday evening with a series of the finest games that are played in any part of the world by the most eminent players, under the superintendence of Mr. Staunton, and the results are published in the Chess-column of the Illustrated London News. 2. Problems are received by the Publisher of the Illustrated London News, and forwarded to the Editor of the Chess-column. 3. We are glad to hear that Mr. Bellamy is recovering from his severe illness. 4. Problem 609 is correct. 5. Your Solution of No. 610 is correct. 6. Your Solution of No. 611 is correct. 7. Your Solution of No. 612 is correct. 8. Problem 613 is correct. 9. Your Solution of No. 614 is correct. 10. Your Solution of No. 615 is correct. 11. Problem 616 is correct. 12. Your Solution of No. 617 is correct. 13. Problem 618 is correct. 14. Your Solution of No. 619 is correct. 15. Problem

T. B. MACAULAY writes, in his lay of the "Armada":—

"The tall Pinta, till the noon, had held her close in chase."

What was the *Pinta*? Is it a generic name or that of a ship? One of C. Columbus's caravels at Palos was also named by that name. Now, to think it might be the same ship that discovered the New World, and then was the forerunner of the Spanish fleet off "Aurigny's Isle," would make it nearly as old as that which conveyed the yearly "Theories" from Athens to Delos Further, I doubt whether the "tall Pinta" of Philip II.'s time sailed well with the petty caravels doled out to that obstinate beggar, who soon gave his King and Queen a new world in exchange.—ARAGON Y LEON, Coventry.

LANDED GENTRY OF SURREY. Can the Editor inform me if any, and what, record remains of the landed gentry of Surrey about the year 1632? —W. B., Garden-court, Temple.

THE FINE OLD ENGLISH GENTLEMAN. Who wrote this popular song, and is it original (I mean the words) or borrowed, as I remember to have heard, from an old ballad of the sixteenth or seventeenth century? Any information you can afford regarding it will oblige.—A SINGER.

NOTES.

SPECULATIVE SOCIETY, EDINBURGH.—This intellectual gymnasium, at which Scott, Jeffrey, Brougham, and others, first trained their powers, still exists. In looking over its records lately, it was amusing to observe the character of the subjects selected for essays by some of its eminent members. Scott appears, as he did in life, compounded of the lawyer and the poet. His essays were on the "Origin of the Feudal System;" on the "Authenticity of the Poems of Ossian," on the "Origin of the Scandinavian Mythology." Henry Brougham (admitted Nov. 21, 1797) selected the following subjects:—"Political Remarks on the Union," "The Balance of Power," "Indirect Influence of the People," "Influence of National Opinion on External Relations," and "An Examination of Certain Plans that are at present entertained of Cultivating the Crown Lands in the Ceded Islands." Charles Grant (Lord Glenelg) was admitted Jan. 12, 1803, and read an essay on the "Usefulness of the Study of Mythology." These young speculators were all Liberals. On the 25th Nov., 1800, the question, "Ought the Test Act to be Repealed?" was brought forward by John Archibald Murray—the kind and hospitable Lord Murray of the present day—and was "carried unanimously in the affirmative."

BLAIR'S POEM OF "THE GRAVE."—Mr. Cunningham, in his new and beautiful edition of "Johnson's Lives of the Poets," quotes a passage from Southey's "Life of Cowper":—"Though the strain of the 'Night Thoughts' is stamped with the strongest manasseism, and both the matter and the manner are of a kind to affect the reader powerfully and deeply, Blair's 'Grave' is the only poem I can call to mind which has been composed in imitation of it." The earlier portions of the "Night Thoughts" were published in 1742, and Blair's "Grave" in 1743; therefore Southey's inference is somewhat less wrong. The "Grave" was written in 1741; and its author, in February, 1742, endeavoured in vain, through the influence of Dr. Isaac Watts, to obtain a publisher in London. The honour of originality, therefore, belongs to the Scottish poet.—D.

MORLEY'S MADRIGALS, AND GREENE'S PERIMEDES.—In Mr. Payne Collier's charming little volume of "Lyrical Poems, selected from Musical Publications between the Years 1589 and 1600" (Percy Society, No. LI.), occur the following lines, taken from Thomas Morley's "Madrigals to Four Voices," 1600:—

April is my mistris face,
And July in her eies hath place;
Within her bosom is September,
But in her hart a cold December.

The learned editor has not noticed that the same idea may be found in Robert Greene's "Perimedes the Blacksmith," 1588:—

Fair is my love, for April in her face,
Her lovely breasts September claims his part,
And lordly July in her eyes takes place,
But cold December dwelleth in her heart.

If both are not translations from the same foreign original, the coincidence is curious, and certainly deserving of a note. EDWARD F. RIMBAULT.

ALMANACK WIT.—"Poor Robin's" Almanack for 1696 concludes with the following receipt:—*To Cure Corns.*—Take the strongest Aqua-fortis you can get, and drop a Spoonful on your Corn, and it will not only eat away your corn, but your Toe also; so you may be sure your Corn will not come there any more.

And this is all which I this year shall pen,
Next year expect to hear of me again."—DIRK.

ANSWERS TO QUERIES.

FASTRADA, THE WIFE OF CHARLEMAGNE.—I do not find that difficulty which M. Victor Hugo experienced in attempting to interpret the two last lines of the inscription on Fastrada. I read the whole thus:—

Fastradana pia Caroli conjux vocitata
Christo dilecta jacet hoc sub marmore
Anno septuagintesimo nonagesimo quarto
Quæ numerum metro claudere nusa negat
Hæc pie cum gessit virgo hostes superavit
Spuritus heroes sit patriæ quæ tristia necat.

Literally translated, this is the interpretation:—

Fastradana the pious, called the wife of Charles,
Beloved by Christ, lies under this marble,
In the year seven hundred and ninety-four,
Which words the muse does not permit to include the number in metre.
"O Pius King, whom the Virgin bore, although she (*fi.*) is here turning into ashes,
May her spirit be heir of that country which knows no sorrow.

This is in every respect a most interesting inscription. Its antiquity of eleven hundred and sixty years renders it amongst non-classical inscriptions most valuable, and the jingle of the rhyme in the two last verses shows us the barbarian origin of that addition to poetry to which we are now accustomed. I know not if an earlier specimen of rhyme in Latin verse could be found. In after ages it became the general fashion in ecclesiastical compositions, as we find in innumerable inscriptions and epitaphs.—R. M. BEVERLEY, Scarborough.

THERE is a translation of the "Posterior Analytics" of Aristotle, by Edward Poste, M.A., Fellow of Oriel College, published by Macpherson, Oxford, price 4s.—B. A., Oxon.

SAVE ME FROM TO DIE. At the moment we can remember only two instances of this form of expression. The one in Spenser's "Faerie Queene," Book III., c. xii., stanza 35:—

——— or if that ought do death exceed,
Be sure that nought may save thee *from to die*.

The other will be found in a Masque by Ben Jonson, called "Chlorida"—

And sculpture, that can keep thee *from to die*.

THE expression "from to die," as equivalent to "from death," occurs in the following fine stanza of Spenser's "Ruines of Time."

LXI.

For not to have been dipt in Lethe's lake,
Could save the sonne of Thetis from the die;
But that blinde bard did him immortall make
With verses, dipt in deaw of Castalie:
Which made the eastern conquerour to crie,
O fortunate yong-man! whose vertue found
So brave a trompe, thy noble acts to sound. M.

GOSSIP'S BRIDLE, OR BRANKS. The following notes may be of service to W. B. in his researches after branks. A woodcut in vol. i, p. 283, of the "Local Historian's Table Book of Northumberland and Durham," represents Robert Sharp, an officer of the corporation of Newcastle, leading Ann Bidlestone through the streets with branks. The writer states that the branks are still preserved in the police-office. In Hodgson's "Northumberland" it is recorded that Elizabeth Holburn was, on December 3, 1743, punished for two hours at the market-cross, Morpeth, for opprobrious language. An engraving of branks will be found in Brand's "History of Newcastle," vol. ii., p. 292, to which W. B. is referred for further information.

There is a scold's bridle in Warrington Museum, and for an account of where four others are see "Transactions of Historic Society of Lancashire and Cheshire for Session 1854-55," page 61. London: J. H. Parker, 377, Strand, 1855.—C. S. GREGSON, Edge-lane, Old Swan.

THE INITIALS M AND N IN THE CHURCH SERVICE.—"R. V." has misplaced these letters in order; they stand as N or M, and are, I believe, the initials of Nicolas and Mary—St. Nicolas being the patron saint of boys, as Our Lady is of girls; at least this is the only intelligible explanation I have ever heard.—F. L., All Souls College, Oxford.

Notices to Correspondents.—A. Macgillvray, Dr Kennedy, Dr. Rimbault, C. M. Ingleby, Scotus, Y. W., C. L., A. H., Ignoramus, H. W. Ranger, Delta, H. Langmead, E. A., M. B., Newcastle-on-Tyne; Yenicale, C. Forrest, Rector, E. L. B., B. N.—received with thanks E. D. For *retro* read *nostro*. J. C., Buckton.—Next week.

MUSICAL REVIEW.

BOOSEY'S UNIVERSAL FLUTE PRECEPTOR. Edited by J. CLINTON.—BOOSEY'S UNIVERSAL CORNOPEAN TUTOR. Edited by STANTON JONES. Boosey and Sons.

Before making a few remarks on these particular works, we wish to say a word on the subject of musical instruction-books in general. In the first place, we have to observe that they are multiplied to such an excess that not one in a hundred has any value of its own. Almost everything that can be said in the way of instruction, in regard to singing or playing on instruments, has been already said again and again: the subject is worn threadbare, and all that a compiler can now do is to hash up a *crambe recocta* of hackneyed precepts and stale examples. Occasionally an exceptional case may occur, when a teacher of great ability and eminence embodies the practical results of his own experience; but such cases are now exceedingly rare. And there is also the case of instruments recently invented or improved, and the powers of which are still in the course of development. When a distinguished performer on one of these instruments publishes his peculiar method, his publication is valuable, because it contains what cannot be had elsewhere. In the second place, we desire to remark that, because such works are described by their authors or publishers as being for the use of amateurs, it is generally supposed that an amateur has only to buy a "Singing Method," or "Pianoforte Method" or "Violin Method," and straightway set about teaching himself to sing or play, without any other assistance. There cannot be a greater mistake. It is impossible to learn to sing, or to play upon any instrument, without a competent *master*. There are a thousand things necessary to be learned which cannot be conveyed by written instructions alone. The master must show, *by example*, how the voice is to be emitted, how the instrument is to be handled, how its tones are to be produced, how its scales and passages are to be fingered. He must do all these things himself, and it is by imitating him that the pupil learns to do them likewise. We advise the amateur, therefore, never to trust to instruction-books. Let him take a master—and let him do so from the very beginning. It is another vulgar error, repeated every day by sensible enough people in other things, that a young lady (for instance) may begin the piano with the help of her mamma or a half-taught governess armed with some "Pianoforte Method," and that it is time enough to resort to a master when she has, as it is said, got over the rudiments. Thousands of pupils are here spoiled in this way every day. It is at the very outset that the soundest instruction is the most essential. The self-taught, mammama-taught, or governess-taught girl (we don't speak of the superior class of governesses, who are few in number), when she comes to have a master, finds, to her own mortification and that of her friends, that she must *unlearn* all that she has been learning so laboriously. Few are able to go through this painful process, and nine out of ten throw it up in disgust.

The real utility of an instruction-book consists in its serving as a *Vade Mecum* or *Handbook* to the master. If it contains a body of sound, concise, well digested, well-expressed, and well-arranged precepts, illustrated by examples and exercises of a similar character, it will facilitate his labours, methodise his lessons, and aid him in many ways. Masters in general, accordingly, take such assistance; and a master will show his judgment by the choice of the handbook he employs.

The two works, the titles of which are given above, belong to a series of "Musical Handbooks" now in course of publication by Messrs. Boosey. Those already published are for Singing, the Flute, the Cornopean, the Pianoforte, the Concertina, the Violin, and the Clarinet. Of these works we may say that though in general they have no pretension to originality of matter, or even novelty of form, yet all of them possess the advantage of *comparative cheapness*. They are judicious compilations, containing as much really valuable matter as could be obtained, in any previous publications, for twice the money; and this is certainly quite a sufficient recommendation.

The instruction-books for the Flute and the Cornopean are somewhat differently situated from the others. Besides the recommendation to them all, these have the additional advantage of belonging to the case (which we have already noticed) of instruments recently invented or improved, and the powers of which are still in progress of development. The flute, it is well known, has of late years undergone important changes both in its construction and in the manner in which it is played. At this moment there are several rival flutes and several rival methods; and it is of much consequence to the amateur that he choose the best kind of flute and the best method to it. Mr. Clinton, the very eminent professor of the flute, is the inventor of one of these improved instruments, of the superiority of which we have already given our opinion. His flute has this peculiar advantage—that, while execution is facilitated and intonation perfected by means of additional keys, these new keys do not disturb the action of those previously in use; so that the established system of fingering is still preserved, and the instrument can be played either with or without the superadded keys. In the "Preceptor" before us Mr. Clinton has given the most simple and approved methods of fingering every scale on the ordinary flute, leaving it to the amateur afterwards to acquire the use of the new keys added to the instrument. This is the kind of instruction-book for the flute which, we apprehend, is the most generally useful; and nothing, we may add, can be more concise and clear than the directions for practice, or more judicious than the exercises and examples.

The Cornopean (otherwise called the cornet-à-piston) is a recently-invented instrument, for which few instruction-books have yet been published. There is, therefore, room for Mr. Jones's work; and we find that it contains every thing requisite, as a manual for the master and an assistant to the pupil, in teaching and learning an instrument which is coming more and more into general use.

The Russian Government has issued a decree prohibiting the export of all kinds of grain by the Polish frontier, "except wheat," which may be exported through any of the Polish customs stations.

The vacancy created in the Dublin police magistracy, by the appointment of Dr. Kelly to the office of Judge of the Admiralty, has just been filled by the nomination of Joseph O'Donnell, Esq., of the Leinster Circuit.

The directors of the Northumberland and Durham District Bank have, we understand, ordered all their *employés* who adorned their face with a moustache to shave or resign.

The *Cardiff Guardian* says that a child, the son of labouring people, received at the baptismal font at Merthyr the names of "James Louis Napoleon Malakoff Broom."

THE FIRST MEET OF THE SEASON.

A BARONIAL castle restored, with plate-glass windows and damask curtains;—a lawn rustling with November's yellow leaves;—a pack of fox-hounds—old, steady favourites, and young ones in their first season inclined to riot after the Persian cat; the huntsman in his bright, fresh scarlet, soon to be stained to a rich damson, silent, attentive, firm, and self-possessed, a commander-in-chief preparing for action; the two whips outside, like sides-de-camp, full of fire, the second proud of new boots and horsemanship; the first whip a huntsman in reversion, with an eye on his chief, and the other on the hounds;—a constant crushing of gravel and grinding of wheels, as family coaches, four-in-hands, mail-phætons, dog-carts, and tandems roll up; while hasty hacks are at gallop across the park, and old hands, riding their hunters, pace soberly;—a crowd of foot-folk in smockfrocks rolled up; a few cherry-cheeked country lasses, with their fathers or sweethearts, mounted on Dobbins, or leading ancient phaeton and modern shandydan, hovering round the lodge gates;—an army of grooms and gardeners and ploughboys turned grooms for the day, leading and fistling hunters, either clothed or great-coated; windows full of lively faces, in pretty morning costumes, beginning with the "company" in the breakfast-hall, and rising gradually to ladies' maids, chambermaids, until the upper turrets are crowned with an infant army and guardian nurses:—these form the raw material of a grand meet with open doors. Condescending butlers walk about armed with cherry-cordial for the shy or the owners of restive horses not to be trusted. The experienced walk in as a matter of course, salute the host and hostess, if she be gracious enough to appear, and then fall to steadily at the best thing going, knowing that at such meets there is almost always time for digestion before a fox gets away in earnest.

The man makes a great mistake who lays in a heavy feed, if there is likely to be any real work within the next two hours. The young and timid slouch in, blushing rosy, as their first "Pink," and, sitting down on the first seat, take exactly what's before them, whether they like it or not, and from pure bashfulness swallow successively tea, cherry-brandy, old ale, and port wine. The squires get in knots and exchange county slang, full of allusions as mysterious to any out of their set as the language of Nineveh. Everybody has got the best horse in the world, and in the general good humour of the first breakfast of the season no one disputes the happy idea.

The lion of the day is the foreign sportsman, Count or Baron, extensively got up with a red cord down his leather breeches: if a German, whether Hanoverian or Bohemian, he will probably be a first-rate judge of horseflesh, and not a bad performer as long as the feeding is reasonable, in spite of his (in our English eyes) eccentricities of costume.

Once moustachios were considered foreign; now they crop out all round the table. Hunting costume is very improving and deceptive. The best-dressed man is a London horsedealer, who may always be taken for a gentleman until he opens his mouth. We must not forget the ladies and the boys. There's the Hon. Mrs. Slashaway, the best horsewoman (we were going to say horseman) across country in the county. Every one crowds to look at her when her name is whispered, and every one is disappointed. It's twenty years since she was a beauty, and rode slap into Slashaway's heart by leading him over five new looked gates. She is now hard, thin, and reddish brown in complexion, and walks up the hall like a dragoon, slapping her whip; but then, in those most breathing grey wide-awakes with ostrich-feathers, there are a couple of nieces who don't ride so well, but canter in the most charming manner through gates opened by ready hands. It requires health and a brilliant complexion to stand the early glare of a hunting breakfast. The boys in kilts, in leggings of curious cut, leather trousers, and Tom Thumb boots, are scrambling in all directions under the unwonted excitement of a holiday, cheesecake and marmalade without end, and a gallop that would be enough for any animal but a pony, without hunting.

We may observe in passing that although a Castle Meet or a Lawn Meet is very well in its way, for real jovial fun and hospitality, unchilled by the dignity of those tremendous butlers and footmen, a rich squire's grange or a-thousand-a-year farmer is to be preferred.

As for the sport between the numbers and the noise, the breakfast of the riders and the freshness of the horses, the glasses of brandy pressed on huntsmen and whips—it is very seldom that a "Grand Meet" ends in anything but chopping an unfortunate or two in cover after heading them back. We can just remember one good day at a Lawn Meet, at Badminton, when we found in Swangrove in the Park, and had thirty-five minutes and a "kill"—about a score in, out of three hundred!

Having said so much by way of preamble about what we may call Break-fast Meets—no pun intended—possible and actual, we are bound to add that our castle is Hever Castle, where Henry VIII.—an earnest sportsman, and never satisfied without a kill—courted Anna Boleyn. How pretty she must have looked on her palfrey, with her hawk on her fist, on the way to kill a heron on the Eden River. As to the fox-hounds, they are the Old Surrey. Their meets include few squires, and only two lords, but are composed largely of corn and mustard dealers, brewers, stockbrokers, brewers, and hatters in a large way, no miscellaneous horse-dealers: one is attached to the Hunt in a sort of official character. The horses are, for the most part, too good for the country; for price is no object with the owners. The country may be divided into three kinds—steep chalk hills and downs, without flints, the same covered as thickly with flints as if a road-maker had made them the receiving-ground of his stock; and a clay vale country below the hills, with deep ditches full of water, banks, and fences stiff enough to satisfy any Shiresman. In the hilly chalk part there are of course no ditches and no fences, except the posts or rails of new inclosures.

The hedges are mere pony jumps, full of gaps; so any man or woman can ride there who don't mind galloping down hill, or at times over something much worse than a macadamised road. The covers lie thick and full of foxes, within a short two miles of each other, so that altogether, as long as you keep out of the clay, it is pleasant galloping over sheep downs with very little trouble, and you may go all day without taking a jump. The field may be divided into two classes. Those who ride there because they can't find time to go into a better country—many of these are horsemen equal to the stiffest country in England; and a most respectable banker sort of subscribers, who go for a constitutional canter and the pleasure of seeing the hounds work—for which last pleasure the Surrey bills are very favourable. We shall not say anything about who are the best men, but among the oldest are two whom it is impossible to pass by. A light-weight, wiry, fresh-complexioned, pleasant old gentlemen, in a white cravat and brown coat, the picture of a squire, but really a banker, riding a thoroughbred, as familiar with the country as his garden, and always well up at a check for experience does for him what hard riding did when he was younger. And then there's Mr. Cannon-Ball, as we may venture to name him, on his old white horse, not the father, but the grandfather of the Hunt—an iron proof that with plenty of hunting and shooting a man may defy even the damp dreary fogs of a City residence. Mr. Cannon-Ball does not ride hard, but he knows all the hounds and all the foxes from the time they are littered until they are fit to run, so although he only trots and canters you meet him, after hustling along best pace on your best horse, when you least expect him. Altogether Surrey is a capital country for a beginner or to get an appetite for dinner, or for a timid gentleman fond of sport; but strangers must take notice that, unless properly introduced, they are fined half-a-crown. There is a sort of City rivalry between the stag-hunters and the fox-hunters in Surrey that is very amusing to a stranger. Why a man should be despised for following the sport that he likes best by anyone except a human hog, who spends his life in eating, drinking, and grubbing up money, we have never could understand. But it is satisfactory to praise yourself by laughing at your neighbour.

It is well to mention that Croydon, close to open downs, is a good place to keep hunters during the summer, or to have them prepared for the hunting season; and that the manner in which horses are conditioned at the Derby Stables, kept by Bignold, fits them to go with the fastest hounds in England.

COURSING.

A COURSING meeting is a racing meeting of sweepstakes, cups, and matches, without jockeys; where the public are lookers on, not partakers in the sport. It bears the same relation to a day with a friend's greyhounds that a steeplechase does to a day with foxhounds. A man must be an owner of greyhounds, or very fond of the sport, to go out in bleak winter weather on open downs like those of Wiltshire or Cambridgeshire, and stand still on foot or horseback while a brace of long-limbed, smooth-coated, keen-eyed beauties race venomously out of sight, with no one up except the judge, and he paid for his fun. But tastes differ, and there is as much enthusiasm in their line among the wearers of the silver cuspules as any class of sportsmen. Certainly they have one advantage—they are not obliged to leave the chief care of their favourites to mere trainers and grooms; for, although it is forbidden to a courser to make a pet of his hounds, under penalty of utterly ruining their reputation, still he may have his kennel in his stable-yard, and, if within reach of open ground, help in the training, if he does not undertake the whole business himself. He can begin at the beginning; breed his pups, nurse them through their infantine diseases, enter them to their first hare, and keep himself and his puppies in condition, while preparing his pet long-tails for serious racing, with no other assistance than one or two intelligent yokels, and the invaluable "Greyhound, by Stonehenge," as his handbook. We don't promise him that he will carry off first prizes at Altcar or Swaffham, but he will think for it, and the thinking of success is the principal element of sport. Prince Poniatowski, an Italian-Polish nobleman, used to say that he liked a very bad horse, because people laid such long odds against him. That is a sort of advantage that it is easy to possess in greyhounds; bad ones are always to be plentiful, and cheap. It may be, but it need not be, a very expensive amusement, unless a man chooses to trust sham professional trainers, and pay unlimited bills for Cheltin eggs and boiled rabbits, pats of butter, portwine, oysters, and other nostrums for making a greyhound-trainer's bill. Stonehenge calculates the cost of a greyhound, bred from a litter, trained, and ready to start, at about £12—so a man may have a dozen for half the price of a very moderate thoroughbred yearling. As to describing a coursing meeting, that is impossible—it is too short and sharp, so hares and beaks, so perfectly mannish (ladies don't go to coursing meetings), so made up of townsmen, noblemen, squires, butchers, and shepherds—it must be seen to be appreciated. If you have a book on the event, or if you, or your uncle, or the squire of your parish, has an idea of carrying off the Challenge Cup or Puppy Stakes, you won't exclaim, as we have more than once—

Dull for an hour and merry for a minute.

There is another sort of coursing that your regular coursers look down on as foxhunters do on beagles, and that is pot-hunting; or else when my Lord gives his tenants a day, and every man that can, begs, borrows, or brings his own dog.

Pot-hunting is thiswise. You are stopping at any some Southdown breeder's farm in Wilts or Sussex when the Missis inquires at breakfast whether you are fond of hare-soup, to which carelessly or thoughtlessly answering yes, in five minutes it is settled that "those nasty long-tails ought to do something for their living—always in mischief, lapping up the cream and upsetting the milk pails;" "so you are to ride the colt," and "father" gets on "the old mare" (there always is an old mare at a farm), and away you go up and down the long hills, with a brindled bitch and a black pup careering before, behind, all round, or peering into rabbit-holes in a manner

HUNTING.—THE MEET AT HEVER CASTLE.—(SEE PRECEDING PAGE.)

that would drive a real courser crazy—quite dea. to whistle and name—away you go until you come to the shepherd, Old Tom. Of course Tom knows of a hare—"such a regular Jack." Silence is ordered, but not obeyed; for the three lads are out on their ponies, laughing and wrangling. Nevertheless, we get close up to the farm without an idea of giving any law. And "Loo-loo, she's away!" with Brindle close to her scut, and Snowball a dozen yards behind. Away we gallop, down a hill as steep as the roof of a house, shouting like demons, until we are brought up on the opposite hill by a gradual descent from a canter to a trot, from a trot to a walk and dead stop—the colt blown, ourselves black in the face—to see the hare circling in the distant downs back towards us. The old mother runs cunning, and leaves the young one to do all the work, waiting for the turns; once, twice, and away, a near shave, as we fancy, but no, it takes five minutes before the puppy turns Puss again, and Brindle, catching her with hasty hungry jaws, rolls over down the steep slope three or four times before stopping. One pitiful squeak and all is over. The farmer, who has not pressed the "oud meare," and Shepherd, who knew pretty well where Brindle would have her, are both up; and the final rites, including presenting Master Tommy, aged seven, with the scut, are soon performed. The colt has recovered his wind. After halt an hour's beat, at it we go again. We are four hours on the downs, with another hare and a leveret, and miles two. We return—hounds and ponies pretty well tired; men and boys with appetites finely set for dinner. So there's hare-soup and jugged hare, and a roast leveret, besides the sport, the heat, the exercise, the shouting.

Speaking fashionably, this sort of thing is "very slow;" but tastes differ: for our own parts, we hope to have many days on the downs ending with farmers' fare, and "the roast leveret," the black pup killed.

WOLDEMAR.

COURSING.

IMPROVED DIVING DRESSES AND LIFE-BOATS.

Some interesting experiments lately took place at Paris, on and near the Seine, with different diving apparatus, life-boats, fire-engines, grappling-irons for saving lives from shipwreck, &c. At noon precisely Prince Napoleon arrived at the place appointed for the experiments, accompanied by a number of the members of the international jury, officers of the Navy and Artillery, and several of the high functionaries from the Departments of War and Marine. The experiments commenced with the life-boats. A boat invented by M. Berthon, which cannot be upset, another in wire-woven canvas, and a third in caoutchouc, were tried with perfect success. The last-named boat was inflated, launched, and manned with three lusty rowers in five minutes. Five diving apparatus had been inscribed for exhibition, but only four—two French and two English—those of Messrs. Siebe, Heinke, Cabirol, and Ernous, were tried. All these apparatus are constructed on nearly the same manner, being composed of a waterproof dress, terminated at the upper part by a cuirass in metal, to which, when on the body of the diver, is screwed a helmet of the same metal, having affixed to it the tube for giving air, the supply of which is kept up by means of an air-pump and a valve for letting off the breath of the diver. One of the experiments tried with Siebe's apparatus was that the diver can of his own free will come to the surface by removing a part of the weight which keeps him under water. The four divers descended at the same time. One of them remained under water forty minutes consecutively, and the others a somewhat shorter period of time, picking up during the immersion several small pieces of metal which had been thrown down. Mr. D. Siebe (who dived) informed us that the Seine was discoloured for about seven feet; but about two feet from the bottom the water was perfectly clear. The appearance of the water underneath is that of a dark sea-

MONS. ERNOUX'S AIR-PUMP AND OPEN-HELMET DIVING-DRESS.

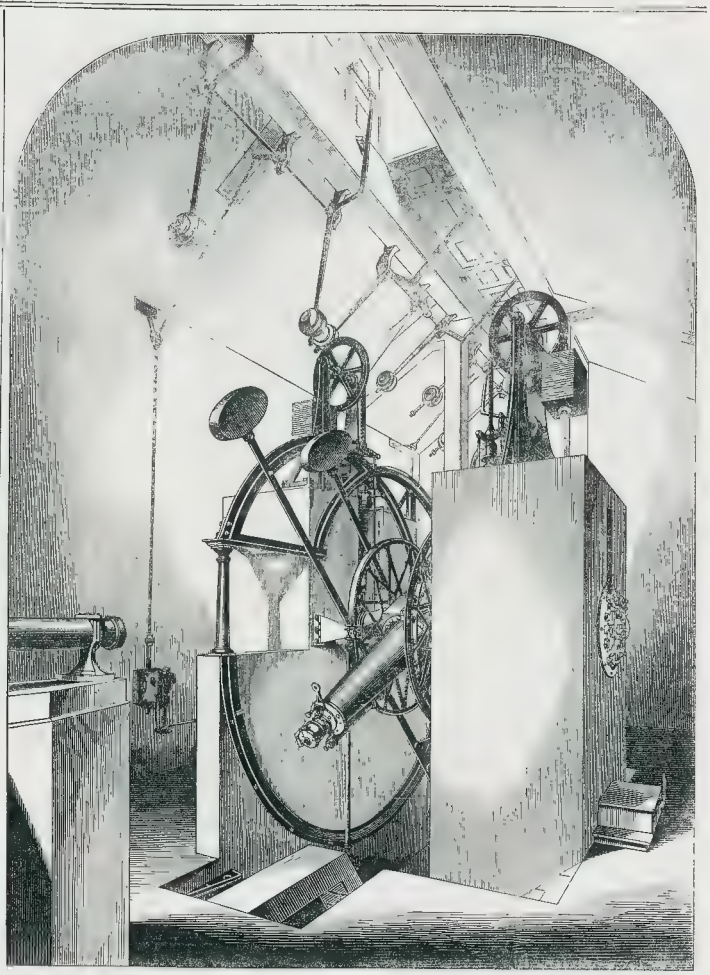
og. The apparatus for throwing the grappling-irons were placed at the entrance o fthe Champ de Mars. The first apparatus, that of M. Trembley, and which is very similar to that used for throwing Congreve rockets, impelled the grappe to a distance of 300 yards; the apparatus of M. Delvigne, consisting of a projectile fired from a small mortar, carried the grapple about the same distance, but with a smaller line. The time taken to throw the grapple was about twelve seconds. A number of fire-engines were also tried, and worked very satisfactorily.—*Galignani*.

MODEL OF THE GREENWICH TRANSIT CIRCLE.

(From our Special Correspondent.)

In the Nave of the Palace of Industry, between the great naval trophy of England and the St. Gobain glass, within view also of Erard's grand piano, stands a large instrument, which has been the wonder of provincial visitors and the puzzle of many a Parisian throughout the summer. It has been described, even by a Parisian *feuilletoniste*, as a model of Greenwich Observatory. I may adopt the Astronomer Royal's explanation of his instrument, calling it a Model of the Transit Circle (an astronomical meridional instrument), copied from that in Greenwich Observatory. I believe that considerable disappointment has been caused by the discovery of the fact that this most prominent model is not a working one. The instrument of which this is the model was constructed some years ago. In the report of the Astronomer Royal to the Board of Visitors of the Royal Observatory of Greenwich, dated the 5th of June, 1847, it was stated that meridional instruments carrying larger object-glasses were now required for the wants of the Royal Observatory. In an "address to the individual members of the Board of Visitors of the Royal Observatory," by the Astronomer Royal, dated December 20th, 1847, a proposal for a large Transit Circle was explained in considerable detail. The Board of Visitors took the matter into consideration at their extraordinary meeting of 1848, January 15th, and drew up a formal resolution, expressing their approval of it. This resolution was communicated to the Lords Commissioners of the Admiralty, and their Lordships immediately gave their sanction to the proposal, and took the necessary steps for providing the requisite funds. The object-glass was purchased of Mr. Simms (after trial and approval by Mr. Airey, the Astronomer Royal) in the autumn of the same year; and in the winter and following spring the Astronomer Royal prepared a detailed model. This model was exhibited to the Board of Visitors, at their meeting of 1848, June 3rd. In the autumn of 1848 Troughton's Circle was removed to a temporary position on the external walls of the East Buildings, and the alterations necessary for reception of the new instrument were made in the circle-room and piers. The instrument was also commenced by Messrs. Ransomes and May, the engineers to whom the construction of the massive parts was intrusted; and, as early as the advance of the larger portions of the instrument permitted, Mr. Simms proceeded with the optical and graduated parts. In the autumn of 1850 the instrument was mounted, and the requisite wooden stages, &c., were immediately prepared; and observations were commenced with it on the first observing day of 1851.

Our Engraving gives a perspective view of the instrument from the north-west—supposing the ladders removed, and the pillars which support the roof broken off. On the right side is the western pier. Upon its external face are seen the eye-pieces of seven microscopes (one pointer microscope, or microscope for reading the whole number of graduations, and six micrometer microscopes), and the attachments for four micrometers not mounted (used occasionally for examining the graduation), all carried by one solid brass plate. The inclined position of these eye-pieces shows that the microscopes, whose tubes are merely perforations of the pier, are directed towards the circumference of the large graduated circle. The bent tube seen among the eye-pieces is the gas-pipe leading to the lamp, whose flame is in the centre of the eye-pieces; the pipe is, for the most part concealed in the pier. This portion of the pipe is jointed, in order that it may be turned away when observations are made on the collimator in the axis of the instrument. The smoke chimney, for carrying off the hot air from the lamp, and for reading the eye, is omitted. At the north and south ends of the pier are the steps for descending into the observing pit. At the top of the pier are the standards, carrying a large wheel, over which passes a jointed chain; which on one side sustains a pile of rectangular plates of lead, operating as a large counterpoise; and on the other side is attached to the fulcrum of the ordinary transit counterpoise, and to the large vertical rod (cut with a screw thread), by which the transit circle is lifted when necessary. Between the standards is seen the ordinary transit counterpoise (in shape resembling a hammer), and on the left side of the large vertical rod is one of the slenderer rods that sustain the friction-wheel frame, by which the ordinary counterpoise acts to support the transit axis.



THE PARIS UNIVERSAL EXHIBITION.—MODEL OF THE TRANSIT CIRCLE IN THE ROYAL OBSERVATORY, GREENWICH.

At a distance to the left is the eastern pier. In the form and dimensions of its central mass it corresponds to the western piers, but it has also north and south wing-walls (the north wing wall is seen in this view) for carrying the extremities of a large iron arch, whose middle part is on the lower part of the western face of the eastern pier, and for supporting the ends of two iron intersecting arches above. The intersecting arches are adapted to sustain the pressure of friction (and thus to prevent tremor) of the two inclined arms bearing large counterpoises, whose lower terminations carry the quicksilver trough, to the lower arch is clamped, in any required position, the middle of a horizontal bar connecting these inclined arms. The western face of the eastern pier also carries two projecting plates, of which one is seen here, for the clamps of the clamp circle, the rod of a hook's joint depends from the clamp. The apparatus at the top of the eastern pier is generally similar to that on the top of the western pier; the view shows distinctly the screw-cut large rod and the bevelled wheel-nut, by whose rotation the large rod is raised. Between the two piers, at mid-height, is the Transit Circle, in the form of a transit instrument, with conical tubes and cubical centre-piece, carrying on its eastern side a clamping circle, and on its western side a graduated circle, whose graduations are viewed by the pier microscopes; and also a steering-wheel, or circle, furnished with handles for turning the instrument. Between the bases of the two piers is the observing pit, extending in the north and south direction, as far as the extreme faces of the pillars which support the roof (whose bases only are exhibited in the drawing). There is in each of end the pit a moveable stage, whose top is level with the floor, and whose front next the centre of the pit has steps. Near to the base of the eastern pillar in the view is seen (imperfectly) the iron crane which carries the store of quicksilver, but which is usually turned out of the way into a recess cut in the face of the wing wall. A new iron crane, generally similar to this, has been mounted near the south end of the pier, as a more convenient position. At the extreme left of the drawing is shown the pier carrying the north collimator. The axis of the telescope is at the

NATIONAL AND INDUSTRIAL SCHOOLS, AT FINCHLEY.—(SEE NEXT PAGE.)

same height as the axis of the Transit Circle, and the object-glass is turned towards the Transit Circle. The wooden box which covers the telescope is supposed to be removed. In the upper and left-hand portion of the Drawing is seen the machinery for opening the roof-shutters. The roof-opening is along the ridge of the roof; it is covered by four shutters, opening on hinges upon the eastern side. The Drawing shows two of these closed and one open. The interstice between two adjacent shutters is covered by a supplementary flap, which is raised by either of the neighbouring shutters; one of these flaps is partially seen in the Drawing as raised by the raised shutter. The mechanism for opening and closing the raised shutter is shown. At a convenient height above the floor there is fixed to the wall a frame carrying a winch, on whose axis is a pin on driving a toothed wheel, and upon the axis of this toothed wheel is a pinion acting in a rack which forms a rod up or down. The upper end of this rod is connected with a bridle-rod, whose centre of motion is at the top of the wall; and from the point of connection a rod leads to the extremity of a short lever arm, which is carried by a horizontal spindle that turns in bearings fixed to the lower side of one of the ridge-beams. Near each extremity of this spindle is fixed a long crooked bar, of which one end acts (by a jointed connecting rod) to support the shutter, and the other end carries a counterpoise. Upon the toothed-wheel frame is a bell: in the movement of the winch, either for opening or for closing the shutter, when the movement is *nearly* completed, a hammer strikes the bell, as a warning to the person who turns the winch that he must move it gently. A large iron forked hook, whose centre of motion is on the wall, is so placed that, when the shutter is closed or when it is fully opened, the hook will lodge upon the winch handle, and will thus effectually secure the shutter in its position

The foregoing description of the Transit Circle will suffice to explain its construction to the reader. Those persons who would be glad to become acquainted with the details of this fine instrument may find ample explanations, together with various plans, in the first "Appendix to the Greenwich Observations (1830)," to which we are indebted for the general view we have attempted to give, having followed the Astronomer Royal's own mode of seeing his apparatus.

THE FINCHLEY NATIONAL AND INDUSTRIAL SCHOOLS.

The subscriptions for these schools were opened in 1846. In the following year the foundation of the buildings was laid, and in 1848 they came into active operation. The establishment includes a boys' school for one hundred; girls' and infants' schools for eighty-four each, with class-rooms, lavatories, cap and cloak rooms, and furnished houses for the master and mistresses (there are two of the latter required, one for the girls' and one for the infants' school), kitchen, fitted, for the proper preparation of the girls in effective but economical cooking, a wash-house, furnished with eisterns, coppers, and washing-troughs, with pipes for hot and cold water; a laundry, with ironing-stove, mangle, and other necessaries; a drying-room, with hot-air apparatus; store-room; scullery and bakehouse; gardens, shrubberies, and play grounds; for the committee have not lost sight of the fact that the child as well as the adult must have amusement, and that it is only by the encouragement and proper regulation of innocent and healthful recreations that the tendency to join in vicious pursuits, injurious to the body and destructive to the soul, can be counteracted. The gardens and land used for agricultural purposes are contiguous to the schools, and each boy in the industrial class cultivates, under the direction of the master, but for his own or his parents' use us or profit, a plot of ground, of the acreage, the produce, and the value of which he is required to keep an account. In the offices enumerated the girls are taught washing, ironing, cooking, and all household duties that are required in a female servant, or in an industrious wife and mother in a cottage. The education imparted in other respects, is fitted for the children of the middle class; and there can be no doubt but that the "industrial" or moral reasons (observe the commit ee) that the children of these classes should be educated together in the National School. Such a union of the middle and labouring classes is recommended by the Committee of Council on Education, and has produced admirable results at King's Somborne, and in other places."

LITERATURE.

THE LIFE AND WORKS OF GOETHE. WITH SKETCHES OF HIS AGE. &c By G H LEWES, Esq, Author of "The Biographical History of Philosophy," &c. 2 vols.—Nutt.

As *Faustof* was both "witty himself and a cause of wit in others," so Goethe—the most various and voluminous of modern writers—was also the occasion and subject of the greatest amount of contemporary criticism He lived so long, too, that in his contemporary criticism he heard what was the language of posterity about many a former friend or competitor, about the fair inner genius of Schiller, and the more vigorous spirit of Wieland. Ministering, on the whole, far less to light amusement than Walter Scott, his popularity, in the true sense of that word, was never so great as Sir Walter's: but his fame was greater, and, of course, being that of a much more serious, studious, and voluminous author. It was also, and is of a different kind as well as a different level. We firmly believe that this fame of Goethe is out of all proportion to his genuine merits as an author, and that we could satisfactorily account for a large portion of it without touching upon the excellence of his works. His countrymen have himself pronounced to be the readiest literary admirers in the world; and, being such, they were just producing their first claims to a national array of compositions in those various lines of intellectual labour which had been long ago by well filled in all surrounding countries. In short, the Germans would have hailed with delight even an inferior writer to Goethe, provided he had shown himself equally universal in his attempts, and equally self reliant in his tone; and foreigners, for some time, at least, invariably take an author's estimate of himself from his countrymen, thinking that the more perfect appreciation which a common language enables the latter to form is conclusive, and admits of no dispute on their part. To this we could add three elements or peculiarities in the social condition of Germany, as it then existed, which peculiarities rendered inevitable the promotion of such a man as Goethe to "*the chair of its literary States General*," without the possession of those soaring gifts from Heaven that have characterised the grander intellects of other lands. To put this in very clear and strong light would be so easy that we are sure every one of our readers who happens to be acquainted with the literary antecedents of Germany seizes most of what we should have to say at a glance; but our present limits forbid us. Impartial and competent judges at the present day would probably all agree that the most striking characteristic of Goethe as a writer is the quantity of what he has written, which is so immense that it would consume the long life of a man whose literary taste was ordinarily busy, merely to read it all. But what is quantity in the productions of the mind? If it be of a poor material, and of coarse workmanship, the more of it the worse. He who has never displayed his capacity may claim the foremost place with more credit and more reason than he of whose insufficiency to occupy that place we have a long life's demonstration. Goethe has left no masterpiece in any division of literature; and there is not a division of literature which he has not attempted. He is eminent in some, considerable in more, but of the highest order in none whatsoever. Compare his *opus magnum*, the "Faust," either as a poem or as a drama—we care not which—with any one of Shakspeare's finer efforts (if effort be the word in talking of Shakspeare), and the dwarf at once appears, despite all the concealments of morbid, mandlin rant despite the big pedestal of Germna enthusiasm among Germans themselves or Germanised critics. But, perhaps, Goethe gave not to his "Faust" as much pains as Shakspeare, and others gave to their chief productions? Granted, after first taking advantage of whatever genius or diviner rage he had within him—after first exhaling the "Faust" in all the fire of his early inspirations—continued to retouch and improve it for a longer period than Shakspeare lived—for the incredible time, indeed, of about sixty years. We do not mean that, during this stupendous delay, he did nothing else; we mean *more* than this. He knew better. Such a method would have stupefied him. He reserved for his favourite work all his happier moments; he would not pay, even to it as a whole, what was his very highest; he possessed nothing in his mind worth possessing which he did not jealously concentrate, just at the right instant, upon this the supreme criterion of all that Goethe could achieve. He watched the capricious visits of his muse, and fed her, whenever she came radiant, always to the one task. He viewed this task from a thousand points: he consulted friend after friend: he armed himself with the hints and comments of two generations of great poets and great critics. In one work he collected all the effects of enthusiasm and all the refinements of meditation: he tested the result with unwearied patience. He waited for the day Goethes that follow each other in his patriarchal life—as in all or as successive men seem to come and to go, approving or disapproving of the past, confirming or annulling: he was resolute, ever equally resolute, resolute to the last that this poem-tragedy should be perfection—human work of the sort ever before received from its author anyti . . . . . like such exertions or such circumspection; and, when he had lavished upon it every thing that was precious in the treasures of his mind, the ecstacies of his youthful genius, wrought and jewelled as it were by the unsurpassed experience of his age, he at length presented it to the world, as it now stands,—and died

Of this work every reader is at liberty to form his own opinion, an opinion which will necessarily be that reader's *dernier mot* about its author also. With the space to which we are now confined we decline expressing ours. It would need full exposition.

In all departments of literature, under all varieties of terms and conditions—light, serious, scientific, positive, real, ideal—Goethe laboured for very nearly seventy years, living eighty four; and in not one line not one—has he bequeathed to us a work regarded by the enlightened as entitled to take rank with the highest of its respective class. It were ludicrous to mention his claims in philosophy. As to system in metaphysics, physics, or morals, was worked out by Goethe. His "Metamorphoses of the Plants" is merely suggestive

His "Theory of Colours" is on a special and rather minute subdivision of a vast and integral subject. In natural history, in physiology, in botany, in chemistry, which are parts of science, and in engraving, in physique, in painting, which are parts of art—he made ingenious and desultory remarks: but not the slightest attempt at any co-ordination of view, such as that which Bacon, on an architectonic scale, and Humboldt, in some favourite provinces of his own, have luminously traced. Still his "Kunst und Alterthum" is a fine essay. In all philosophy, moral and psychological, as well as physical, Goethe was thus a discursive critic and a suggestive guesser; but in no solitary instance the founder, the discoverer, or the teacher of anything assured. As a political writer he seldom troubled himself: a few platitudes, of which nothing practical can easily be made, are all he produced. His historical claims are not much higher. The "Annals" are pretty nearly as egotistical as the "Wahrheit und Dichtung," or Autobiography, which, of all his works, is the one principally meant to put the author in a fascinating light, and most calculated to give an unpleasant impression of him. His "French Campaign," again, requires that the title should be forgotten, in order to disarm the reader's vexation and contempt: for this "Campaign" is all about Goethe himself, his studies and his sensations. The "Letters from Switzerland," and the "Italian Tour" are the best of these semi-narrative productions, except the criticism on Winckelmann. The "Benvenuto Cellini," we need hardly say, is a translation; we may add that any one who possesses an equal knowledge of German and Italian has only to take up Goethe's version and compare it with the masterly original. The only remaining department of prose in which he much figures is that of the novelist. Omitting his work on the "Conversations of German Emigrants," there are still four fictions to be noticed. The "Sorrows of Werther" tells its story in epistles, which are in a style of impassioned and sentimental raving, intended to narrate the emotions of Werther's unsound mind. These constitute the real incidents and adventures of a morbid book, which contains endless "oh's and "ah's," and must have been composed with the hair of the author's head standing on end, and his bloodshot eyes staring wildly.

If Werther be a narrative of one individual's successive passions and paroxysms, the "Apprenticeship of Wilhelm Meister, a psychological romance," is the narrative of another individual's reflections in strictly literal order, and of the interior germinations of a brooding intellect. To the same class the "Wanderings of Wilhelm Meister." No one who had read the others could mistake its authorship, or that of the "Elective Affinities," which is any thing but a moral work, even for Goethe.

We thus come to his poetry. It is needless to mention that he has left no epic behind him, nor any poem which would sustain a comparison with even the great irregular grandeurs of the muse of his own or of other lands. It was not for him to compose anything like the "Orlando;" without alluding to such a work as the "Divina Comedia," so well and beautifully named. It would be a mere waste of time to talk of his "Achilleis." On the other hand, among the minor poems there is not one which deserves to be cited in company with many of his friend Schiller's. That great writer's genius shines even more superior in song to that of Goethe than it towers above Goethe's, in the noble, though one-sided, eloquence which he carried into vast and multitudinous historical researches, such as will remain for ever monuments of his fervid spirit, his penetrating and exalted intelligence. But our subject is running away with us. We must turn from the author of this book about him by Mr. Lewes.

We have always felt that a really great writer would have those with whom he is a favourite, and many are the examples which we could give of this very intelligible truth. We have, in fact, frequently noticed the good results which common sense would have led us to anticipate. Erasmus records the same, with a slight difference to fully. But a strong taste for Goethe will generally be found to have a lamentably different result. Mr. Lewes is evidently an accomplished scholar, and a man of naturally fine taste, which he has not allowed to run to waste for want of culture. He deserves higher praise than this. His kind and generous sympathies, the ardent and ideal temperament of that species of intelligence of which it were hard to say whether it be originally more poetic or philosophical. Such a critic misses no beauties, though he may condone many a defect; nay, he has a tendency to transform by the fire of his own genial soul the baser objects over which it is kindled. Unconscious himself of the effects of a fervour to which the sentiment of generous admiration is a necessity, he seems at times to be great and smooth as great but not uncouth; for a coloured light is shed upon it from his own glowing fancy, and he pauses to worship in the "subjective" image what nothing but the "subjective" action could thus have mellowed.

In this manner Goethe looms upon him as vast and sublime through the fuliginous atmosphere with which that literary star, long thought to be a central sun, is at once wrapped and magnified. Far be it from us to jeer at a noble disposition too rare in this age of shallow cynicism. But Mr Lewes has been unlucky, with such a peculiarity of literary temper—whether we regard its weakness or its strength—in having sworn such his loyal heart to a mere Alexander or Sesostris of letters whose fleeting and meteoric conquests are already passing away, and to whose dynasty a much more modest kingdom only (though that, indeed, legitimate) will remain enduringly.

However, we are far from wishing to describe the present work of Mr. Lewes as uninteresting. The subject is rich in facts, and suggestive of most instructive reflections. Quite the contrary. Any one who loves Goethe is well founded, or it is not. If well founded, Goethe was a truly great man, and we have here a work in which he is sharply delineated with that intention in the portrayer. On the other hand, if the enthusiasm for him be unfounded, we have in Goethe's success a startling proof that any European —phenomenon which we cannot too closely study. In either case Mr. Lewes deserves to be read. His book is adorned with two splendid engraved portraits of Goethe at the ages of thirty and of seventy-nine respectively; and it is a very good, and beautiful; and the whole work would grace either the table or library.

The historical position, moreover, of Goethe, standing among those who laid the foundation-stones of modern German literature, is of immense importance; and the character, bearing, and conduct, as one extremity, the Seven Years' War and the deeds of Frederick the Great, and reaching at the other into the reign of Louis Philippe, is one of the most interesting and remarkable that any author, ancient or modern, was ever able to bring with honour to its long-deferred conclusion

Those who do not know German, and would estimate for themselves the extraordinary mind of Goethe, should read Mr. Filmore's "Faust" which furnishes the means of a delightful comparison Schiller's "Wallenstein," and "Faustus," and Longfellow translated them, being presented to the public in the same volume.

THE POETICAL WORKS OF HENRY W. LONGFELLOW. A New Edition, illustrated with upwards of One Hundred Designs, drawn by John Gilbert. London: George Routledge and Co.

"The Song of Hiawatha," by Mr. Longfellow, we consider to be a great mistake, but the mistake, nevertheless, of a man of genius. Such a poem never can become popular; and, with all respect to the gifted author, we must add our belief that it does not deserve to be so. But in his earlier poems, collected in this magnificent edition of Mr. Routledge, he has established his claim to rank among the immortals.

Too many of our modern verse-makers have wandered far away from the lofty purposes and the rightful mission of poetry. In vague and misty themes (does not Mr. Longfellow sometimes like those of Mr. Alexander Smith, in harsh and crabbed styles like those of Mr. Browning, they have quenched the genuine inspiration, or, at any rate, have attempted to substitute mere "bosh" for the divine afflatus. The great and well-earned reputation of Henry Longfellow may be accepted as a certain proof that good poetry will always meet with admirers. Let a master strike the lyre, and he will soon attract the attention of a crowd of eager listeners. No other American poet is so generally read as Longfellow. His name is a household word; he is a guest in our firesides; the companion of our sons and daughters, our relations and friends; in fact, he enjoys a European reputation. There can be little difficulty in discovering the reason of this universal homage; the poetry of Longfellow—his "Hiawatha" always excepted—appeals to the heart. In his verse he deals with human life as it really exists; in his effusions we find something akin to the tides of existence that are ebbing and flowing around us. He addresses his generation in terms that all can understand. Most of his productions contain proofs of a deep and solemn purpose: we ever find him bent upon communicating lofty truths to his fellow-men. Let our youthful aspirants for poetic fame remember that people will not trouble themselves with the perusal of works which even the authors themselves can scarcely be supposed to comprehend. No man ever poured sweeter poetry than Shakspeare; none ever fashioned the English language, or any language, ancient or modern, into such variety of appropriate apparel, from "the gorgeous pall of sceptered tragedy" to the "easy dress of flowing pastoral." His words and idioms, as Coleridge says, "are as fresh now as in their first bloom;" and although the changes through which our language has passed since his day, and unavoidable progress of the press, have scarcely perplexed his critics, and rendered the meaning of certain passages obscure, yet, upon the whole, Shakspeare is intelligible to all who read and reflect for themselves. We are not desirous of instituting a comparison between Shakspeare and any living poet; we would merely show that poets who have ever commanded the attention and won the esteem of mankind agree in one point: they deal in themes of universal interest; they make use of language that may be readily understood. No true poet hides his head in gloomy and treacherous obscurity. If he has a mission, he knows what it is, and does not fear to declare it; and when he has anything to communicate he strives to render his meaning intelligible. Verbiage and mysticism are to true poetry what fustian is to genuine oratory—a very poor counterfeit.

Longfellow has vindicated his right to the poet's wreath, and never was a fairer trubute offered to genius than the edition before us. Mr. Gilbert's illustrations are gems of art—equal if not superior to those which his graceful and facile pencil executed for Mackay's "Salamandrine."

The wood engravings have been executed with the greatest care and attention, and may be regarded as triumphs of that branch of art. The work is enriched by a very beautiful likeness of the poet, taken from the only portrait for which he ever sat.

THE KING AND HIS DEPUTY.—A well-known Anti-Russian member of the Prussian Chamber, M. de Vincke, elected by the town of Hagen, has not accepted his nomination. The following explanations are given by the *Post Ampt Gazette* of that step. A short time after the election the King passed through Hagen, where he met a very warm reception. He said on that occasion, "The reception given me the greater pleasure, proceeding as it does from a town which has elected as Deputy to the Chamber one of my enemies." These words determined M. de Vincke to resign

MORTALITY IN THE CITIES OF THE UNITED STATES.—The number of deaths in New York city last year was 28,458, being 1 to every 31·95 of the population. In Philadelphia the number of deaths was 11,811, or 1 to every 42·33 of the population; in Baltimore, 5703, or 1 to every 36·54 of the population; in Boston, 4418, or 1 to every 36·21 of the population. In New York the ratio of deaths by consumption was 951; in Philadelphia, 842; in Baltimore, 315, in Boston, 379.

AUSTRIA'S SYMPATHY WITH RUSSIA.—Letters from the south-east corner of Prussia complain that their communication with Warsaw is now entirely impeded by the quantities of sulphur which are being sent daily in ther from Cracow, the railroad from the latter place joining the Warsaw Rail at the point where the Prussian Rail from Myslowitz does. In the ordinary way of transport these goods would pass from Austria along the Nordbahn, would cross the Prussian frontier, and be conveyed from the Myslowitz (Prussian) station to the Warsaw Railroad. Since, however, the Prussians have refused to forward any contraband of war to Russia, not being of Zollverein origin, the Austrians are obliged to have the goods stopped at the Leipnik station on the Nordbahn, whence they are conveyed across country to Cracow, and thence brought upon the Warsaw Railway. The quantity of sulphur thus conveyed by Austria, with the open connivance of the Government and railway authorities, has been more than 100,000 cwt in the last four weeks, and every day upwards of 600 cwt. pass. Another article in hand, Insterburn Tilsit, a Prussian town on the frontier of Russian Poland, that eight or ten barges are still lying there laden with sulphur, which the authorities will not permit to pass into Russia.—*Letter from Berlin.*

TERMS OF PEACE.—The *Austrian Gazette* publishes a letter from its Paris correspondent in which the writer says: "It is certain that after the fall of Sebastopol the question of an indemnity for the expenses of the war was raised before the Allied Powers; and that England showed itself rather disposed to add that article to the conditions upon which peace would be made The Emperor Napoleon, however, pronounced against it, from a double motive: first, in order to prove to Europe that the Western Powers have only in view the general political equilibrium, without demanding indemnity; and next, because the financial situation of Russia is not such as to enable her to defray, even in part, the charges of the war supported by the Western Powers, whilst the latter only desired to impose upon her conditions at once practicable and accepted by her. But, on the other hand, the Western Powers have resolved to require, with much the more reason, the full and true meaning of the Four Points, and they will keep the Crimea as a pledge for the due execution of them"

WHY ODESSA WAS SPARED.—When the fleet was off Odessa, the advice of the highest person in France on the project of bombarding the town was sought by the French Admiral, and it is believed that his reply implied a "radical opposition" to any such proceeding, nor was our Admiral authorised by the home authorities to attack Odessa unless certain of success. Sir Edmund Lyons and Admiral Bruat have acted all along with the most perfect accord; but there has been this difficulty in their mutual relations, that Admiral Bruat is under the orders of the Commander-in-Chief of the army, while Admiral Bruat is directly under the control of Marshal Pelissier, and it is known that the latter is opposed to any operations which would require large detachments from the French army. * * * * If Odessa is to be destroyed, it can only be done, first, either by great numbers of floating batteries to reduce the forts and enable the lines to approach within bayonet distance; secondly, by a sustained fire constantly renewed for several days of a flotilla of gun-boats, bombs, ketches, and mortar-vessels, fed by continuous supplies of ammunition, and even of new guns and mortars; thirdly, by the disembarkation on the coast below the city, or higher than the Peresyp, of a force sufficiently strong to defeat the garrison and the outlaying army defending the place, in which case the city would be open to the conquerors, and all the defences taken in reverse; or, fourthly, by some unknown operation of war, locked up by the Admiralty key in Lord Dundonald's bosom, or secreted in Mr. Disney's stink-pots Of these plans the third alone seems to ensure the certainty of destroying Odessa. The wear and tear of ships in a protracted bombardment is incredible. For one shell which would fall through the roof of a house in Odessa, three or four would fall in the public streets, squares, and yards, where they would be comparatively harmless. These large missiles take up great space, and the fleet *could not hold enough to lay Odessa in* ruins.—*Letter from the Camp.*

SPECIMENS OF MODERN GERMAN ART.

ART in Germany has of late years pretty freely mingled the severities of the historic style and the realities of the landscape with poetic creations drawn from the very widest range of fancy. The works which we engrave in the present sheet are specimens of this sensuous and romantic school, which although certainly removed from their more gay and joyous neighbours of France and Italy, has lost nothing of its sentimentalism in the transfer.

The first—"The Signal," by Hollwig, an artist enjoying considerable popularity, represents a young lady in an old fashioned brocaded dress, seated in an old-fashioned oval window, holding forth a handkerchief as a "signal" to her admirer, who, doubtless, is not far distant. The combination of the hard architectural locale, with the earnest and wandering expression of the eye, is remarkably quaint, and is German all over.

In the other picture, an "Italian Girl at a Fountain," by De Keyser, there is more of the abandon and warmth of the sunny South. The figure is well drawn; and the introduction of the butterfly on the young lady's shoulder affords an opportunity for a telling contrast of glittering colours, and for a pleasing expression of curiosity and interest in the face. A poet friend thus apostrophises this agreeable subject.

AT THE FOUNTAIN

BUTTERFLY, butterfly,
Wilt not stay and rest?
Warm beats the heart here
Underneath my breast.
Purple black my locks are,
Dewy red my mouth;
Fancy them vine clusters
And roses of the south.

Far hence the Maremma
Spreads its waste of lands;
Better rest, butterfly,
In my tender hands:
I beside this fountain,
Couched in dreamy ease;
I ke[illegible] ace.

Lover's breath shall never
Stir thy winglets gay,
Nor brown-handed children
Clutch thee in fierce play
Lovely, safe, and lonely,
All our summer-tide,
Thou and I, butterfly,
Will together bide.

Ah! was that a flutter
Of that restless wing?
Then I'll hold thee looser,
Little trembling thing.
There! no tie shall bind thee,
My heart's warmth alone:
If thou wilt, butterfl.
Go! Ah, thou!

NEW BOOKS, &c.

ON SUDDEN DEATH. By A. B. GRANVILLE, M.D., F.R.S. London: JOHN CHURCHILL, New Burlington-street.

Just published, 8vo, cloth, 5s.
LECTURES on INSANITY. By FORBES WINSLOW, M.D., D.C.L. Oxon. London: JOHN CHURCHILL, New Burlington-street.

THE ILLUSTRATED LONDON NEWS.

No. 772.—VOL. XXVII.] SATURDAY, DECEMBER 1, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

THE KING OF SARDINIA AND THE EMPEROR OF AUSTRIA: A CONTRAST.

THE auspicious visit of the King of Sardinia, the good friend and ally of this country, affords an opportunity for contrasting his position, his conduct, and his character with that of another Sovereign who might have entered, but would not, into the great alliance of England and France, in defence of the independence of Europe. While London rings with the unbought applause of an honest people on the pathway of an honest King who comes to make more intimate acquaintance with them, those amongst us who do not yet sufficiently understand the noble part which Victor Emmanuel of Sardinia has played in the politics of our time will be able to comprehend it more fully if it be contrasted with the conduct of the Emperor of Austria—a Sovereign standing in a higher place, having grander opportunities of action, and a greater stake in the pacification of the world. If the Sovereign of a great nation appear but mean and small by the side of one who rules a more limited territory, and who cannot call into the field a tenth part of the bayonets at the command of the other, so much the worse for the character of him whose heart is not equal to his work, or whose intellect is not bright enough to show him that safety and duty always go together;—that in the eternal balances of Heavenly Justice the coward incurs more danger than the brave, and that Might, though apparently on the side of the Wrong, always in the long run comes over to the Right, and bears it in triumph to issues which confound the calculations of the faint-hearted and unprincipled.

Francis Joseph of Austria and Victor Emmanuel of Sardinia are both young men; both are Sovereigns in Italy; both succeeded to their thrones in consequence of the revolutionary events of 1848; both are the children of adversity; both made compacts with their people, or inherited those compacts with their crowns; both have to maintain their independence, as Sovereigns, against the all-grasping power of the Papacy; both have to consolidate their domestic rule over their subjects,—and both have aspired to take their share in the great drama of our time—the war of industrial and civilised Europe against the military despotism and encroaching barbarism of Russia. Let us see how each Sovereign has comported himself in such great emergencies, and what gratitude and respect are due to either—by their own subjects or by Europe.

Youth is said to be generous; but where are we to look for the generosity of Francis Joseph? He was called to the throne that he might save the empire—not because he was wise or just, or brave; but simply because he was young, and had made no enemies. His uncle was imbecile, and was forced to abdicate to save his family the disgrace of his expulsion. His father—not exactly imbecile, but weak and irresolute—was set aside because he had a wife of strong mind and unpopular character, whom the people would not tolerate on the throne. So Francis Joseph—in his teens—was called upon to fill the gap. He found the empire in danger of dismemberment and destruction. The waters of the post-Metternichian deluge had broken loose—Lombardy and Venice were in revolt—Kossuth was "thundering at his gates"—the Viennese were clamorous for a Republic. There was peril everywhere, and safety nowhere but in dishonourable reliance upon foreign aid. Francis Joseph sought that foreign aid, and became indebted for his crown to the contemptuous charity of the Czar Nicholas. His Italian and Hungarian kingdoms were thus preserved, and the sword became the emblem, as it had been the instrument, of his Government. The desire of his subjects for Constitutional Government could not be quenched, but it could be thwarted. The concessions made to the people in the dark hour were retracted in the sunshine of Russian support, till it became apparent to all Austria that the only results of the revolutionary movements of 1848 and 1849 were to rivet still tighter the chains of the people, and to abolish such privileges of the aristocracy as had been found to interfere with the autocracy of the Emperor. But all this, bad as it was, did not exhaust the domestic policy of the youthful Monarch. History offered him great examples of Sovereigns who, arbitrary at home, caused themselves and their nations to be respected abroad. But these examples were unheeded in Austria. With a meanness and a short-sightedness unparalleled in the annals of Europe, with a gratuitous renunciation of kingly dignity, with the most servile self-humiliation before the spiritual arrogance of a Pope whom his own bayonets help to keep upon an unrespected and tottering throne, the young Francis Joseph has thrown away, without value received, without the shadow of a *quid pro quo*, his right to be supreme in his own dominions, and bound himself body and soul to the service of Popes and Cardinals, degrading himself and his nation, and causing his subjects to blush for him with a shame greater even than that which they felt when, for the more tangible reason of conquering the Hungarians, he sold his dignity to the Czar. And, while such has been his domestic policy, what has been his conduct towards foreign nations? The facts are patent. The whole world knows them. He has confessed his sympathies with England and France against Russia, but has not had the courage to give effect to them by his actions. What is the result? Simply this: that Austria has not a friend in any part of Europe; that her name is a byword of contempt in the councils of Sovereigns; and that Russia—in fear of whom she stands—must share the contempt as largely as any other Power, and will one day make her feel it, if ever the fortune of war should give her the opportunity.

Under every one of the aspects in which we have considered the policy of the Emperor of Austria, King of Lombardy and Venice, that of Victor Emmanuel, King of Piedmont and Sardinia, stands in brilliant contrast. *He* also was the heir of revolution; but had sagacity and courage to manage his own domestic affairs without the aid of alien Sovereigns. *He* also made compacts with his people,—but he kept them. *He* also had a Constitutional Government to administer; but, instead of destroying, he widened the basis of rational freedom and conquered the revolutionary malcon-

COUNT CAMILLE CAVOUR, PRESIDENT OF THE COUNCIL OF SARDINIA.

MARQUIS MESSIMO D'AZEGLIO, AIDE-DE-CAMP OF THE KING OF SARDINIA.—(SEE NEXT PAGE.)

tents of his dominions by his justice and his liberality. *He* also had dealings with the Pope, but did not find it necessary to act like a slave. On the contrary, he vindicated his independence both as a man and Sovereign, and freed his subjects from sacerdotal tyranny and priestly assumption in matters secular, without weakening the sentiment of true religion either in himself or among his people. He refused to yoke himself to the retrogressive car of the Papacy, but went forward in the path of honesty and honour, with the blessings of all Italy and the approbation of mankind. His foreign policy was, if possible, more noble. He boldly took the side of Right and Justice, and enrolled his gallant army among the defenders of Europe—setting at nought the jealousy and hostility of Austria, his nearest neighbour and worst foe—and braving all risks that might accrue from the pent-up vengeance of Russia at a future time. By thus acting he not only rendered essential service to the cause of the Allied Powers, but added new lustre to the name of Italy, and fixed upon his person the eyes of all Italians who desire Italy to be Italy, and to take the rank which her past glory, no less than her present virtue, entitles her to claim.

In one sentence, the conduct of the Emperor of Austria is a warning to great Sovereigns of the faults which they should avoid, if they do not wish to become little and despised; whilst that of the King of Sardinia shines as a brilliant light to show the Sovereigns of small but independent kingdoms how they and their people may become great and respected. Victor Emmanuel has not come amongst us in vain. His reception in this country will read a lesson to many kings who seem to stand in need of one.

COUNT CAMILLE BENSO DE CAVOUR, SARDINIAN PRIME MINISTER.

IF it were always a political truth, that the occasion brings forth the man, the anxieties of many States on the subject of their future might be dispelled. Unfortunately it has happened, and to no States more frequently than Piedmont, that the genius for war or for statesmanship has been found wanting in rulers exactly at the critical moment. The enemies of Kingship will proclaim that this is an evil inevitably resulting from absolutism, and that it may be averted by a measure to the constitutional system of government, under which the best man is sure to distinguish himself. Yet, if the combatants on either side were driven to support their arguments by instances, the champion of Constitutionalism would be forced to confess that, as a general rule, Monarchs have not lacked the energy and the talent demanded at great crises, however much chance may have influenced that result. While the career of the Emperor Napoleon III. might be cited as an example on the opposite side, no stronger argument in favour of free government could be urged than that afforded by the life and actions of Count Camille de Cavour, as contrasted with those of the predecessor of the present Sovereign of Piedmont.

It is scarcely too much to claim for Count Cavour that to him is mainly owing the extraordinary success of the constitutional or representative form of government in Piedmont, with a population who were believed to be unfitted by temperament for the exercise of such functions, and who certainly, during the earlier years of their Parliamentary system, did their utmost to fulfil the prophecies of their enemies. For, if Count Cavour, as a Minister, is not exactly the man whom a cautious people like the English would place at the head of affairs, more especially of the finances, he is of a temper of mind exactly that which was required in the comparative infancy of the Piedmontese Parliament, when boldness, firmness, energy, and tact were absolutely required, in order to control the State, yet would have only provoked opposition, if not known to be allied with a strong sympathy for the wants, the wishes, and even the foibles, of the people.

Count Camille de Cavour assisted at the very birth of the Piedmontese Parliamentary system. The late King Carlo Alberto had resolved—seeing the tendency of the times—to bestow on his subjects a constitutional form of government, rather than find himself ungraciously forced to make such a concession. Still, it was but the resolve, not the execution,—for which, indeed, a more astute and enlarged mind than that of Carlo Alberto might have been puzzled to find a safe form. At this moment he received, among other requests of the same kind, a deputation from certain citizens of Turin, praying for the grant of a Constitution. The deputation presented itself to the Count Avet, Minister of Grace and Justice; and, the King having decided to know the names of those of whom it was composed, it appeared that they were Brofferio (with whose name the public are so familiar in the debates of the Piedmontese Parliament), Count Santa Rosa (afterwards Minister), Col. Durando (now General and Minister of War), and Farina, the Count's family physician. It is said that when the King heard this last name mentioned he at once saw that the matter was serious and worthy of attention. The consequence of this was that the King finally resolved to perfect his idea. He called around him the most able men on the Constitutional side, and in the end there came forth what was called the "Statuto"—a term equivalent to the French "Chartre" which, however, was but a crude and imperfect work, little more than a copy of the French Charter of 1830, which, at the very epoch of the appearance of its Sardinian prototype, was about to be trampled under foot by the Republicans of February, 1848.

And why did the late King of Sardinia thus pay respect to the name of Count Camille de Cavour? In the first place, there was the fortunate accident that he lived in the Royal memory. Of an ancient and wealthy family of Piedmont, and connected with the most noble houses of that country, the young Cavour had been appointed, while yet a mere youth, a page at the King's Court. Here the sanctity of his wit and the independence of his character soon distinguished him, though in a manner not to render him a favourite of courtiers. He left the Court for the military academy, where he obtained the rank of Lieutenant of Engineers. But, although of a high and wealthy family, he was but a cadet; and in Piedmont military promotion was then almost the sole privilege of the more favoured children of birth and fortune. Nor had he made friends at the Court. The result was, that he gave up the military career; and, leaving his country, he resided at Geneva for some time, and afterwards in England. The years which followed his subsequent career will not be surprised at its events, when they consider in what atmosphere the youth and early manhood of the statesman were passed.

In 1847, at the period of the recognition of the Count's name by the King, he had already made himself a political notability in Piedmont, by becoming editor of the *Risorgimento*, a journal of daringly Liberal tendencies, yet pervaded by the aristocratic spirit as regarded the tone of its articles. Its doctrine in some sort resembled that of Whiglism some sixty or sixty years ago, when Dukes, heirs to earldoms, and leaders of Opposition, proposed to our Parliament a measure falling but very little short of what is now termed the People's Charter. It must not be understood that Count Cavour, in his journal, pandered to the mob; on the contrary, his notions were so thoroughly aristocratic that he could not, if he would, have made him take the laws of his mind from others. Relationship to the then existing state of things in Piedmont must the [illegible] of this publication, and of its editor, be regarded.

Carlo Alberto then exhibited more perspicuity than some subsequent passages of his career would imply the existence of, when he at once saw the importance of the name of Count Cavour as a member of the deputation to which we have referred. It is worth while to follow the fate of its other members. The Count de Santa Rosa afterwards became, under Victor Emmanuel, Minister of Agriculture and Commerce. He was about to die at the very height of the dispute between Sardinia and the Papal See, and the priests refused to administer the sacrament unless he would retract his complicity, as Minister, in one of the measures of the Cabinet designed to repress priestly rapacity and Papal tyranny. The priests held out, and the Minister died unabsolved, declaring, in his dying moments, that

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

CAMP, SEBASTOPOL, Nov. 17, 1855.

THE appointment of General Codrington to the supreme command of the British Army, and the numerous changes made in the general staff, as well as in the organisation of the forces, have naturally been the subject of much debate. The proposed formation of two army corps, under the command of General Markham and Sir Colin Campbell, the concentration of military arrangements in the hands of the new Chief of the Staff, and the apparent intention of making alterations in the well-worn military institutions of England, were naturally the subject of varied opinion and comment. That the British Army should be divided into two parts, instead of six, changing the hierarchy of divisions, was considered a step of serious moment, and I believe objected to on more than one ground. It was evident that the Government invited comment on this measure by naming as chief under the new arrangements men who are not at present in the Crimea, and are unlikely to return to it for some time. This part of the new Government plan is, therefore, in abeyance, whilst at the same time the names of Sir William Eyre and Lord Rokeby are mentioned as those officers likely to have the command which Generals Markham and Campbell might be unwilling or unable to assume. In case of a vacancy thus arising in the Third Division, Gen. Garrett, it is said, would take the lead therein, whilst Gen. Barnard assumed the command of the Second. As Sir William J. Codrington assumed his new command three days ago, at the time of General Simpson's departure, Lord William Paulett was instantly installed in his place in the Light Division. The General-in-Chief issued short and pithy addresses to his old corps and to the army on his abandonment of divisional and assumption of the chief command. General Windham has not yet entered on his new duties of Chief of the Staff; and Colonel Herbert will not be in orders, as successor to General Airey, until to-night. In the midst of all these changes the new brevet made its appearance yesterday, and gave general satisfaction, on account of the evident fairness that had presided over the choice of names.

In the midst of the quietness of a camp settling itself gradually down for a few months' repose, a terrible incident cast a gloom over us on Thursday, the 15th inst. At three o'clock in the afternoon, as I was returning from the hills of Careening Bay, and passing through the Light Division, the French siege-train by the Inkerman Mill blew up with a terrible commotion. A vast perpendicular column of fire rose, as by magic, three hundred feet into the air, with a roar that shook the ground. The smoke spread instantaneously from the summit of this column of flame, and, expanding into large round volumes, again emitted a grand rolling sound, like the bursting of a hundred shells. The spectators outside the immediate focus of the explosion stood gazing in astonishment at the grandeur of the sight, when suddenly, out of the mass of smoke and flame, appeared to issue a quantity of shells and rockets, which burst in every direction, filling the air with volumes of sound, dazzling the eye with the brilliancy of explosions, and making the boldest heart quail. The death-shower lasted but a few minutes, but in this short space had sent upwards of 400 souls to their last account. I was happily, by the gracious interposition of Providence, saved from imminent peril, as were many round me, who, like myself, panic-stricken, by the speed and terrible force of the visitation, made violent but abortive attempts to run. Never did hope so speedily disappear from the minds of men. The race here was not for the swift or the strong. It was, in truth, best to remain passive. There was no cover, and the iron hail fell around, fatal to many, but strangely harmless to the mass. The Staff Officers and Generals of Division were speedily on the scene of disaster, General Codrington at their head, notwithstanding the imminent danger of explosion, partially renewed, as the fire raged and gained ground. The explosion first occurred in the French siege-train, where there were large depôts of gunpowder and live shells. It communicated rapidly to the English artillery park, where fortunately there was no powder, and only rockets and Moorsom shells, the greater part of the latter out of range of the fire. The instant effect of the explosion was to kill or maim forty artillerymen and 150 of our infantry regiments around; the huts and tents about the place were blown in; the English and French hospitals overthrown; the roof blown off the mill, at that moment filled with 300 tons of powder; and the Ordnance Commissariat, French and English, thrown down.

The loss amongst our allies was greater and more severe, amounting in all to 250 men—many of these, as well as of the victims in our own ranks, having disappeared for ever. Mr. Yelland, Ordnance Commissary, was blown to death; whilst Lieut. Roberts, who had been with him, was severely scorched. Lieut. Dawson, R.A., suffered such injuries that his foot was shortly afterwards amputated. Doctor Bent's artillery hospital fell in; not, however, before the men had had time to crawl under the iron bedsteads. Numbers of men and horses were killed at great distances all round. Two men were killed in the Second Division, many in the Light, and two in the middle of the houses of Little Kamiesch, or Coquinville, as it is now generally called.

In the course of a few hours the fire was extinguished. The troops had been ordered under arms at the moment of the catastrophe, in case of the Russians intending an attack. They opened vigorous fires upon us when they saw the explosions, which so surprised them that they jumped on the parapets of their works and lined the hills all round to see us. Nothing occurred of moment.

On Monday night the French sent a large party in scullers to the north side of Sebastopol for the purpose of firing a steamer there. Notwithstanding a strong musketry, they boarded the vessel, lighted a fire in her bows—which, unfortunately, burnt too slowly, for after the men retired the Russians came down and put it out.

We have had fine weather, though cold.

THE EXPEDITION IN THE CRIMEA.

DESPATCH FROM GENERAL SIR W. CODRINGTON.

War Department, Nov. 29

Lord Panmure has this day received a despatch and its enclosures, of which the following are copies, addressed to his Lordship by General Sir William Codrington, K.C.B.:—

Sebastopol, Nov. 17.

My Lord, On the 15th inst., about 3 p.m., a terrific explosion shook the army and spread heavy destruction in the immediate neighbourhood of its force; even here, at head-quarters, two and a half miles perhaps distant, it burst open and broke windows, and felt the power of it; and the high column of smoke, with shells bursting in the midst and around it, told too well the cause, and showed the danger of all within its reach.

It was not long before we were on the spot. To the sudden burst had succeeded a continued and dark drift of smoke, which told its tale of continued fire and danger: constant bursting of shells was going on, and the ground was covered with bits of wood, musket-balls, and splinters of shells from the first explosion, which had strewn the ground with destruction, and killed and wounded many people.

100,000 pounds of powder [illegible] to all the stores there, said to our neighbour, an English park, which was fiercely burning whilst [illegible] second and as serious an accident [illegible] roof of the building had been damaged and the door blown in by the shock.

Some general officers had taken [illegible] marched part of their divisions down, others sent some to the fire, some with stretchers for the wounded; all exerted themselves with the French with an energy and disregard of danger that was admirable; blankets were taken to the exposed store, placed and wetted on the roof by water being passed up in buckets: the doors were covered with blankets and sandbags, and in a short time it was reported and looked safe, though the closeness of the fire and frequent explosions could not allow the feeling of security. Many detached though small fires were burning, and the ground of both the French and English parks, a space of 150 yards across, was a mass of large fires, some of fuel, some of huts, some of gun-carriages, boxes, handspikes, and rope.

The fortunately light air had rather changed its direction, and by breaking up and throwing away a large part of the mass at first ignited, and fires put out, and gradually got under control, because confined to small or though fierce fires, but manageable.

I saw every one working well, and I know that French and English took live shells from the neighbourhood of danger to a more distant spot, and at a later period parties threw what earth the rocky soil could give upon the fires, and helped much to subdue them. All was safe at seven p.m., and a strong guard and working party posted for the night.

The army was under arms the following morning before daylight, and, everything being quiet, I ordered the divisions to turn in, and continue the working parties in the roads, which I had counter-ordered for that morning.

The exploded powder-store was situated in the ruins of some wood which had advantageously been made use of for the purpose of shelter; it had been the store of supply to the French attack on the Malakoff front, and it contained the powder which had been brought back from their batteries. It is at the head of the ravine, which, as it gets towards Sebastopol, forms the steep and rocky valley of Ravin du Carénage.

The Light Division was on the ground which it first took up in October, 1854, the Rifles on the right; then the 7th, the 33rd, and 23rd; on their left the 34th Regiment, which subsequently joined, was on the right front in advance; and the vacating of a spot of ground by the Sappers' camp enabled me, when commanding the division, to place the Artillery and Small-arm Brigade on the immediate right of the Rifles.

The French subsequently brought their main siege train and store to the position it has now for some time occupied.

Daylight showed the damage, of which I have given your Lordship an outline in another letter, but the more important and sad part is the loss of life, and the wounded who have suffered.

One officer and 20 non-commissioned officers and men, killed; 4 officers and 112 non-commissioned officers and men, wounded; with 7 missing, show the sudden and fatal power of the shock, which not only destroyed its immediate neighbourhood, but wounded, by shell and splinters, some at a distance of three-quarters of a mile. The loss of our allies is distressingly heavy.

I have, &c.,
W. J. CODRINGTON, General Commanding.

The Lord Panmure, &c.

OFFICERS, NON-COMMISSIONED OFFICERS AND PRIVATES, KILLED ON THE 15TH NOVEMBER, 1855.

Royal Artillery: Field Train Department—Deputy-Assistant Commissary G. Yelland, Corporal William Langley. Gunners William Spence, John M'Grace, Samuel Torgoose, James Howard. Bombardier Daniel Lackie. Field Train Sergeant-Conductor John Dickson.

7th Foot: Private [illegible].
[illegible] Sergeant Major Mark Sergeant.
33rd Foot: Corporal Alexander M'Kay; Private John Bell.
34th Foot: Private William M'Gash.
[illegible] Joseph Lally.
77th Private John Irwin.
77th Private Joseph White, John Freeman, John Davison.
2nd Battalion Rifle Brigade: Private William Powell.

OFFICERS WOUNDED.

Royal Artillery: Lieutenant [illegible] Dawson (dangerously). Field Train Department: Deputy Assistant Commissary [illegible]. 2nd Battalion Rifle Brigade: Lieutenant W. H. [illegible] Assistant-Surgeon [illegible], slightly.

THE PASSAGE OF THE INGOUR.

THE details of the Turkish victory on the 6th of November, which have been received this week, encourage the belief that the Russian army in Asia is not strong enough to resist Omer Pacha. The Russian position on the Ingour, although one of considerable strength, was held by too small a force, considering its importance, from which it is inferred that General Mouravieff is short of troops. Great credit is due to the Turkish General for the skill with which he conducted the operations. On the night of the 4th ult. he caused two batteries to be erected opposite a Russian fortress commanding the ford and enfilading a portion of the opposite bank. This was so promptly executed by the Turks that it was completed before the morning. The object of the batteries was to engage the attention of the enemy while Turkish troops passed the river below, where it divides into two branches. The first was crossed without opposition, the Rifles, under Colonel Ballard, leading the way. They were followed by a column of infantry and several guns. It was on the second branch of the river that the engagement began in a contest of riflemen and artillery. A second ford having been fortunately discovered, Omer Pacha directed a simultaneous attack on both points. Osman Pacha, with six battalions, crossed the Ingour in the face of the enemy, on the right, driving him from the bank at the point of the bayonet; while in the centre Colonel Simmonds, with two battalions of infantry, and Ballard's rifles, dashed through the stream and carried the intrenchment by storm. The two successful columns formed that day. The Russians, driven from the battery, fled in confusion, and, finding the day had gone against them, and that a victorious enemy had turned their left flank, they abandoned the fort of Ruchi, and the whole of the Turkish army was transferred to the left bank of the Ingour.

The accounts vary as to the numbers engaged. The Turkish bulletin makes the Russian force from 15,000 to 16,000 in number. The Correspondent of the *Times* says: "It cannot have been less than 10,000; of which 4000 were Mingrelians."

Letters from Erzeroum bring news from Kars of the 27th of October. The Russians had made no new attempt against the place, but the blockade is maintained in as vigorous a manner as possible. A convoy of provisions and munitions of war is expected there. It is hoped that the winter, which is rapidly approaching, will force the Russians to retire, if Omer Pacha advances as far as Kutais they will be obliged to raise the blockade, otherwise their retreat will become impossible.

CAPTURE OF RUSSIAN STORES.

Several despatches have been received from the Crimea within the last few days, but they contain very little additional information. One of the despatches—from Brigadier-General Paget—gives an account of a considerable capture of Russian stores made by the Allies on the 2nd ult. at Tchotai, about fifteen miles north from Eupatoria. The prize consisted of forty arabas, three carriages, and about 8000 head of horses, camels, oxen, and sheep. Before coming away, on their return, they burned thirty large ricks of hay.

THE DANUBIAN PRINCIPALITIES.
